But the peril is even more imminent than that. American cities may be in mortal danger, even before the era of push-button warfare, because the Russians are now working on an aircraft-to-ground missile that will not require the four to five thousand mile intercontinental range. If this relatively short-range air-to-ground missile is perfected, the Communists will be able to fly their jet bombers up to the outer range of our Nike defenses—say, somewhere off our Atlantic coast—and launch guided missiles from that point. Such missiles will probably have the 8,000 mile per hour speed we mentioned earlier, and thus would be unstoppable before they reach American cities.

Now, my good friends, the best and the only known defense against a Communist guided missile attack is an intercontinental guided missile arsenal of our own. If we get to the finish line in the race to develop this weapon by the time, or before, the Communists do, the fear of retaliation may discourage the Soviet Union from launching such an attack. But if the Communists win the race, it is "curtains" for us all.

How is the race developing? The Communists were given a handicap at the opening gun. In the closing days of the war, two V-2 plants located in Eastern Germany, and 160 German scientists, who had been working on the rocket, fell into the hands of the Red Army. The important machinery from the plants, and the scientists were promptly toted off to Russia, and put to work for the Soviet Union. Consequently, the Communists got a huge head start in the race to build the intercontinental guided missile. Our most reliable intelligence reports indicate that the Russians have given top priority to their guided missile program ever since, and with the invaluable aid of the German scientists, have taken huge strides toward perfection of the weapon.

But just as top priority has been given to the Russian ICBM program, just so, the slow-down of the American program is the top priority mission of Communist agents in this country. That is their most important job. Has the Communist fifth column been successful?

We know this much: Ever since the war, our guided-missile program has been a relatively low-priority project. The program got off to a slow start at the end of the war, and in 1949—just at the time, you will recall, that Oppenheimer was convincing President Truman that the H-bomb was "immoral"—the guided-missile program was cut back even further. Why? That question must be answered—and until it is answered, and until those who were responsible have been apprehended, the security of this country remains in the gravest peril.

Since 1949 the guided-missile program, as a whole, has been stepped up slightly. Guided missiles for defense against jet attack—like Nike, Falcon, and the Navy's Terrier—have finally been developed. But very little, if any, progress has been made in developing the all-important intercontinental ballistic missile.

The American people have a right to know why this aspect of our guided-missile program is moving at a snail's pace. Is it because our scientists are inferior to the Russians? Is it because of innocent bureaucratic bungling? Or is it because highly placed Communist agents have been successful in sabotaging the program?

I doubt that American scientists are inferior. I find it hard to believe that any amount of bureaucratic inefficiency could, alone, and over a long period of time, be responsible for the neglect of our single most important defense weapon. I therefore find frighteningly compelling the alternative that Communist agents are making good on their assignment.

Back in 1950, the leftwingers told us, in effect, that Alger Hiss had been the last Communist in Government. Hiss was gone, they said, so there was no need to continue the so-called witch hunts—we could let down our guard. But the American people, in their wisdom, demanded and got, relentless investigations by congressional committees. One traitor after another was exposed, until we began to get some picture of the extent of Communist infiltration. Today, the leftwingers are saying, once again, that all the Communists are gone.

This is an assumption that Americans can never afford to make if they are to remain free. Especially, can we not afford to make it when, for some curious and unexplained reason, some person—or persons—is giving low priority to the weapon on whose rapid and successful development the fate of America rests.

We live in a time of great tension, my good friends, and of great anxiety. We all want to relax the tensions and remove the anxieties. We thus may be tempted to "play along" when wily Communist diplomats turn on the charm. We may be tempted to roll out the carpet when Communist bureaucrats, disguised as "farmers," pay a "goodwill visit to Iowa. We may be tempted to listen to those who tell us we cannot expose and prosecute Communists in Government because this would violate the "spirit of Geneva" and offend the Soviet Union. But nothing could be more foolhardy. If there were no other reason to puncture and deflate the spirt of Geneva, it is enough that this spurious love fest is causing us to let up in our efforts to expose subversion. Since we are losing the race to produce the decisive weapon, the guided missile slowdown must be investigated exhaustively and relentlessly until the culprits are uncovered.

We simply cannot afford to play the game of being "nice" to Communists.

However much we want peace, we must not lose sight of the hard truth that there will be no lasting peace so long as the Communist conspiracy survives.

We must not buy tranquillity today at the price of slavery tomorrow.

We must not forget our solemn duty to leave for our children the blessings that God has given us.

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, ANNUAL FALL MEETING OF SERTOMA INTERNATIONAL, ALLGAUER'S RESTAURANT, CHICAGO, ILL., DECEMBER 5, 1955

My fellow Americans, a little over a month ago, a remarkable event occurred in the city of Milwaukee. In a small, dingy auditorium, known as Wetzel's Hall, some 40 persons gathered to hear an announcement. The 40 shifted in their seats somewhat nervously, as the speaker arose behind a rickety, make-

shift rostrum. Many of those in the audience had not seen this man for 5 years.

"I went away," the speaker began, "to carry on the struggle for the rights of the people, for democracy and peace. Where I went and what I did is not important. But what is important is what is happening today at Geneva. I decided to come back."

Who was the speaker? He was Mr. Fred Bassett Blair, chairman of the Communist Party of Wisconsin. And the audience? The 40 persons in the audience were the hard core of a Communist Party unit, who had responded to the party's call to come out into the open again.

"We disappeared," Mr. Blair went on, "because of the people who fostered the menace of McCarthyism. They made it impossible for us to carry on our work."

But now, said Blair triumphantly, with a smile as big as Khrushchev's, there have been wonderful changes. "We are no longer political exiles in our own country. Since the Geneva Conference of the Big Four powers, people are waking up because they realize there is no such thing as a Communist conspiracy. This thinking makes it possible for us to return."

This scene I have just described to you, my good friends, was reenacted in numerous American cities last month, possibly right here in Chicago, as the Communist underground decided to crawl up from under the planks, and renew a public campaign to overthrow our Government. The spirit of Geneva, and the supposed defeat of McCarthyism—these are the things that, according to the Communists, make it possible for them to show their faces again.

The local party leaders did not, of course, make their decisions independently—they were operating under direct instructions from Moscow—instructions that were revealed recently by Mr. Herbert Philbrick, a former FBI undercover agent who still has contacts in the Communist underground. Here is what Mr. Philbrick wrote just a few days before the public meeting in Milwaukee:

"The Cominform, world headquarters of the Communist International, has ordered top Red agents here to bring the Red network in the United States above ground, and to reinstate the American Communist Party as a 'legitimate national political party.' The new instructions, obviously part of the Red pattern, since the Geneva Conference, signals a major and abrupt shift for the Communist movement in the United States, which, for the last 4 years, has operated almost entirely as an underground apparatus."

"Couriers from national headquarters"—and I am still quoting—"are now being assigned to go into some 21 specific areas in the United States. Among the cities pinpointed for district Communist headquarters are Boston, Philadelphia, Buffalo, Pittsburgh, Cleveland, Detroit, Chicago, Minneapolis, Los Angeles, Seattle, and Denver. A target city for a forthcoming party building effort will be Houston, Tex."

The Communists are optimistic about the success of open party activities because they believe—and now Mr. Philbrick is quoting from the Cominform instructions that "* * * 'attacks and persecution' of party members will come only from 'Fascist and war-mongering reactionary elements,' who are clearly attempting to sabotage President Eisenhower's policies and program for world peace." These "savages," according to the Communist instructions, "are to be 'condemned' as 'enemies of the United States'."

I trust you realize that one such "savage" is speaking to you right now. This point was driven home by the chairman of the Wisconsin Communist Party at the Milwaukee meeting. In explaining the Communists' mission, Blair said: "We are back here to fight against the rise of McCarthyism."

Now, my good friends, I have no desire to exploit the implications of personal flattery contained in that statement. The Communists use the term "McCarthyism"—a word they coined—to describe everything they don't like. They mean by it, not only Senator McCarthy, but also Congressional investigating committees. They mean the FBI and the Government security program. They mean patriotic organizations who have been striving valiantly over the years to alert the American people to the dangers of communism. They mean those who favor a realistic foreign policy that recognizes the Soviet Government for what it is—a ruthless tyranny whose ultimate aim is the conquest of the United States. It is these people the Communists are going to fight against—and now, fight against in the open.

I first learned of the Milwaukee Communist meeting from a news clipping sent to me by one of my constituents. Across the top of the story I read this note from the sender: "How can they have the nerve?"

How can they have the nerve? What makes the Communists think they can pull off this new campaign to deceive the American people?

Part of the answer is painfully clear. The Communists are bound to be optimistic as long as we try to keep alive the spirit of Geneva—as long as the administration nourishes the myth that the Soviet Union is a peace-loving nation. Why shouldn't the Communists be optimistic when our own Government endorses the principal plank of their propaganda platform?

But there is a further reason for the Communists' optimism, namely, the increasingly successful anti-anti-Communist campaign here at home. This is the matter I want to discuss with you tonight—the efforts to reduce awareness of the Communist menace, to destroy our security program, to whip up public hysteria against anti-Communist measures. This campaign is being waged by the Communists, to be sure; but the heaviest blows are being struck by their numerous, and influential and very wealthy liberal allies, who, I insist, are doing as much damage to this country as the Reds themselves.

Take, for example, the Ford Foundation's notorious Fund for the Republic. Three years ago the Ford Foundation gave $15 million tax-exempt funds to a group of allegedly respectable, and distinguished liberals, and told them to conduct a number of study projects that would advance understanding of civil liberties. After 3 years' performance, it is now plain that this so-called research organization is nothing of the sort: it is a vicious anti-anti-Communist propaganda machine.

Many Americans have by now caught on to the fund's real purposes; but with its tax-exempt millions, and with the unanimous backing of the liberal press, this false-front organization is bound to have a profound influence in creating an atmosphere conducive to a Communist revival.

One of the reasons the fund is so helpful to the Communists is its president, Dr. Robert Hutchins. This so-called scholar, the former head of Chicago University—whose organization is now advising the American people that our security program is too tough—has some rather interesting ideas about those against whom the program is directed.

Let's listen to Dr. Hutchins' views on Communists, as he related them in 1949 to a committee of the Illinois Legislature. This testimony was given under oath.

Question: "So far as those who have stated they are Communists are concerned, do you not assume that their purpose must be subversive by definition?"

Dr. Hutchins' answer: "It is not yet established that it is subversive to be a Communist."

Next question: "There is no doubt in your mind about the Communist Party, itself, being a subversive organization, is there, Doctor?"

Hutchins' answer: "Well, I can't believe that that is true here, or the Communist Party would long since be illegal."

In other words, the man, whose organization is passing judgment on our security program, says that he doubts that the Communist Party is a subversive organization.

I think we should listen to one more observation by Dr. Hutchins.

Question: "Is there any doubt that the Communist Party is a conspiratorial fifth column operating in the interest of a foreign state?"

Hutchins 'answer: "I am not instructed on this subject. I understand many Communists say they do not operate under instructions of a foreign state."

Thus, the former chancellor of one of our leading universities, the "boy wonder," as you may recall, of the academic world during the thirties, says he is "not instructed" as to whether the Communist Party is a Moscow-directed conspiracy.

Now, my good friends, let's compare this statement with the recent claim of the Wisconsin Communist chairman that we mentioned a moment ago. Remember: He said the American people "realize there is no such thing as a Communist conspiracy?" This judgment might be a little premature, but why shouldn't they be optimistic when they can count on the Hutchins and organizations like the Fund for the Republic to peddle their line for them?

Incidentally, Hutchins hasn't changed his views a whit since 1949. Last month, at a press conference in New York, he said he would be glad to hire Communists to work for the Fund for the Republic—an organition that is supposed to be fighting communism; also he said that he had no objection to those who take the fifth amendment and refuse to tell whether they are Communists on the ground that the truth might tend to incriminate them.

Another reason the fund can be counted on to give the Communists a helping hand is in the person of its vice president, Mr. W. H. Ferry. "Ping" Ferry, as he is known, used to be director of public relations of the infamous CIO Political Action Committee. The CIO–PAC, as you will recall, spearheaded a Communist-inspired attempt to take over the Democrat Party in the middle forties—and was itself riddled by Communist Party members.

This former PAC propaganda chief, now second in command at the fund for the Republic, still, evidently, likes the same kind of company. Last year, for example, he joined a host of notorious Communist fronters to protest the holding of hearings by the Senate Internal Security Subcommittee on the Southern Conference Educational Fund. The subcommittee found that the Southern Conference Educational Fund was, in effect, simply a new name for the Southern Conference for Human Welfare, which was "conceived, financed, and set up by the Communist Party in 1938 as a mass organization to promote communism through the Southern States."

We get an even better idea of the fund's bias by taking a close look at some of its activities over the past year—activities which betray a single underlying purpose: to belittle the Communist menace and to create a fantastically distorted picture of the civil-liberties issue.

Take, for example, the fund's famous study of the Government loyalty-security program. The results of this investigation have now been published in a book entitled "Case Studies in Personnel Security"—a case-by-case story of how harshly our security program deals with suspected Communists.

Now, do you know how the fund went about making this survey? First, it appointed one Adam Yarmolinsky to head up the project.

Yarmolinsky then enlisted members of unsuspecting law firms throughout the country to interview the defense attorneys of Government employees who had been fired as security risks, so as to get the defense version of each case. These tales of woe were forwarded, unevaluated, to Mr. Yarmolinsky and his staff. The Yarmolinsky crew then culled from the field reports—still representing only the empolyee's side of the story—what appeared to be the worst cases, and prepared them for publication. The book is now palmed off to the American people as a balanced study of the Government security program.

It is interesting to note one method by which the fund's propaganda machine accomplishes its mission. In his introduction to the book, Mr. Yarmolinsky is careful—lest the fund be caught with its red underwear showing—not to call these cases typical. However, the claim is made that the cases are representative, in a highly charged emotional article on the Yarmolinsky collection appearing in the Saturday Review of Literature. Copies of this Saturday Review article are now being distributed throughout the country by, guess who?—the fund for the Republic.

Let's look at another of the fund's projects. Two years ago, the fund appropriated $185,500 for a study of attitudes toward communism and civil liberties. This study eventually begot a book called Communism, Conformity, and Civil Liberties, published this year—the main themes of which are (1) that Communists are merely a "nonconformist" "minority"; and (2) that this country has a distressingly small number of "tolerant" people, as the book describes them, who are willing to let avowed Communists spread Red propaganda in their communities. Incidentally, one of the professors who helped put this book together has a record of 15 Communist-front affiliations.

Take another of the fund's projects. A year ago this month the fund appropriated $75,000 of its tax-exempt money for "awards for outstanding original drama and documentary scripts on civil liberties themes." In September of this year the fund selected 19 prize-winning scripts and offered them to the television industry. As might be predicted, not a single dealt with the threat to civil liberties from communism. Instead, the dramas ridiculed the fight against communism, depicting situations that even the most imaginative Communist would be proud to have dreamed up. Here are some typical award-winners, described in the fund's own language.

"The invisible accuser: The fight of a woman surgeon to clear herself of malicious loyalty charges.

"The burden of the day: A prominent lawyer takes on the defense of a former Communist knowing his act will end his political hopes.

"The claws in the cat's paw: The smear of a teacher as a Communist by economy-minded citizens to forestall spending for school improvements.

"The inner curtain: A practical joke involving communism at a large industrial plant ultimately forces the perpetrator of the joke to resign."

Perhaps, the Communists didn't write these scripts, but they know a good thing when they see it. The Daily Worker devoted several columns in its September 16 issue, to a laudatory discussion of the prize-winning scripts.

Another project of the Fund for the Republic is its financing of the so-called freedom agenda. The freedom agenda has published a series of pamphlets designed to show that Communists are operating in the tradition of Thomas Jefferson, and that measures for protecting our Government against Communist subversion are a violation of Constittuional safeguards for "dissenters."

Still another fund project is its distribution of 35,000 copies of a book called the Fifth Amendment Today, by Erwin Griswold, dean of the Harvard Law School. Dean Griswold attempts through highly selective legal arguments to prove that one may not infer Communist leanings from the fact that a man refuses to answer questions about alleged Communist connections on the ground that a truthful answer might incriminate him. This book is being energetically promoted by Communist Party publications and Communist-front organizations and, of course, by the Fund for the Republic.

One more example: In a recent president's report, Dr. Hutchins states that the Fund for the Republic "has made an expanded version of the television film of Edward R. Murrow's interview with J. Robert Oppenheimer available to educational institutions and groups concerned with public affairs."

This Murrow film, as you may recall, is a thinly disguised attempt to elevate to national martyrdom one of the most dangerous security risks this country has ever known.

I don't think it necessary to go into Oppenheimer's record tonight: suffice it to say that this man admittedly contributed money to the Communist Party right up until the time he was asked to serve in our top-secret atomic-energy program—and then, after he had achieved unrivaled influence in the atomic-weapons field, told Harry Truman it would be immoral for us to produce a hydrogen bomb, knowing full well that the Soviet Union would soon produce an H-bomb of its own. The Fund for the Republic is now spending tax-exempt funds to make this man a hero.

I am sure that you in this audience have as much contempt for the work of the Fund for the Republic as I do. I am sure you are as outraged as I am that the United States Government—through its tax-exemption regulations—is, in effect, subsidizing this brazen campaign to belittle the Communist menace and undermine our security program. Don't you agree that the least we can ask of the "Fund to Destroy the Republic" is that it pay its taxes like everybody else?

Even the Communist Party has to pay an income tax.

I could go on and on, citing examples of how the spirit of Geneva is being implemented here at home—of how liberals are giving aid and comfort to the Communists. If there were time, for example, I would like to discuss the activities of the Senate Subcommittee on Constitutional Rights—so-called—headed by Missouri's contribution to the leftwing bleeding-hearts club, Senator HENNINGS. HENNINGS is operating hand in hand with the Fund To Destroy the Republic in trying to persuade Congress to rip the guts out of the Government security program. No wonder the Communists are rejoicing, no wonder the Kremlin leaders are congratulating themselves on their smashing diplomatic victories, no wonder the Communist Party in the United States is coming above ground again. I suggest, my good friends, that it is time the American people start fighting back.

Tonight I want to mention three ways in which we can combat this new offensive by the Communists and leftwingers.

No. 1: We must rise to the defense of an effective security program, and insist that effective security standards be vigorously enforced. We must reaffirm the principle that working for the United States is a privilege and a trust—that it is not a "right," as the Communists and leftwingers claim, that is available to persons who have played ball with the Communists, and thus for all we know may be members of the conspiracy.

If a man has compromised himself in the past by joining Communist fronts and associating with known party members, he must suffer the consequences. If there is reasonable doubt that a man's loyalty is, four-square, to the United States, the benefit of that doubt must go to the Government and to the American people.

But we cannot save our security system unless we come to grips with those who are attempting to destroy it. We must therefore recognize that our enemies are not only the Communists but their leftwing allies—the Fund for the Republic, the ADA, the anti-anti-Communists in Congress and the executive branch—who are trying to whip up public sentiment against measures that will protect our country.

Some persons say, "Oh, MCCARTHY, aren't you being a little hard on the leftwingers? Isn't it true," I am sometimes asked, "that the lefties are good Americans, misguided perhaps, but who have been genuinely taken in by the 'civil liberties' red-herring?" My answer is yes, this may be true. But I have neither the patience nor the resources to attempt to find out the inner motivations of every person who helps peddle Communist propaganda. I say, don't call them Communists. Let's concede they are well-meaning people who have been "taken in" by Communist propaganda; but let's also be very clear about what team they are playing on. In terms of the damage they do, they are every bit as dangerous to this Nation as the Communists themselves. This Republic will not last one day longer by being able to say that its destroyers had good intentions.

No. 2, we must show those arrogant, gloating Communists—who say the American people are ready to welcome them back as just another political party—that they are dead wrong. The Communists are hopefully getting under steam a massive propaganda campaign, and a vigorous drive to recruit new party members. Our answer to them should be sharp and decisive. We should outlaw the Communist Party.

I submit that a criminal, conspiratorial fifth column, under instructions by a foreign power to try to overthrow our Government, has no legitimate claim to the protection of our laws. No nation that has any intention of surviving can afford to give legal license to those who, by intrigue, sabotage and lies, seek to destroy its institutions and way of life.

I am aware of the argument that outlawing the party would drive the Communists underground. This argument forgets, however, that the Communists need and desire an open party—as well as an underground. They want to maintain both, an underground of secret party members who do the the party's conspiratorial work of sabotage, espionage and policy subversion; and an open party that conducts propaganda and recruiting activities. One effect of outlawing the party would be to block overt efforts to sell to the American people under false and deceptive colors, the Communist package of lies.

And please don't let me hear that old canard about free speech. For one thing, a Communist does not engage in free speech and free thought: He is told what to say and think. For another, Communists are not just carriers of a political ideology: They are criminal conspirators, dedicated to the overthrow of our Government, and must be dealt with as such.

When a man commits a murder you don't, in the name of free speech, present him with a soapbox and invite him to try to win converts to the cause of murder.

No. 3—and this is most important of all—we must puncture and deflate the illusory and farcical spirit of Geneva. This means getting our foreign policy back on a realistic and moral footing—acknowledging that international communism is our implacable enemy, and that world communism will either destroy us or be destroyed.

The spirit of Geneva is the natural consequence of our having taken as our own policy guide the Communist line of peaceful coexistence. I hold that coexistence with

communism is neither desirable nor possible nor honorable.

As I said to the Senate on August 1—just 3 days after the Geneva Summit meeting, when most of the Senators were gushingly congratulating the President for having made friends with the Kremlin leaders—"Is it not still self-evident that hostility to communism—overt, articulate, unyielding hostility—is both necessary and desirable? We must be hostile to communism for the same reason that good is hostile to evil. Good cannot clasp the hand of evil without becoming evil, and without inviting destruction by evil. You cannot offer friendship to tyrants and murderers without advancing the cause of tyranny and murder."

God gave us these great United States and inlaid on our broad land the peerless gem of freedom. We owe it to God and to ourselves to guard that freedom today against the most monstrous tyranny in history. Let us ask God to give our generation that strength and courage and wisdom with which He has never failed to grace the American people in time of great trial.

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, MUNICIPAL THEATER, TULSA, OKLA., DECEMBER 7, 1955

My fellow Americans, I always like to speak in the Midwest, here in the heart of the United States, because we don't have to spend our time discussing elementary things. You people in Oklahoma—unlike some of the persons I know in Washington—don't need a grade-school education on what the Communist fight is all about.

There is no need, for example, to tell a Tulsa audience that the so-called spirit of Geneva is the spirit of illusion, folly, and appeasement.

In Tulsa, it is unnecessary to explain that when you propose friendship with tyrants and murderers—however good your intentions—you advance the cause of tyranny and murder.

There is no hesitation in this audience, I am sure, to refer to Communists as the eternal enemies of God and the human race, and to the Soviet Union as an unregenerate international bandit—even though the Paul Hoffmans and the Milton Eisenhowers tell us that such words constitute a serious breach of coexistence etiquete.

I trust that you good Americans will never lose sight of, nor minimize, the central fact of this struggle—namely, that however broad the smiles of the Kremlin leaders become, international communism is irrevocably commited to destroy this Nation and our way of life.

We cannot do business, we can never make friends, with that sort of enemy.

Creating the spirit of Geneva was, of course, a great triumph for Communist diplomacy, and the Kremlin leaders are still exploiting that triumph to the hilt. But the spirit of Geneva was not only a diplomatic victory for the Communists, it has had repercussions here at home.

A little over a month ago, an event occurred in the city of Milwaukee that gives some idea of why the Communists were so anxious to create the spirit of Geneva. In a small, dingy, auditorium, known as Wetzel's hall, some 40 persons gathered to hear an announcement. The 40 shifted in their seats somewhat nervously, as the speaker arose behind his rostrum. Many of those in the audience had not seen this man for 5 years.

"I went away," the speaker began, "to carry on the struggle for the rights of the people, for democracy, and peace. Where I went and what I did is not important. But what is important is what is happening today at Geneva. I decided to come back.

Who was the speaker? Who was the man who decided to come back? He was Mr. Fred Bassett Blair, chairman of the Communist Party of Wisconsin. And the audience? The 40 persons in the audience were the hard core of a Communist Party unit, who had responded to the party's call to come out into the open again.

"We disappeared," Mr. Blair went on, "because of the people who fostered the menace of McCarthyism. They made it impossible for us to carry on our work."

"But now," said Blair triumphantly, with a smile as big as Khrushchev's, "there have been wonderful changes. We are no longer political exiles in our own country. Since the Geneva Conference of the Big Four powers, people are waking up because they realize there is no such thing as a Communist conspiracy. This thinking makes it possible for us to return."

This scene I have just described to you, my good friends, was reenacted in numerous American cities last month, possibly right here in Tulsa, as the Communist underground decided to crawl up from under the planks, and renew a public campaign to overthrow our Government. The spirit of Geneva, and the supposed defeat of McCarthyism, these are the things that, according to the Communists, make it possible for them to show their faces again.

The local party leaders did not, of course, make their decisions independently: they were operating under direct instructions from Moscow, instructions that were revealed recently by Mr. Herbert Philbrick, a former FBI undercover agent who still has contacts in the Communist underground. Here is what Mr. Philbrick wrote just a few days before the public meeting in Milwaukee:

"The Cominform, world headquarters of the Communist International has ordered top Red agents here to bring the Red network in the United States above ground, and to reinstate the American Communist Party as a 'legitimate national political party.'"

Philbrick went on to say "the new instructions, obviously part of the Red pattern * * * since the Geneva conference, signals a major and abrupt shift for the Communist movement in the United States, which, for the last 4 years has operated almost entirely as an underground * * * apparatus."

"Couriers from national headquarters"—and I am still quoting from Philbrick—"are now being assigned to go into some 21 specific areas in the United States * * * among the cities pin-pointed for district Communist headquarters are Boston, Philadelphia, Buffalo, Pittsburgh, Cleveland, Detroit, Chicago, Minneapolis, Los Angeles, Seattle, and Denver. A target city for a forthcoming 'party building' effort will be Houston, Tex."

The Communists are optimistic about the success of open party activities because they believe—and now Mr. Philbrick is quoting from the Cominform instructions—that "* * * 'attacks and persecution' of party members will come only from 'Fascist and war-mongering reactionary elements,' who are 'clearly attempting to sabotage President Eisenhower's policies and program for world peace'." These "savages," according to the Communist instructions, "are to be 'condemned' as 'enemies of the United States'."

I trust you realize that one such "savage" is speaking to you right now. This point was driven home by the chairman of the Wisconsin Communist Party at the Milwaukee meeting. In explaining the Communists' mission, Blair said: "We are back here to fight against the rise of McCarthyism."

Now, my good friends, I have no desire to exploit the implications of personal flattery contained in that statement. The Communists use the term "McCarthyism"—a word they coined—to describe everything they don't like. They mean by it, not only Senator MCCARTHY, but also congressional investigating committees. They mean the FBI and the Government security program. They mean patriotic organizations, and people, who have been striving valiantly over the years to alert the American people to the dangers of communism. They mean those who favor a realistic foreign policy that recognizes the Soviet Government for what it is—a ruthless tyranny whose ultimate aim is the conquest of the United States. It is these people the Communists are going to fight against—and fight against in the open.

This new Communist declaration of war is one reason that no politician—whether he be Republican or Democrat—can come before the American people in 1956 and, in good conscience claim to have brought peace to the world. There will never be real peace so long as the Communists own one-half of the earth and are determined to enslave the other.

I first learned of the Milwaukee Communist meeting from a news clipping sent to me by one of my constituents. Across the top of the story I read this note from the sender: "How can they have the nerve?"

How can they have the nerve? What makes the Communists think they can succeed in this new campaign to deceive the American people? This is the subject I want to deal with tonight. I want to talk about some recent events that make it all too clear why the Communists are optimistic about the future.

On November 7, just 1 month ago today, a message was sent from Denver, under the signature of President Eisenhower, to Klementi Voroshilov, chairman of the Presidium of the Supreme Soviet of the U. S. S. R. Before reading it, let me say I am reluctant to attribute the inspiration for this message to the President. He was on his sick bed and was probably under the influence of the "palace guard," that shadowy left-wing cabal consisting of the Paul Hoffmans, Harold Stassens, and Milton Eisenhower—men who are masterminding our foreign policy even though they were not elected to office and will surely be repudiated by the American people if they ever become candidates.

Here is what the Eisenhower message said: "On this national anniversary of the Soviet Union, I am happy to convey to your Excellency and the people of the Soviet Union the best wishes of the people of the United States for progress toward a permanent and just peace."

And what was this "national anniversary" that we helped the Communists commemorate? It was the day of the Russian revolution—the day that marks the beginning of slave labor camps, of collectivized farms, of the closing of the churches, of the enthronement of the worst tyranny the world has ever known.

No wonder the Communists are cocky about the future, when our President, in effect, congratulates the Communist leaders on the anniversary of the day they managed to enslave 200 million people.

The incredible thing about this message is that it was sent on behalf of the people of the United States. How many of you people in Tulsa were consulted about it? How many in this audience thought it proper to congratulate the peoples of Russia on the anniversary of the day they were put in chains. Yet this is exactly what was done in your name—and in mine.

The fact that we keep making degrading overtures to the Kremlin is one of the reasons the Communists think they have a rosy future ahead. But there are others. Most important are the increasingly successful attempts to whip up public hysteria against anti-Communists and any effective efforts to protect our Government against Communist subversion. This campaign was inspired by the Communists; but the heaviest blows are being struck by their numerous, and influential, and wealthy liberal allies who, let me assure you, are doing as much

damage to this country as the Reds themselves.

Take, for example, the Ford Foundation's notorious Fund for the Republic which claims to be conducting an objective study of the Communist menace and of the Government security program. The other night in Chicago I discussed the activities of this organization in some detail—activities that show it is an anti-anti-Communist propaganda machine.

I wish I had the time tonight to go into the full story of an organization that is spending $15 million of tax-exempt money to help spread the Communist line. But we can get some valuable insights into the Fund for the Republic by taking a quick look at its president, Dr. Robert Hutchins.

In 1949, Dr. Hutchins was asked about his views on communism by a committee of the Illinois Legislature. Here is his testimony given under oath:

Question. "So far as those who have stated they are Communists are concerned, do you not assume that their purpose must be subversive by definition?"

Dr. Hutchins' answer: "It is not yet established that it is subversive to be a Communist." (This was in 1949.)

Next question: "There is no doubt in your mind about the Communist Party itself being a subversive organization is there Doctor?"

Hutchins' answer: "Well, I can't believe that that is true here, or the Communist Party would long since be illegal."

In other words, the man, whose organization is passing judgment on our security program, says that he doubts that the Communist Party is a subversive organization.

Let's listen to one more observation by Dr. Hutchins.

Question: "Is there any doubt that the Communist Party is a conspiratorial fifth column operating in the interests of a foreign state"?

Hutchins' answer: "I am not instructed on this subject. I understand many Communists say they do not operate under instructions of a foreign state."

Thus, the former head of one of our leading universities, the "boy wonder" as you may recall, of the academic world during the thirties, says he is "not instructed" as to whether the Communist Party is a Moscow-directed conspiracy.

Now let's compare this statement with the recent claim of the Wisconsin Communist leader that we mentioned a moment ago. Remember: Blair said the American people "realize there is no such thing as a Communist conspiracy." This judgment might be a little premature, but why shouldn't the Communists be optimistic when they can count on the Dr. Hutchinses and organizations like the Fund for the Republic to peddle their line for them?

With Hutchins feeling the way he does about communism, is it any wonder that the Fund for the Republic's method of "investigating" the security program was to gather together the complaints of discharged Communist suspects, and then palm them off to the American people as an objective account of how the program works.

Is it any wonder that the fund sponsored a book on communism the main themes of which are (1) Communists are merely a "nonconformity minority," and (2) that this country has a distressingly small number of "tolerant" people who are willing to let avowed Communists spread Red propaganda in their communities.

Is it any wonder that the fund appropriated $75,000 in prizes for television scripts that ridicule and dsparage the efforts of those who are attempting to oppose Communists?

Is it any wonder that the fund distributed a book by the dean of the Harvard Law School, who tells his readers they may not infer Communist leanings when a man refuses to answer questions about alleged Communist connections on the ground that a truthful answer might incriminate him?

Is it any wonder that the fund financed the distribution of Edward R. Murrow's television film on J. Robert Oppenhimer—which attempts to elevate to national martyrdom a man who admittedly gave money to the Communist Party right up until the time he was asked to serve in our top secret atomic-energy program, and after that, was responsible for the disastrous postponement of our hydrogen-bomb program?

I am sure that you people in Tulsa have as much contempt for the work of the Fund for the Republic as I do. I am sure you are as outraged as I am that the United States Government—through its tax-exemption policies is, in effect, subsidizing a brazen campaign to belittle the Communist menace and undermine our security program. Don't you people in this audience agree that the least we can ask of the "Fund to Destroy the Republic" is that it pay its taxes like everybody else?

Even the Communist Party has to pay an income tax.

Unfortunately, however, the heaviest blows on the Communists' behalf are being struck in the halls of the United States Congress. Last May, the Democrat-controlled Senate set up a committee, headed by Missouri's special contribution to the "leftwing bleeding hearts club," Senator HENNINGS, to investigate the alleged threat to civil liberties. The Communist Party had been calling for such an investigation for many months. Ever since then Senator HENNINGS has used all the power of a Senate committee in an attempt to wreck the Government security program.

Recently I issued a public statement, pointing out that HENNINGS was waging jungle warfare against the security system, and was making it easier for the Communists to infiltrate our Government. HENNINGS replied the next day and said, in effect, McCARTHY doesn't understand what we are trying to do when we attack the security program: we are trying to "strengthen the security program."

For hypocrisy and doubletalk, I have seen few equals to that statement. Let's look at the record. A little over a month ago in St. Louis, Mo., HENNINGS demanded three changes in our security program. He said (1) we can no longer utilize the doctrine of "guilt by association." This is leftwing gobbledygook for saying that the fact a man has belonged to 5 or 15 or 30 Communists fronts, and regularly associates with espionage agents and members of the Communist Party, must not even be taken into account in deciding whether he should be given a sensitive Government job.

Then (2) HENNINGS insisted we must do away with a "system of secret informers." This is leftwing gobbledygook for saying that FBI undercover agents cannot disclose the treasonous activities of Government employees, unless they reveal their own identity—which would, of course, destroy our counter-espionage system overnight.

But HENNINGS was not satisfied with that. He also contended (3) that we should get rid of the "reasonable doubt" loyalty standard. This means—as HENNINGS well knows—that John Stewart Service, John Patton Davies, Esther Brunauer, and dozens of others suspected of Communist activities would be back behind their desks in the State Department. These proposals are not exactly what I would call "strengthening our security program."

Senator HENNINGS is no fool. He knows that if these recommendations were put into effect, the security program would be left in shambles. He is bright enough to realize that this would open the floodgates to wholesale Communist infiltration of our Government. HENNINGS, of course, is playing politics. He is trying to prove—although he knows better—that Republicans are unmindful of civil rights. But this kind of cheap politics cannot be tolerated when the life or death of this country is at stake.

Another aspect of the security program about which HENNINGS has raised a great hue and cry is what he and the leftwingers call "built-by-kinship." This issue has been so misrepresented and distorted by the leftwing press that the public has very little idea of how family relationships actually figure in a security determination. Actually, of course, a security decision does not involve the question of guilt at all—the question is whether a person is suitable for a sensitive job, whether he is a good security risk. So the term is, to begin with, a deceptive misnomer. But beyond that, it is not the policy of the Government—contrary to what the leftwingers allege—to make an adverse finding on the basis of family relationships alone; this is just one of the factors to be taken into account.

Now: Does it make sense, as HENNINGS says, to pay no attention whatever to the fact a man's relatives are Communists? Let's test HENNINGS' theory by an actual case, the facts of which have now been documented. Let's suppose that, several years ago, a man named Harold Ware applied for a job in the State Department. Assuming the State Department was operating as it should, it would have called for an investigation and the FBI would have reported as follows: This man Ware's mother was a member of the central committee of the Communist Party, was Communist candidate for Governor of Pennsylvania in 1938 and for Congress in 1940; his mother's first husband was the Communist candidate for Governor of North Dakota in 1932; his brother was a Communist organizer and was the Communist candidate for Governor of Minnesota in 1930; his first wife was a Communist pamphleteer; and his sister conducted a music studio at which Communist meetings were held.

Now, according to HENNINGS, the State Department should not have taken these factors into account because that would have been endorsing the doctrine of guilt by kinship. I suggest, however, that the Department would have been wise to look a little further into the case of Mr. Harold Ware. A further look might have been rewarding, for the Department might have found that this man with the highly suggestive family tree was, himself, the organizer of one of the Washington cells of the Communist Party later exposed by Whittaker Chambers.

Now, does the fact his relatives were Communists prove that Harold Ware was a Communist? Of course not. But it should raise a flag, a warning to security officers and be considered as part of the whole picture. HENNINGS would have us ignore this information altogether—indeed, it seems he would have us ignore every type of circumstantial evidence of treason.

The thing we must remember is that the Communist conspiracy is a covert operation, and that Communist agents are usually successful in covering up their tracks. Clues of disloyalty are few and hard to find. HENNINGS must know that we cannot rule out, one by one, every method of spotting Communists and still hope to catch them.

Yet this is exactly what he is attempting to do. Three weeks ago, the Hennings committee began attacking the Army for trying to correct lax security practices that had been exposed by the Senate Investigations Subcommittee under my chairmanship. You will recall that we discovered in the Peress and Belsky cases (incidentally, has anybody discovered who did promote Peress?) that the Army was giving honorable discharges to soldiers who took the fifth amendment when asked about their Communist connections. After the Peress case,

the Army corrected that particular situation—corrected it, that is, until HENNINGS arrived on the scene. Last month the Hennings committee, day after day, hammered away at Army officials for refusing to grant honorable discharges to fifth-amendment Communists.

At one point in the barrage, HENNINGS berated the Army for merely including as one of the items to be taken into account in deciding a security case the fact that the man took the fifth amendment. HENNINGS' counsel said: "How can you justify that, either on the constitutional basis, or on just the basis of morals? If a man is entitled to rely upon his constitutional privilege, how can the Army hold that against him?" Now do you get this picture? The Army, as part of a routine security investigation, makes a list of all of the information about a man that might possibly be considered derogatory—that is before any decision is made about the man—and it includes in this list the fact that the soldier says "I refuse to tell whether I am a Communist on the grounds that the truth might tend to incriminate me." But the Hennings committee says, "No, you can't do that; that's immoral."

There is, however, a sequel to this story. Due to Hennings' daily browbeating of Army officials, the Army changed its regulations and they are now worse than they were before the Peress case. The other day, the Army issued an amazing new directive. In effect, the new directive says to Communists and Communist party-liners who are drafted into the Army: All you have to do is take the fifth amendment, and then you will be able to avoid military service altogether, and go back to civilian life with no disgrace or stigma attached to your name.

I simply cannot understand the topsy-turvy moral standard that prevails in some quarters. How can we, in good conscience, ask loyal American boys to give several years of their lives to their country's service, when we allow Communists and Communist party-liners—by pleading the fifth amendment—to go scot free, neither drafted nor disgraced?

After this directive was issued, Hennings said, "We are making progress. I look forward to further improvements in the regulations as the subcommittee prosecutes this inquiry."

If what Hennings is doing represents an improvement to our security system, then I suggest we need some improvement in the type of men who conduct congressional investigations, and we need it as fast as we can get it.

I have no desire to get into politics tonight but I feel we must talk some now about Hennings, the Democrat. There is no way in the world of divorcing responsibility for the activities of a Senate committee from the political party which has control of the Senate. Moreover, the activities of Hennings' committee are the responsibility of the national leaders of the Democrat Party—who, anytime they choose, can find ways to call off the dogs, to stop the efforts to destroy our security program.

Several days ago I addressed a letter to the three leading candidates for the Democrat presidential nomination—Adlai Stevenson, Estes Kefauver, and Averell Harriman—asking them to repudiate Senator HENNINGS and his committee. None of them has done so. As a matter of fact, I am unaware that a single Democrat leader has spoken up and condemned HENNINGS on the grounds that the proper concern of the United States Senate is with exposing Communists and not with protecting them.

Therefore, we must face facts and start talking about the qualifications of the two major political parties to lead our country. I would like to be able to tell the American people that the Democrat Party is alert to the dangers of the Communist menace—for I know that millions of rank and file Democrats throughout the country abhor communism. But I cannot and I will not overlook the demonstrable fact that the Roosevelt-Truman-Stevenson leadership of the Democrat Party has, for the past 23 years, made life easier for the Communist Party-liners.

Most of that record is well-known. Let's look, however, at the most recent chapters. A year ago this month, Democrat Senators, en bloc, voted to censure me—and why? Was it because I had tried to cover-up a tax delinquency? That question was pretty well settled when the Government admitted it owed me $1,056.75 for overpayment of taxes. Was it because General Zwicker was mistreated? As of this moment, General Zwicker's case is being examined by the Criminal Division of the Justice Department, on the recommendation of the McClellan committee, for possible perjury prosecution. No, these things—as everybody knew—were window dressing. The real crime was McCarthyism—i e., tough anticommunism.

But after that the Democrats were anxious to cover their tracks. So on January 10th of this year, after they had obtained control of the Senate, a resolution was introduced and passed which said: "it is the sense of the Senate that its appropriate committees should continue diligently and vigorously to investigate, expose, and combat * * * [the Communist] conspiracy and all subversive elements and persons connected therewith." Now, this resolution was manifestly an attempt to offset the impression that the Democrats' censure vote was a vote in favor of letting up on prosecution and exposure of Communists. Nonetheless, I though we should give the Democrats a chance to make good on their promise. So I said at that time on the Senate floor that I would give the Democrats 1 year to prove they meant what they had said about exposing Communists.

That year is now almost up. What do the Democrats have to show for that year? What is the box score? During the course of this past year not a single Communist in Government has been exposed by the Democrat-controlled Congress—not a single one. But worse than that: instead of trying to expose Communists, Democrats have concentrated their efforts on trying to emasculate our security program.

First, there was the Johnston committee that spent its time parading discharged Communist suspects before the public to tell their tales of woe. Then came the Hennings committee with its stepped-up assault on efforts to rid the Government of Communist influence. Such is the record for the Democrat Congress. In the light of that record, it is to imperil the safety of this country to say that communism should not be a political issue in 1956.

After 20 years of being soft on communism, there are no signs that the Democrat leadership has improved—not the slightest hint of repentance or acknowledgement of past errors. Yet have the American people not a right to demand some evidence of repentance and improvement if communism is to be dropped as a political issue? Did Harry Truman repent when he lied about his actions protecting Harry Dexter White, and then tried to defend those actions? Has Adlai Stevenson ever indicated a change of heart after his wisecracks in the 1952 campaign about Communists in the Bureau of Wildlife and Fisheries? Do the activities of the Hennings committee suggest that Democrats are ready to stop following the party line on the subversion issue?

Political leaders must learn that they cannot dance to every tune the Communists play and then expect to be entrusted with the conduct of our national affairs. Until they do learn this—whether they be Democrats or Republicans—they must answer to the American people at the ballot box.

The Communists are gloating today. They are congratulating themselves on their smashing diplomatic victories, and on their remarkable success in getting non-Communist Americans to wage their propaganda war for them. Of course, they have good reason to rejoice.

At the same time, I am convinced the Communist victory celebration is a little premature. The Communists may have the majority of the Nation's press, and tax-exempt foundations, and Senate committees doing their leg work for them. But if they think this means that victory is theirs, they have not reckoned with the ordinary American when he gets aroused and decides to fight back.

We are still, thank God, a Republic. By the power of the vote, the American people can see to it that their own wholehearted, unconfused, militant opposition to communism becomes the policy of the United States Government. We have our work cut out for us in 1956. Let's do a job for America.

ADDRESS BY HON. JOE MCCARTHY, OF WISCONSIN, MANION FORUM OF OPINION, MUTUAL BROADCASTING SYSTEM, JANUARY 8, 1956

My fellow Americans, tonight I want to talk about the most serious problem confronting us: Our losing battle against international communism; and I want to discuss what I believe to be the basic cause of our continuing defeats, namely, that we have permitted the Communists to write our foreign policy, as well as their own.

Any man who is honest and who views the situation objectively will admit that, since the Communist-inspired Geneva summit meeting, America's world position has progressively deteriorated. In Western Europe, instead of honoring their commitments to NATO, our allies are decreasing their armed forces. The West Germans are losing faith in us and are in danger of being forced into a neutralization deal with the Communists. A Comunists arsenal is being established in Egypt. The Near East is torn with anti-American riots. In North Africa, anti-Western feeling is at a fever pitch. Millions in India cheer the Communist leaders. Communist enslavement of eastern Europe has, in effect, been ratified by the United Nations by its admission of Soviet puppets in the infamous package deal.

Our fighting allies in Asia have been abandoned and one of them, Free China, has been threatened with blackmail for taking a moral position on the package deal. Indeed, President Eisenhower personally sent three cables to Chiang Kai-shek, urging him not to veto the admission of Outer Mongolia to the U. N.

Now, what has happened since that proud day in 1952 when the American people endorsed a militant, realistic foreign policy, grounded firmly on moral principle; when we told the world that we would not only oppose further Communist advances, but would seek to roll back the Communist tide? On November 4, 1952, we elected a President whose party platform had said: "We shall again make liberty into a beacon light of hope that will penetrate the dark places. * * * (We will) end * * * the negative, futile, and immoral policy of containment which abandons countless human beings to a despotism and godless terrorism, which, in turn, enables the rulers to forge the captives into a weapon for our destruction."

That statement in the Republican platform of 1952, and its overwhelming endorsement by the American people, struck terror into Communist hearts; and that terror was redoubled in the first few months of the Eisenhower regime by deeds—when, for example, President Eisenhower wisely revoked Truman's orders to the Seventh Fleet to protect Communist China. The Communists feared that if this new policy continued, their plans for world conquest would be frustrated.

It was therefore essential for the Communists to persuade the Eisenhower administration to get back on the road of cringing appeasement that had been traveled for 20 years under Democrat rule. This was to be their supreme mission in the months ahead.

Let us see how the Communists went about their task. On August 8, 1953, the then dictator of the Soviet Union, Georgi Malenkov, made a major foreign policy speech which laid down the line for a dramatic switch in Communist international tactics. The world situation, according to Malenkov, required the easing of international tensions. (How many times, incidentally, have we heard that Communist phrase parroted by Western statesmen during the past year?) Malenkov then went on to explain that the easing of international tensions could be accomplished by great power negotiations. This, then, was the Kremlin's strategy.

The job of undermining America's new moral position was assigned to the international Communist apparatus. In the fall of 1953, the Communist Party of the United States called a secret national conference. Let me read from the main report delivered at that conference. These were Moscow's instructions to the American Communist Party in 1953: "Both the needs and the possibilities of the present moment call for the development of a veritable crusade for peaceful negotiations, for a top-level meeting of the big powers. * * * It is to this end that we must turn all our energies, our utmost skill, tenacity and resourcefulness * * * We must develop a full-throated demand for peaceful negotiations that will ring from one end of the country to the other."

We all know that this Communist propaganda drive, like so many others in the past, was completely successful. Last spring, a year and a half later, the administration reversed its policy and agreed to a meeting at the summit. A black headline in the Communist Daily Worker screamed: "Geneva: A peoples' victory." And well the Communists might have rejoiced, for when officials of the United States Government shook hands, smiled and drank vodka with the Kremlin despots, our moral position had been smashed beyond recognition. We had adopted a foreign policy that had been devised in Moscow. Thereafter, the spirit of Geneva became the keystone of American policy, and concrete Soviet political victories began to pile up, one after the other.

Today, many people are saying, "Yes, Geneva was a mistake, but we know this only through hindsight." But I say this knowledge does not come to us through hindsight. The tragic consequences of falling for the Communist coexistence line were, I believe, foreseen by the majority of the American people—as, indeed, they must have been by anyone who possessed the most rudimentary knowledge of Communist teachings.

On June 16 of last year, just a few days after the President first announced that he was going to meet with the Kremlin leaders, I advised the Senate that the Soviet peace offensive was a fraud, and that we were falling for a Communist ruse. I reminded the Senators of a speech delivered by Dmitry Manuilsky in 1930 to the Lenin School of Political Warfare—which is just one example of traditional Communist teaching. Here is what Manuilsky said 26 years ago: "War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. The capitalist countries, stupid, and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we will smash them with our clenched fist."

I warned the Senate that by acceding to Communist demands for the summit meeting, we were helping to fulfill Manuilsky's prediction.

On June 20, when it was apparent that the administration was determined to go through with the conference, I urged the Senate to recommend that the subject of the Communist satellites be put on the Big Four agenda. It was, after all, ludicrous to attempt to ease world tensions without so much as discussing the real cause of those tensions—namely, the Communist slave empire. But the Senate refused to so advise the President because—the argument ran—that would be tying the President's hands.

Because the Senate was too timid to exercise its constitutional right to advise the President on matters of foreign policy, the Communist slave empire was never discussed by the Big Four; and, as a result, the hopes of the captive peoples for obtaining their freedom were dealt a death blow.

By thus abandoning our liberation policy and substituting for it the Communist inspired spirit of Geneva, we courted the disastrous events of recent months.

The overriding fact of the present situation is this. There is not a single square mile in the entire Communist empire that is threatened by, or under pressure from, the free world. Thanks to our policy of peaceful coexistence—which we dutifully observe and the Communists do not—the Communists have absolute freedom to maneuver in any direction they choose. They are therefore on the offensive everywhere in the world. The free world, on the other hand, has denied to itself the right to try to liberate Communist territory, and is thus completely on the defensive. The result is that we are frantically trying to plug the holes and build up the dikes in a hundred places on the globe. We spend millions of dollars in one area, only to find that the Communists have advanced in another area. We then discover, several months later, that the millions we spent produced only more anti-Americanism.

I am not one of those who believe that the world situation can be repaired by the American taxpayer handing out more money. This is the argument of the Democrat leaders and the administration, which now wants to double our foreign-aid bill from two and one-half to five billion dollars. Handouts are no substitute for a foreign policy. We received startling evidence of this fact when the most enthusiastic welcome in India for Khrushchev and Bulganin occurred in a town built with American money.

What is really needed today is a return to the principles of the Republican platform of 1952. We must give all the aid we can spare, not in bribes to the neutralists, but to our fighting allies, the Free Chinese, the South Koreans, the South Vietnamese. Above all: We must give hope to the enslaved peoples all over the world by refusing to recognize their Communist rulers and by encouraging them to throw off their chains.

Now, it goes without saying, I think, that we cannot restore a liberation policy by returning the Democrat Party to power in 1956. Under the Roosevelt-Truman leadership, the Democrats appeased the Communists for 20 years; and they took the lead last spring in insisting that we accept Communist demands for top-level negotiations. (In fact, it was WALTER GEORGE, Democrat, chairman of the Senate Committee on Foreign Relations, who first urged the President to agree to the meeting.) Moreover, the definitive answer as to how the Democrat Party feels about communism was provided a year ago when, without a dissenting vote, Senate Democrats fell into line and carried out Democrat Party orders to censure a man who had fought Communists too vigorously and too successfully. At the same time, a majority of Republicans voted against condemning hard anticommunism.

We will get the kind of foreign policy we need only by electing those Republicans who, over the years have proved they understand that America will never defeat communism by appeasing communism.

We must all work for a rejuvenated foreign policy in the months ahead. I trust that you, my fellow Americans, will lend to this fight the time, energy, and devotion that are necessary to save our country.

Address Delivered by Hon. Barry Goldwater, of Arizona, Before the National Association for the Advancement of Colored People

EXTENSION OF REMARKS

OF

HON. BARRY M. GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered before the National Association for the Advancement of Colored People at Tucson, Ariz., on October 12, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Three years ago, I met with this organization in Tucson, I answered specific questions as to my position in regards to governmental policies that effected the Negroes of America, and my answers to these questions indicated to you, I believe, that I was wholeheartedly in sympathy with the program outlined, at that time, by our candidate for President, Mr. Eisenhower.

I believed then, and I believe now, in the equal dignities of all our people, whatever their racial origin or background may be. I believe in their equal right to freedom and opportunity and benefits of our common citizenship.

I am happy to be able to stand here tonight and report to you the accomplishments of this administration, in the field of what we might call civil rights. Actually though, it is a report on what has been accomplished for all Americans, because I don't think we should continue to look on Americans as a nation of minorities and majorities, but rather as a nation dedicated to the proposition that all men are created equal and that they are endowed by their Creator with certain inalienable rights, and that among these, are life, liberty, and pursuit of freedom. I believe that we should recognize in these words of Jefferson, the source of our freedom and the fact that freedom given by God is given to all people whether they be white or black, or Catholic, Protestant, or Jew.

These accomplishments have been American accomplishments and I am proud to have participated in bringing them about. In these accomplishments we find the fulfillment of promises made to all American people in 1952 and I would like to indulge you for a few moments in a recitation of these accomplishments.

1. A Republican administration will win an honorable and just peace.

The Korean war ended shortly after President Eisenhower was inaugurated. Service-

men who had been prisoners of war for as much as 3 years were brought home to their families. Not since that time has it been necessary for mothers and wives to send their sons or husbands to war.

2. A Republican administration will end segregation in the Nation's Capital.

By agreement with the administration, racial restrictions were lifted in theaters, hotels, and all other public places during Inauguration Week, beginning January 19, 1953. Most places of business cooperated. It was understood that while it would not be advertised (even after the inauguration), if Negroes presented themselves they would be accepted. With few exceptions, this plan of action was carried out. In August 1953 racial bars were dropped officially. Negroes now attend theaters, restaurants, and other public places, as well as public schools, in the District of Columbia. There has not been one reported incident as a result of the general integration. The Bell Telephone Co., Capital Transit, and other private industries are hiring colored employees on all levels. This is the result of the work of the President's Committee on Government Contracts, which has worked quietly but diligently to eliminate the evils of segregation and discrimination in hiring.

All recreational facilities are now operated on a nonsegregated basis.

Segregation among District of Columbia employees has been eliminated, even to the controversial Fire Department, which was an issue for so many years.

The District of Columbia public housing (National Capital Housing Authority) program is now operating on an integrated basis.

Civilian as well as uniform personnel are included in the integration program on all bases and in all departments of the District of Columbia government.

3. A Republican administration will stop bias and Jim Crow in Federal departments and bureaus, which the Democrats have not done.

On January 18, 1955, the President created, by Executive order, the President's Committee on Employment Policy, which automatically abolished the old Fair Employment Board. This Committee has increased in stature and reports directly to the President. Its purpose is to look into and straighten out problems on racial discrimination in the various executive departments.

When this administration took office there were many areas in which Negroes were not employed above a messenger; in some few there were none whatsoever. These inequities have been practically eliminated—opening up unlimited opportunities to youth—men and women all over America. No longer can it be said that our great sacrifices for education and preparation for participation in the American way of life are futile.

When President Eisenhower took office nearly half of the Negro units were still intact in the Army. Today, there are none. Over three-fourths of the Negroes in the Navy were in mess halls as servants when President Eisenhower took office. This system has been eliminated, and they are now serving in all branches of the Navy on an integrated basis.

All segregated schools at Army, Navy, and Air Force installations had been eliminated by the administration long before the Supreme Court handed down its decision against segregated schools.

There is no segregation in naval installations in the South; cafeterias, restrooms, and drinking fountains were all separate when the Republicans took over our Government in 1953.

Racial segregation has been eliminated from all the veterans' hospitals in the South, a feat said to have been impossible whenever this subject was discussed.

4. A Republican administration will make Negro Federal appointments of real importance, commensurate with the demonstrated ability of Negroes, as it did when in power before.

This is one of the brightest spots of this entire administration. Negroes are serving in administrative positions in practically every department of Government—many on a policymaking level, such as:

J. Ernest Wilkins, Assistant Secretary of Labor, the first Negro subcabinet officer. Wilkins was first appointed Vice Chairman of the President's Committee on Government Contracts, and as a result of his outstanding ability was chosen by Secretary of Labor Mitchell to be one of his assistants;

Scovel Richardson, Chairman of the Federal Parole Board—the first and only Negro ever to be appointed to the Board;

E. Frederic Morrow, Administrative Officer for the Special Projects Group in the Executive Office of President Eisenhower, promoted from Adviser on Business Affairs in the Department of Commerce;

Hon. Charles H. Mahoney, lawyer and insurance executive, first full delegate to the United Nations;

Marron W. Fort, Light Chemical Engineer in Israel under the Foreign Operations Administration (International Cooperation Administration) program, first to have ever served in such capacity;

Archie Alexander, Governor of the Virgin Islands;

Richard L. Jones, Ambassador to Liberia, who was first appointed Chief of Mission for Foreign Operations Administration (ICA);

Joseph H. Douglass, Special Representative of the Secretary of Health, Education, and Welfare;

John W. Roxborough II, Consultant to the Secretary of State;

Dr. Frank Snowden, Cultural Attaché, United States Embassy, Rome, Italy;

Samuel Pearce, Assistant to the Under Secretary of Labor;

Joseph Clark, Special Assistant to the Assistant Postmaster General;

Vernon Greene, Assistant General Counsel, Post Office Department;

Joseph Birch, member of the legal staff in the Fraud Division, Post Office Department;

Hon. Archibald J. Carey, Alternate Delegate to United Nations—and now Vice Chairman of the President's Committee on Employment Policy.

Attorney Julia Cooper, member of the legal staff of the Justice Department—was transferred and promoted from the legal staff of the General Services Administration. She was the first Negro to serve in the Legal Division of the General Services Administration, and is the first woman to serve in the Criminal Division of the Justice Department;

Brig. Gen. B. O. Davis, Jr., United States Air Force, is the first colored brigadier in the Air Force;

Alexander Laneuville, Special Assistant in the Office of Veterans' Administrator stationed in New Orleans—the first Negro to serve in such a capacity in the South;

Dr. Francis Hammond, Information Specialist, United States Information Agency;

Frank Walker, Administrative Aid in Postal Transportation in New Orleans—the first to serve in such a capacity in the South;

Attorney George E. C. Hayes, Chairman of Public Utilities Commission for the District of Columbia, is the first Negro to receive a Presidential appointment on any commission in the District of Columbia;

Joseph Ray, Racial Relations Adviser to the Administrator of Housing and Home Finance Agency;

Philip Sadler, Racial Relations Adviser, Public Housing Administration;

Joseph Rainey, information specialist, Housing and Home Finance Agency—this is a first;

Carmel Carrington Marr, area advisor on the staff of Ambassador Henry Cabot Lodge, Jr., the first and only Negro ever to serve in such a capacity;

L. B. Toomer, Register of the Treasury, the first to be so appointed since the administration of President William Howard Taft, also a Republican.

5. A Republican administration will appoint a Negro to an administrative office in the White House.

With the appointment of E. Frederic Morrow to the White House staff the 14-point program of campaign promises to minorities has been fulfilled. With still a year and a half to go in his first term, President Eisenhower will move on from here to attain greater rights and freedoms for all of us. A continuing program for the good of our great country and all its citizens can be expected as long as President Dwight D. Eisenhower, with his high religious and democratic concepts of the dignity of man, remains in the White House.

6. A Republican administration will make it possible for Negroes—not just one Negro, as now—to be placed in policymaking jobs in governmental agencies.

Of the more than 250 appointments by the Republican administration, such men and women as J. Ernest Wilkins, E. Frederic Morrow, Joseph Ray, Scovel Richardson, Joseph Douglass, Samuel Pierce, Richard L. Jones, George Maceo Jones, Charles Mahoney, Archibald J. Carey, Jr., Roberta Church, Carmel Carrington Marr, and others are on a policymaking level. This is a positive unmistakable demonstration by President Eisenhower and the Republican Party that the qualifications and ability of men and women of all races is the yardstick by which appointments are made. The color of the skin no longer is a barrier.

7. A Republican administration will strengthen the civil-rights section of the Justice Department.

In this particular field the administration has been outstanding. The Justice Department has been relentless in its attacks on the offenders of the civil rights of others; for example:

(a) In 1954 prosecution of the Ku Klux Klan in Florida and the Carolinas resulted in the conviction of nine North Carolina klansmen under the Lindbergh kidnap law. This brought a total of 40 convictions for floggings of citizens by lawless Kluxers who were taking many of their victims across State lines.

(b) In Alabama, Fred and Oscar Dial were convicted of peonage and sentenced to 18 months in prison. They would buy prisoners out of jail, then hold and work them for nothing on their plantation. One victim died after a beating inflicted upon him by one of the brothers.

(c) The courts upheld the Justice Deparment's contention that flogging is a crime under the Federal civil-rights laws in all State institutions. Thus there can be no more flogging of prisoners.

(d) The courts upheld the Justice Department's contention that civil-rights statutes pertain to Federal officers as well as those of States and municipalities. This resulted in the first conviction of a Federal employee for brutal treatment of a member of a minority race.

One of the most effective measures on the civil-rights front instituted by the Justice Department has been the inauguration of a program of indoctrination and preliminary training of all United States attorneys appointed by President Eisenhower. This was followed up by close liaison and direct supervision in civil-rights cases.

The new procedures have been very valuable in eliminating many of the misunderstandings and problems which existed in the civil-rights field in the past.

8. A Republican administration will not be tied down by a southern anti-Negro bloc in control of Congress and committees.

The 83d Congress was headed by Republican leaders. The committees were chaired

by northern and western Republicans. We saw no such disgraceful performance as in the present Democratic Congress, when the chairman of a District of Columbia Subcommittee, Representative JAMES C. DAVIS, of Georgia, conducted hearings for the sole purpose of ending the integration program in the Fire Department, which had been placed in operation by the Eisenhower administration; nor the disgraceful spectacle of one Democratic Congressman, ADAM CLAYTON POWELL, being attacked physically by a southern Democrat, Congressman CLEVELAND M. BAILEY, of West Virginia, in a committee meeting just because he insisted that the constitutional rights of Negroes be protected in the school-building program.

9. A Republican administration will be able to better enforce the antibias laws already on the books, but seldom invoked by prejudiced white officers.

All instances of encroachment on constitutional rights of Negro citizens anywhere in the United States have been investigated by the Justice Department and action taken to correct these abuses; for example, the quick action and fervor with which the FBI is investigating the murder of Rev. George Lee in Belzoni, Miss., has seldom been equaled in its history.

10. A Republican administration will really enforce the nondiscriminatory clauses of the Taft-Hartley Act which will break the grip of negrophobic labor unions.

A magnificent job has been done in this field; slowly but surely Negroes are being employed in all occupations. This has been done through the President's Committee on Government Contracts. The Capital Transit, the Chesapeake & Potomac Telephone Co., and many others are now hiring Negroes. The Armour Meat Packing Co. is now hiring colored white-collar workers. Many labor unions that formerly barred Negroes now include them as members.

11. A Republican administration will reduce taxes.

Taxes were reduced by the Republican Congress nearly $7½ billion. This is the largest tax cut ever given. This is the first substantial cut made by our Federal Government since 1948 when the 80th Congress, also Republican led, cut taxes $5 billion.

12. A Republican administration will protect the basic freedom of all people and stop the trend toward all powerful and costly centralized government.

This administration has reversed the 20-year trend toward centralization of power in Washington. Free enterprise is again operating full steam ahead, and we now have the greatest prosperity in the history of our country. More people are working than ever before, over 64 million workers are averaging over $70 per week take home pay. Thus more people benefit from this great prosperity than in any other period of history.

13. A Republican administration will not arouse false hopes of Negroes by promising what it never intends to deliver.

Candidate Eisenhower made no wild promises on civil rights. His approach has been one of action, not words. Every move has been directed toward the complete elimination of every vestige of segregation and discrimination in American life with first-class citizenship for all as a goal.

It would be an easy matter for me to stand here tonight and give the Republican Party full credit for these achievements, but in effect the people of America deserve an equal share in this instance. Inherently, an American has a sense of fair play and they realize that all of us are bound in a common destiny, namely, our spiritual faith in the dignity of all men under God. The achievement of this dignity rests with the individual and not with a bureaucratic Federal Government. Given the opportunity, all Americans who possess initiative and courage and a faith in our fundamental strength can achieve and maintain the dignity of material success, but more importantly he can retain that dignity granted him as a free child of God if he but does unto others as he would have them do unto himself.

The Communist Conspiracy

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. McCARTHY. Mr. President, I ask to have printed in the Appendix of the RECORD the following letters and press releases regarding the Communist conspiracy:

Letter from me to the President of the United States dated August 24, 1955.

Letter from me to the President dated September 21, 1955.

Letter from me to the senior Senator from Arkansas [Mr. McCELLAN] dated November 2, 1955.

Press release from my office dated November 9, 1955.

Another release dated November 13, 1955.

Another release dated November 25, 1955.

Letter from me to the senior Senator from Missouri [Mr. HENNINGS] dated November 29, 1955.

Letter from me to the Senator from Tennessee [Mr. KEFAUVER] dated December 2, 1955, copies of which were sent to Governor Averell Harriman of New York and Hon. Adlai Stevenson.

Letter from me to the Attorney General dated December 16, 1955.

Letter from me to the senior Senator from Arkansas [Mr. McCLELLAN] dated December 16, 1955.

There being no objection, the letters and releases were ordered to be printed in the RECORD, as follows:

AUGUST 24, 1955.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: Your administration claims to have brought prosperity to the country. I think there is an important sense in which this is untrue.

Some areas of the economy are, thanks to huge Government expenditures on our defense and foreign-aid programs, quite prosperous. But the prosperous times being enjoyed by industry and labor are not being shared by the farm community. A boom in industry exists side by side with a depression in agriculture.

In such circumstances it is difficult for the farmer to take your administration's prosperity claims seriously; before long the falacy will be brought home to the whole country. For prosperity in America is indivisible: we cannot have an unhealthy farm community without the disease soon spreading to the rest of the economy. As you know, the great depression of 1929–39 was preceded by a depression on the farms, and was caused in large measure by depressed farm prices with consequent loss in farmers' purchasing power.

The current farm depression is not only being tolerated by your administration; it is a direct and predictable result of your administration's farm program, which I can only describe as one of persecution of the farmer. Although I cannot imagine why this should be the case, it seems to me that your administration is engaged in open war against the farm community.

My feelings might be considerably different if your administration's farm program reflected a general economic policy, consistently applied to all segments of our economy. I would, that is to say, understand—and to a large extent sympathize with—a determination by your administration to reestablish throughout the economy the free-enterprise system, and to restore, gradually, to all aspects of our economic life the sovereignty of the free market place.

But your administration has shown no such inclination, except with respect to the farmers. As you well know, the Federal Government continues to give subsidies, directly or indirectly to industry and labor—so that there is probably not a major industry existing today that would not suffer serious dislocation if the Government were to single it out and force it to compete in an otherwise subsidized economy. The various subsidies to the nonagricultural elements of the economy have resulted in incomes to these elements, that have, in nearly every case, kept pace with national income trends. But under the Benson farm program of lower commodity loans and Government selling at depressed price levels, the farmer is experiencing economic hardships that have not been visited upon any other segment of the economy. The farmer is asked to compete for economic survival where his costs and taxes are as high as those of other elements of the economy but where his wages—i. e., farm prices—are deliberately being forced downward.

The parity concept suggests nothing more nor less than that farm prices should advance or retreat in unison with prices received for nonagricultural goods. When farm prices are at 100 percent of parity, the farmer is getting his fair share of the national income. But the farmer can never get prices at 100 percent of parity when the Government is in a position to establish the market price, and then goes on to buy and sell farm products at less than parity prices.

I simply cannot understand why your administration should want to work an injustice on the farmer. The Wisconsin dairy farmer—for an example—whose prices are now supported at 75 percent of parity—is asked to receive less for his labor than heretofore, while he continues to face the same taxes and the same costs of production.

The farmer is constantly assured by Mr. Benson and his lieutenants that he is better off than ever before. The farmer knows this to be untrue, and he can cite no less an authority than your own Department of Agriculture. Let me remind you of the statistics recently issued by the Department of Agriculture comparing the farmer's income of the past 4 years with that of the rest of the economy.

Date	Gross farm income	National income	Percentage
	Billion	*Billion*	
1951	$36.4	$277.0	13.1
1952	36.9	291.0	12.6
1953	35.5	305.0	11.6
1954	33.9	300.0	11.3
Average, 1946–50	32.2	211.0	15.2

In the light of these figures—which show not only that farm income itself is dropping, but that the farm community's relative share of the national income is steadily dropping—it is hard to deny that the farmer is getting a raw deal. I can assure you that your administration's claim of bringing prosperity to the country is a huge and tragic

joke to the Wisconsin dairy farmer—and, of course, to other members of the farm community.

If your administration is willing to put the country back on a free-enterprise footing, with no subsidies to anybody, that would create an entirely different situation. But a policy of favoritism in subsidies will never wash with the American people's sense of justice.

At one point in your political career, Mr. President, you apparently appreciated the farmer's claim to justice. On Ocober 4, 1952, at Brookings, S. Dak., you told the American farmers:

"The Republican Party is pledged to the sustaining of the 90 percent parity price support and it is pledged even more than that to helping the farmer obtain his full parity, 100 percent parity, with the guaranty in the price supports of 90."

You may have forgotten that solemn pledge, Mr. President, but I assure you that the farmer has not. I earnestly urge you to reexamine the position you took then, and see if it was not based on principles of justice and fair play.

A year ago, about this time, I asked you to honor your campaign pledge by urging Congress to enact such a farm program, and by instructing your subordinates to administer it in such a fashion, as would result in 100 percent of parity in prices at the market place. I predicted that if you administration failed in this, our party would lose the 1954 congressional elections. The experts seem to agree that the Republican Party's defeat in 1954 was caused primarily by the vote of an alienated, betrayed, and disillusioned farm community. There is every reason to suppose that the farmers will return precisely the same verdict in 1956 if your administration continues to press its war against agriculture throughout the next year.

I hope the Republican Party can honestly campaign under the "prosperity" banner in 1956. But we cannot do so unless your administration adopts a farm program that gives justice to the farmer and real prosperity to the country. May I suggest, Mr. President, that the problem is urgent, and deserves your earliest consideration.

Sincerely yours,

JOE MCCARTHY.

SEPTEMBER 21, 1955.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: I am deeply concerned, as I am sure you are, over the mounting assault on the administration's security program. Left-wing Democrats, in alliance with liberal-front organizations, have launched a full-scale attempt to discredit the Government security system. The current attack is, in part, politically inspired by men who desperately seek an "issue" for 1956; but it is also the fruit of an unrelenting Communist and left-wing propaganda campaign that for many years has sought to undermine public confidence in security measures—and, ultimately, to bring about the dismantling of the security system itself. The attackers are scoring new successes every day, and I predict they will continue to do so until the administration stands up on its hind legs and fights back.

Those who would keep Communists and security risks in Government have become so drunk with their successful attack on the security program, that in the case of the Communist Party of the United States versus the Security Control Board, even a United States Senator joined with the Communist Party in their demand that our security laws be declared unconstitutional.

The left-wing Democrats and the "civil liberties" cultists have hit upon a remarkably effective formula for discrediting the security program; thanks to the executive secrecy policy inaugurated by President Truman—which prevents the Government from telling its side of the story—the left-wingers have only to publicize the alleged grievances of discharged Government workers in order to make their point that we are back in the days of the star chamber.

With the deck thus safely stacked against the administration, Democrat-led committees parade before the public one ex-employee after the other to recount his "ordeal." The Democrat committee members and counsel express profound shock at what, in the absence of evidence in support of the Government's case, appears to be a terrible injustice to the employee. The Liberal press then gleefully retells the employee's story as though it were the whole story, and the public is led to believe that the administration of the security program is arbitrary, brutal, and unintelligent.

The Ford Foundation's Fund for the Republic, of which your personal friend and adviser, Mr. Paul Hoffman, is chairman of the board, has followed a similar approach. The fund's method of "evaluating the security program" is to compile alleged employee grievances, supplied by defense counsel of discharged security risks, and on the basis of such data, to publicize selected "cases" that seem to prove the Communist and liberal contention that the security program is a guise for a political witchhunt.

So far, the left-wing Democrats and the liberal fronts have had a free hand. So far, responsible administration officials have been unwilling, or unable, to stand up against the attacks and effectively defend the program. As a result, the vicious anti-security propaganda campaign—originally inspired by the Communists—is making headway and we are in serious danger of losing any semblance of the sort of security program that is needed to protect the Government against Communist subversion.

The dilemma of the administration is, of course, very real: as long as security officers are forbidden to discuss security cases, they are hard put to defend their actions before congressional committees. But in the interests of the Nation's security, a way must be found, and soon, to combat the new left-wing offensive.

In my judgment, the best way to protect the security program is to revoke Executive secrecy orders, insofar as they prevent security information from being divulged to United States Senators and Congressmen. I have, of course, always been opposed to the "blackout," and continue to regard it as a violation of legislative prerogatives. The Executive branch defies both the Constitution and principles of sound government when it denies to Congress information it needs to discharge its responsibilities. And now the evil has returned to plague its creators.

During the Truman regime, the blackout order was issued for the purpose of keeping from Congress data that would have exposed criminal negligence in the administration of the security program. But now by keeping the Truman order in force, the executive branch has been hoisted by its own petard. The secrecy order prevents the administration from showing that the program has improved, and from defending itself against the charge of overtoughness.

Congressional investigating committees should be given access to security files so that they may properly evaluate critcism of the program—whether the charge be that the program is too tough, or that it is not tough enough. Should you decide to divulge to committees the information to which they are entitled, I shall, for my part, urge the Congress to provide that no member of a committee or its staff be permitted to examine the files until he has received top security clearance, and that no specific information be divulged to the public that would, in the judgment of the Executive, endanger national security. Security would thus be protected, and congressional committees would be in a position to present to the American people a balanced, informed report on the administration's program.

Another possible consequence of the secrecy order should be noted—namely, that those responsible for the administration of the program may become demoralized by the sort of attack the left-wing is now waging. On several occasions, security officers have been hauled before Democrat-led committees, and asked to justify discharges or suspensions that appeared to be unwarranted on the basis of employees' complaints. The security officers were not, of course, at liberty to explain their actions. But knowledge of this fact did not prevent the committee or its staff from berating and ridiculing men who had been denied the means of defending themselves. In one case, Mr. Derrell Peterson, a Veterans' Administration security officer, was severely browbeaten by interrogators who showed little sympathy for his claim that silence had been imposed on him by Presidential directive. It is easy to see that such incidents can hamper sound administration of the program, for a security officer is certainly less likely, in a close case, to apply strict standards when he may be required to justify his decision publicly without being permitted to give his reasons.

If, however, you are unwilling to revoke the secrecy order, I suggest that you take the next best step—namely, commence a vigorous educational campaign to inform the public about the security program. If the executive secrecy order is to remain in force, administration spokesmen should make it absolutely clear to the American people that, for security reasons, they are getting, and can get, only one side of the story.

The public must be told that the "letter of charges" made public by the employee is at times incomplete and that the Government's evidence in support of the charges is either withheld entirely or disclosed in miniscule fragments.

In addition, the administration can, without violating the secrecy order, explain certain security practices that are now under attack.

Take, for example, the "suspension" issue: the left-wingers falsely claim that the fact a suspended employee is subsequently cleared proves he was dealt with unjustly in the first instance. The public should be informed that a case of reinstatement after suspension does not demonstrate a miscarriage of justice. Security officers are required to suspend an employee when derogatory information appears in his file, pending more extensive evaluation of the information and further investigation. The fact an employee is later cleared means only that he was able to explain the derogatory information to the satisfaction of the security board or of his department head; it most definitely does not mean the employee should not have been suspended, pending such explanation or the development of additional evidence. I believe, as I am sure you do, that mandatory suspension on the receipt of derogatory information is absolutely essential if our country is to be given adequate protection against the Communist conspiracy.

Or take the charge that too many jobs are considered "sensitive": the liberals contend for a security system that would recognize the sensitivity of a few select (but always unidentified) positions, and their argument is invariably made at the level of Adlai Stevenson's crack about spies in the Bureau of Wildlife and Fisheries. Administration spokesmen should make it clear that the great majority of Government jobs are sensitive in varying degrees—and should explain, with some examples, why this is so,

and let them make the further point that while there may be some positions that would be utterly useless to the Communists, it is practically impossible to draw a hard and fast line that will separate sensitive from nonsensitive jobs.

Even more important is the need for the public to appreciate the wide differences between the demonstrable Communist and the "security risk," that is, between the traitor and the potential traitor—and to understand that neither type can be entrusted with a Government job. The public should understand that a security officer is not required to make out a case of treason that would stand up in a court of law—is not even required to show that the employee is, more likely than not, a Communist. If the department head or his representative entertains a reasonable doubt about the man's allegiance, he must order that man to leave the Government service. Those who quarrel with this strict standard entirely miss the point about the covert nature of the Communist conspiracy and the difficulties of obtaining legal evidence of treason.

Unfortunately, the security net will inevitably catch some persons who are not Communists. This is one of the prices of national safety. But the public must realize that the personal injustice allegedly involved in such cases is much less than the disgruntled employee or his lawyer may claim. Every Government employee is aware that working for the Government is a privilege, and is on notice that the Government may at any moment—and at its discretion—revoke that privilege. The employee is thus forewarned that associations, past or present—or, indeed, the associations and circumstances of relatives who are susceptible to Communist pressures—may cost him his job. If a man believes that the well-advertised risks of placing his economic bets on a Government job are too great, he is free to seek employment elsewhere.

These and other aspects of the security program should be emphasized vigorously and often. The leftwing attack is proceeding with increasing viciousness and irresponsibility. We must fight back. And I believe that you, Mr. President, should assume personal leadership of the defense. May I suggest that you devote a major speech to this subject in the very near future. Republican leaders throughout the country should then be urged to take their positions in the line. We should also attempt to enlist conservative Democrats in the fight, for our national security is surely an issue that transcends party lines.

We should not claim that the security program is beyond reproach. It has improved, but it is far from perfect. For example, recent investigations have disclosed delays in the handling of security cases that appear unreasonable. That situation ought to be remedied. Much more important: an impartial investigation would reveal that certain Government departments are still too lax in the application of security standards, and that potential traitors are still in Government.

We can undertake to remedy these defects and, at the same time, restore and maintain public confidence in the basic ideas of the program. We will have taken a firm step in the right direction, should you see fit to repeat your excellent speech on the Communist menace made at Milwaukee, Wis., on October 3, 1952, in the course of which you said that:

"To work for the United States Government is a privilege, not a right. And it is the prerogative of the Government to set the strictest tasks upon the loyalty and the patriotism of those entrusted with our Nation's safety."

The leftwingers are having a field day at the expense of the Nation's safety. It is our imperative duty to the American people to resist their unprincipled campaign—a campaign that, if successful, will open the door once again to large-scale Communist infiltration of our Government.

Sincerely yours,

JOE MCCARTHY.

NOVEMBER 2, 1955.

Hon. JOHN MCCLELLAN,
United States Senator, Chairman, Senate Permanent Investigations Subcommittee, United States Senate, Washington, D. C.

DEAR SENATOR MCCLELLAN: After an intensive investigation which dates back to nearly a year ago, I have succeeded in uncovering facts which, if true, establish the existence of a currently functioning Communist cell in one of the Federal agencies.

Since I am no longer chairman of the investigations subcommittee, and do not have the power of subpena, the job of tracking down and verifying the leads that have been given to me over this period has been extremely difficult. Nevertheless, sufficient information has now accumulated to convince me of the existence of a grave and present threat to the security of this country.

My information indicates that the National Labor Relations Board is literally honeycombed with individuals identified either as members of the Communist Party, or as having had years of constant and close association with know and/or suspected Communists and Soviet agents. Moreover, it appears that this shocking situation has been condoned by the responsible NLRB authorities for many years.

I am now prepared to turn over to you, as chairman of the Senate Permanent Investigations Subcommittee, the results of my investigation so that the Committee's staff of investigators with its power of subpena may prepare the individual cases for public hearings. I should therefore like to urge that you immediately call an executive session of the Committee so that I may furnish you and the other members with the information I have gathered.

May I emphasize that my information incriminates a large number of individuals who at this very moment hold top-level jobs in this Government agency. I understand that another congressional group is in possession of information concerning past subversive activity in the NLRB. While it is of great importance that such evidence of past subversion be brought to light, the present situation appears to be so critical that, in my opinion, the investigations subcommittee must immediately undertake an inquiry of the facts I am prepared to present.

With a limited staff and no public funds, it has been impossible for me to follow up every lead and double-check every datum that has been brought to my attention. I can, however, assure you that all of my information has been furnished by informants of high reliability and with indisputable access to the pertinent facts. I am sure that, after you have heard the evidence, you will agree that it constitutes a cogent and alarming prima facie case against the adequacy of security enforcement in this Government agency.

Undoubtedly, powerful and bi-partisan pressures will be exerted upon you and the committee to prevent an investigation. For the evidence reflects not only upon the past Democrat administration of Mr. Roosevelt and Mr. Truman but also upon the present administration of Mr. Eisenhower.

The Nation is well aware that the Communists successfully infiltrated the Government during the 20 years of Democrat rule. Many Americans, however, have been led to believe that since January 1953 the Republican administration has dislodged most, if not all, subversives. I was among those in 1952 who were sure that this would be done if the Republican ticket were elected, and I campaigned for the Republican candidate on the basis of the pledge that Communists and security risks would be eliminated from the Government. Consequently, no one can be more distressed than I by the realization that the well-meaning efforts of the present administration in that direction have at least partially failed.

Both parties stand to be embarrassed by an exposé of the NLRB situation; yet I am confident you will frustrate any politically inspired attempts to prevent the Committee from performing its clear duty. I know you agree that partisan considerations must pale in the face of a common threat to us all.

As you know, no Federal agency during the last 20 years has had more influence upon the economic and social structure of the Nation than the National Labor Relations Board. The subversion of the Board is consequently a prime goal for those whose mission is to destroy our way of life.

With its network of branch offices—in New York, Philadelphia, Baltimore, Atlanta, Boston, Chicago, Buffalo, Cleveland, Cincinnati, Detroit, Los Angeles, Minneapolis, Pittsburgh, St. Louis, San Francisco, and other large cities—and in the light of its tremendous daily impact on labor-management relations, the NLRB, from its inception in 1935, presented an ideal target for Communist infiltration. The record is replete with evidence that the Communists were very successful in placing their agents in top-level jobs. In 1940, when the nature of the Communist conspiracy was only vaguely understood in Congress, a House committee headed by Representative SMITH of Virginia reported that the NLRB was heavily infiltrated. My information is that the conspirators still wield a powerful influence in the Board's operations.

To give you an idea of the situation now existing in the NLRB, I am herewith setting forth some of the data in eight of the cases, as an indication of the nature of the evidence gathered in my investigation. You will note that one of the cases, No. 8, is a Truman presidential appointee, a member of the five-man National Labor Relations Board. I shall, of course, mention no names here since these individuals are entitled to testify under oath at executive committee sessions and furnish whatever explanations are available. However, I shall be glad to give the committee full details on the names, dates and circumstances surrounding these and the other cases.

Case No. 1: This National Labor Relations Board official enjoys high connections both on Capitol Hill and in the Washington office of the Board. He was fired from the Labor Board in 1954 after a hearing during which he admitted under oath that he had been a Communist Party member. He admitted that he had made false statements in denying this fact when he applied for employment, attempting to justify this position by asserting that he had never been an American Communist—only a British Communist.

Despite his denying having been a member of the Communist Party of the United States, the evidence is that this man taught in a Communist Workers school in this country. He also supported the campaign of a western Congressman who has since invoked the fifth amendment when questioned about his Communist connections.

This man was properly dismissed on grounds of questionable loyalty. The almost incredible fact is that he was rehired a short time later, reportedly on the intervention of a member of the NLRB itself, by the NLRB, which had discharged him as a potential traitor. He is presently employed by the NLRB.

Case No. 2: This woman was a secretary to the Regional Director of the National Labor Relations Board. She was fired in 1954 after a loyalty hearing on the basis of past and

present association with known Communists and subversives. She was rehired a few weeks later and given back pay upon the reported intercession of the same Board official. She is an employee today.

Case No. 3: This individual was fired in 1953 after a Loyalty-Security Board had unanimously recommended his separation upon hearing the record of his Communist activities. He was rehired 8 months later, in 1954, again upon the reported intercession of the same high official.

Case No. 4: This individual, an ex-convict, was a reported close associate of a foreign atomic scientist who fled behind the Iron Curtain. He was identified as a member of the Communist Party in a western State. He was given a clearance, despite these facts. Even though he remains employed in the office of the Chairman of the NLRB in Washington, D. C., his case has been referred to the Department of Justice for possible perjury prosecution.

Case No. 5: This employee was identified as a member of the Communist Party. At a loyalty board hearing in 1949, he at first denied, then admitted that he may have been a Communist. He was given a second loyalty hearing in 1955 and cleared because the confidential informants of the FBI could not be produced. A recommendation for perjury action against him has been sent to the Justice Department. Nevertheless, he remains presently employed by the NLRB.

Case No. 6: This young woman admitted in applying for employment that she had been a member of the Young Communist League. She was nevertheless hired. Investigative reports show that she has continued extensive Communist Party activities, and that her husband was also a member of the Young Communist League. Recommended loyalty board hearings on this person have not been held. She is presently employed as a field examiner with access to classified defense installations.

Case No. 7: This man is currently a regional director of the National Labor Relations Board. He was appointed to that position by Nathan Witt. This regional director was a lecturer at the Philadelphia School of Social Sciences and Art which was cited by the Attorney General as "an adjunct of the Communist Party." Recommended loyalty board hearings on this man have not been held.

Case No. 8: This individual is a prominent member of the National Labor Relations Board. The evidence relative to this case is sufficiently alarming to justify an immediate investigation. The derogatory information on him was so extensive and his position so important that his case was submitted to the White House. His complete file is reported to have been taken to Independence, Mo., by President Truman when he retired from office. Yet he remains in his high office with the National Labor Relations Board.

The American people have been told that communism in the United States is an exaggerated menace. As you know, this is a myth propagated by the Red leaders and the left-wingers. Communism is still an ugly, evil, and powerful threat to our Government and to our liberties. The American people have a right to know that men devoted to a godless ideology have been installed in high office in our Government, have successfully run the gauntlet of the loyalty security system, and remain in positions where they are able to influence policy and shape the destiny of our Nation. This fact will be brought home to the public if this investigation is pressed with vigor and determination. I am confident you and the committee will do just that.

Sincerely yours,

JOE MCCARTHY.

PRESS RELEASE, NOVEMBER 9, 1955

Mr. Molotov's vigorous restatement yesterday of the Soviet Union's intention to communize Germany leaves Secretary Dulles with no alternative but to break off the Geneva negotiations. To continue the conference in the teeth of this reaffirmation of Soviet imperialistic designs would serve no useful purpose, and would create still further dangers to the western position.

On August 1, I told the Senate that, despite all the smiles and handshakes, the Geneva summit meeting produced not the slightest change in the traditional Soviet position on German unification and European security, and that it was thus inviting disaster for us to play the Communists' friendship game. Some of my colleagues advised postponing judgment until the October Foreign Ministers' meeting. That meeting has been held, and with it has disappeared even the most visionary basis for hoping for a Soviet change of heart.

Obviously, there is nothing more to be said at Geneva, by either the Communists or ourselves, on the questions of Germany and European security. This means the conference will dribble off on the subjects of East-West trade and cultural contacts. It approaches insanity, in the light of Molotov's reaffirmations of Communist objectives, for our diplomats to try to work out agreements that will strengthen the Russian economy, and that will further facilitate the sending of Communist cultural delegations to the United States and other western countries.

The deceptive and farcical spirit of Geneva was at the outset, and remains, the chief propaganda tool of our admittedly implacable enemy. Any attempt to keep it alive is fraught with perils for the free world.

Mr. Dulles deserves credit for standing firm at Geneva for the American policy of a free and unified Germany. It is his duty now to return to the United States, to advise the American people that the recent Communist peace offensive has been root-and-center fraudulent, and to set about restoring our Soviet policy to a realistic basis.

PRESS RRLEASE, NOVEMBER 13, 1955

There is a pressing need for the administration to correct an absurd situation that deprived the country of the invaluable services of one of its greatest sons. Ever since 1951 when President Truman, for partisan reasons, relieved him of his far eastern commands, Gen. Douglas MacArthur has been compelled to sit on the sidelines of the free-world's struggle against communism. This has been an extraordinary exile inasmuch as General MacArthur is a world statesman of unchallenged stature, and unquestionably one of our foremost experts on the Far East—the area where the fight against communism will probably be won or lost.

But today there is an additional reason for summoning General MacArthur's services. Due to his unfortunate illness, President Eisenhower is not now able to carry, personally, the full burdens of his office. In view of the continuing crisis in the Far East, the President's task would be immensely facilitated if he and his advisers had the benefit of the daily counsel of this wise man and seasoned area expert.

I therefore urge that General MacArthur be asked to serve as special Presidential adviser on far east affairs. The appointment would considerably lighten the President's workload and worries, and would assure the American people that their affairs are in capable hands.

PRESS RELEASE

The leadership of the Democrat Party should immediately call a halt to the disgraceful and dangerous activities of the Democrat-controlled committee under the chairmanship of Senator HENNINGS, of Missouri. Under HENNINGS all the power of a Senate committee is being used to wage jungle warfare against the Government security system on the argument that it is too tough on Communist suspects. The Hennings committee is being used as a "front" for leftwing organizations such as the Fund for the Republic and the ADA, whose principle objective is to torpedo any effective security program.

The Hennings committee activities are not only a disgrace to the Senate and to the Democrat Party, they pose a grave threat to the security of the United States. I note that not one Democrat leader has come forward to condemn the Hennings spectacle—which indicates that the national Democrat leadership is as soft as ever on the Communist issue.

The Communists-in-government question should not be an issue between America's two political parties. They should be united in efforts to fight Communist infiltration. However, unless the Democrat leadership does something to curb the activities of the Hennings committee, Communist subversion will be a major issue in the 1956 campaign. If the Democrat leadership does not remedy the situation then the millions of Democrats throughout the country, who abhor communism, will have no alternative but to put Republicans in control of the congressional committees.

When I was chairman of a committee that was attempting to expose Communists in government and in defense plants, there was a great hue and cry by the Democrat leaders and the leftwing press against one-man committee hearings. I note that now—when HENNINGS is conducting one-man hearings to "protect the rights" of Communist Party-liners in government—not a single objection is to be heard from the Democrat leaders or from the leftwing press.

NOVEMBER 29, 1955.

Hon. THOMAS C. HENNINGS, Jr.,
United States Senate,
Washington, D. C.

DEAR SENATOR HENNINGS: Last Friday I commenated on the activities of your one-man committee, pointing out that you were making it easier for Communists to infiltrate our Government. Your reply to that statement has been brought to my attention, and let me say that the Sir Galahad pose you attempted to strike did not quite come off. The only people who can reasonably call you their hero are the Communist Party liners whose antisecurity propaganda campaign your one-man committee is so energetically promoting.

You stated that you are attempting to strengthen our security program. This claim was double-talk and hypocrisy at its worst: One November 3d at St. Louis, you demanded three changes in security procedures which, if adopted, would leave the security program in shambles. You urged, in effect, that we get rid of the reasonable doubt standard under which the benefit of the doubt in loyalty cases is given to the Government. You contended that the facts that a man's associates are Communists and that he has joined Communist organizations should not even be taken into account in determining his security status. Finally, you insisted that the Government be forbidden to make use of derogatory information gathered by undercover FBI agents. Far from strengthening the security program, these changes would open the floodgates to wholesale Communist infiltration of our Government.

Most recently, you brought the Army under attack for trying to correct lax security practices that were exposed by the Senate

committee under my chairmanship in the Peress and Belsky cases. Day after day, your committee hammered away at the Army for refusing to grant honorable discharges to soldiers who take the fifth amendment when asked about their Communist connections. During one of the sessions (vol. 7, pp. 1049–1065), your chief counsel, supported by you, berated the Army for merely including as one of the charges against a soldier the fact he had taken the fifth amendment when asked about Communist activities. Mr. Hocker said: "How can you justify that, on either a constitutional basis, or on just the basis of morals? If a man is entitled to rely upon his constitutional privilege, how can the Army hold that against him?"

The result of this daily browbeating of Army officials was the promulgation of an amazing Defense Department directive. In effect, the new directive says to Communists and Communist Party liners who are drafted into the Army: "All you have to do is take the fifth amendment, and you will be able to avoid military service and go back to civilian life with no disgrace or stigma attached to your name." In other words, loyal American youths must give several years of their lives to their country's service, but Communists and Communist Party liners go scot-free—neither drafted nor disgraced.

After that directive was issued, you commented: "We are making progress. I look forward to further improvements in the regulations as the subcommittee prosecutes this inquiry." Progress for whom, improvement in whose behalf, Senator?

The frightening thing about your efforts to wreck the security program is that they apparently have the support of national Democrat leaders—none of whom have yet repudiated you or your committee. It is a sad commentary on Democrat leadership that the only Senate Committee now holding hearings on the Communist issue is waging jungle warfare against our security system instead of attempting to expose and get rid of Communists and Communist Party liners. For this choice of objectives the Democrat Party bears full responsibility. I do not want Communist subversion to be an issue in the next campaign, but I assure you it will be an issue, unless your committee desists from activities that give aid and comfort to this country's enemies.

I am sure that the millions of Democrats throughout the Nation who abhor communism join me in this protest against your committee's activities.

Sincerely yours,

JOE MCCARTHY.

LETTER WRITTEN TO SENATOR ESTES KEFAUVER, GOV. AVERELL HARRIMAN, HON. ADLAI STEVENSON

DECEMBER 2, 1955.

DEAR SIR: It is evident that you are being seriously considered for the Democrat presidential nomination in 1956. Therefore, I think it proper that at this time you take a stand on one of the major issues that will confront the American people in the coming election, namely, how to deal with the never-ceasing Communist attempts to infiltrate our Government. I think it is important that the public, and especially the delegates who select the Democrat nominee, know your views on this vital question.

On January 10, 1955, after the McCarthy censure, and after the Democrat Party had obtained control of the Senate, a resolution was introduced and unanimously passed which said, in part:

"It is the sense of the Senate that its appropriate committees shall continue diligently and vigorously to investigate, expose and combat * * * (the Communist) conspiracy, and all subversive elements and persons connected therewith."

That resolution was admittedly designed to counter the impression that the unanimous vote of the Democrat Party on the censure issue meant that "the Senate would terminate or soften its investigation of communism and subversion."

Although I voted for the resolution, I commented at the time that the resolution amounted to a declaration against sin, and that the Democrat Party would have to prove by deeds that it had ceased to be soft on the Communist issue. I added that I would give the Democrats 1 year to demonstrate that they had meant what they said.

That year is now nearly up. So far, under Democrat leadership, congressional investigating committees have not exposed a single Communist in Government. But this is not the most serious indictment of the Democrat Party. Instead of exposing Communists, the Democrat leadership has seen fit to join in the Communist-inspired campaign to discredit existing measures for combating subversion. While I did not expect any progress to be made in exposing Communists, I could hardly anticipate this development: That the Democrat Party would flagrantly and unabashedly expose its softness toward communism by attempting to destroy the security measures now in force.

First, the Johnston committee attempted to whip up hysteria against the security program by parading before the public a long line of discharged Communist suspects and inviting them to relate how badly they had been treated. No attempt was made to evaluate the complaints or to present the Government's side of the cases.

But the most serious threat to the safety of this country is the activities of the Democrat-controlled subcommittee under the chairmanship of Senator HENNINGS. The manifest objective of the Hennings subcommittee is nothing less than the total emasculation of the security system.

Under the guise of protecting constitutional rights, HENNINGS has brought under attack practically every security procedure that is useful in detecting Communists and getting rid of them. If HENNINGS has his way the only person who would be caught in the security net is the man who announces "I am a present member of the Communist Party, and here is my party card to prove it." The procedure changes urged by the Hennings subcommittee would open the floodgates to wholesale Communist infiltration of our Government.

Inasmuch as the Democrat Party now controls the Senate, the activities of the Hennings subcommittee are the direct responsibility of the Democrat Party. The Democrat Party therefore has been put on record as being more concerned with protecting Communists than with exposing them. As things stand now, this is the record upon which the Democrat Party will have to campaign in 1956.

I have often said that it is not my wish for Communist subversion to be an issue between our two political parties. But the American people will make this an issue, unless the Democrat national leadership repudiates activities that give aid and comfort to our country's enemies. The public is fast losing patience with politicians who dance to every tune the Communists play and then ask to be entrusted with the conduct of the Nation's affairs.

I therefore call upon you to repudiate the antisecurity vendetta being conducted by Senator HENNINGS and to condemn all other attempts to weaken our national security. If you fail to take this action then you have no right to ask the American people, either in the primaries or in the national election, to endorse your candidacy.

Sincerely yours,

JOE MCCARTHY.

DECEMBER 16, 1955.

Hon. HERBERT BROWNELL, Jr.,
Attorney General, Department of Justice, Washington, D. C.

DEAR MR. BROWNELL: I make reference to a letter addressed to you on November 14, 1955, by Hon. JOHN L. MCCLELLAN, chairman of the Senate Permanent Subcommittee on Investigations, which reads:

"Reference is made to my letter of April 12, 1955, wherein I referred to you various material concerning Brig. Gen. Ralph W. Zwicker. At that time, I requested that your office advise whether there appeared to be a violation of the perjury statute and what action your Department intended to pursue.

"It would be appreciated if you would advise me as to the status of the case."

I am informed that your office has replied to this letter to the effect that the Zwicker case has been referred to the Criminal Division, but that no action has, as yet, been taken.

As the ranking Republican member of this subcommittee, I feel obliged to remind you that continued delays in the disposition of this case may reflect adversely on the present administration. The case was originally referred to your Department 8 months ago, because this subcommittee was of the opinion that General Zwicker's testimony might constitute the basis of a perjury prosecution. I submit that any further delay will arouse suspicions that the Department is permitting political considerations to interfere with the administration of justice.

May I be advised at the earliest possible moment of what action is to be taken.

Sincerely yours,

JOE MCCARTHY.

DECEMBER 16, 1955.

The Honorable JOHN L. MCCLELLAN,
Chairman, Permanent Investigations Subcommittee, United States Senate, Washington, D. C.

DEAR SENATOR MCCLELLAN: I am deeply concerned over the attacks by the Johnston and Hennings committees on the Government security program. In my opinion, these committees have consciously sought to discredit anti-Communist security measures by means of ridicule, unfair emphases and downright misrepresentation. The committees are deliberately portraying the security program as a ruthless, bungling Gestapo-like operation and this distorted picture is being passed on to the public with great gusto by the left-wing press. The result is that the Communist Party is winning a stupendous propaganda victory and may soon achieve its objective of destroying the security system altogether.

I enclose for your careful reading a photostat of an article published in the Washington Star of December 11, 1955—one of literally hundreds of the same tendency—which shows the kind of games the left-wingers are playing with the security issue. This article deals with the Hennings committee's so-called investigation of the Army's policy of assigning to "controlled duties," and refusing to grant honorable discharges to, inductees who take the fifth amendment when questioned about their loyalty to the United States.

I have read in their entirety the relevant transcripts of the Hennings committee hearings, and let me say that this story faithfully records the distorted version of security procedures developed by that committee. This team of clever publicists so twists the facts as to make the Army's position look ridiculous. The article, for example, "proves" that the Army compels an inductee to exercise his constitutional privilege, then punishes him for doing so.

When considered step by step by anyone who is acquainted with the security prob-

lem, and who takes a realistic view of the measures that are necessary to protect our country, the Army procedures that are under fire are utterly reasonable. To begin with the Army asks the inductee, in effect, whether he is loyal to the United States. (Do Hennings and left-wingers want the Army to induct persons without obtaining this information?) It then tells the inductee that if he chooses not to disclose whether he is loyal to the United States, the way to avoid such disclosure is to invoke his constitutional privilege. (Do left-wingers have in mind some other way in which an inductee can justify refusing to assert his loyalty?) The Army then must determine what bearing the invocation of the fifth amendment has on the inductee's security status; it usually decides against giving him full security clearance and an honorable discharge. (Are the left-wingers saying that the Army should completely ignore the implications of an inductee saying, "I cannot tell the truth about Communist connections because the truth might tend to incriminate me?")

Of course, the left-wingers never commit themselves on just what step in the process is wrong. Their purpose is to whip up public sentiment against a caricature of the whole—and thus to pressure the Army into emasculating its program or dismantling it altogether.

Daily browbeating of security officers by the Hennings committee has forced the Army to revise its procedures for dealing with fifth-amendment cases, and the new regulation creates a situation more absurd and more dangerous than existed when our committee went into the Peress case. The new regulations call for a loyalty investigation prior to induction. The result is that a Communist or Communist Party liner—or, for that matter, anyone who wants to dodge the draft—can, by merely invoking the fifth amendment, avoid the draft and return to civilian life with no mark or stigma attached to his name.

I am informed that ridicule and intimidation by Senate committees and the press has caused a general relaxation of efforts by the executive departments to expose and get rid of Communist suspects. My purpose in writing you is to suggest that our committee, which is charged with overseeing the operations of the executive branch of the Government, has a clear duty to attempt to repair the damage done by the Hennings and Johnston committees. First, we should give the Defense Department and the other Government agencies an opportunity to explain the operation of the security program in an atmosphere other than that of a "kangaroo court." We should make it clear to the executive officials that our interest is in strengthening the security program, not in weakening it.

Second, our committee should resume efforts to expose the Communists who are still in our Government. It is truly a sad commentary on the political leadership of the Senate that the only committees dealing with the Communists-in-Government issue are directing their fire at those who are attempting to prevent Communist infiltration, instead of at those who are doing the infiltrating.

This gets me over to a subject to which I hope you will give the most careful consideration. Unless Senate committees—all of which are Democrat-controlled—start fighting Communists instead of helping them, there is no way on earth to prevent the Communists-in-Government problem from becoming a political issue in 1956. The two parties should be united in their determination to fight Communist subversion, but on the basis of the Democrat Party's Senate performance to date, they are not united; and unless this situation changes, it will be the duty of Republican candidates to point out the differences to the electorate.

On January 10 of this year, the Democrat-controlled Senate passed a resolution that provided, in part:

"It is the sense of the Senate that its appropriate committees shall continue diligently and vigorously to investigate, expose and combat . . . [the Communist] conspiracy, and all subversive elements and persons connected therewith."

I voted for that resolution, though I felt that its real purpose was to offset a widespread impression that the unanimous Democrat vote on the censure issue foreshadowed a letup in efforts to expose and get rid of Communists in Government. I stated at that time that I would give the Democrat leadership 1 year to prove that it had meant what it said.

That year is now nearly up and so far, not a single Communist in Government has been exposed by a Senate committee. Moreover, so far as I have been able to discover, no attempts to uncover subversives in Government are being made by a Senate committee. Instead, Democrat-controlled committees have concentrated on discrediting the security program. The responsibility for this strange choice of objectives must be laid directly to the Senate Democrat leadership and to Democrat committee chairmen.

I believe that you personally, along with many other Senate Democrats, are anxious to expose Communists; but I also believe you have been hamstrung by the left-wing leadership of the Democrat Party. The interests of the country require that good Democrats emancipate themselves from left-wing domination. Unless this is done, unless the Senate starts providing some opposition to the Communist-inspired anti-security campaign, instead of abetting it, Republicans in 1956 will have no choice but to cite the Communist issue as reason for restoring to them the chairmanships of Senate committees.

Sincerely yours,

JOE MCCARTHY.

Unless Nonessential Spending Is Trimmed and Budget Is Balanced, Congress May Fritter Away Chance To Give People Some Honest Tax Relief

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. FISHER. Mr. Speaker, if this Congress wants to do it, the American people can be given some badly needed tax relief this year. And it can now be done on a sound basis. Indeed it is possible, if we set our minds to it, to have moderate tax reduction and also pay a billion or so dollars on the mounting public debt.

But we all know that we cannot have honest tax reduction that really means something unless at the same time the budget is balanced. Otherwise the Congress would find itself in a position of borrowing money, adding it to the public debt, and of in effect paying that borrowed money to ourselves as taxpayers.

In other words, if the Federal Government spends more than it takes in it engages in deficit financing to that extent. That deficit is made up by the Government borrowing that amount and adding it to the public debt. We now pay nearly $7 billion annually in interest on that debt.

It is an unsound business practice, under present conditions, to borrow money for tax-relief purposes. That is not really tax relief—it is tax postponement. In a way it is a fraud because it unloads that much more on future generations to pay, while leading the people to think we have really down something for them.

Let us hope, Mr. Speaker, that as we approach this subject of tax reduction this year we keep these basic considerations in mind.

TAX REDUCTION IS CONDITIONED ON REDUCED SPENDING

If we do that, if we really want to take advantage of this opportunity to give some tax relief on a sound basis, we will start looking right now for ways to cut down on nonessential spending. That is the only approach to honest—not phony—tax reduction.

Now, how can we reduce spending? There are many ways. We can, for example, take the fat out of foreign aid and limit it in the main to necessary military assistance, with economic aid going only to those countries that are on the side of the Free World, that are strategic and cooperative, and which without our help are in danger of falling into Communist hands—thereby further endangering our own security and world peace.

END OF PUBLIC HOUSING WOULD HELP TAXPAYERS

Another obvious saving would be to discontinue the expensive public housing which each year is becoming increasingly burdensome to American taxpayers. It will be recalled that this House last summer reversed an earlier position and at the end of the session voted to continue public housing—a billion dollars worth of it having been committed at that time. Those who support that sort of reckless spending should be the last to talk about tax reduction unless and until the budget is balanced.

Indeed, the Congress should begin steps now to liquidate socialized housing and get out of this business that private enterprise can handle so much better. About $10 billion is involved in outstanding commitments, loss of revenue to local communities in foregoing local taxes on such housing projects, and other factors. Let us get the Government out of that kind of business and give the taxpayers a break.

TO HAVE TAX AND DEBT REDUCTION WE MUST FOLLOW CONSISTENT POLICIES FROM YEAR TO YEAR

Mr. Speaker, it should be evident to everyone that our approach to these problems should be consistent from year to year; planning for a sound fiscal policy should be projected into the future and not be haphazard. Such policies should be the same—the objectives should be the same—on nonelection years as they are on election years. The same basic principles of economy should be practiced every year—not just occasionally.

It happens that I have been one of those who in the past has tried to follow that rule of consistency. I have consistently opposed nonessential spending and phony tax cut proposals. I was constrained to vote against the big package foreign aid bills the past 3 years because they contained, in my judgment, too much fat, too much waste, along with the desirable features. We are told, for example, that Denmark was given $100 million last year to be used in helping balance its budget. And it was reported that $200 million was handed as a gift to Great Britain shortly before their last general election.

We simply cannot go on with irresponsible spending if we are to have responsible tax reduction and debt retirement. It is just that simple.

MORE PEOPLE NOW REALIZING THAT TAX CUT IS MEANINGLESS UNLESS BUDGET IS BALANCED

As I said at the beginning, we now have a chance to give the people some honest tax relief because we are within sight of a balanced budget. But that possibility can be frittered away by excessive spending.

There is another encouraging sign: many who last year and the year before insisted upon additional tax cuts despite the unbalanced condition of the budget are now, according to press reports, realizing the fallacy of that position and are calling for caution in applying similar tax cuts at this time unless the budget is brought into balance. That change in attitude is commendable.

Let us hope, Mr. Speaker, that those who now admit that honest tax relief can be had only with a balanced budget, will join with those of us who make annual fights for reduction in nonessential spending. Let us bear in mind that 10 percent of all taxes now collected is used just to pay annual interest on the public debt. Even if we paid a billion dollars a year on that debt it would require 280 years to retire it. The use of commonsense economy is the key to prospects for tax relief this year—and for a sound fiscal policy throughout the foreseeable future.

The Outlook for Business

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. WILEY. Mr. President, I have in my hand a copy of a very fine address, entitled "The Outlook for Business," which was delivered by one of Wisconsin's great sons, Harry A. Bullis, who is now living in Minneapolis, and who is president of General Mills, Inc. He made an address in Des Moines, Iowa, on January 5, 1956. I think the address is worthy of anyone's perusal, and would prove to be profitable and enjoyable reading. I therefore ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE OUTLOOK FOR BUSINESS

(Address of Harry A. Bullis, chairman of the board, General Mills, Inc., at annual dinner meeting of the Des Moines Chamber of Commerce, Des Moines, Iowa, January 5, 1956)

The future of the American economy depends first of all upon certain facts, but it is also related to one's point of view.

Over in Moscow, U. S. S. R., they hope that 1956 will be the year of the great American depression. They believe a shattering business panic here is inevitable. Stalin didn't live long enough to see it. His successors are as confident as ever that it will come to pass. They view the American economy as a gasoline engine, its tank just emptied, but spinning madly on in a last burst of speed before it chugs to a halt.

Here in America, as we survey the business scene, we are reminded that this is a political year. Before 1956 is out we will elect—perhaps I should say that we may re-elect—a President of the United States. We will pass upon the entire membership of the House of Representatives. A good third of the United States Senate will risk its political future.

There is one platform that both political parties are agreed upon. They are in favor of prosperity. For the party in power it may be called continued prosperity. For the outs it may be called genuine prosperity. And for both it is sincere concern for the sick members of the moment in our economic family—the American farmer. But agreed they are that the United States shall and must have prosperity.

So here we have the picture—the Kremlin hang-dogging under its domes, wishing the worst; the political drums beating out the presidential election year; all parties agreed on prosperity—and the state of American business good—in fact, never better at any time in the history of these United States.

HOW GOOD ARE WE?

Just how good business is today, is hardly appreciated. Consider with me that our gross national product—the production of all goods and services in this country—is nearing the rate of $400 billion per year.

Just before the war the annual rate was $100 billion.

In other words, we are doing 4 times what we did in 1940.

To be sure, we must allow for the lessened purchasing power of the dollar compared with the prewar years. But after this allowance the rate is fabulous.

Now all this logically leads to a basic question. How much further can this thing go? Is it possible to sustain this pace? Can we keep our economic footpedal pressed down to the floorboards? Can we race our engine as we are—and possibly get still more speed and mileage?

The United States businessman has already expressed himself on this question. His answer is a resounding yes. But he did not reply just that way. In fact, he has acted an affirmative in the form of commitments for capital-goods expenditures during the year 1956. These expenditures cover the cost of new plants and equipment, in other words the creation of new means of production by which we can push higher our flow of goods and services that contribute to a higher standard of living for all Americans. The known total of all planned capital expenditures for 1956 is $33.4 billion. This is 13 percent more than the $29.4 billions invested by industry in capital goods during the past year. We all know that this supplies jobs. Consider that the Bell System alone will spend $2 billion for new plant facilities.

Other major expenditures are planned by iron and steel, light metals, autos, chemicals, paper, rubber and synthetic fabrics.

So looking at the economic picture through the American brand of eyeglass, we can say that beginning with politicians, right down through the businessman, and for that matter including the man on the street—the future looks good. It looks good because the nation is determined to work and invest to make it good. I think that is an important point to remember. A heavy volume economy doesn't just happen—it is created as the result of the joint actions of millions of human being who invent, create, invest, manage and govern so that it shall be that way.

Now, since we have practically attained a 400 billion dollar Gross Product, where do we go from here?

THE JOB AHEAD

At this moment, our major concern is to keep a balance between the expanding growth in output and our ability to finance all the producing machines and the consumers of all the end products they turn out. Fortunately, our Government's fiscal condition is sound with the budget presently indicating a cash surplus. Therefore our basic problem is to keep the output of our gigantic machine in which business has invested, such as houses and their equipment, appliances, radios, TV's, and automobiles—the things that make American life good—moving into consumer hands. The list includes food, clothing, tobacco, oil products, rubber tires, and other products destined for consumer dollars and which consumers need. What then is the job ahead?

We know that our national productivity grows at the rate of almost 4 percent a year. Better techniques in management and production, a more highly skilled labor supply, greater efficiency in farming and coal mining, plus increase in population, are the forces behind this growth. Also our labor supply of about 800,000 a year is an addition of one percent to our production potential. Improved technology, so strikingly observable on any Iowa farm, adds about 3 percent more per man and per farmer. All this increase in productivity means we have to find ways to market some 10 to 15 billion dollars more in goods and services in 1956 than we did in 1955. Can we do it? My answer to that one is—I am an optimist.

A LOOK BACKWARD

Let's look back a little. In 1954, after the truce in Korea, the administration cut defense expenditures 14 billion dollars. There followed a reduction in stockpiles of all goods accumulated for defense, excepting, of course, our "strategic stockpiles." Also our exports were a little greater, thanks to the recovery we had helped produce in Europe. But it was the consumer who spent $18 billion more on consumer goods and almost $3 billion more for new houses. It was the consumer, remember, who started the economy on the upward trend again. To meet his demands, industry had to start building more factories, more machines, and buying more inventories to fabricate into the consumer goods he wanted to own. In addition to this consumer pressure, our State and local governments carried on a large construction program.

The final outcome of all these favorable upward forces was to elevate total gross national product from its low of less than $360 billion to the $392 billion annual rate attained in the third quarter of 1955. It is that rate of national product which is reasonably expected to reach $400 billion—some predict more—in the early part of 1956.

WHERE DID THE MONEY COME FROM?

Now we come to the all important question: "Where's the money coming from?" First, we must ask where did the consumer

get his money last year? We know that business got its money from retained earnings, increased depreciation, and new financing. We know also that during 1955 consumers increased their spending by 7 percent, and at the same time paid $1 billion more in income taxes. The plain fact is the worker consumer got a part of the money he needed from greater earnings. Wage boosts for the total labor force averaged about 4 percent, without considering increased compensation from overtime. The factory worker enjoyed a total increase of about 8 percent in average weekly pay. This increase was transmitted, in many industries, to the white collar workers. The overall result was that the annual rate of personal disposable income rose by about $17 billion between the third quarter of 1954, and the third quarter of 1955, and undoubtedly increased further in the fourth quarter.

THE FARM PROBLEM

In all the long and tragic history of the world, the periods of man's hunger and lack of adequate food supply have been measured in ages and centuries—and the bright days of his plenty have been known as decades, or fewer years. Even today, our economists and social scientists tell us that 77 percent of the world's population has less than enough to eat.

All of this makes all the more paradoxical our overabundance of agricultural products. And it points a serious indictment at our inability to create satisfactory markets for the products of the farmer's toil, and to see to it that he as well as organized labor is given an opportunity to grow and prosper with an expanding standard of living geared to the fortunes of our great Nation.

Although consumers generally spent 25 percent more dollars for all durable goods, 5 percent more for all services, and 17 percent more for new houses—the farmer found himself with fewer dollars. A larger farm output brought no larger gross receipts, and a somewhat smaller net farm income. Of course, we know that the number of people living on farms is down several million in the last 10 years. And yet the 1955 crop was the biggest harvest ever made in the United States.

It is heartening to note that the farm problem is receiving consideration now at the place where the remedy must be applied. I refer to the rate of production. It is only prudent conservation of soil and resources to gear production to demand. A fairly priced market for farm products is a part of that picture. And all the while that this temporary limitation—for such it is—is operating, we may be confident that the value of the land will continue to grow in economic importance and prestige as it always has through all history. The farmer is the primary producer. Without the efforts of his toil, all other production ceases. Food production is a source of great national strength. It is well to remember this law of nature, and respect the farmer's place in our economic progress.

THE DEBT PROBLEM

To return to our study of where consumers got the money they spent, of course, much of it came from increased earnings. But, as to the rest, the plain fact is "they borrowed it." Yes, borrow it they did. But at the same time they also increased their holdings of liquid assets. Incidentally, this is something our farmers have done very well during the past 15 years. It is significant that consumers' holdings of liquid assets grew more than twice as much as their debts.

We learn from economists that the debt pattern runs something this way:

Most of the younger married couples buy new houses. Sometimes their parents help them make a small downpayment. Then the youngsters move into a new house. After that they are on their own. The parents like that.

Children come along. The young parents get ahead and their income grows. They begin to think about a better house. Soon they do something about it. Records show that though we make mortgages of 18, 20, 25, and 30 years maturity, the average life of all of them is only 7½ years. Those smart kids of yours seem to move into a better house very fast—and don't their fathers and mothers like that.

The pattern continues this way. While the children are doing this, we oldsters are paying off our debts and we are also continuing to pay on our life insurance. This gives financing institutions larger resources from which loans are made to those younger families. Actually, if we save more, some other groups must go into debt to use our savings; otherwise, there would be no investment. That is why debts must increase in a growing society. Some people are always paying off old debts, while others are incurring more debts. The instant anyone pays off a debt, he becomes an individual who saves. All the new houses I see around the outskirts of Des Moines gives evidence that we are certainly training a lot of people to save these days. The combination of debt and saving and more debt and more saving is resulting in the growth of this distinguished city of yours.

OUR PROBLEM

Nevertheless, because some people are becoming nervous about this accelerated debt pattern, I do not think our total debt will rise as much in this year of 1956 as it did last year. That is the general feeling.

Nor should we expect the total earnings of workers to go up as much in 1956 as they did last year, especially from more overtime.

So here is our problem. We expect $10 billion to $15 billion more in total output this year. Yet our debt pattern will not accelerate as much as it did last year; nor will the total earnings of workers go up as rapidly as in 1955, because overtime will not increase much more. But we must move our extra $10 billion to $15 billion in output into consumer hands. How can we do this?

TAX REDUCTION

I think a very sound and tested way is to lower taxes. That will leave more money in consumers' hands.

How will this work out, you ask? Something like this:

The lowered taxes will enlarge the consumers disposable income. That in turn will encourage spending, thereby moving products and services. All that is good.

Have we ever tried this before? The answer is, "Yes."

In January 1954 total taxes were reduced by $7.4 billion. This reduction came just at the beginning of the 1954 recession. This released spending money helped to stop that recession. The resulting increase in production, business activity, and incomes caused tax revenues to go up at a substantial rate. The total increase was perhaps $7 billion, and for that reason our national cash budget changed from a state of deficit to one of surplus. This is one type of surplus no one complains about.

ECONOMIC POLICY

We have a national talent for bold thinking. Today, the bold policy is to plan for continuing economic growth, to plan to finance it, and to buttress this growth with a favorable Government fiscal policy. To say that another way, we can determine the amount of prosperity we shall have in 1956 by wise management of our money supply, realistic extension and management of debt, and sound decisions about our taxes in the area of fiscal policy.

The final question is the issue of proper timing. In government, as in football, a sharp play fails if it is badly timed. Well timed, even the old Statute of Liberty play works.

As an example of good timing, between 12 to 18 months ago the leaders of the Eisenhower administration announced the fiscal policies which are responsible for our strong economic position today. It is time now for us to look ahead to the latter part of 1956 and 1957 and make decisions that will carry our prosperity into and beyond that period.

At the moment, some men believe that we should be more concerned with possible inflation than with planning for economic stimulants. But that type of unbold thinking will not dictate policies to sustain our economic vigor in the days ahead of us.

We have every reason to assume that the administration and Congress jointly, which have not acted with untimely speed, neither with carelessness in these matters, will adopt sound policies to meet any economic problems which may arise in the year ahead of us.

CONCLUSION

What does all this add up to? You and I will agree it adds up to a lot of things, most of them good. We know that our American economy is remarkably strong—that it is increasingly stable. Business has tangibly expressed its confidence in continued progress by the huge commitments for capital goods expenditures in the year ahead. At the same time, it is fully aware of the necessity of avoiding excesses, of not getting winded. In my opinion, we shall continue to have a steady growth in business. I am convinced we have the financial means to accommodate it. The wisdom which we need is not so much as to whether we can continue our economic expansion, as it is to determine the rate at which the expansion can proceed without danger of inflation and excessive boom.

During the past 10 years we have lifted our imports by more than $6 billion a year. We have thus helped the rest of the world keep busy and prosperous. Our own prosperity enables us to purchase needed raw materials from foreign countries and that in turn helps to bring prosperity to all the world.

The continuation of our progress will require the increasing cooperation of the various elements of the economy. Business management will need the full support of labor and farmers, as well as of the general consuming public of which we are all a part. Only with the responsibilities shared and with a mutual awareness of the needs and desires of all members of society can the overall goal be reached.

By boldness and faith, with everyone cooperating and working together intelligently, we can continue to have an expanding economy under freedom that is producing 24 hours a day for all the people of America, and for all the people of the world.

And therein lies the greatest promise, the hope and the unlimited future of America.

The University of Pennsylvania and the Commonwealth

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. MARTIN of Pennsylvania. Mr. President, at the 57th annual dinner of the Pennsylvania Society, which was held in New York City on December 10 last, the principal address was delivered

by the distinguished scholar and educator, Dr. Gaylord P. Harnwell, president of the University of Pennsylvania.

I commend Dr. Harnwell's notable address to the attention of my colleagues, because it sets for the problems that must be met to safeguard the freedom and independence of higher education in the United States.

In his remarks Dr. Harnwell traced the history of the University of Pennsylvania since it was founded 215 years ago by Pennsylvania's foremost citizen and statesman, Benjamin Franklin.

This year we are celebrating the 250th birthday anniversary of Dr. Franklin, and we are proud that the University of Pennsylvania is outstanding today among the many living and enduring monuments to the vision and wisdom of that great American patriot.

Mr. President, I ask unanimous consent to have Dr. Harnwell's address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE UNIVERSITY OF PENNSYLVANIA AND THE COMMONWEALTH

During the decade between the birth of George Washington and that of Thomas Jefferson, Philadelphia was the most rapidly growing city in the Colonies. It had inherited a religious but nonsectarian tradition from William Penn which attracted a wider variety of racial stocks, more tradesmen and skilled artisans, more professional men and philosophers than any of its rivals along the narrow strip of seacoast which was the western beachhead of advancing empire. English and Germans, Quakers and Lutherans were establishing a sturdy bastion of tolerance and independence which gave Philadelphia and its institutions a character which they have never lost.

Among the occasional visitors during this decade was a gifted evangelist, George Whitefield, who drew thousands of people to his open-air meetings. His magnetism, however, won him no invitation to an established pulpit so his following of tradesmen and artisans, in 1740, built a plain one-room building on Fourth Street below Arch, one of their purposes being to accommodate the congregation during Whitefield's visits. Moved also by a pressing need for schooling in the growing city, which was to be the cradle of liberty 34 years later, they designated the building not only as a "House of Publick Worship" but also as a charity school. This was the beginning of the University of Pennsylvania.

Use of the structure for educational purposes lagged, however, until the movement was given life and vision by an enterprising young citizen who was later to become the leading statesman and philosopher of a new nation. Benjamin Franklin, who served as a trustee of the unversity for nearly 40 years, exerted his rising influence to promote the welfare of the charity school and his great wisdom to guide its early years; his pamphlet, "Proposals Relating to the Education of Youth in Pennsylvania," stimulated interest in its growth and revitalization as The Academy; and he secured for it gifts from his fellow citizens; the city of Philadelphia; Thomas Penn, the governor of the province; and from the king himself. Franklin engaged as the academy's first provost, William Smith, recently arrived from Scotland, who found the spirit of religious tolerance and emphasis on practical learning greatly to his liking. He instituted the first liberal curriculum in the Colonies which provided instruction in modern languages, physics, mathematics, and economics in addition to the classics which had previously formed the sole area of instruction.

Pennsylvania was the first institution on this side of the Atlantic to grow into a university. The spirit of Franklin and the distinguished faculty assembled by Provost Smith attracted to the university students of all classes from up and down the seaboard, and from these groups 10 were later to be signers of the Declaration of Independence. George Washington, who was a frequent attender at college functions during his residence in Philadelphia, was awarded an honorary degree in 1783. A tradition of freedom of thought and speculation, of liberality in its educational philosophy, and of catholicity of welcome to scholars of all races, creeds, and nations was established, which has characterized Pennsylvania for over 200 years.

When the constitution of the Commonwealth of Pennsylvania was adopted in 1776 it stated that "* * * all useful learning shall be duly encouraged and promoted in one or more universities." In 1779 the general asembly amended the charters of the various early foundations to be "* * * conformable to the revolution and to the constitution and government of this Commonwealth and to erect the same into a university. * * *" The supreme executive council was directed "to create a certain fund for the maintenance of the provost, vice provost, masters, and assistants, and to uphold and preserve the charitable school of the said university." The first State aid of 1,381 pounds, 5 shillings, and 7 pence ha'penny was received in 1785. In 1791 the governor became president of the board, and continuing interest and responsibility was implied by the requirement that the university should periodically lay a statement of its accounts before the general assembly.

The university has grown in size, in educational maturity, in area of academic interest, and in service to the Commonwealth and to the Nation during the 215 years since the founding of the charity school. We are this year celebrating the 100th anniversary of the establishment of an engineering curriculum, and next year will be the 75th anniversary of the establishment of the Nation's first school of business and public administration. We note with pride that Pennsylvania is among the leading institutions in the proportion of its engineering graduates who appear in the professional reference, "Who's Who in Engineering." Graduates of the Wharton School of Finance and Commerce occupy positions of responsibility in almost every large business enterprise, and, according to the International City Managers Association, our Institute of Local and State Government has trained more men for the civic managerial field than any other university educational program of like nature.

While these are important anniversaries, I am sure you will agree that one which will be celebrated in 1965 is of unique significance—that marking the 200th year since the founding at Pennsylvania of the first medical school in the Colonies. Graduates of this school have received many honors during this period of time, but perhaps none is quite so meaningful as the one accorded recently to Dr. E. Roger Samuel, of Mount Carmel, of the class of 1913, who was chosen by the American Medical Association as "General Practitioner of the Year 1955."

There are only 33 universities in the United States which are independent of church or State, and we find satisfaction in the fact that the University of Pennsylvania is 1 of the 6 of these having a student-teacher ratio of less than 10 to 1 and granting 40 percent or more of its degrees for graduate or professional study. Certainly the whole tale of the university cannot be told in an evening, but it is a distinguished story of education in a free society of which our 82,000 graduates, including 44,000 who now reside in the Commonwealth, can be justly proud.

Now the University of Pennsylvania, while possessing the oldest tradition, is only one member institution of a broad and diversified system of higher education in the Commonwealth. Pennsylvania stands among the leading States in terms of the number of colleges and universities within its borders. In addition to Pennsylvania State University, which is a land-grant college, there are great urban units, such as the University of Pittsburgh at one end of the State and Temple University at the other. There are more private liberal arts colleges and public teachers colleges in Pennsylvania than in any other State. On the other hand, higher education is not one of the major expenses of the Commonwealth. In relation to its population, its wealth, or its other expenditures Pennsylvania stands among the lowest 10th of all the States in its support of higher education. The State spends less than half as much per capita as Michigan, Indiana, or Illinois, and less than a third as much as Iowa or Minnesota. How are these facts to be reconciled with a distinguished tradition for learning extending back to Colonial days and with the strong system of institutions which exist today?

Part of the answer is that the State is indeed not subject to the accusation of profligacy in its support of higher education. In part the answer is also to be found in a strong desire for independence among the individual citizens who have established and maintained the excellent institutions for higher education throughout the State. Outstanding among the smaller colleges are those with which the Quaker tradition of thinking otherwise has enriched our principles of education. Also, in part, the answer rests in the unique system of State aid to private independent institutions like the University of Pennsylvania which, by assuming their own initiative and responsibility, stretch the State's dollar to the uttermost. The Commonwealth can be proud that this aid to the great universities at each end of the State has entailed no measure of control or privilege.

At the University of Pennsylvania our yearly income totals some $30 million. One quarter comes from the students' tuition and fees, a third from the sale of services as in hospitals and clinics, a sixth from endowment income and gifts, and an eighth each from the Federal Government for services and from the State as an apropriation in aid. We acknowledge with deep appreciation our obligations to all sources of support, and we strive to maintain that excellence in the performance of our educational function that will merit the assistance and justify the independence which we enjoy.

A university is a nursery of ideas. In it freedom of inquiry and investigation must be protected from the infections of bigotry and prejudice, the periodic epidemics of demagoguery, and the blight of pressure groups, by courage of conviction and by independence of operation. The touchstone of the true university is the liberalism of its outlook. The distinguished scholar, scientist, or teacher is the man upon whom occasional partial glimpses of the truth he seeks confer the humility of wisdom rather than the arrogance of conviction. In universities the way must be kept open to flexibility of learning through a recognition both of present ignorance and of the necessity of freedom in intellectual investigation.

In an address delivered at the Westminster College Centennial, Dr. Milton S. Eisenhower, president of Pennsylvania State University, spoke as follows:

"Private institutions established and now maintain our vital traditions of academic freedom and the freedom of academic bodies from partisan interference and control—and on these freedoms, above all else, is based

the ability of colleges and universities to contribute to the advancement of human knowledge. Private institutions have implanted these traditions of freedom so firmly that the publicly supported institutions are able also to enjoy them, in spite of recurring pressures which would uproot them. We of the public colleges and universities are constantly in your debt."

What of the future of the University of Pennsylvania which, like its sister institutions, must match from its own resources the sum brought in by tuition in order that it may offer its opportunities within the means of the ablest of the Nation's students and which is also to be faced within the next 2 decades by an application rate rising about 3 percent a year to a potential doubling of our present student population?

In the first place, we must be true to the tradition which we have inherited from our Founding Fathers and maintain those standards of freedom, liberalism, and educational excellence which constitute our reason for existence. Ten times the fraction of college-age people go to college now as did at the turn of the century. The private colleges have not grown nearly so fast and the increase has been made possible by the rise of excellent State universities and city colleges. We cannot, however, if our principles of independence are sound, accept complacently a situation in which a continuously decreasing fraction of young Americans are enabled to experience the educational opportunities at private universities like Pennsylvania.

The question then is: How may we conduct our affairs and, in particular, enhance our resources to the end that we may most effectively perform our traditional and appropriate functions in the educational program of the Nation? It is a vital question for all of us here this evening for, as Thomas Jefferson wrote to Jarvis in 1820: "I know of no safe disposition of the ultimate powers of society but the people themselves: And if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take from them, but to inform their discretion by education."

It appears to me that the University of Pennsylvania must concentrate upon the solution of this problem during the coming years by following three separate lines of endeavor. First, we must survey our present facilities, resources, and methods with the view to insuring their most efficient and effective employment in our appropriate educational function. This will entail a careful and scrupulous study by the faculty and administration of the economy of our methods, the balance of our facilities, and the priority of employment of our resources. With the assistance of the Fund for the Advancement of Education of the Ford Foundation, we are already engaged in a searching self-survey and evaluation of our educational procedures and objectives in order that we may have clearly before us the course that we should follow.

Secondly, in recognition of our probable inability to increase our resources at a rate which will enable us to respond in any significant measure to the pressures of numbers, we must study the educational pattern in accordance with which we should evolve if we are to maintain the position of leadership in educational excellence which will be expected of us. The growth of 2-year junior colleges, the strong system of small 4-year colleges throughout the Nation, and the observation that, whereas in our fathers' days a small percentage of the population went to college, in our sons' days a small percentage of the population continues on to graduate and professional degrees suggest that a changing pattern might be appropriate at Pennsylvania. Our undergraduate mission must be carried on and with increasing standards of excellence, but possibly a greater proportion of our new resources must be allocated to the work of the later undergraduate years and to the years of graduate, professional, and research activities if we are to maintain the closest match we may between our resources and the students of outstanding ability to whom their fellow citizens will look for leadership in the future. Here again the faculties and administrative officers of the university must conduct some broad and searching studies and grapple with hard human and educational problems.

Thirdly, we must make every effort to enhance our financial resources in order that the university may continue to perform its mission on a scale that is as nearly as possible commensurate with the opportunities presented by the rising generation of students.

Our present and foreseeable funds come from six sources. The first of these is the tuition paid by the students for their education. Tuition will rise in the future as in the past, but it would be regrettable if private independent education were to price itself out of the market to which able students come. The second is endowment, representing the gifts of past generations of benefactors; the current economic climate suggests this source will be of lesser proportionate significance in the generations ahead. The third source is that of individual gifts, and here friends and alumni are responding ever more generously; the University of the future will be greatly indebted to this source for its continuing growth. The fourth source is the private foundation; the older ones have well understood patterns of interest which have been of immeasurable help to education, and the newer ones are establishing their own patterns, many of which may be in accord with the University's purposes. It is unlikely, however, that these foundations will represent any considerable proportional increase in the resources with which universities may meet their future responsibilities. The fifth source, which is the business foundations and businesses themselves, represents one of the most promising factors in our future growth. Here the pattern of policy is barely emerging, but the resources are vast and the fractional support may increase manyfold without assuming a magnitude which would be of concern to the Internal Revenue Service or would raise questions of policy dominance within the universities themselves. Sixthly, one comes to Government subsidies where again considerable increases are possible within appropriate safeguards. The White House Conference on Education will probably eventually be extended to explore the Federal policy in regard to the support of higher education, and here quite new principles may ultimately emerge. At the State level, I have already indicated the well established pattern in Pennsylvania in which there is no present sign of any radical change. Finally local civic interest and support may develop as the pressure of population mounts. So long as the principles of independence are not subverted by the terms of magnitude of the support, our way should be clear.

Next year is the 250th anniversary of the birth of Benjamin Franklin. We at the University of Pennsylvania are holding an academic birthday party in his honor on the 14th of January. On this occasion we are inviting the heads of the 5 institutions, which during Franklin's lifetime honored him with degrees—Oxford, St. Andrews, Harvard, Yale, and William and Mary—to be with us and in turn to join our body of honorary alumni. The benign spirit of our founder will be very much with us on that occasion. We trust that he would be pleased with the success of the custodians of his institution in carrying out his Proposals Relating to the Education of Youth in Pennsylvania and in establishing that uniquely American institution—the independent university. He would surely be greatly heartened by the vast growth in useful learning which has marked his country during a quarter of a millenium. And we know that he would commend our confidence that the citizens of his nation and of his Commonwealth will continue to support the University of Pennsylvania in the traditions which he established.

Address by Charles H. Silver at Annual Scholarship Dinner of Yeshiva University

---

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent address by the president of the Board of Education of the City of New York, the Hon. Charles H. Silver. This address was delivered on the occasion of the annual scholarship dinner of Yeshiva University, at which time Mr. Silver was honored with a degree of doctor of humane letters.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY CHARLES H. SILVER, PRESIDENT OF THE BOARD OF EDUCATION, AT THE YESHIVA UNIVERSITY DINNER, HOTEL WALDORF-ASTORIA, DECEMBER 11, 1955

In the years of my life, I have been blessed with many moments of happiness and gratitude. As I humbly thank you, Dr. Belkin, for the great honor you have done me tonight, I know that this is the happiest of all. Through you, I want to express my gratitude to our great university, but the joy and pride I feel in my heart are too vast for any words to convey.

Let me only say that I shall not wear this honor as a laurel. I shall carry it as a torch. The degree you have bestowed on me, from this school I love, is not accepted in token of a task accomplished. Rather, I shall hold it before me to blaze a path into the challenging days ahead, dedicating myself anew to the cause of Yeshiva, until I must pass this torch to other hands eager to carry it forward.

Tonight is all the more rewarding because you have granted me the privilege of sharing your accolade with a notably great American, Abe Ribicoff, the first of our faith to be named by the people of Connecticut as Governor of their sovereign State. You could not have placed me in better company. Governor, I know your heroic efforts in these days when Connecticut looks to you for leadership out of crises and disaster. We are proud that you are here * * * and I am proud to stand beside you.

This is a period of fulfillment for Yeshiva University. We have seen much of our founders' dream come true as the small academy of a few decades ago has grown into a mighty citadel of learning—a sanctuary for youth in quest of knowledge—a beacon to banish the gathering darkness and bring light to the soul and mind of man.

How fortunate we are to have been able to witness the steady development of Yeshiva and enjoy the culmination that has come within the last 12 months! The Stern College for women has become a reality through the initial gift of a half million dollars by Max Stern, vice president of our board of trustees. The Albert Ein-

stein College of Medicine, that mammoth project to promote the divine art of healing, has welcomed its first students as the only medical school to open its doors in this city since 1898 and the first medical college under Jewish auspices in America.

In my day to day work as president of the Board of Education of the City of New York, I am no stranger to the wonder that attends the birth of a new school. There is a deep sense of the sacred in creating a place where men and women may study to build a better world. It is like the planting of a tree where none grew before; the sowing of a seed in ground that never knew so rich a harvest.

You who did breathe life into Yeshiva University and sustained that life to its present maturity and distinction among the foremost schools of our age—you have wrought 1 of the 2 great miracles of our people in the 20th century. Look to the old world and you see the banner of a new land, the flag of Israel bravely flying against the threatening skies. Look to the new world and take heart to see the towers of Yeshiva soaring toward the stars.

Each day's headlines tell of fresh jeopardy to that fertile infant commonwealth which our people have carved out of the barren desert. This is a time of terrible crisis for Israel. The Communist world has boldly pushed its way into the seething politics of the Middle East. This has not been done with the diplomatic pressure we have come to regard too complacently as the cold war. I am talking about the hot muzzle of a Czech gun leveled at Israel's heart.

If there is one country in all the world which, in 7 short years of precarious existence, without fixed boundaries, with few friends around her and not a day of peace, has shown a zeal for creative effort and constructive work, that land is Israel. Like Yeshiva, she has thrived on adversity, striving, building with hands and hearts, groping toward recognition and security. Can we afford to let her down? Can the world afford to let her down?

I like to think that our people, hounded and beaten about the globe for centuries, extended little compassion and less protection by law, have survived their trials as a sword survives the flame in which it is tempered. I like to think that we have emerged at last from our endless wanderings as a people resolved to preserve its own nation and deserving of the armed assistance of every other freedom-loving people in defending our borders against attack.

If a long history of anguish and torment must leave its mark upon the Jew of today, let this be the mark it leaves: A burning ambition to find security by preserving that hard-won land where the Torah shall be our law, the man of peace our lawmaker and Almighty God our king. In this way we can realize our ancient prayers for a Zion that will be a model for all nations. In this way we can keep the faith with that Jew who died in the Brown House of Munich, who burned in the ovens of Buchenwald, who starved in the blood-stained ghettos of Poland. This, we owe—this, the world owes to the million Jews who perished as they cried the alarm while most of humanity preached appeasement or slept in false safety.

We cannot forsake them now; civilization cannot forsake them. If Israel goes down, then you and I go down—and so does honor and decency.

Israel with its proud but paltry one and a half million population faces the encircling hate of 40 million potential foes. All right, you can repeat a comforting phrase like, "One with God is a majority." You can say this tiny land is fortified by men and women that walk in the flame of their new-found freedom—and they will fight that way. But, let us not put these truths to an unequal test against the overwhelming force of Soviet tanks, jet planes and submarines. Israel merits more from mankind than reassuring words.

This is a moment of tremendous impact upon the progress of humanity and the preservation of liberty. There is more than the future of Israel at stake. "Tomorrow" is in your hands. It is not a question of who sells guns to Egypt or who sells ammunition to Israel. It is a question of how long our reputedly civilized community of nations intends to stand idly by while these merchants of death are permitted to barter and bargain for human lives anywhere under the sun.

And the human lives I speak of are not alone those of our brothers in the Middle East, but may very well be our own or our children's if we blind ourselves to the peril of this decisive hour. We must show all nations by our example here in this most blessed stronghold of man's dignity, this God-loved land of America, that the material and spiritual benefits of the democratic way of life are worth striving for wherever they are assailed. We must let the assailant know that Israel does not stand alone, and we shall not let her fight alone.

Let us leave the troubled scene where we pledge ourselves never to let triumph crumble into ruin and return to that other miracle to whose support we are also pledged. Civilization, of late, has been too busy devising means of exterminating itself to dabble extensively with intellectual or spiritual pursuits. And yet, here on our shores, the Jew continues to nourish the mind and the spirit. He succeeds—you succeed, you, Dr. Belkin, practical visionary, inspired teacher—you, Max Etra—all of you here tonight and all who have helped everywhere, and our many Christian friends, also, you succeed in the mingling of knowledge, art, science, and faith which is Yeshiva. This, too, is worth defending; this, too, is worth nourishing.

A dweller among many lands and cultures, the Jew has always been able to reach into his heart and tear forth his complaint against oppression, to fling it on the pages of a book, or on canvas or into notes of music. In the Jew there is a creative power found in few other people. From him came the scriptures and the law; of his blood are Hillel, Spinoza, Rashi, Halevi. Who can discriminate against genius? There are great books yet to come, great songs, great thoughts long awaited. The Jew's very faith is a religion of literature; our existence an endless quest for learning.

Traditional wanderer of history, the Jew has led the typical student's life on a cosmic scale. Hounded from garret to garret of the world, segregated, shunned, spurned, and misunderstood, he has gleaned a portion of the soul and spirit of every land in his endless rovings. Possessing his own inherent culture, he possesses a world's. Does travel lend wings to the artist? Who has traveled more widely than the Jew? Does suffering give tongue to the writer? Who has endured it longer than the Jew?

How tragic it is that, for so many generations, our young people have had to batter stubbornly and in vain against the closed doors of institutions of higher education. Their hands were pushed from the engineer's plumb-line, torn from the surgeon's scalpel. Ability was not enough. Money was not enough. There were other insurmountable obstacles.

Well, the world is slowly changing in this respect—and for the better. This miracle of Yeshiva, that has multiplied into so many magnificent schools in so many branches of learning is a significant part of that change. And you have made it all possible, and you will make possible even greater things to come in Yeshiva's world of tomorrow.

Like Israel, Yeshiva was brought into being not only by Jews alone and it has meaning not merely for Jews alone. Like Israel, Yeshiva is young, Yeshiva is small, but, with your help, it is growing larger and stronger with every passing day.

There is a bridge between them, between the Old World with our new country and the New World with our old love of learning living again in Yeshiva. Over this bridge, intangible, invisable, but real, must course the mighty pulsing purpose of your devotion and your solemn decision that Yeshiva is another Zion—and, like Israel, it must endure.

Let it be our prayer, in this fateful hour, that destiny shall stand sentinel over these symbols of our faith—that Yeshiva, like Israel, shall survive eternally, imperishably—citadels of mind and spirit, shrines of liberty and justice, where man may walk with God, and think and speak.

Dixon-Yates in Court

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dixon-Yates in Court," which was published in the Washington Evening Star of November 28, 1955.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DIXON-YATES IN COURT

The controversial Dixon-Yates power contract case appears headed now for its day in court. It is appropriate, perhaps, in the mixed-up background of this now-canceled contract, that there should be a judicial ruling on its settlement. The Atomic Energy Commission has decided the Government has no financial obligations—on grounds that probable violation of the conflict of interest laws made the basic agreement invalid. Spokesmen for the Dixon-Yates utility combine, the second party to the contract, have indicated they are not accepting this finding and that they are going to court in pursuit of the settlement costs.

Actually, the several million dollars involved are not particularly important and a court's determination of who is to bear this expense will not be the last word on this ill-starred venture. It was, from the beginning, an unusual arrangement. As the contracting agency, the AEC arranged with the Dixon-Yates company to build a new plant in Arkansas for supplying power to Memphis, Tenn.—this power compensating for electrical energy which the Tennessee Valley Authority would supply to the AEC. Certain technical details of the contract were worked out by Adolphe H. Wenzell, special consultant to the Budget Director, on leave from his association with First Boston Corp., an investment banking firm. Later, after Mr. Wenzell had severed all relations with the First Boston, the investment concern emerged as financial agent for the Dixon-Yates enterprise. Unfortunately, despite a "full disclosure" of the background of the case by the Budget Bureau, Mr. Wenzell's role was not revealed until a Senate Judiciary Subcommittee investigated circumstances of the contract. Meanwhile, the city of Memphis had decided to build its own plant and the contract was canceled.

It is easy, in a partisan political atmosphere, to read sinister implications into this

background. Public power proponents considered it an effort to undermine the TVA. Democratic spokesmen are charging now that the deal was a "fraud." It is unlikely that the courts will make such a finding, or that they need to in ruling on liability for the contract settlement. It is clear, however, that the Government agencies involved were either naive or injudicious in their whole labored approach—including the use of Mr. Wenzell—to the problem of adding to the power supply of the area affected. Chairman KEFAUVER of the Senate subcommittee, who has more than one reason for being interested in the matter, is calling some of the principals before his group this week. They should not be surprised to hear more about it during the 1956 campaign.

Water Resource Development on the National Scale

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Where We Stand" delivered by Maj. Gen. Charles G. Holle, Deputy Chief of Engineers for Construction, before the Mississippi Valley Flood Control Association, at New Orleans, La., on December 1, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHERE WE STAND

(Remarks by Maj. Gen. Chas. G. Holle, Deputy Chief of Engineers for Construction, before the Mississippi Valley Flood Control Association, New Orleans, La., December 1, 1955)

An annual meeting is a time for taking stock, reviewing the past, trying to look into the future; in short, taking a look at "where we stand." Each of the several speakers at the meeting will undoubtedly address the subject from the viewpoint of his particular field of interest. The Members of Congress from their vantage point in the Congress; General Hardin, following the usual custom, will make an annual report as president of the Mississippi River Commission and division engineer, Lower Mississippi Valley Division. I propose to offer you some observations on water-resource development on the national scale, based on how it looks to us in the Office of the Chief of Engineers.

First, a few remarks about the Mississippi Valley Flood Control Association. As my jobs and assignments, and field inspection trips, have taken me to a number of civil-works projects in different parts of the country—I naturally, in my own mind, make comparisons. I have observed that the projects which advance faster, more uniformly and orderly and effectively are those supported by strong, well organized, voluntary, nongovernmental organizations such as this one. In my opinion, the people of the lower Mississippi Valley are greatly indebted to this association, its founders and members during the years who have so wisely fostered and furthered its successful continuation, and the association merits recognition and appreciation of that public service.

In publicly praising the association I include not only the members and officers but especially the series of able executive vice presidents—Fred Benecke, Bobby Crawford, and your present one, Bruce Tucker.

The coordinating part played by this association in the development and furtherance of the lower valley programs has become a pattern and guide in other areas. The principles of comprehensive, cooperative, and integrated water-resource development formulated here in the valley have been a sustaining force nationwide during years of ups and downs in the fortunes of water resources.

You will recall General Sturgis' discussion last year of the difficulties which beset all of those interested in water-resource development during the years following World War II. The strained international situation demanded our attention. The costs of the cold war and national defense and foreign aid have been tremendous. Naturally, there was constant hope and effort toward reduction of Federal expenditures, balancing the budget, and reduction of taxes. In the circumstances, the important development of water resources lagged. You may remember the statistics General Sturgis cited: a backlog of $400 million of civil-works projects in 1927 as compared to a current backlog of $8½ billion. Fortunately, the trend has changed.

Among the events of the past year has been a nationwide reawakening to the reality that the use and control of water are vital to our lives and livelihoods. The Congress, led by those farsighted members who have always advocated development of water resources, has responded to that demand and urgent need.

For the first time in 6 years the appropriation for the Mississippi River and tributaries project went up instead of down; the $52 million appropriation for fiscal year 1956 was 14 percent higher than the $45 million appropriation for the previous year. Since last year's meeting the Congress has appropriated funds for and has authorized the start of, or resumption of work on, 102 civil works projects of the Corps of Engineers. Work has begun on the Old River control structures, and provision was made for the commencement of work on the Reelfoot Lake area and Atchafalaya River dredging, and resumption of work on the Big Sunflower and Yazoo tributaries. Figuratively, we can now see some sunshine through the clouds, both regionally and nationally.

In the Northeast—in recent months—in an area paralleling the coast, in the States of Pennsylvania, New York, New Jersey, Connecticut, Rhode Island, and Massachusetts, we have had two grim demonstrations of the need for flood control. In August, Hurricane Diane dumped rains of unprecedented volume and intensity on the narrow river valleys. The resulting high stages and high velocities did tremendous damage. In October, while the people of the area were still staggering from that blow, another hurricane-borne rain brought new floods. The amount of direct damage still has not been accurately estimated, but the floods caused a loss of life of close to 200 persons, and caused untold loss and suffering in wrecked homes, lost jobs, and disrupted business, and wrought serious dislocations in the economy of the region. Perhaps a description of the disasters of flood are unnecessary and even inappropriate before a group of the Mississippi Valley, but those of you who have seen pictures of the New England floods will appreciate the vastness of the damage caused by the velocity of the water. They didn't just get wet—structures were demolished and literally washed away by the current.

The 1927 Mississippi flood is almost 30 years in the past and incomplete flood-control works protected the valley in the '37, '45, and '50 high waters of the Mississippi but you dare not relax your vigilance. I trust that my 4 years in New Orleans gives me some license to comment on the destructiveness of floods and to decry complacency.

Of course, in the August and October floods of the Northeast there was prompt response from many sources and the immediate and urgent needs for food, medicine, clothing, and shelter were promptly taken care of. The need for replacement of bridges over relatively narrow streams to restore communications, especially for fire protection, and access to hospitals and similar essential resources, was promptly met by the Army through the supply of portable Bailey bridges from Corps of Engineer depots and installed by Regular Army, National Guard, or Corps of Engineers personnel or contractors. In addition, a relatively new type of assistance came into action through the application of Public Law 875, on a more extensive scale than ever before required. That law provides for the establishment of the Federal Civil Defense Administration and authorizes Federal action, in cases of disaster, for the removal of debris which is hazardous to life and public welfare, and for the temporary repair or restoration of publicly owned essential facilities. Pursuant to the recommendation of the Federal Civil Defense Administration the Corps of Engineers was charged with the accomplishment of that Federal mission in the Northeast-New England flood area.

However, all of those emergency relief actions did not and could not restore loved ones who perished, homes that were swept away, nor businesses that were ruined. And now there is much talk of flood insurance to partially reimburse those who must undergo the tragedy of loss of life and property by floods. As commendable as that thought may be, money cannot compensate for loss of life, wretchedness, and heartbreak; and although individuals can be reimbursed, the overall economic loss is not eliminated. The most effective flood insurance is flood-control structures completed and in operation to control the floods.

The lessons in preparedness taught by this year's floods have had considerable impact in many areas where the residents have not always been persuaded of the value and urgency of extensive flood-control programs. The experiences in the Northeast and New England this summer have convinced many a doubter, and we now find—as we do after every great flood—that some of those who were most skeptical and obstructive are now among those who are shouting loudest for action.

But even so, before these floods, there was an increasing concern over water resources throughout the country. The 102 new starts or resumptions of projects provided by the Congress in its appropriations to the Corps of Engineers last July is a manifestation of the conviction that urgently needed work has been too long put off, and that determined efforts must be made to regain lost ground. Because of this determination and effort, the past year or so has seen a number of long-deferred and badly needed developments pushed vigorously into the construction stage. They include the St. Lawrence seaway, the modern Calumet-Sag Channel linking the Mississippi River system with the Great Lakes, and the long-postponed modernization of the Ohio and Warrior River Waterways—all great developments which will have direct and far-reaching effects upon the welfare of this region, even though they lie outside the limits of the alluvial valley.

Looking beyond work underway, we find recommendations for enlarging the connecting channels between the Great Lakes, and for constructing the Mississippi River Gulf Outlet—the so-called Tidewater Channel—conceived and supported by the late Lester Alexander. Both of these proposals have been submitted to the Congres, where it is expected they will receive attention early in the next session.

We in the Corps of Engineers view these events as manifestations of a general awakening of the public to the significance of our water resources. We earnestly hope that this interest or concern is not transitory but rather is rooted deeply in the public consciousness. This national reaction logically results from basic national needs which have been accumulating ever since the war. For a time, these needs have been obscured by postwar excitements and a series of international crises. But it would appear now that the American people have had more opportunity to take stock of our domestic situation, and they have found few problems more critical than those of our water resources.

There are a number of other manifestations of a renaissance in water resources development. For example, during the past 7 or 8 years there have been at least that many high-level surveys of national water problems, and each study has resulted in the conclusion that there is serious need of stepped-up construction to meet growing water needs. The President of the United States within the past year has appointed two different commissions to study Federal water policies and programs, in addition to the Hoover Commission which has considered water topics prominently in its study of the organization of the executive branch of the Government. These studies both reflect and contribute to the general public awareness of the importance of water resources and development programs.

Concurrently, the irristible pressure of the Nation's accelerating growth is driving home the same lesson of the importance of water resources. Municipalities are reaching farther and farther, and sometimes coming into conflict with one another, in their search for water supplies. Some of our foremost industrial regions are discovering that their future growth is threatened by the lack of an expansible supply of industrial water. Pollution of one kind or another is increasingly impairing the usefulness of whole rivers for both domestic and recreational purposes. These problems have arisen as local problems, and for a long time the people looked only for local solutions. Now they are coming to realize that local water-related problems have become so general, widespread, and interlocking that they have grown into truly national problems—problems bearing with increasing urgency upon their own towns, jobs, and livelihoods.

Meanwhile, we have become more aware of the enormous benefits that ensue from water-resources development, and of the great potentialities offered by such regions as the lower Mississippi Valley—potentialities which can be fully realized only with well-conceived river-development programs. We have seen how the gulf coast and the Pacific Northwest boomed and flourished with the construction of water-resource programs properly designed to utilize the water-related advantages of each region—navigation on the gulf—power and irrigation in the Northwest. There is general appreciation of the contributions of those regions to national strength for defense and national prosperity for peace. We know that as the Nation's population grows and its responsibilities increase, we will need more creative and productive developments of the same sort. We know that in regions like this valley, great opportunities are still untapped, awaiting only adequate development and use of water resources to make them available to American enterprise; and we must realize that such development is not just a regional desire, but a national need.

In many respects, river-development work has proceeded both farther and faster in the lower Mississippi region than in any other basin. Dollarwise the authorized MR & T project has passed the two-thirds mark; no other river-basin program has yet reached the half-way mark. It is true that the flood-control system is not yet finished, and it is only through hard work and the unpredictable favor of fortune that such flood stages as have so far occurred have been within the capacity of uncompleted works. Nevertheless, the fact of not having suffered a disastrous flood since 1927, and the knowledge that flood-control construction is proceeding at a steady if not spectacular rate, are most reassuring to prospective investors in the Mississippi Valley.

The growth of the inland-waterway system and completion of the Calumet-Sag, Ohio, and Missouri River and other waterways will multiply the water-transportation advantages of this area. And sharing in importance with flood protection and navigation are the many industrial sites with an abundant supply of fresh water. This latter resource is becoming more important each year. For example some authorities have predicted that by 1975 American industry will require more than twice as much water as it now uses; that in the 10 largest water-using States it will be difficult (and in some cases impossible) to economically double the present rate of water withdrawal; and that in years to come, water supply will be perhaps the most important single factor in determining the locations of industrial plants.

Thus, it is apparent that the lower Mississippi River Valley is in as good as, or better, position today than at any time in the past to develop its potentialities and expand its economy. The faster the river work can be accomplished, the stronger become the inducements to enterprise; and the more enterprise attracted to the valley, the greater will be the justification for still more acceleration of the river work.

However, a review of the past will demonstrate that the fortunes of flood control and other waterway improvement in this valley are directly related to the national attitude on water resources development. A strong, nationwide resurgence of interest in water resources, such as we are experiencing today, provides by far the best atmosphere for the advancement of regional prospects and programs. Hence, it is the best form of self-interest to cooperate with the people of other American river valleys in helping to shape and to advance our national water-resource programs as a whole. We may be confident of continued progress if we work together in the future as we have in the past.

The Late Vera Buchanan

SPEECH
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. ABERNETHY. Mr. Speaker, I join with my colleagues in expressing the sadness of this House on the passing of Representative VERA BUCHANAN. The House has lost an able and distinguished Member, and we have lost a vivacious and winsome friend.

VERA BUCHANAN succeeded her husband, Representative Frank Buchanan, who had served long in this House with marked ability. She soon made her own place in this body and her devotion to the interests of her constituents and to the public welfare twice won her reelection.

No matter how heavy the duties became, she never lost the pleasantness and genuine sweetness of character which she brought to all her relationships. Her untimely passing is the greater sorrow to those of us who knew her for the reason that she herself was so vital, so full of the goodness of life. She truly made an art of friendship and all those here who knew her are the better for it.

In our own loss of a useful Member and friend, we extend condolences to her family to whom she gave much love and to her constituents to whom she rendered great service.

I believe it will be appropriate to quote here the lines of Henrietta Huxley:

"Be not afraid, ye waiting hearts that weep,
For God still 'giveth his beloved sleep',
And if an endless sleep He wills, so best."

Liberalism

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Call to Liberalism," written by David Lawrence and published in the January 13, 1956, issue of U. S. News & World Report.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A CALL TO LIBERALISM
(By David Lawrence)

Liberalism has been undergoing a steady erosion. The so-called liberalism of today is a philosophy of coercionism in conflict with the spirit and letter of the Constitution. It is not true liberalism.

Time was when liberalism meant freedom from excessive government—freedom from encroachment upon the rights of the people.

Time was when the 10th amendment to the Constitution was as sacred as any other provision of the Bill of Rights about which we hear so much from today's liberals. This amendment says:

"The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

Control of education, of course, was one of the powers reserved to the States and to the people. No power of the Federal judiciary has until recently been exercised to set forth standards of education or to examine and rule upon the psychological influences that may or may not prevail in the classroom.

Today the Supreme Court has proclaimed that the Federal judiciary has the right to determine who shall or shall not attend public schools. This disregards the wishes of the States as expressed in their laws and respective constitutions. It is a short step now to the selection of teachers and to the designation of a curriculum by Federal authority.

Today's liberal acquiesces in this usurpation of Federal power.

Control of employment has hitherto been a right reserved to the people—the right of the individual to work or to refrain from working, and the right of the employer to hire or to refrain from hiring. Neither the States nor the Federal Government were ever given the right to interfere with the freedom of individuals to contract for goods or services.

The Federal Government, under the Wagner Act and the Taft-Hartley Act, has undertaken to supervise the operations of labor unions and management where the employer-employee relationship is involved. No such power was ever delegated to Government, Federal or State, by the Constitution. It is plain usurpation.

Today the liberal enthusiastically champions these enlargements of govermental authority over the people.

Discrimination in economic opportunity because of race or creed or color is a shameful thing anywhere—but nothing in the Constitution grants the Federal Government or the States the power to punish employers or union officials who practice such discrimination. If the people want to abolish discrimination—economic or social—and desire to legislate morals, why not let the people adopt a constitutional provision to accomplish such a purpose? The 18th amendment legislated on morals, but at least it was written into and taken out of the Constitution by the methods specified in the Constitution itself.

Today, without the slightest shred of constitutional power, a Presidential commission coerces employers by threatening to deprive them of their right to contract with the Federal Government unless they obey its decrees on who shall or shall not be employed. This is a usurpation of power.

Granted that these objectives are desirable, shall they be achieved by usurpation? Do we really believe any more in that clause of the Constitution which prescribes the proper way to amend the Constitution, or do we believe that nine Justices may rewrite the Constitution as they please?

It was Thomas Jefferson, the greatest of the true liberals of America, who first inveighed against the power of the judiciary to emasculate the Constitution. He complained that the judges could make the Constitution "a mere thing of wax" which they "may twist and shape into any form they please."

It was Thomas Jefferson who first protested against the centralized state.

Today's liberal believes in the mastery of the State. He wants the Government to own public-power enterprises and believes that the Federal Government is authorized to own or control every line of business.

True liberalism must be revived in America. It means a government of laws under a written constitution—not a government by the caprice of men who temporarily hold public office.

True liberalism is today being ignored by so-called liberals who by their tactics are involuntarily enlarging the forces of reaction and stimulating extremist groups of the right which are as unprincipled as those of the left.

There is only one course for the true liberal—to oppose the ideology of those who, in the name of emergency, expediency, convenience, or profit, would forsake both the letter and the spirit of the Constitution.

For it is the written Constitution—the whole of it and not just a few selected provisions—which we as citizens take an oath of allegiance to preserve, protect, and defend.

Revise Polish History

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Wilkes-Barre Times Leader-Evening News on January 5, 1956, in which the paper comments on the current program of the Communist regime in Poland of preparing the history of Poland from the Marxist viewpoint:

REVISE POLISH HISTORY

One of the goals of the Communist regime in Poland is to transform the ideas of the Polish people concerning their history and culture. The attitude of the Polish people toward their past is considered by the Communists as obsolete and bourgeois-inspired, and they seek to impose their own opinion on the people. For the last 10 years, the Communist regime spared no efforts to attain that goal. But all its exertions have had little effect.

Now the regime is printing a large History of Poland, consisting of several volumes and prepared from the Marxist point of view. The publication is to become the basis for all future monographies and fragmentary compositions on the history of Poland. It is to be based on the history prepared in Russia by Soviet scholars. The first volume of the publication, which will have 1,200 pages, is still being examined by the censors.

The Warsaw daily, "Trybuna Ludu," main organ of the Communist Party in Poland, announced the publication, saying in part: "The closing of the work on the first volume of the 'History of Poland' conducted for the past 3 years by a group of outstanding Polish historians is an important event in our world of science. It is the first stage in a broad work on a synthesis of Poland's history, a publication 'The History of Poland,' which will have about 4,000 pages. The work is scheduled to be finished during the next 5 years."

The daily adds that "The aim of the authors of 'The History of Poland' is to carry out the first Marxist analysis of our history and to purge the teaching of Polish history of all those mistakes, concealments and even frequent lies with which it has been burdened by bourgeois historians."

Everything is clear. The publication is aimed at distorting the history of Poland in accordance wtih pseudo-scientific Marxist theses. There is little likelihood that it will change the attitude of the people toward their past.

The Sorry Cyprus Situation

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a very fine article which appeared in the current Time magazine entitled "Too Much Death."

This article dramatically points up the tragic situation in Cyprus, a situation which calls for settlement before it erupts into a major trouble spot. It is becoming more and more evident that United Nations action is called for in this dispute between the Cypriots and the British. The longer such action is deferred, the longer communism has a perfect situation for exploitation.

From authoritative sources which in the past have been utterly reliable I learn of one error in this otherwise accurate article. The EOKA described by the writer as a "Communist terror group" is, according to my information actually a nationalist patriotic group which is opposed to communism.

The Cyprus situation has been smoldering for some time. Further delay in effecting a just solution is certain to result in an explosion that will rock the foundation of the free world's peace effort. Further delay but fosters increased disunity among our friends, to the utter delight of our enemies.

I have introduced two concurrent resolutions—House Concurrent Resolution 26, January 6, 1955, and House Concurrent Resolution 100 on March 24, 1955—dealing with the Cyprus situation. Both ask for immediate exploration of ways and means to bring to the beleaguered Cypriots the principles of self-determination advocated by the United Nations.

The Honorable JOHN MCCORMACK, of Massachusetts has introduced and the House has passed House Concurrent Resolution 149 calling for United States support and influence in behalf of peoples desiring to achieve self-determination or independence.

The time for action is now.

The article from Time magazine follows:

TOO MUCH DEATH

It is dark at last in the Kyrenia Mountains of Cyprus and the British commando officer has no appetite for the task he must now perform. He assembles his squad for a patrol, but his mind is on another night like this, 14 years ago. Then he was the hunted, a fugitive from the Nazis who had poured into Greece. Three young Greeks sheltered him, then carried him in a tiny caique away from Greece to safety. Now the officer is the hunter, and it is time to hunt down Greeks as brave and as passionate for freedom as those who saved his life. "Things have certainly changed," the officer sighs. He slaps a clip into his Sten gun and orders his men forward.

It is time for divine services in the small Protestant church in Nicosia. Sir John Harding, a brave soldier and brilliant commander has fought two wars, led whole armies—including thousands of Cypriots who fought in British uniforms. But he dares not worship alone. A squad of British soldiers precedes him and examines the altar, the Bible, the pews, and chancel for planted explosives. Harding arrives in a bulletproof sedan. Armored cars bristle outside as Sir John, Governor General of the Crown Colony of Cyprus is at his devotions.

The authorities have at last found the Cypriot whose paintbrush adorned a wall with a slogan offensive to the governor. Such scenes at police headquarters suggest a boys' game gone terribly wrong—the young, pink-faced British soldier looks almost as scared as the culprit he drags in, squirming and nauseated with fear. This criminal is a schoolboy of 14; the message he painted was, "Harding come down from your helicopter." The punishment for the boy's crime: 3 months in prison.

A handsome British major of 34 is decorated with the coveted George Medal for his bravery in breaking up an ambush of terrorists. But Major Brian Coombe has killed a man and he is not proud. "My driver was killed by one of them and it was my duty to bring to justice the people who murdered him," he says softly. "As a result, one frightened, pathetic young Cypriot was

killed. It is tragic. The Cypriots now are acclaiming the dead man as their hero, and the British press is acclaiming me as theirs. You may think I am talking like a grandmother, but there is far too much hatred here. There is already too much death, pain, and tears in Cyprus."

History may place the death, pain, and tears as but passing stages in the 20th century's long funeral procession of British colonialism. There came Ireland, India, Palestine, Kenya, Malaya, and now Cyprus. But the special tragedy of Cyprus is that it involves friends, and that the suffering should be so simply avoidable. A clear statement from the British Government promising the right of self-determination at a definite time in the near future to Cyprus' 520,000 people could halt overnight a conflict that daily grows more violent and more dangerous. Week by week it becomes more apparent that Britain's release of control of Cyprus to its inhabitants is not only the just solution, but the inevitable one. "One wonders," wrote the conservative London Daily Telegraph's Cyprus correspondent last week, "if we have not arrived at a point of no return."

TURNING BACK THE MEDALS

For a century, the partnership of Britain and Greece was one of history's warmest. By last week, hatred for the British was the chief preoccupation among Greeks. In many cities and villages, streets once named in gratitude for Winston Churchill were being renamed. Scores of Greeks decorated for valor with British forces in the war have recently sent back their medals to the British Embassy in Athens.

It was not always thus. Modern Greece was born to the accompaniment of Lord Byron's odes against the hated Turks. British diplomats gathered gratitude by helping Greece get back the Ionian Islands and Corfu. Gladstone hoped before he died (in 1898) to see Cyprus and Greece joined in enosis (union), and early in the century a political comer named Winston Churchill eloquently reminded Cypriots of their destiny to be joined with Greece. For a time, early in World War I, Britain dangled the promise of Cyprus as an inducement for Greece's entry on the side of the Allies. Said one of Cyprus' governors, the late Sir Ronald Storrs: "The Greekness of Cypriots is * * * indisputable. No sensible person will deny that the Cypriot is Greek-speaking, Greek-thinking, Greek-feeling, Greek."

Sixteen months ago, Britain's Minister of State for Colonial Affairs Henry Hopkinson used a word that British diplomats are said never to use. His word for enosis was "Never." Fortnight ago Hopkinson passed on to his reward: he was promoted to the House of Lords and ceased to be Minister. To the patriotism of Cypriots and the passion of Greeks, his indiscretion was a signal that diplomatic pleading would not be enough. At the front of the Cypriot agitation appeared the youthful face of black-bearded Makarios III, who studied theology at Boston University and at 42 is spiritual and temporal leader—the Archbishop and Ethnarch of Cyprus—to the island's overwhelmingly (80 percent) Greek population. A small but dangerous Communist terror group, the EOKA joined in. Lean and warwise Sir John Harding found Makarios a tough man to deal with, but he has also found him the man to deal with.

A TWOFOLD CASE

The British case for holding on in Cyprus is twofold.

First, it is strategic. Since abandoning the Suez Canal, Britain has made Cyprus its Middle East command post, has begun building a massive base at the bay of Episkopi. It maintains that loss of Cyprus as a base would endanger not only British but NATO defense. The Greeks have publicly promised that in return for self-determination and enosis, the British can get ironclad terms for staying in their Cyprus military installations.

Second, it is concerned for Cyprus' Turkish minority (about 93,600 people) and for Cyprus' proximity to Turkey. Any settlement would have to guarantee the Cyprus Turks their rights. The hatred that divided Greeks and Turks during the time of the Ottomans and the terrors of the early 1920's was in recent years subdued by their working partnership in NATO and the Balkan Pact. The Cyprus issue has uncovered old scars.

Slowly, too slowly to win any credit for good will, the British have begun beating a retreat. Archbishop Makarios made known that he would be happy to settle for an unconditional British pledge of self-determination and prompt steps toward arranging it; enosis, if that is the will of the people, would come later. After much gulping and shooting of cuffs, Sir Anthony Eden's government took back Henry Hopkinson's never, and 3 weeks ago accepted Cyprus' right to self-determination—but still would not say when. The United States, ally and friend of all three nations involved, thought it expedient not to say in public what the State Department believes in private—that the British must give in on self-determination.

In Athens for a visit, an old soldier with profound experience in that part of the world felt impelled to warn that Britain's "when" had better come very soon. Retired United States General James Van Fleet, who organized the Greeks' victory over the Communists in 1947–49, was alarmed by United States policy of "adhering to antiquated British-French colonial policies * * * instead of taking an independent, clear-cut road, consistent with our own statements and principles." The United States, said Van Fleet, had hurt itself seriously in Greece by appearing to support Britain and the status quo on Cyprus. Soldier Van Fleet saw no hope for a British policy of rule by force. No military base, no matter how powerful or well guarded, said he, is of much use if it stands "as an island surrounded by a hostile sea."

This Year and Years To Come

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled, "This Year and Years To Come," which was published in the Evening Herald of Rock Hill, S. C., dated January 4, 1956. The Evening Herald is one of our prominent daily newspapers, and is ably edited.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS YEAR AND YEARS TO COME

As we start this new year, two statements are being repeated in a number of ways:

Russia and world communism have been gaining;

America and the free nations of the world have been slipping.

So, many Americans, like people in other free nations and probably like people in nations under Communist dictatorship, are asking questions about the future which reflect worry and even fear:

What will Russia do next? And after that?

What will world communism do this year and in the years to follow?

And it is after such questions that we ask ourselves,

What can we do to try to stop the Russians? To try to block communism's long-term program to take over the whole world?

Such thinking is wrong. All wrong.

For example, look at a football game. Which team wins, the one that just plays a defense, or the one that carries the ball?

To win, your team has to get the ball across the goal line. Carry it. Pass it. Kick it. But hold on to the ball, advance, keep the other team on the defensive.

Part of last year, we carried the ball against the Russians. That was done by President Eisenhower's address to the United Nations—by President Eisenhower taking the top position of world leadership at the first Geneva meeting, the meeting of heads of nations.

Then Russia got the ball. Maybe we fumbled.

We can recover.

We are still the stronger team.

We are stronger in our moral position. (Although we have been weaker in our propaganda about it.) Stronger in the honesty of our desire for peace in the world. Stronger in combination with the other free nations in industry, in the initiative of freemen.

Stronger because we want for human beings around the whole world those freedoms which their instincts cry for.

Let's carry the ball again. Carry it this year. Plan to carry it for many long years to come; for that is the only way we can expect our way to win.

President Eisenhower, we hope, is regaining the strength to reenter the struggle. Meanwhile, we of the American people can encourage others of our team to really carry the ball.

We can encourage the men in our Government. Those in the executive branch. And particularly those in the Congress. For us South Carolinians, that means Senators JOHNSTON and THURMOND. For us in the Fifth District, it means Representative RICHARDS in his highly important position of chairman of the House Foreign Affairs Committee.

Above all, we can ourselves start thinking, and talking, constructively instead of defensively. For what is thought and talked by the people across the United States in time determines not only the talking and thinking in Washington but also the actions of our Government throughout the world.

We can win the long struggle for a free world.

We must win.

Science Lag Cited in Foreign Policy

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. FLOOD. Mr. Speaker, much has been said and written by governmental officials, educators, and industrial leaders of the vital and necessary part that science has played and will play in the progress and wellbeing of this great country of ours.

There is no question in my mind that were it not for the invaluable contributions made by our scientists, especially in the military field, we would find ourselves in a very percarious position.

With that thought in mind, I would like to call your attention to an article which recently appeared in the New York Times of January 8, 1955, which stated "that the State Department's science program, launched on an ambitious scale 5½ years ago, appears to have collapsed."

This program was designed to provide information and assistance, both inside the Government and to science in general, and scientists were also appointed as attaches to our embassies abroad in order to assist friendly countries.

The embassy personnel, it has been said, "dispelled any suspicion of being espionage agents and had been the only representatives with access to influential foreign scientists."

This latter point should be well considered. We most certainly do not live in vacuums or ivory towers. We have friends, and we need more friends abroad. Coordination in the field of science among friendly nations is a must. Let us not permit this vital program to go down the drain. It should be continued. An explanation by the State Department for its termination is most definitely in order.

The New York Times article follows:

SCIENCE LAG CITED IN FOREIGN POLICY—STATE DEPARTMENT ACCUSED BY CHEMIST UNIT OF LETTING TECHNICAL OFFICE COLLAPSE

WASHINGTON, January 8.—The American Chemical Society asserted today that "the State Department's science program, launched on an ambitious scale 5½ years ago, appears to have collapsed."

The chemists said the Department's scientific corps "has deteriorated to the point where it will have no representatives overseas after January 15, and no scientists in the home office."

They noted that the post of Science Adviser in Washington had been vacant since Joseph B. Koepfli, an organic chemist, left in January 1954, and his deputy, James W. Joyce, a geophysicist, departed 6 months later.

A career departmental economist, Walter M. Rudolph, now carries on the work with two secretaries, but "has done an outstanding job of keeping the office going," the chemists added.

ENORMOUS WASTE FEARED

The society's comments were based on a report in its weekly Chemical and Engineering News. This reported both the United States and other countries had benefited from the science corps. Former State Department scientists were quoted as saying in mystification that "to let the science function die now would be next to criminal and an enormous waste" of time and money.

As one example of gains, the report cited an agreement worked out by Walter W. Greulich, as scientific attaché in Bonn, on recruiting German scientists for work in the United States for industry and Government. Mr. Greulich also warned against danger to the West of losing the rapidly recovering German scientific resources.

Citing congressional approval for both State and Navy Department science work abroad, the report suggested that "if money is the problem, it stems from within the Department." The State Department, it added, "hasn't made up its mind about what kind of pattern it wants, if any."

The Science Office, the report said, started after recommendations by the State Department's International Science Steering Committee under Lloyd V. Berkner in 1949. This had followed experience in disseminating wartime developments and problems in coordinating science in Government, as well as success of the Department's London office on science and technology, taken over from the Commerce Department in 1946.

PROFESSIONAL AID URGED

A departmental reorganization task force had reported foreign policy being handled "without adequate scientific evaluation," and had called for "top policy consideration and the aid of professional scientific judgment."

The Science Office was set up at the policy level, with the science adviser ranking as a special assistant to the Under Secretary of State for Administration. His task has been to provide information and assistance both inside the Government and to science in general, on occasion representing the Department in scientific meetings. Scientists were also appointed as attachés to embassies.

Since the Berkner recommendations, 19 scientists have served as embassy attachés in London, Stockholm, Bern, Bonn, Paris, and Tokyo. The peak was 10 in 5 European embassies in the summer of 1952. Last year there were four. By next Sunday, all will have returned without replacements named, the chemists' report said.

The report terms lack of a scientist in the Science Office "harmful." Curtailment of the attachés was described as regarded by foreigners as "a slap at their science" and an indication that "Americans are vacillating and unreliable."

The former attachés were quoted as contending they had dispelled any suspicion of being "espionage agents," and had been the only officers with "access to influential foreign scientists." They were reported alarmed by a Hoover Commission recommendation that science attachés be put under the Central Intelligence Agency.

Address by Mr. Justice Samuel H. Hofstadter, of New York, Before the New York City Association of the Bar on November 22, 1955

EXTENSION OF REMARKS
OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address by Mr. Justice Samuel H. Hofstadter, of New York, before the New York City Association of the Bar on November 22, 1955. Judge Hofstadter is one of our ablest jurists and a distinguished legal scholar:

Edmund Burke, warning Britain of the qualities which made the Colonies dangerous, listed among them their love of the legal profession. The admonition seems well taken when we consider how many of the Founding Fathers were lawyers. The love held by the legal profession for liberty is equally notable. It is altogether fitting, therefore, that we, as lawyers, should concern ourselves greatly with these matters.

There are many thoughtful men and women who differ about the fifth amendment and an immunity act. But they are not as vocal as the extremists whose raucous recriminations obscure their real purposes. The radicals of the right deride the fifth amendment; and their opposite numbers of the left repel an immunity act. Both exploit our national dilemma. Both use the same words to express contradictory ideas to suit opposite ends, calculated to hide the same ultimate purpose—to destroy the American ideal.

The man of good will, however, perceives that one of the most urgent problems of our time arises from the apparent contradiction between two of our most pressing needs—the need to maintain a level of security adequate to our present dangerous situation, and the need to protect individual rights essential to our ordered society.

With the passage of the Immunity Act of 1954, there is reason to hope that the competing claims of public good and private right have been synthesized. The act contains important safeguards which protect both the witness and the Government from ill-considered use of its provisions. It deals with inquiries involving the national security. A witness compelled to testify after having claimed his privilege, may not be prosecuted in regard to any transaction about which he testified; nor may his testimony be used as evidence in any criminal proceeding against him in any court. This immunity is as broad as the privilege; it satisfies the test of validity established by the courts.

Under the act the compulsion of the witness and his immunity must be grounded on a direction by a United States district court, after compliance with a prescribed procedure. If the proceeding is before a congressional committee, the grant of immunity must first have been authorized affirmatively by the vote of two-thirds of the full committee. The Attorney General must have been notified and the court's direction given only after hearing the Attorney General. In court and grand jury proceedings the application for the direction must be made by the United States attorney in charge, upon the approval of the Attorney General.

The act will enable the Government to secure the testimony of those who now hold back, whether they be those willing to talk but genuinely apprehensive of prosecution, those reluctant because perplexed, or those who are definitely recalcitrant. The first two groups should be encourged; the third group compelled to disclose facts requisite to the national welfare.

The act, too, steers a sensible middle course between the extremes espoused by the doctrinaires on both sides: those who, fearful of any erosion of the privilege as a peril to liberty or resentful of the excesses of certain investigating committees, equate the privilege with the right to remain silent, even in the absence of self-incrimination; and those who, incensed by the abuse of the privilege, would abolish it altogether.

Contrary to general assumption, the privilege, though found in the Bill of Rights, is of comparatively recent origin in the development of Anglo-American law. In terms the clause speaks only of self-incrimination in any criminal case; but by decision the privilege is held applicable to civil cases and to virtually every form of official inquiry. It embraces not alone testimony directly incriminatory, but also that forming a link through which guilt of crime may be established. The witness himself is the judge, free to withhold testimony which he in good faith believes may pave the way to possible prosecution.

Broad as the privilege is, it is not unlimited. Traditionally and historically the privilege has always been personal to the witness. He may not invoke it to shield others from punishment. It does not protect from unpleasant consequences to the witness or to others. Unless the testimony may tend to incriminate the witness, the right of the public to know is paramount to his preference for silence.

In theory the privilege runs counter to the duty everyone owes society to give testimony of any facts known to him, and its exercise may hamper search for needed facts. This conflict between the public interest and private right has always been resolved by the enactment of immunity laws. These laws follow a general pattern; the compulsion to testify accompanied by a grant of immunity from prosecution. Immunity has

been made available to witnesses testifying to violations of almost every Federal regulatory statute. The States, too, have many immunity laws. The privilege has not thereby lost any of its vitality. For what the fifth amendment protects is non-self-incrimination, not silence.

The principle of the right to avoid compulsory self-incrimination has not been accepted without reservation.

Legal philosophers and scholars contest not only its intrinsic validity but its pragmatic justification. Cardozo, speaking for the Court, boldly observes that though it may have value, it is "not of the very essence of a scheme of ordered liberty." It is noteworthy that the bench in this case included Justices Hughes, Stone, Brandeis, Roberts and Black; Mr. Justice Butler dissented.

On the other hand, the Supreme Court has called the privilege "a wise and beneficent rule of evidence" and the New York Court of Appeals has said: "While the guilty may use the privilege as a shield it may be the main protection of the innocent."

It is incongruous that some lovers of liberty have condoned interposing the bar against self-incrimination, not for its intrinsic purpose of self protection but as a makeshift shield against the excesses of certain investigating committees. It is questionable from a moral point of view; it is of doubtful expedience; it is intellectually inadmissible. Such a course tends to pervert "due process"—to vitiate its force and disparage its significance. Correct procedure must be underlined; it is expedient as well as valid to do so.

The essence of "due process" is the legal imperative, based on a moral one, that good ends must be secured only by good means—desirable results by honest expedients, otherwise the means contaminate the ends. The thesis that the end justifies any means is rejected by all right-thinking men. Though disguised as the friend of freedom, or security, or piety, it is hostile to them all; it is a philosophy implemented only by authoritarian techniques.

The fifth amendment is too important to be improperly used; any use for which it was not intended is an abuse. It is a great constitutional canon forged as a shield of protection, and it must not be inverted. It is a "barrier between the obligation to give evidence and the injustice of inquisition;" "a protection to the innocent though a shelter to the guilty." For the innocent or guilty—the intention is to afford a refuge against oppression in any form or degree.

Generally speaking, I would divide those who are affected by the privilege into six groups. At one extreme are the innocent; at the other, the guilty; there are those who are probably innocent but may be implicated—they, themselves, are not always sure—and conversely, those who are probably guilty, but honestly or otherwise claim innocence. Then there are those who unwittingly or thoughtlessly lent their names or money, if not themselves to doubtful causes. There is a sixth category—probably it was the most important if not preponderant, when the privilege originated in Puritan England—those who infringed against laws which public conscience condemned as odious or mischievous or even downright evil.

Doubtless at some time the privilege was more in use by the innocent and at other times more so by the implicated. Very likely—at least in the beginning—in England it was invoked more frequently by the innocent; in our own courts, I would hazard the guess that it has more frequently been invoked by the guilty. But the fact remains, the imponderable is, that this is exactly what we intended.

The privilege is enshrined in our constitutional system and I believe most Americans want it to rest there securely. Dean Griswold summed it up: "* * * the privilege against self-incrimination is one of the great landmarks in man's struggle to make himself civilized."

To obtain the testimony of a witness who claims the privilege, a pardon before testifying is a traditional device, both here and in the British Commonwealth. When the state has granted him a full pardon, it may not be denied his evidence. In the give and take of our society, these are the ultimate guide lines: No man may be forced to help convict himself of crime. But when fully freed of potential danger, the community may call upon him to speak.

When Holmes said: "The most stringent protection of free speech would not protect a man in falsely shouting fire in a theater and causing panic," he was speaking in limitation and not preclusion. The obverse bears equal weight. There may be a clear and present duty to shout "Fire" if there is, in fact, danger—when the proclamation is not fraught with danger to the person making it. What is protected and guaranteed in the fifth amendment is not silence but non-self-incrimination.

It is as much a distortion to equate the privilege against self-incrimination with the right to remain silent, as it is to identify dissent with disloyalty.

Indeed, in an ultimate view, an immunity statute, relieving the rigidity of the privilege, conserves it. For the statute insulates the right against disrepute, and perhaps discontinuance, at the instance of those who deride its use or as a reaction against those who use it improperly.

The protagonists of repeal of the fifth amendment and the antagonists of an immunity statute have lost sight of controlling considerations. The privilege is a basic safeguard against governmental power—its repeal would do violence to our tradition of individual freedom. And it is morally expedient to confer immunity when necessary to secure information needed for national security.

There is a right to speak; there is a right to silence—when self-injurious. There is, too, the duty to speak.

The stress of rights must be balanced by insistence on obligation. There are important things which must take the place of personal considerations, or there could be no human society. The progress of humanity has resulted more from the concept of duty than that of right.

With the passage of this legislation, balancing of public weal and individual right enters a more refined area. What is philosophically possible is often pragmatically unwise. Owing to recent events, many are concerned about the authorization of immunity grants to congressional committees. I share their antipathy to the incontinent behavior of certain of these committees, and, indeed, publicly have protested their methods.

But the statute itself will tend to minimize the excesses. The area of disparagement and indecorum will be narrowed, if not occluded, when witnesses can no longer decline to testify.

To seal the mouth of pertinent witnesses is not to resolve the problem but rather to evade it. And that evasion deflects attention from the primary purpose of the congressional power to investigate, to a manifestation of its misuse.

The power of Congress to seek information through investigation has long been regarded as one of the greatest it possesses. In their role as aids to the formulation of legislation, congressional committees are vital to the national welfare. But investigation cannot be lawful except for the purpose of gathering information for legislation contemplated; it must bear a reasonable relation to the lawmaking functions of Congress.

The Supreme Court has been disposed to uphold the widest possible legitimate use of such investigatory powers. But, on occasion, these powers have ben distended by abuse beyond matters that fall rightly within their competency. And the conduct of inquired, at times, has been a violation of propriety and contrary to fair play.

The House and Senate must adopt a mandatory Uniform Code of Fair Procedure for their respective committees; weasel words are not acceptable as a substitute. Congressional leadership, Democratic and Republican alike, has persistently defaulted in discharging its obligation in this critical matter. It is to be hoped that they will not delay any longer. For, despite the apparently improved motivation and temper with which recent inquiries have been conducted, reliance must rest on fixed principles and not on the vagaries of individuals.

But even the adoption of, and adherence to, such a code will not suffice. Better rules will avail little, if the spirits of using them does not also improve. Legislative bodies that make the law, and their subsidiary agents, charged with lawful investigation to further this end, must give cognizance not only to rule and statute, but also to self-discipline. Self-imposed restraints, by code and by mood, encouraged by right public attitudes, will go far to hold legislative investigations within bounds not only of wisdom, but of necessity and decorum. When these have been exceeded, the courts are available.

Lawyers can differ as to what are the limits of the power to investigate, but would certainly agree that there are limits. The line is not always clear, but when the line between the permissible and the illegal is not merely blurred but obliterated, when all safe and proper limits of committees' powers and conduct have been exceeded, the judicial arm of the Government may be successfully invoked to stay further aggression. For the legitimacy of all power is a matter of degree. Referring to Chief Justice Marshall's dictum that the power to tax is the power to destroy, Holmes said, "In those days, it was not recognized as it is today that most of the distinctions of the law are distinctions of degree. The power to tax is not the power to destroy while this Court sits."

The authority to investigate is indispensible to the sovereign power that resides in Congress to make laws. Incident to it is the right to grant amnesty to those witnesses from whom a full and free disclosure would not be otherwise obtainable. For an effective means of obtaining essential information is a prerequisite to responsible government. No state can endure upon volunteered evidence alone. To assure its survival, inquiry—judicial or legislative—may not be thwarted by recalcitrant witnesses.

Honorable accommodation is cardinal to ordered freedom. It was easier to phrase the Declaration of Independence than to frame the Constitution. It is easier to initiate a revolution than to organize a stable society.

It was the political genius and prophetic wisdom of the Founding Fathers which fashioned the Constitution—but it is "the strong and diverse heart of America"—in Stephen Vincent Benet's phrase—which vivified it. The virtue of the American system evolves from the fact that the United States is a vast area of diversified interests—it requires the art of rational compromise.

Because of a genius for honorable compromise 160 million souls derived from races of every background, have been able to forge a bond of fellowship, in a common peoplehood. This has been possible not despite the fact but because we are not homogeneous—something those who struggle for conformity as the supreme end should ponder. We have achieved unity in diversity.

The golden mean, distillate of generous spirit and heroic will, is our rule. At times, rights of the individual are dominant; at

other times, the need of the Nation prevails; always the two remain in balance. Legislation within normal limits representing the preponderant view of the people is vindicated, morally as well as legally, by the good temper in which all accept it; extremism does not prevail. In the existing crisis we are called upon to make difficult adjustments to assure national security and yet to maintain the basic freedoms which are the very fiber and fabric of our being. If we surrender the right to think and speak freely, we shall have lost our free society; the right extends to the unpopular as well as the popular cause. In his essay On Liberty, John Stuart Mill said: "The mere example of nonconformity is itself a service." On the other hand, the primacy of a nation's right to protect itself is inherent in the life of social order. Zealous to appraise justly the relative spheres of individual right and public interest, we must maintain an exacting balance between them. It is such an accommodation which the American people have made in complementing—I may even say, implementing—the privilege of the fifth amendment by the Immunity Act of 1954.

The privilege of not being compelled to testify against one's self has been caught up in the ideological tensions of our time, with resultant distortion of perspective. The problem of security has been merged with the fifth amendment. A primarily procedural device, designed to shield the witness in legal proceedings, has been transformed, for the doctrinaire of the left into a shibboleth of secular martyrdom; for the doctrinaire of the right, a rallying cry of subversion.

It is time that we surrounded the concept of nonincrimination with a cordon sanitaire and recognized it for what it is. It exists on its own terms apart from any immediate fact, situation, or emotional reaction. It is not a political canon nor a philosophic abstraction—but a concrete response to the need of the individual for protection against authority—any authority, however benevolent. The privilege is a limited one; it should not be debased by disparagement nor enhanced with a borrowed radiance. Viewed in its historic context it was intended to operate in a climate of controversy and should not be suspended whatever the frame of reference—any more than it may be expanded. A right that is effective only when not needed is scarely a right at all.

The importance of the safety of the Nation must not be underestimated; equally important is the more inclusive safety of a way of life which is based on principle and not expedience. Those who take the fifth amendment in vain for any purpose adulterate the moral integrity that is our birthright.

The privileges and immunities of our individual citizens have been weighed against the needs of the people as a whole. It has been the genius of our Anglo-American legal tradition that it has been able to achieve the synthesis of personal liberty and public order under the sovereignty of law.

Grand Island, Nebr., the All-America City

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MILLER of Nebraska. Mr. Speaker, I should like to make the following remarks about one of America's all-America cities, and to extend the same in the Appendix of the CONGRESSIONAL RECORD.

GRAND ISLAND, NEBR., THE ALL-AMERICAN CITY

Last Thursday, January 5, 1956, the largest city in my congressional district celebrated a well-deserved honor. The occasion, high-lighted by national celebrities who are proud to claim Nebraska's third city as their home town, marked Grand Island's recognition as a Look magazine all-America city for 1955.

The idea that Grand Island might compete for this honor was suggested by the city manager. The chamber of commerce gave it impetus. An all-out community effort sold it.

The comprehensiveness of the community improvement program was remarkable, but most significant were these projects developed or realized in 1955: A $4 million school bond issues; a Community Lutheran Hospital fund drive that brought in contributions exceeding $400,000; a vigorous and expended youth recreation program, emphasizing little league baseball, a concerted drive to increase religious and church activity; and a new home for the Hall County Fair, pari-mutual horse racing, 4–H shows, and farm youth activities.

These accomplishments were the backbone of the case presented on May 5, 1955, to the National Municipal League in New York City by Walter P. Lauritsen, chamber of commerce president, and Chamber Secretary William E. Dauer.

Grand Island can be justifiably proud to receive the coveted Look magazine award, to be recognized as one of the 10 outstanding cities in the United States in 1955. More deeply, however, they can be proud of the people and the forward-looking community of individuals who made this recognition possible.

The mark of a good home town is its emphasis on the church, the school, and the home. Grand Island is a city of 25,000 people. There are 36 churches providing places of worship for their congregations. In the past 10 years, these churches have spent nearly $2 million on new buildings, additions, and schools, and their membership has increased by nearly 10,000.

Grand Island, no different in this respect from many other cities and towns in America, was faced with a serious classroom shortage. The citizens rescued themselves. First, a campaign was conducted that led to a special building fund in 1947. Out of this fund came the wherewithal for urgent and immediate building. The long-range program was then agreed upon by a citizens planning committee, their campaign was started and, with the untiring effort of an organized community, a $4 million school-bond issue was approved by a near-record number of Grand Island voters. The $2.7 million spent to date from this fund has gone a long way toward solving the third city's classroom problems, but these forward-looking people say "it has not completed the job," and pledge fulfillment.

New and beautiful homes have sprouted on practically every one of the hundreds of vacant lots that existed before World War II. In 1953 alone more than $5 million was spent on new home and dwelling construction, and in the 10 years following World War II, nearly 2,000 homes have come into being at a cost of more than $20 million. This home-growth record undeniably influenced the selection of Grand Island as an all-America city.

Many other community projects deserve praise: Beautiful new Fonner Park, internal improvements to streets, water and sewer systems, outstanding hospitals, commercial air service, and many others. It was this atmosphere of progress and achievement that induced at least six large industries to take notice of the prospecting in 1955 campaign of the chamber of commerce, and locate plants in Grand Island. This, and the inherent assurance that in Nebraska there is a labor supply of men and women who will do a day's work for a day's pay.

Grand Island's beauty is not confined to its homes, churches, or schools, or even the community spirit that evolves from a united and common campaign. The ethereal qualities of two daughters of Mr. and Mrs. Forrest Ritchie, of that city, last year received national recognition. Sharon Kay Ritchie is Miss America for 1956; her sister, Mrs. Donna Jo Strever, was a finalist in last year's Miss Universe contest.

No wonder its splendid citizens say "It's grand to live in Grand Island."

Highway Financing

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. RODINO. Mr. Speaker, I wish to include in the Appendix of the RECORD remarks made at the 23d annual meeting of the American Bridge, Tunnel, and Turnpike Association, by Mr. D. Louis Tonti, on October 14, 1955. Mr. Tonti, who is executive director of the New Jersey Highway Authority—Garden State Parkway—is conversant with the problem of highways. I submit his remarks, Mr. Speaker, purely for the information of the Members of the Congress on this all-important issue. However, the views expressed therein do not reflect my own opinion on the subject since I am presently considering and studying various proposals which have been referred to my attention.

Mr. Tonti's remarks follow:

The national highway program, as outlined by the President's Committee, headed by General Clay, can be partly financed by a direct assessment on every vehicle produced in the next 10-year period.

This would be a special excise tax, earmarked for the 40,000-mile interstate system that the Clay committee says is essential in solving the nationwide highway problem. If we take the total needs as outlined by that committee; namely, $100 billion over a 10-year period, and assume that 85 million vehicles will be produced in the same period, it is obvious that each vehicle requires $1,185 to pay for the required highway system. Of

course, I do not propose that each vehicle be taxed this amount, but a tax of $100 per vehicle produced during this period would provide some $8½ to $9 billion. Naturally, this tax could be graduated for different types of vehicles and adjusted in amount to increase the total revenues from this source as high as it were deemed necessary. I leave the arithmetic to the experts, but the important point I would like to emphasize is that our greatest defection in our transportation economy is the absence of a tie-in between the production of vehicles and the construction of highways. Both factors are important and inseparable.

The automobile industry cannot continue bragging about new production records, while no adequate provision exists for the highways needed for such vehicles. By imposing a realistic tax on each vehicle and earmarking it for highway construction, we will be forcing the manufacturers to incorporate in their price structure, the inseparable factor of highway costs. This will have a number of beneficial effects. First, it will inhibit the overproduction of vehicles and "under" construction of roads. If the present unbalance continues, we are faced with the ridiculous prospect of all cars coming to a standstill.

Secondly, by including this added tax in the cost of making the vehicle, it will force the manufacturer to stop thinking of cars solely in terms of horsepower and fancy trimming and give some attention to the highway needs essential to carry the vehicles they produce. Consumer resistance will discourage price increases, with the result that in most cases the consumer won't feel the tax. He will merely get a substitution; a "piece" of highway instead of some chrome and push-button gadgets.

Finally, this will encourage the auto makers to demonstrate their industrial statesmanship by furthering research in new materials and methods in highway construction with the objective of reducing costs. A cheaper, more durable road surface becomes just as important as a plastic substitute for a steel body. Furthermore, I have faith that private enterprise can do this pioneering more effectively than our State agencies with inadequate facilities and underpaid engineering personnel.

In summary, I believe the principle of combining the cost of highways and vehicles all under the same hood is sound. In the operation of our free economy, we will avoid the unbalance that now prevails in our transportation economy.

Radio Reports by Farmers Union Grain Terminal Association

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD daily radio reports, dated January 2, 1956, and January 6, 1956, prepared by the Public Relations Department of the Farmers Union Grain Terminal Association, St. Paul, Minn.

There being no objection, the reports were ordered to be printed in the RECORD, as follows:

MONDAY, JANUARY 2, 1956.

Starting out a brand new year is always a thrill for us. We get the feeling that it's time to hitch up our belts, square our shoulders, and tackle afresh the problems that last year seemed unsolvable. That's why we'd like to repeat for you today a few lines from a "forward to '56," printed in the 1955 annual report of Farmers Union Grain Terminal Association. It is by M. W. Thatcher, the general manager of GTA. For more than a quarter of a century, he has been a leader in the struggle for decent incomes and living standards on the farms of the Nation.

"The year ahead is packed with momentous decisions for the American farmers," Mr. Thatcher states in this "forward to '56." "Developments today are alarmingly similar to the period preceding the tragic business collapse of 25 years ago. There is need for a new, a bold, and a positive approach to the whole problem of farm prices and production. The farmer must be ready in 1956 with the kind of a program that will do the Nation the most good."

And, Mr. Thatcher continues: "That is why cooperatives like GTA will be even more important to the farmer in the difficult year ahead. The cooperative that is aware of its obligations and conscious of its responsibilities will not measure its true worth by its financial statement, volume of business or total membership. It must be prepared to do all it can to help the farmer plan now for a better tomorrow. At no time in history has GTA had at its command such strength of finances, physical assets, and encouraging prospects for the future.

"So it is only natural," Mr. Thatcher points out, "for patrons to expect GTA to use its power and prestige to press for decent farm legislation. The farmer looks to his farm organization and his cooperatives for direction and leadership." And he will find them, Mr. Thatcher promises, for here is a new opportunity for cooperatives to prove their worth.

"GTA," he predicts, "will measure its success in 1956 by how much it can do—in Washington and everywhere else—to help farmers get back on their feet economically, and move ahead in the American tradition to better living, peace, and security."

That is the promise for 1956, because farmers are organized and working together, GTA, the co-op way.

FRIDAY, JANUARY 6, 1956.

Here at GTA office building, we're honored today by a special group of visitors. They're members of the Farmers Union, and they are Washington-bound. They'll be off for the Nation's capitol, bright and early tomorrow morning. Each year, Farmers Union locals select certain members to take this Washington trip. They travel in buses, and are scheduled to arrive in Washington Sunday afternoon or evening, depending on driving conditions, of course.

Washington Caravaners here today are from Minnesota, North and South Dakota, and the Rocky Mountain area. The group totals about 125 in all. They've got a busy schedule ahead and will be back in St. Paul a week from tomorrow. Next Friday another group will be at GTA and ready to start off on the trip to Washington. In fact, we'll have Washington Caravaners visiting GTA for five successive Fridays. Altogether, it's expected that about 1,200 farm men and women from some 14 States will go to Washington on these bus trips in the first 3 months of the new year.

North Dakota will have eight bus loads. Minnesota, as we've said, will have five—with Max Larson, GTA director and farmer from Beltrami, Minn., in charge of that State's groups. South Dakota, the Rocky Mountain area, and Indiana will send 4 bus loads. From Montana and Illinois will come 3 loads each. Texas will have 2, and Ohio, Iowa, Pennsylvania, Kentucky, and Arkansas will send 1 load apiece.

The Northwest Caravaners organize here in St. Paul. On the group's schedule for today is a tour of GTA headquarters to give them a chance to learn more about the operations of their regional grain marketing co-op. They'll have lunch here, too, and get acquainted with one another. From here, they'll go to the Farmers Union Central Exchange and the Farmers Union Marketing Association, their supply co-op and their livestock marketing co-op. So, you see that today they are studying the work of their regional cooperatives, giving them a chance to see more clearly the importance of these services, so they'll be able to discuss the role of their co-ops when they get to Washington.

When they get to the Capital City will come the most important part of the whole tour. That's visiting their Congressmen and Senators. They'll make appointments with these elected officials—go to their office and discuss the problems of family-type farming. They'll outline what they feel is needed in the way of farm legislation. These meetings will give farmers a chance to ask questions, and Congressmen and Senators to do the same.

This is democracy in action—citizens expressing their views to their elected officials. It's an opportunity for farm people to speak their minds on farm policy, in Washington, where farm prices are made.

The Caravaners will attend sessions of the House and Senate, visit the Department of Agriculture and talk to officials who administer farm laws, and tour points of historical interest. They'll express their views on farm legislation, and they'll come back with a keener interest in Government and public affairs than ever before. This is GTA, the co-op way.

Gas Fight in the Senate

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an editorial entitled "Gas Fight in the Senate," published in the Kansas City Star for January 7.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GAS FIGHT IN THE SENATE

LYNDON JOHNSON, the Senate Democratic majority leader, expects the natural gas bill to reach the Senate floor in a couple of weeks. Then the chips will be down on the measure that would exempt independent producers of natural gas from Federal price regulation.

The bill passed the House by a narrow margin last summer. The present strategy of the oil and gas Senators apparently is to push the identical measure through in a hurry. That would avoid compromises and conference committees that would send it back to the House where the margin of victory was only six votes.

Generally, the gas-producing States and the consumer States are the opponents with both political parties sharply divided. Recently, however, there have been indications that consumers in the Southwest aren't so sure that their interests lie with a free market for natural gas. Naturally that area has produced the most vociferous antiregulation legislators.

Kansas City's direct interests lie with reasonable controls to bolster the rather ineffective Federal jurisdiction over the ultimate cost of gas. The producers may argue that no great increases would come without regulation. But the current Cities Service rate request—which we are now paying—is based to a large extent on the fair-field formula. That method, which allows the pipeline to figure rates on the basis of market price instead of costs, recently was overturned by the courts. The natural gas bill would write the fair-field formula into the law and it would cost the consumers a great deal of money.

Why Public Law 875 Should Be Amended

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. PATTERSON. Mr. Speaker, every Member of this distinguished body knows of the devastating flood disasters that occurred along the eastern seaboard last August and October when the boundless might of nature destroyed human lives and caused untold destruction to property.

It was my district, Mr. Speaker—the Naugatuck Valley of Connecticut—that suffered worst of all from those two successive floods; and during those tragic hours of the August flood, I was a constant observer of the illimitable courage and heroism of those whom I was born amid, grew from youth to manhood with, and for whom I established an everlasting admiration and love.

However, Mr. Speaker, during the aftermath of those horrible tragedies of August and October of last year, I also observed the execution of a law of the land that this great body had enacted—Public Law 875. But it soon became clear, Mr. Speaker, that despite the many good provisions of this law, it was still inadequate to meet the impact occasioned by such a natural disaster as that which struck the State of Connecticut and five other States and afford immediate relief to victims in such disaster areas, as the Congress had expressly intended this bill to do. It is for that reason, Mr. Speaker, that I am introducing amendments to Public Law 875, and also for the following reasons:

When sudden disasters strike homes, farms, and factories, the American people plead for greater opportunities to help those in need. They realize that earthquakes, fires, floods, tornadoes, and hurricanes sweep asunder the lives, possessions, hopes, and dreams of many persons. They know that even creeping disasters cut away coastlines, alter rivers' courses, cause droughts, and take their tolls regardless of a person's race or color, religion, amount or lack of money, political affiliation, or where he lives.

The people respond gladly to public subscriptions and other forms of relief, but these efforts are usually insufficient. Many people feel that their eagerness to help has been frustrated.

Rivers once flowed unhampered to the sea. But streams are being increasingly constricted by bridge piers, bridges, transportation, rights-of-way, pipelines, factories, and other obstructions. Consequently, the dangers and damages of floods grow.

Even the well-intentioned efforts of our Government officials are too slow, too meager, and too cumbersome, mainly because of inadequate Federal disaster laws.

PUBLIC LAW 875

The principal authority for Federal disaster relief is Public Law 875, approved on September 30, 1950. This act authorizes the President to coordinate the disaster assistance activities of the National Government and to direct Federal agencies to utilize their available personnel, equipment, supplies, facilities, and other resources. This act has been amended to permit greater Federal assistance, by Public Law 107, 82d Congress, approved August 3, 1951, which authorizes housing relief in major disasters; and Public Law 134, 83d Congress, approved July 17, 1953, which authorizes Federal surplus property use in major disasters.

Basic statutory authority of the United States Department of Agriculture was amended by Public Law 115, 83d Congress. This amendment assists particularly in relief of drought areas.

Authority to administer Public Law 875 is lodged in the Federal Civil Defense Administration. Before Federal disaster assistance can be given the governor of the affected State must formally certify the need for Federal help and assure the expenditure of a reasonable amount of funds for relief purposes by the State or local governments. Then the President has to determine that the catastrophe is serious enough to be classified as a major disaster. This has been done 51 times up to June 30, 1954.

THE NEED TO IMPROVE PUBLIC LAW 875

Public Law 875 needs to be improved so that help can be more direct and more financial assistance can easily be made available. At present the officials charged with administration of the law have virtually no guidance for how much the State and local governments must spend. This should be made more definite, and the act should recognize differences in fiscal capacity among the States. Recognition should also be given to the disaster's crippling effect upon an area's ability to pay.

The specification that $5 million be appropriated to the President for purposes of the act is much too small and restrictive. It should be omitted and terms such as "whatever funds are necessary" should be substituted. It is difficult to specify an exact amount. Actual appropriations for Public Law 875 purposes through the fiscal year 1955 amounted to $59.3 million——28 million of these funds were advanced to the USDA for drought relief and subsequently the USDA reimbursed Civil Defense from its appropriated funds. This is to be contrasted with property losses from major disasters during the same period of about $4 billion.

Apparently the total amount of public money spent to recover from disasters is small compared to the total damage. The Federal investment—$59.3 million—since its enactment has averaged only 14 percent of the total public funds spent for disaster relief. The local authorities have furnished about 73 percent of these payments and the States have paid about 13 percent. In other words, those areas hit by the floods, hurricanes, earthquakes, and other disasters were the very ones which were least able to pay but they furnished three-fourths of the money. These people realize that we spent over $21 billion for foreign aid in the last 4 years. They know that the money for foreign aid comes out of the pockets of all the taxpayers, including those in disaster areas—to help outsiders. Regardless of the merits of foreign aid it is shocking to note that during the last 5 years Congress appropirated only $59.3 million for natural disaster sufferers in our country.

Evidently private insurance did not and probably could not fill the gap between total public expenditures—somewhat over $400 million—and total disaster losses of about $4 billion in the last 5 years. For example, of the 1951 Kansas-Missouri $1 billion flood loss, only 5 percent was covered by insurance—United States Congress, Senate, Committee on Banking and Currency, Federal disaster insurance, staff study, 84th Congress, 1st session, committee print, November 30, 1955, Washington, Government Printing Office, 1955: 14. Floods, whether caused by hurricanes or other factors, do the most damage, are hardest to insure and are apparently the least covered by any type of insurance. Insurance is scarce also for tidal waves, certain water damage from hurricanes, and air pollution.

The authority of the President and the several agencies to act quickly should be more definite and less restrictive. For example, the disaster in New England in the fall of 1955 required a decision as to whether or not a special session of Congress was necessary. Fortunately, that was not demanded. The chairmen of the congressional Appropriations Committees approved the emergency expenditure of additional Federal funds. This was admirable action but for a while a condition of uncertainty existed and valuable time was taken to get a decision. In contrast, if the law permitted more automatic and direct authority by the President to pledge the credit of the United States to necessary amounts, then private funds would be more quickly available and many frustrations and uncertainties would be avoided. More direct authority for the President to pledge credit would put less of a burden on the Small Business Administration which is empowered to make disaster loans, but naturally many safeguards are applied and the approv-

als of loan applications take considerable time.

Public Law 875 does relatively nothing to stimulate pre-disaster planning or post-disaster permanent reconstruction. To cite another example, numerous factories located in or near streams are damaged or washed away by floods, but they relocate at or near their original, dangerous sites. The Office of Area Development, United States Department of Commerce, has some specialists who could help advise businessmen on new locations. However, this agency has only about 15 employees and its services to distressed areas are thus quite limited.

Public Law 875 generally confines Federal agencies' aid to temporary, emergency assistance, and authorizes permanent restoration work only for Federal structures. This is a great hardship in some cases. There should be some provisions to explain Federal assistance on certain types of permanent restoration work.

It is sometimes said that some people will save taxes on disaster losses, but those individual savings will not be as large as is generally supposed. Such losses have to be applied first to the year's pretax income. It is only if the loss exceeds income that the excess can be "carried back" against the income of the preceding 2 years, with a possible tax refund.

The following table shows estimated losses from major disasters in the United States during 1951–55. It should be noted that it is difficult, if not impossible, to segregate hurricane and flood losses:

Major disaster losses in the United States, 1951–54, 1955 preliminary

[Not counting droughts]

[Property damage in millions of dollars] [1]

	1951	1952	1953	1954	1955 [2]	1951–55
Property damages:						
Floods and hurricanes (tropical storms)	$1,031	$257	$128	$755	[3] $1,776	[3] $3,947
Tornadoes	30	35	224	28	31	348
Earthquakes	3	60	----------	1	----------	64
Total damages	1,064	352	352	784	[3] 1,807	[3] 4,359
Lives lost:						
Floods and hurricanes (tropical storms)	51	57	42	193	231	574
Tornadoes	34	230	516	35	123	938
Major earthquakes	----------	13	----------	----------	----------	13
Total	85	300	558	228	354	1,525

[1] Figures rounded.
[2] 1955 estimates are preliminary and partly estimated. Large flood damages occurred in December 1955.
[3] Hurricanes often cause floods. In attempting to avoid duplication, the costs of these 2 disasters were combined for 1951–53 when hurricane damages were reported as small and flood losses large. For 1954 and 1955 the reported damages from hurricanes which included large flood losses were used.

Source: U. S. Congress. Senate. Committee on Banking and Currency. Federal disaster insurance. Staff study, 84th Cong., 1st sess. Committee print. Nov. 30, 1955. Washington, D. C., GPO. 1955. pp. 5, 37, 124, 133, 149.

Disasters hurt more people than their direct victims. By causing losses in incomes they reduce taxes collectible and by destroying factories, homes, and lives they weaken the strength of the whole Nation. It is high time the Congress enact legislation to provide broader, more direct, and more permanent relief from natural disasters.

Four Chaplains

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. QUIGLEY. Mr. Speaker, in a war that produced great feats of heroism, self sacrifice, and examples of great faith in God, no World War II incident has inspired America more than the courage and faith of four chaplains when the steamship *Dorchester* was torpedoed and sunk on February 3, 1943.

The story of the four chaplains is well known. One of these four men of God was Rabbi Alexander D. Goode of York, Pa. His fellow townsmen have seen fit to honor him in many ways. The most recent memorial to him is an elementary school bearing his name, decorated with murals which will present the message of great faith to generations of children who will attend that school.

I had the high privilege to attend the dedicatory services on November 13. The listed principal speaker was Dr. Daniel A. Poling, whose late son, Clark Vandusell Poling, was 1 of the 4 chaplains who gave his life aboard the *Dorchester*. Dr. Poling was unable to attend, so another son, the Reverend Dr. Daniel K. Poling, read his inspiring speech.

I include Dr. Poling's speech as a part of my remarks:

ADDRESS DELIVERED BY DR. DANIEL A. POLING AT THE DEDICATION OF THE ALEXANDER D. GOODE HIGH SCHOOL, YORK, PA., SUNDAY, NOVEMBER 13, 1955

On the morning of February 3, 1943, shortly before 1 o'clock, the steamship *Dorchester*, a converted passenger freighter of less than 6,000 tons, entirely inadequate for transport service, was torpedoed and sunk by enemy action off the tip of Greenland. Of the 906 men on board, only 229 survived, but there were eyewitnesses to tell an epic story of courage that America will never forget.

In those freezing days and nights of January and February, the iceberg waters of the north were the hunting ground of enemy undersea wolf packs. Hundreds of ships went down and thousands of brave men died. But the *Dorchester* story has significance beyond all other brave tales of that tragic winter.

Four chaplains on board, chaplains of our three great faiths—John P. Washington, a priest who entered the service from Arlington, N. J.; Alexander D. Goode, a rabbi whose congregation was in York, Pa.; George L. Fox, a Methodist minister who reported for duty from Gilman, Vt.; and our son, Clark Vandersall Poling, minister on leave from the First Dutch Reformed Church of Schenectady, N. Y.

As another has written, "Day after day, as the ship plowed on, the chaplains talked to the men, joked with them, sang with them * * * The men knew they were heading out into torpedo junction and they were scared. That made things tougher for the chaplains * * *" Then 2 torpedoes tore into the heart of the little ship, ripped her wide open. Within minutes she listed sharply. There was panic on the slippery decks. A man couldn't live long in those waters. The chaplains moved among the confused and frightened men, encouraged them, prayed with them.

Let it never be charged that there were insufficient lifejackets on board. There was an ample supply—every man had one and he had been ordered to sleep in it. But the *Dorchester* was less than 100 miles from port. Accompanied by 1 destroyer, she had moved out from the convoy and was at the top of the fiord. That last night untrained and undisciplined boys and men relaxed. Hundreds of them laid aside their gear to get a real rest. Hundreds died below the decks and others came up half dressed and without their life preservers. From the spares in the chests, the chaplains distributed Mae Wests until all were gone and then, when 4 men appeared without jackets, each of the chaplains took off his own belt and forced it upon an unwilling serviceman. That serviceman knew what it meant to the man who gave it to him.

One of the survivors, a young engineer, Grady Clark, told me how he watched the chaplains as they distributed their belts. I saw him in the Valley Forge Hospital at Phoenixville immediately after he came down from Greenland with badly frozen legs. He was one of the last men picked up—and few there were who survived that frantic bath.

"But," said he, "I got to the deck fully equipped—how, I don't know—and watched, fascinated, while the chaplains worked. I forgot myself. I saw one of the four men of God force his belt over a man who cried hysterically, 'I don't want it. I don't want it.' He knew what that belt meant to the chaplain. But the chaplain pulled his rank and said, 'Get into that belt, soldier, and move fast.' And then they spun 'round and crashed down on the rail together. The chaplain lifted him up, helped him over, and shouted, 'Swim out, soldier; swim out.' He turned then and came sloshing up the deck toward me. He saw me. He knew me. He said, 'Soldier, what are you doing there? Get over the rail.' And he spun me round with his open hand and we slid together. The rail was awash now and over I went. 'Swim out,' he said, 'swim out.' And he laughed a nervous laugh. I swam out—fast and far as I could. Then I turned and looked back. The flares lighted everything. The chaplains stood braced against the rail, their arms locked. I knew that they were praying for the safety of the men. They had done everything they could."

And Grady Clark concluded his staccato story: "The bow came up high and she slid under. I never saw the chaplains again."

Each of the chaplains was awarded the Purple Heart and the DSC—the Distinguished Service Cross. Also the Government issued a memorial stamp. This then is the story.

This afternoon as I listen, listen with you and for you, I hear what I think the four chaplains have to say to their fellow Americans of all faiths, of all races, and of all economic conditions:

"Ours was a unity that transcended all differences. Ours was a unity that was not uniformity. Ours was a unity that strengthened within each of us every worthy individual loyalty of family and of faith. Ours was a unity that, at its highest and its best, is the United States of America. To this unity, in which we died together, we call upon you of all faiths, of all racial strains, and of all economic conditions, to live together—to live together, that those who died shall not have died in vain."

For me, these are the words of the chaplains, as I stand before this, another memorial—a memorial to 1 of those immortal 4 men of God, Alexander D. Goode, of whom I shall speak even more intimately in closing my address.

Freedom is at once both an inheritance and an achievement. We have it from the past and we save and hold it; we strengthen and enrich it for ourselves and for the future.

The Founding Fathers laid the firm foundations of church and school, of home and state, upon which we built. They pioneered the wilderness. They conquered the West and made the continent into a Nation. The Pilgrims in New England, the Dutch and the Jews on Manhattan Island, the Swedes and Quakers in Philadelphia, the Catholics in Maryland, the Cavaliers in Virginia, the Scotch-Irish in the Carolinas—these and all the mingled racial strains converge to make the mighty river of America.

But clearly that figure of speech is inadequate. Rather, this Nation is the product of a forge heated white—the fused and welded faiths and races of the earth. It is by no accident that "united" is the first word of our name—the United States. Out of suspicions and dissensions, acrimonious debates and long delay, that word came. It rose at last above selfishness and fear, and from a federation of weakness into a union of power. The story of our past is the record of men and women who brought us from Plymouth Rock and Yorktown, Belleau Woods and Iwo Jima. It is the history we should read and teach. Read first to have our own hearts quickened and teach then to our children and children's children, that it shall instruct their minds and inspire their souls for the tasks that lie ahead.

But within the genius of liberty, as of the uniqueness of the American union, freedom must be rewon in each generation and in some measure reborn in each citizen. Freedom is never static. It is never finished and it must march or die. That it may march, that it may press toward the far-off goal, that its voice, however discordant at times, is never silenced, has set America apart from dictatorships and makes her today the hope and inspiration of all free peoples and of all who would be free.

In our time it is not difficult to make a case for defeatism. Surely, by all economic tests, the world is now in a worse state than it was when the Kaiser launched his gray hordes against Liege, or when Hitler broke his evil treaty and crossed into Poland.

"What did your boy get by dying?" was a question flung at the father of 1 of the 4 chaplains. Yes, what did he and all the others get? They got tortured living and strangled dying—but they got infinitely more. They got for us the chance—the fighting chance—to win the peace. And this is everything. This they got for us—the immortal dead whom we remember today. They and all the others who also gave themselves but who, in God's providence, returned to serve their country in the peace, got for us the warrior's chance to pay again the price of freedom.

Winning the war and winning the peace are one and the war has not been lost and our dead have not died in vain unless we live in vain.

Today ours is the heavy task of carrying freedom forward to new heights of "liberty and justice for all."

But it was easier for the Nation's sons to die together in World War II than it is for us to live together in the present qualified and uncertain peace. But live together we must, and in the spirit of their dying, or we, too—and all we hold dear—shall die. Yes, surely die, but without their glory.

The irreducible minimum for an adequate defense of America is American unity. Not uniformity. All races and faiths, all colors and economic degrees, living together and working together as Americans all.

Unity can only be achieved where there are differences and in the presence of an event or in the service of a cause transcending all differences. And it is the uniqueness of unity that it strengthens and enriches the particular loyalty of the individuals and groups that have achieved it. Here, too, is the genius and uniqueness of America.

"Lo every people here has sent
Its sons to answer freedom's call.
Their living blood is the strong cement
That builds and binds the Nation's wall.
Then let us purge of poisoned thought
That service to the state we give,
And so be worthy as we ought,
Of this great land in which we live."

Yes, here is the uniqueness of our freedom and the genius of our way of life. Unity is in going together the length of our common agreements and, in peace as in war, "united we stand, divided we fall." Unity is without prejudice to particular loyalties of individuals, of groups and faiths. Unity strengthens and enriches every worthy loyalty. Unity is dynamic and has propagating power. Unity is the ultimate achievement and can only be achieved in support of a worthy cause. Unity is America on the march.

Even as American unity is the irreducible minimum for national defense, so the unity of free peoples and of all who would be free is the irreducible minimum for world security and peace. Geographically and by all tests of time and space, this is one world, but ideologically, politically and spiritually, it is a divided and subdivided world.

We have learned in sweat and blood and tears that wars cannot be isolated. Shall we fail to learn before it is too late that peace and security can never be isolated? That these must be for all if presently they are to be at all? Build well today the structure of the state. Beat back the foes within that shame her cities, corrupt her youth and exploit liberty into evil license.

Now again patriotism must come alive in deeds and the ideal must be reconciled with the real. The Nation's preparedness must be comprehensive and complete—moral, spiritual and physical. But the irresducible minimum of that defense—the minimum without which the barricades will be breached and freedom will die within before she succumbs to any foe from without—the irreducible minimum is unity. And it was in the unity that the four *Dorchester* chaplains lived and served and died, but live on forever in such memorials as this which we dedicate today.

Now mankind is engaged in a spiritual Armageddon. The godless state challenges the faith of our fathers and moves with ruthless disregard of human rights toward a world revolution that would displace democracy with dictatorship and all the freedoms with atheism, excluding both God and the free man. Here the issue joins and nowhere else. And here may be achieved the unity of a billion human beings who believe in one God. Against this unity all the tides of dictatorship would rise and beat in vain.

It is altogether fitting that this new and beautiful building, erected for the intellectual and moral guidance of the youth of York, Pa., should be dedicated as a memorial to one of the immortal four chaplains, Rabbi Alexander D. Goode, who went from this Pennsylvania city into the uniform of his country, to serve young men in uniform and to be their spiritual companion and guide. In this city is the congregation that he served, where he will be forever well remembered.

Mrs. Insall, national president of the Story Tellers League, speaking at a memorial service of her organization which was held in the Chapel of Four Chaplains—another memorial to these four men of God—paid the following poignant tribute to the man we honor this afternoon:

"Alexander Goode was too young for World War I. While George Fox was winning medals on the battlefield of France, Alexander Goode was receiving medals in Eastern High School, Washington, D. C., for tennis, swimming, and track. He led his class in scholarship, too. He planned to follow in his father's footsteps and become a rabbi, but that did not kep him from having a laughing, shouting, hail-fellow-well-met boyhood with all the Protestant and Catholic boys in the neighborhood.

"When the body of the Unknown Soldier was brought to Arlington Cemetery, Alexander Goode attended the ceremonies. He could just as well have ridden that 15 miles, for, after all, there were trolleys and buses in Washington, and the Goode family had a family car, but he thought it showed more respect to walk—and walk he did, all the way to Arlington and all the way back—30 miles. That's how he felt about the Unknown Soldier. Even while training for his calling he joined the National Guard and kept up an active membership.

"He married his childhood sweetheart. After he got his synagogue, he felt he still was not worthy. He would know better how to heal men's souls if he knew how to heal their bodies, too, and so for 3 years he drove every day to Johns Hopkins University, 45 miles away, until he won his medical degree.

"One day in 1943 Mrs. Goode received a telegram from her husband: 'Having a wonderful experience,' it read, and then Mrs. Goode knew that her husband had found a warm companionship with the men with whom he could share his faith and his laughter."

But let my final tribute be the words of the citation won by Alexander Goode, as he received posthumously the Distinguished Service Cross:

"Chaplain (1st Lt.) Alexander D. Goode, Army of the United States. For extraordinary heroism in connection with military operations against an enemy of the United States. On the night of February 3, 1943, a loaded troop transport was torpedoed, without warning, by an enemy submarine in the North Atlantic and began to sink rapidly. In the resulting confusion and darkness some men found themselves without life jackets and others became helpless through fear and the dread of plunging into the freezing water. Chaplain Goode heroically and calmly moved about the deck encouraging the men and assisting them to abandon ship. After the available supply of life jackets was exhausted, he gave up his own. He remained aboard ship and went down with it offering words of encouragement and prayers to the last."

Above the entrance of the unique Interfaith Memorial in Philadelphia, the Chapel of Four Chaplains, beyond the eternal light burning above its entrance and the bronze plaque which bears the names of all chaplains who died in World War II, these 10 words have been chiseled into the stone:

"Here is sanctuary for brotherhood
Let it never be violated."

God grant that these words shall be written now upon our hearts to come alive in deeds that shall make America stronger yet. God grant that in them and through us, all nations shall be enriched and all men blessed. To this high task in this high hour, as we would be worthy of Chaplain Alexander D. Goode and of his comrades, let us pledge our faith, our lives and our sacred honor.

Status of Forces and International Law

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. ANFUSO. Mr. Speaker, I want to insert an article in the RECORD which discusses the NATO status of forces agreement and international law. I consider this article as the most thorough treatment and analysis of this problem and commend it highly to the attention of all my colleagues.

The author of the article is Dr. Edward D. Re, professor of law at St. John's University in Brooklyn, N. Y., and a very close personal friend of mine. This article is based on a lecture delivered by the author at a forum on jurisdiction over United States Armed Forces serving abroad, held in New York under the auspices of the Bar Association of New York City and the New York County Lawyers Association. The article was published in the July-August 1955 issue of the Northwestern University Law Review, where it extended over 46 pages. A shorter version of this article was published earlier in the May 1955 issue of Phi Delta Delta magazine of the legal fraternity of the same name.

Col. F. W. Schweikhardt, staff judge advocate of the Continental Air Command, Mitchell Air Force Base, New York, republished the short version in the August 1 issue of JAG Reserve News Letter. It is the latter version that I am today inserting into the RECORD, notwithstanding the fact that it exceeds the space generally allotted.

Professor Re received B. S. and LL. B. degrees from St. John's University and J. S. D. degree from New York University. He is the author of Foreign Confiscations in Anglo-American Law and Brief Writing and Oral Argument. From 1943 to 1947 he served as legal officer and instructor at AAF Officer Candidate School. He is chairman of the committee of civil procedure and practice, American Bar Association.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the article by Professor Re:

THE NATO STATUS OF FORCES AGREEMENT

(By Dr. Edward D. Re)

I

Since, as part of our country's collective defense efforts under the North Atlantic Treaty, American servicemen are stationed in other countries, it has become necessary to determine the rights and duties of these Americans while they are stationed in the territory of another NATO country. Hence, the NATO Status of Forces Agreement. It may be added that the agreement is not limited to servicemen, but includes civilian employees and dependents.

It should be noted at the outset that the NATO Status of Forces Agreement is not, as one might infer from its title, an executive agreement or some informal understanding among the heads of states or military commanders of the NATO countries. Rather, it is a solemn treaty signed at London on June 19, 1951, and duly ratified by the Senate of the United States on July 15, 1953, by a vote of 72 to 15.[1] From a legal standpoint it is a multilateral reciprocal treaty designed to implement the provisions of the North Atlantic Treaty. Its exact title is "Agreement Between the Parties to the North Atlantic Treaty Regarding the Status of Their Forces." It express purpose is to establish and set forth the terms and conditions which will determine the rights, duties, privileges, and immunities of the forces of one country that is a party to the agreement sent or stationed in the territory of another country that is also a party to the agreement.

Before discussing the relevant portions of international law and the specific jurisdictional provisions of the agreement that have been subjected to severe criticism, a few preliminary observations should be made to place the specific topic to be treated in its accurate factual and legal framework.

First, since the treaty is reciprocal in nature, whatever duties and rights are spelled out for the troops and personnel of nation A stationed in the territory of nation B will also determine the legal status of the troops and personnel of nation B stationed in the territory of nation A. The tenor of the agreement, therefore, is clearly one of partnership and equality whereby one party to the agreement does not exact or expect what it does not itself concede or grant.

Secondly, the agreement is not limited to what has traditionally been referred to as passage of troops going from nation A to nation C and passing through the territory of nation B. The agreement, rather, is designed to give effect to what is actually a more or less permanent stationing of the troops and personnel of one country in the territory of another.

Thirdly, the NATO status of forces agreement, for the first time in our history, permits the stationing of American troops on foreign territory in times of peace. The agreement is not a wartime agreement between Allies. It expressly provides for modification and suspension of the jurisdictional provisions in the event of hostilities.

These preliminary matters are of particular importance in determining the principles of international law that would govern such a situation because most of the precedents and authorities that have been urged in all discussions of this topic dealt with either the privileges and immunities of troops passing through a neutral country, invasion of enemy territory, or military occupation of enemy soil.

II

The provisions of the agreement that have been subjected to the severest criticism deal with the jurisdiction of a receiving state to try and to punish offenders for criminal offenses committed by personnel of a sending state within the territory of the receiving state. The agreement defines "sending" state as "the contracting party to which the force belongs." By "receiving" state is meant "the contracting party in the territory of which the force or civilian component is located, whether it be stationed there or passing in transit."

Article VII of the agreement prescribes the circumstances under which the sending or receiving states will have either exclusive or concurrent jurisdiction to try offenders. In those situations where both states have concurrent jurisdiction article VII prescribes which state shall have the "primary" jurisdiction. Exclusive jurisdiction implies that only one State has the right to try an offender as in a case, for example, of security offenses which are against the laws of one country but not of another. If an offense violates the laws of both states, both states may have jurisdiction. However, the state that has the right to try the offender in the first instance, and in this sense may be said to have the prior or superior right to try the offender, is deemed to be the state having the "primary" jurisdiction. This does not imply, however, that in the ordinary case a person may twice be in jeopardy. Paragraph 8 of article VII expressly provides: "Where an accused has been tried in accordance with the provisions of this article by the authorities of one contracting party and has been acquitted or has been convicted and is serving, or has served, his sentence or has been pardoned, he may not be tried again for the same offense within the same territory by the authorities of another contracting party." This section safeguards an accused against double jeopardy. This, however, is subject to what may be deemed a military exception to double jeopardy which does not prevent the military authorities of a sending state from trying a member of its force for a violation of rules of discipline arising from an act or omission which constituted an offense for which he was tried by the receiving state.

Article VII sets forth the respective criminal jurisdiction of the sending and receiving States. Paragraph 2 of article VII, which deals with exclusive jurisdiction, in effect, provides that each State shall have the sole right to try offenders for "security offenses such as treason, sabotage, and espionage which are punishable by the law of the State having exclusive jurisdiction and not by the law of the other State." As can be imagined problems involving the exclusive jurisdiction of a State will not be numerous and hence have not evoked undue criticism.

Article VII gives the sending State primary jurisdiction over two types of offenses committed by its armed forces. The first relates to offenses solely against the property or security of the sending State, or against the person or property of personnel of the sending State. The second relates to offenses arising out of any act or omission done in the performance of official duty. An American soldier in France, therefore, who commits an offense against another American soldier or his property comes within the primary jurisdiction of the American military authorities. If the American soldier were to commit an offense while in the line of duty, such an offense also would come within the primary jurisdiction of the American authorities.

Most of the criticisms that have been heaped upon the NATO Status of Forces Agreement stem from that provision of article VII that "in the case of any other offense the authorities of the receiving state shall have the primary right to exercise jurisdiction." This includes the greater majority of the off-duty offenses. It includes, for example, the case of the American soldier in France, who may commit an asault upon a Frenchman, or who may be driving an automobile while under the influence of intoxicants and all of the other offenses that are usually punishable by a civilian community.

A provision that is very important from the standpoint of the practical administration of the agreement deals with the waiver of jurisdiction by the state having the primary jurisdiction. First, in the event that the state having the primary jurisdiction does not desire to exercise jurisdiction, it shall notify the authorities of the other state for a waiver of its right in cases where that other state considers such waiver to be of particular importance."

Footnotes at end of speech.

Pursuant to this provision, when the giving of sympathetic consideration to a request for a waiver of a state's jurisdiction results in a waiver of its jurisdiction, many problems are neatly avoided. Actually, experience indicates that it is only in the exceptional case that the receiving State will wish to exercise its primary jurisdiction to try a member of the force of the sending State and not grant the request for a waiver of its jurisdiction. It is unquestionably true that "the experience of the Armed Forces has been that the countries in which the United States Forces are stationed give waivers of this jurisdiction in the great majority of cases." [2]

III

The question, nevertheless, remains whether under international law the receiving State would have the right to try members of a force that it has invited or which has otherwise entered its territory with its consent. Certain cases where the receiving State has actually tried American soldiers for off-duty offenses committed on the territory of the receiving State have received a great deal of publicity and as a result the question may very well be asked why under the agreement the United States has agreed to subject American soldiers to the criminal jurisdiction of the foreign country where he may be stationed. Based upon the firm belief that the rule of international law as laid down by Chief Justice John Marshall and many other later authorities is that troops of a friendly nation stationed within the territory of another are not subject to the local laws of the other country, but are subject only to their own country's laws and regulations for the government of the armed services,[3] many patriotic Americans have vehemently objected to the approval of the NATO Status of Forces Agreement.

The view that the receiving State under international law would have no jurisdiction to try American soldiers for off-duty offenses has led Senator BRICKER to state that to approve the criminal jurisdiction provisions of this treaty would amount to penalizing the American soldier in an effort to please our NATO allies.[4] In the sincere belief that this unprecendented agreement reflects a callous disregard of the rights of American Armed Forces personnel, Senator BRICKER proposed a reservation to the agreement [5] intended to withhold from the receiving state all jurisdiction over criminal offenses commited by members of the United States forces. At the same time the reservation would have had the result of depriving the United States of jurisdiction over offenses by foreign forces in United States territory if the foreign State requested a waiver of American jurisdiction. The end result of such a reservation, had it been adopted, would have been to deprive the receiving state of jurisdiction over all offenses commited within its territory regardless of whether in the line of duty or the nature of the offense. Thus, an American soldier while off-duty in Paris could not be tried by the French authorities for an assault and battery upon a Frenchman, or for any other crime. Under the agreement, since its provisions are applicable to the political subdivisions of contracting parties, a French soldier who commits a crime while off-duty in New York City can be tried by the appropriate court of the city or State of New York. If the reservation proposed by Senator BRICKER would have been effective, such a French soldier could not be tried by the local authorities, if a request were made by the French authorities for a waiver of jurisdiction. The Bricker Reservation, together with the criminal jurisdiction provisions of the agreement, were thoroughly considered by the Senate.

Footnotes at end of speech.

IV

If a member of the force of a sending state is to be tried by a receiving state for a criminal offense committed within the receiving state, the offender, naturally, will be tried according to the law of the receiving state and, hence, will receive whatever benefits and protections are afforded by that law. However, apart from rights existing under local national law, paragraph 9 of article VII of the agreement sets forth certain specific rights that must be accorded to an offender.

In addition to these safeguards, prior to the ratification of the agreement, the Senate adopted a statement or reservation proposed by its Committee on Foreign Relations. This statement declared that it was the understanding of the Senate which was inherent in its advice and consent to the ratification of the agreement that nothing in the agreement diminished or otherwise altered the right of the United States to safeguard its security by excluding or removing from the United States persons whose presence is deemed prejudicial to its safety and security. This statement was amended so as to include additional matters which expressed the sense of the Senate [6] that:

1. The criminal jurisdiction provisions of article VII of the agreement were not to be deemed a precedent for future agreements.

2. Where a member of the Armed Forces of the United States is to be tried by a receiving state, his commanding officer shall examine the laws of such state with particular reference to the procedural safeguards contained in the Constitution of the United States.

3. If the commanding officer is of the opinion that there is danger that the accused will not be protected because of the absence or denial of constitutional rights he would enjoy in the United States, the commanding officer shall request a waiver of jurisdiction in accordance with the provisions of the agreement. If the receiving state refuses to waive its jurisdiction, the commanding officer shall request the Department of State to press such request through diplomatic channels.

4. When a member of the Armed Forces is tried by the receiving state a representative of the United States "will attend the trial" and will report any noncompliance with the procedural safeguards enumerated in paragraph 9 of article VII of the agreement to the commanding officer of the Armed Forces of the United States in the receiving state who, in turn, will request the Department of State to take appropriate action to protect the rights of the accused.

The late Senator McCarran, who opposed the ratification of the agreement, chiefly because in his opinion it was "violative of the rights of American nationals," indicated that, although paragraph 9 of article VII "looks like a pretty good list," upon analysis "it becomes apparent that some of the most important guaranties under our own Bill of Rights have been omitted from this list." [7] He observed, among other things, that there were no provisions guaranteeing a public trial, the privilege against self-incrimination, freedom from cruel and unusual punishments, the right to appeal or review a decision, freedom of religion, freedom of speech and of the press, right of free assembly and petition, freedom from unreasonable searches and seizures, and the right to trial by jury. Apart from the wisdom of inserting a Bill of Rights in an international treaty of this nature, it should be noted that some of the rights referred to, such as trial by jury, would have no application to a serviceman who would otherwise be tried by military court-martial. It also could be shown that some of the remarks, such as the one that there is no presumption of innocence under the law of France and other European nations, are factually incorrect. Actually, the more valid answer to Senator McCarran's criticism would probably not be one dealing with technical principles of constitutional law and the administration of criminal justice, but rather, would deal with the highly developed system of jurisprudence that prevails in the NATO countries. This fact was pointed out by Senator WILEY, who added that "our experience with these countries with respect to this problem has been good." Of course, the Senator referred to our experience under the temporary bilateral arrangements that existed subsequent to World War II and prior to the NATO Status of Forces Agreement. Senator McCarran, however, was fully justified in observing that the accused's right "to communicate with a representative of the Government of the sending state" differed from the right "to have such a representative present at his trial," and this latter right, according to subdivision (g) of paragraph 9 or article VII, would only exist "when the rules of the court permit." To be deprived of the right to have a representative of the government of the sending State present at the trial might very well be more important than a so-called public trial. Furthermore, this limitation upon the right of an accused is contrary to one of the requirements enumerated in the statement of the Committee on Foreign Relations that a representative of the United States attend the trial of an American serviceman being tried in the courts of a receiving state. Although the statement does not have legal effect, it does, nevertheless, declare and make known to the commanding officer in the foreign country, and through the Department of State to the foreign country itself, the policy of the United States.

Footnotes at end of speech.

V

It is entirely justified to regard the case of the schooner *Exchange* as the convenient and authoritative point of beginning in a discussion of this subject. This celebrated case involved a libel filed in the United States District Court for the District of Pennsylvania by American citizens who claimed to be the former owners of the schooner *Exchange*.[8] They alleged that the vessel had been seized outside the United States by orders of the Emperor of France, and was subsequently commissioned as a man-of-war by the French Government. After referring to the "perfect equality and absolute independence of sovereigns" Chief Justice Marshall stated that the "common interest impelling them to mutual intercourse, and an interchange of good offices with each other * * * have given rise to a class of cases in which every sovereign is understood to waive the exercise of a part of that complete exclusive territorial jurisdiction, which has been stated to be the attribute of every nation." In enumerating this class of cases, Mr. Chief Justice Marshall first mentioned "the exemption of the person of the sovereign from arrest or detention within a foreign territory"; secondly, "the immunity which all civilized nations allow to foreign ministers" and then added: "A third case in which a sovereign is understood to cede a portion of his territorial jurisdiction is, where he allows the troops of a foreign prince to pass through his dominions."

The celebrated jurist stated that the consent for foreign troops to enter a friendly country is not presumed but must be expressed. In relation to vessels, however, he stated that the situation was different in

Footnotes at end of speech.

that unless a particular port was closed to a foreign naval vessel and notice of such fact was given "the ports of a friendly nation are considered as open to the public ships of all powers with whom it is at peace." The libel was therefore dismissed and the vessel was released.

Even if it be assumed that a judicial decision of a national tribunal can authoritatively expound principles of international law, and that concepts analogous to stare decisis are also applicable to international law,[9] it is manifest that the remarks of Chief Justice Marshall dealing with the immunity of troops were dicta. These remarks, 67 years later, again in dicta were expanded to read as follows in *Coleman* v. *Tennessee:*

"It is well settled that a foreign army, permitted to search through friendly country or to be stationed in it, by permission of its government or sovereign, is exempt from the civil and criminal jurisdiction of the place." [10]

The Coleman case dealt with a criminal offense committed on enemy territory. It involved a military occupation of "hostile country," and consequently "soldiers of the Army of the United States in Tennessee during the war * * * were not subject to the laws nor amenable to the tribunals of the hostile country." Hence the defendant was to be "delivered up to the military authorities of the United States to be dealt with as required by law."

Although the Coleman case dealt with a criminal offense committed by a member of an occupying force over enemy territory, the Court spoke of an exemption from the "civil and criminal jurisdiction of the place."

The dictum of the Coleman case became the holding of *Dow* v. *Johnson* decided the following year by the Supreme Court of the United States.[11] In this case, General Dow was sued in a State court of Louisiana for certain property that he, in his military capacity, had ordered to be taken from a plantation owned by the plaintiff Johnson. Judgment was given against the general by default and an action was brought upon the Louisiana judgment in the Circuit Court of the United States for the District of Maine. Mr. Justice Field, who wrote the majority opinion for the Supreme Court of the United States, held that General Dow was not subject to the civil jurisdiction of the local court and, hence, it had no jurisdiction to render the judgment upon which the plaintiff brought suit.

The three cases just discussed are the American judicial decisions principally relied upon to establish the immunity or exemption of troops from the jurisdiction of the territorial sovereign.

Another Supreme Court decision also relied upon is *Tucker* v. *Alexandroff*.[12] In the Tucker case, a detachment of the Russian Navy with the consent of the United States entered the United States for the purpose of manning a vessel that had been built in this country for the Russian Navy. Pursuant to the specific provisions of a treaty between the United States and Russia, the Supreme Court held that the commanding officer of the Russian detachment was entitled to have a deserter arrested and returned to his control. The Tucker case is generally cited for its statement concerning the holding of Schooner Exchange case. It reads: "This case, the Schooner Exchange, however, only holds that the public armed vessels of a foreign nation may, upon principles of comity, enter our harbors with the presumed license of the Government, and while there are exempt from the jurisdiction of the local courts; and by parity of reasoning, that if foreign troops are permitted to enter or cross our territory, they are still subject to the control of their officers and exempt from local jurisdiction." Although the preceding cases are not the only ones decided by American courts that had some bearing on the subject, they are the most relevant and the most cited precedents. Yet as can be gleaned even from the terse factual discussions contained herein, they fall far short of the mark surrounding the stationing of troops abroad pursuant to the North Atlantic Treaty.

VI

The true foundation and basis of the case of the Schooner Exchange, however, is not found in its discussion of the three classes of cases "in which every sovereign is understood to waive the exercise of a part of that complete exclusive territorial jurisdiction," which has been stated to be "the attribute of every nation," but in the statement that declares categorically:

"The jurisdiction of the nation within its own territory is necessarily exclusive and absolute. It is susceptible of no limitation not imposed by itself. * * * All exceptions, therefore, to the full and complete power of a nation within its own territories must be traced up to the consent of the nation itself. They can flow from no other legitimate service."

Clearly, therefore, the rule is one of territorial supremacy and all exceptions thereto must be traced to the consent of the territorial sovereign. The exceptions involve situations where the territorial sovereign has waived the jurisdiction that would normally attach. These situations do not involve any extraterritoriality but are referred to as exemptions from the territorial jurisdiction. In such cases the person or thing is exempt or immune from the jurisdiction. The important question that persists deals with the scope or extent of the immunity or exemption.

As indicated in *Cheng Chi Cheung* v. *The King*,[13] some immunities are well settled while others are more uncertain. The immunity of the sovereign himself, his envoy, and his property, including his public armed ships, from the local or territorial jurisdiction is clear. The applicability and extent of the immunity over friendly foreign armed forces is not clear. Although it is clear that a certain immunity exists, it is equally clear that such an immunity is not unlimited and complete. As to troops, as distinguished from naval vessels, there does not even exist a presumed or implied consent to enter a friendly country. The consent must be expressed, and as indicated by many of the writers the conditions of the movement are arranged * * * in a preliminary treaty or agreement.[14] In other words the permission to enter the territory will also contain the conditions, privileges, and limitations upon which the permission is granted. Clearly, therefore, the matter of entry or passage of a force through foreign friendly territory is strictly a matter of consent.

A survey of the sources examined reveals that the granting of consent does not ipso facto imply a complete exemption or immunity from the jurisdiction of the territorial sovereign. Even those authors who favor the existence of such an exemption indicate that in the absence of a special agreement the immunity is subject to limitations. Following the lead of Mr. Chief Justice Marshall, most authors concede that the immunity is limited to the passage of troops. The limitations are expressed in varying language. Lawrence speaks of the limitation within their own lines or were away on duty.[15] Oppenheim similarly limits the immunity to the rayon of the fortress and to offenses committed on duty.[16]

The most extensive discussion of this subject is found in an article written by an English scholar, G. P. Barton.[17] After a treatment of the international agreements concluded in World War I, the interwar period, World War II, the relevant municipal legislation, and the existing judicial decisions, the author concludes that even though the military courts of a foreign friendly force are entitled to exercise jurisdiction over its members, which includes the right to try a member for offenses against the local law, "it has not yet been established that this right carries with it the right to exercise exclusive jurisdiction over members of those forces who commit offenses against the local law." He adds:

"On the contrary, it has been shown that there exists a rule of international law according to which members of visiting forces are, in principle, subject to the exercise of criminal jurisdiction by the local courts and that any exceptions to that general and far-reaching principle must be traced to express privilege or concession."

It cannot be seriously questioned or disputed that all authors recognize and agree that the scope and extent of the immunity is really a matter of agreement between the interested States. This view is fully justified by a survey of the practice of States. The various bilateral conventions, agreements, and arrangements actually entered into reflect the particular needs of the parties with regard to a specific situation to be dealt with. Some granted complete immunity whereas others granted none. Not only was no single type of agreement used, but those agreements granting a complete exemption from the local jurisdiction were wartime agreements considered to be temporary and exceptional and dictated by the conditions of war.[18] The only existing multilateral treaties on the subject do not recognize any unqualified immunity.[19] Moreover those who insist that there exists a principle of complete exemption in the absence of agreement can find no support in the decided cases apart from the dictum in the Schooner Exchange case which, again in dicta, was expanded in the Coleman and Dow cases. The oft-cited Cheng Chi Cheung case involved the commission of a crime committed on board a naval vessel and the other cases were decided pursuant to a specific agreement.

Sound legal analysis, therefore, would require the conclusion that although a certain immunity exists for foreign visiting forces, the extent of the immunity is strictly a matter of agreement. It is for the territorial sovereign to determine the extent to which he wishes to waive the exercise of his jurisdiction. The agreements actually entered into by the nations of the world, and the decided cases clearly demonstrate that the problem has always involved reconciling "the practical necessities of the situation with a proper respect for national sovereignty." [20]

Predicated upon the foregoing legal analysis, it is apparent that the contention that, in the absence of the agreement, the NATO countries would have no jurisdiction over American forces stationed there is completely untenable. The agreement not only concedes the primary jurisdiction to the sending state in offenses arising out of the performance of official duty, but also in offenses solely against the property or security of the sending state or against the person or property of the personnel of the sending state. In the remaining cases when the receiving state shall have the primary right to exercise jurisdiction, the agreement expressly provides for the giving of sympathetic consideration to a request for a waiver of such jurisdiction. It is in this area that a great deal can be done in the actual implementation of the agreement. Surely, if an American serviceman about to be tried by a local court expresses the desire to be tried by an American court martial, everything

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

diplomatically possible should be done by the American authorities to see to it that the receiving state waive its primary jurisdiction. In this connection one is in accord with certain statements of Senator BRICKER,[21] that "* * * judge advocates should try to obtain a waiver of jurisdiction for every American serviceman in foreign custody." This seems to be in line with the resolution made by the Committee of Military Justice of the New York County Lawyers' Association pursuant to which the Defense Department was requested "to adopt a procedure whereby in all cases of United States Military Personnel involved with the civil authorities in Japan as well as in the NATO countries, efforts be made to have the personnel returned to United States military custody for appropriate disciplinary action by the military authorities."[22] This resolution would also strengthen the procedural safeguards provided by paragraph 9 of article VII of the NATO agreement in those cases where the receiving state refuses to honor the request for a waiver of jurisdiction, by guaranteeing to every American serviceman "adequate legal representation not only by local counsel versed in local procedures, but in addition * * * military counsel to aid in the defense of such person."

These suggestions seem to possess great merit and would justify legislation to authorize making available the necessary funds to engage the personnel required to achieve the desired purpose. They are sound suggestions, since they impliedly admit the wisdom of the American collective security plan. The alternative of abandoning NATO or the agreement is hardly a solution that warrants, in the view of our military leaders, serious consideration at this time. In view of the fact that the agreement is reciprocal, it seems difficult to speak of its terms as being unfair or unjust. Rather they tend to prove a statement made by Chief Justice Marshall in another famous case that "no principle of general law is more universally acknowledged than the perfect equality of nations." As indicated at the very beginning of the article, America is dealing with partners and Allies, not with conquered nations. After such deliberation, the NATO Status of Forces Agreement represents the solemn compact that has been agreed to by sovereign nations. If it is to be changed or modified, it must be done so freely and willingly. It is earnestly hoped that the modification or supervision of its terms will not be made necessary by those provisions dealing with the dreaded "event of hostilities."

1. Exercise of criminal jurisdiction by foreign tribunals over persons subject to United States military law: During the period January 1, 1954, through November 30, 1954, 7,416 (3,987) [23] persons subject to the United States military law were accused of offenses subject to the jurisdiction of foreign courts throughout the world. Jurisdiction was waived by foreign courts in 5,424 cases, and trial was had in 1,475 (793) cases. Charges were dropped as to 255 individuals, and 123 were acquitted. Confinement was imposed in 178 (38) cases but was suspended in all but 77 (16) cases. In 1,164 (693) cases, fines only were imposed. These figures include statistics under the North Atlantic Treaty Organization status of forces agreement, which is applicable to United States forces in Belgium, Canada, France, Greece, Luxembourg, The Netherlands, Norway, the United Kingdom, and Turkey. Of the 1,475 cases tried by foreign courts, 815 (452) were subject to the status of forces agreement.

Partial statistics of cases tried by countries include: France 283 (117), The United Kingdom 271 (208), Canada 249 (125), Panama 216 (104), Iceland 116 (25), and Japan 107 (36).

As of February 10, 1955, 58 United States citizens subject to military law were serving sentences to confinement in foreign institutions pursuant to sentences of foreign courts. Of course, 32 were for robbery and larceny, 15 for rape and related offenses, 6 for assault-type offenses, 4 for murder, and 1 for negligent homicide.

Unemployment in Economically Depressed Areas

EXTENSION OF REMARKS
OF

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. GRAY. Mr. Speaker, on the opening day of the 2d session of the 84th Congress, I introduced H. R. 7902, a bill to establish an effective program to alleviate conditions of excessive unemployment in certain economically depressed areas.

It is of the utmost importance to all the people of southern Illinois that this bill become law in this session of the Congress. I hope we will be able to hold early hearings on this bill and that it may be passed without undue delay in order to alleviate human suffering.

Under unanimous consent request, I wish to have inserted the following statement by me made before the United States Senate Labor Subcommittee on January 6, 1956:

STATEMENT BY THE HONORABLE KENNETH J. GRAY, REPRESENTATIVE IN CONGRESS, 25TH DISTRICT, ILLINOIS, BEFORE THE UNITED STATES SENATE LABOR COMMITTEE, ON JANUARY 6, 1956

Mr. GRAY. Mr. Chairman and members of this fine committee, I am indeed grateful for the invitation and opportunity to appear before your committee which is studying the economic conditions in depressed areas of our country.

I have the honor of representing the 15 southernmost counties in the great State of Illinois and before settling down to specific facts concerning our true economic conditions as they now exist in southern Illinois, please let me first preface my remarks by saying that due to coal and fluorspar mine closures and other factors, the economy of southern Illinois has been slipping for the past 10 years. The people of this region, through their chambers of commerce, Southern Illinois, Inc., community development programs, and other groups have done an outstanding job in trying to promote private industry to our region to take up some of the unemployment slack; however, the economic decline has been so great that the results of their endeavors have not been fast enough to prevent an economic recession in which we find ourselves at the present time.

Southern Illinois is made up of fine people, good schools, churches and bounded on both sides by two of the greatest navigable streams in the world, the Ohio and Mississippi Rivers, but is severely hurt economically and if Federal help is not forthcoming, thousands of additional people will be forced to leave the area to seek employment. There are 31,000 able-bodied men and women in my congressional district unemployed and according to the latest figures from the Illinois Public Aid Commission there are 51,876 persons receiving Government surplus food in the 15 lower counties of southern Illinois. In an effort to spotlight the needs of Southern Illinois and to give each community a chance to stand up and speak out in behalf

of their wants and needs, I called a nonpolitical factfinding forum for December 31, 1955, and urged every man, woman, and child in southern Illinois to attend. I invited every State and Federal official, concerned with this type of problem, from President Eisenhower on down. I was indeed gratified by the huge success of the meeting which was made possible by the attendance of 35 southern Illinois mayors, an estimated 5,000 private citizens and a score of various chambers of commerce and other spokemen who came to the "sink or swim" meeting to tell their story and every word uttered received the utmost attention of the following State and Federal officials who were in attendance:

LIST OF STATE AND FEDERAL OFFICIALS ATTENDING "SINK OR SWIM" MEETING HELD AT WEST FRANKFORT, ILL., DECEMBER 31, 1955

PAUL H. DOUGLAS, United States Senator, chairman, Joint Committee on Economic Report.

Bert Baker, State representative, Illinois.

Russel Travis, representing Illinois State Director of Labor.

Lester E. Leigh, representing Ezra T. Benson, Secretary, United States Department of Agriculture.

Harry P. Raymond, Interstate Commerce Commission.

J. M. Ballard, representing Administrator Wendell Barnes, Small Business Administration.

Charles S. Green, representing Illinois Department of Labor.

Paul Dorris, representing Illinois Industrial and Planning Commission.

CHARLES W. VURSEL, Member of Congress, 23d District of Illinois.

G. R. "Bob" Beckmeyer, State representative, Illinois.

Dean Hammick, State representative, Illinois.

Clyde Miller, United States Department of Commerce, personal representative of President Dwight D. Eisenhower.

A. L. Rascher, Jr., United States Department of Commerce, personal representative of President Dwight D. Eisenhower.

Paul Zeigler, State representative, Illinois.

Clyde Choate, State representative, Illinois.

V. O. Verhines, State representative, Illinois.

E. Bishop Hill, representing United States Health, Education, and Welfare.

L. D. Norman, representing Department of Public Welfare.

Clyde W. Campbell, representing Interstate Commerce Commission.

John M. Darr, representing Wendell Barnes, Administrator, Small Business Administration.

Ralph Warnack, representing Wendell Barnes, Administrator, Small Business Administration.

Russell L. Kelly, representing Illinois Department of Labor.

H. K. Olds, representing State of Illinois auditor's office.

E. E. Crawford, representing United States Department of Interior.

H. E. Stiles, representing United States Department of Interior.

I expended months of hard work in organizing such a factfinding forum and I believe it was well worth the effort because it accomplished at least three specific things: (1) It gave the people of southern Illinois a chance to tell of the true economic conditions existing in their respective communities; (2) through questionnaires an opportunity was provided to list projects needed to stimulate the local economy; and (3) focused State and Federal attention on our plight with a view that the information derived from each community will be helpful in setting up a distressed-areas program. Speakers came from every walk of life—rich man and poor man, banker and coal miner, and each one reiterated a common plea to officials in attendance that "we don't want charity or doles, we want to work"—but they pointed out they had no chance to work. No jobs were to be found, they said, unless they left their homes and went to some other place.

It was brought out in the meeting that the people are very disgruntled with the Government for sending billions of dollars overseas in foreign aid while communities in the United States could be utilizing these funds to alleviate human suffering in this country.

We were privileged to have Senator DOUGLAS at our meeting to discuss some of our problems and offer ways of improving conditions and have him explain the provisions of his depressed-areas bill, S. 2663.

President Eisenhower personally directed that Mr. Clyde Miller and Mr. A. L. Rascher, of the United States Department of Commerce, report back to him their findings of the forum. They summed up conditions in southern Illinois by including in their report that the "area is economically depressed and needs Federal assistance."

Gentlemen, I call these facts to your attention because they reflect the opinion of unbiased individuals who were sent into our area to review our economic plight. Similar reports will be forthcoming from other State and Federal officials in attendance.

In addition to our industrial plight, our farmers are also experiencing undue hardship. In a survey that I conducted in my district in cooperation with the Bureau of Census, it was determined that there has been a net loss of 4,000 farms in my congressional district since 1951. This means only one thing—the small farmer is being forced out of business and has been selling his acreage to the larger farmer. This can be substantiated by the fact that the average acreage per farm has increased. We have also lost over 25,000 people in the past 5 years who have moved to other sections of the country to find work.

I think I have expounded long enough as to our need. The main concern of mine at this time is what can we do about it. I believe it is incumbent upon the Congress to pass some type of depressed areas bill in this session so we may go about the task of stimulating the economy of our communities without further delay. I have read thousands of questionnaires that have been filled out by individuals, organizations, and cities. I am thoroughly convinced that a program designed merely to loan money will not be sufficient to cope with the problem. In addition to loans to communities with which to induce new industry, other things will be needed—public works projects such as new highways and streets, city halls, new schools and additions to old ones, improved water and sewerage systems, artificial lakes to insure an adequate water supply, increased dredging projects for navigation and flood control, and new sources of electrical power. To help carry out some of the aims of area development, I have just introduced H. R. 7902 which is similar to S. 2663 introduced by Senator PAUL DOUGLAS in the Senate. I expect to have some slight changes in my bill after completion of the study of the thousands of suggestions contained in the questionnaires I circulated in conjunction with the "sink or swim" meeting held last week.

On behalf of all the fine people of southern Illinois, may I urge upon you very strongly to take drastic action in an effort to alleviate the critical unemployment situation existing not only in southern Illinois but the other economic sore spots in the country. We do not ask for handouts, but merely be given some projects and tools with which to work so that we may make our area more attractive to private industry.

Thank you very kindly for your attention and for this opportunity to testify before this committee.

Senator DOUGLAS (chairman of Subcommittee on Labor, presiding). May I interrupt a moment? You know, of course, that section 9 of S. 2663 authorizes the appropriation of an additional $100 million for public works and public facilities outside the sums carried in other appropriation bills?

Mr. GRAY. That is exactly right. As I have said, I have had the honor of introducing a companion measure to your bill in the House, H. R. 7902, and I realize that. I merely mention this because I think some of the supporters of depressed areas bills will merely want to make money available to lend to these various communities. I don't think that is going to do the job by itself. I don't think the economy of some of these communities will allow them to put up the necessary capital to obtain a loan. I think there are going to have to be types of projects other than just lending money to these various communities. That is the reason I pinpoint and mention this.

Senator DOUGLAS. Yes. May I ask this question? It is not true that though the averag rainfall over a period of years in southern Illinois has in the past been adequate, though not in certain years, that nevertheless there is something connected with the soil so that there are not natural lakes in the region, and it would be necessary probably in order to build up the region to have a series of artificial lakes or reservoirs both for the use of the community and to provide industrial water for new industry which may come there? It would be, therefore, necessary to have a public-works and public-facilities program to go along with loans to new industries.

Mr. GRAY. That is exactly right, Mr. Chairman; not only for possible irrigation farming and industry, but in the past 3 years almost every city reservoir in southern Illinois has dried up, and they have had to pump water from as far as 30 miles away to supply their local communities.

I might say that after looking over thousands of these questionnaires I may have some additional recommendations to make to this committee. There is some wonderful testimony in the questionnaires, both from individuals and groups, and due to the fact that the meeting was only last Saturday, I haven't had a chance to go over all of them.

Every person who came to the microphone to speak at the meeting told that we didn't want doles, but we would like to have some things to raise our economy up with the economy of the rest of the country, and to provide these people with a decent living.

As I say, there are 31,000 unemployed in my district, plus the 25,000 who have had to move off to other places, including the potash mines of New Mexico. Many own their homes, and would like to come back to them. So if you added that figure, we probably would have 50,000 or 75,000 unemployed if they all could come back home. This is a matter that has been discussed pro and con as to whether or not the Government should help these areas, and in my opinion, after listening to this nonpolitical fact-finding forum, it is a must, for some Federal action if these communities are to survive. My home town of West Frankfort, Ill., in 1940 had a population of 15,800. Today it has an estimated population of 9,000. Imagine such a loss in population when most cities have grown considerably since the war.

Last week, on the very day that I called the fact-finding forum, we had a very large department store on Main Street, one of the largest in town, close after 35 years of operation, because of economic conditions. Thirty-five years in the same spot, and it closed the very day we had this forum.

Senator DOUGLAS. That is the same thing that happened in Johnson City.

Mr. GRAY. That is right. All those towns.

I again say I certainly appreciate this opportunity. I am at the disposal of this

committee any time that I can give information that I have derived from these questionnaires or from personal knowledge of the problem. The questionnaires contain the unbiased opinions of the people of southern Illinois, regardless of political affiliations, and we are at your command at any time.

The American Legion's Legislative Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement by the national commander of the American Legion, Mr. J. Addington Wagner, in which he presented the legislative program of the American Legion to the Committee on Veterans' Affairs:

STATEMENT OF J. ADDINGTON WAGNER, NATIONAL COMMANDER, THE AMERICAN LEGION. BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, JANUARY 12, 1956

Mr. Chairman and members of the committee, as national commander of the American Legion, I shall have no assignment more important than my appearance here today. I thank you for the opportunity to present, on behalf of veterans of three wars, the American Legion's requests and views on the subject of veterans' legislation.

The members of this distinguished committee assume an enormous responsibility in serving the welfare of veterans along with that of all citizens. We acknowledge your responsibility; we admire and are grateful for your dedicated diligence. We are particularly mindful that your committee in the past has presented and supported a vast amount of legislation benefiting veterans.

I should like to express our appreciation for the beneficial legislation enacted in the present Congress since my predecessor appeared before you, approximately 1 year ago.

Through Public Law 84, 84th Congress, you have provided veterans living on farms with loan-guaranty entitlement equal to that given veterans in the city under the GI bill of rights. Our national economic commission feels that this measure has materially improved the home-loan guaranty provisions.

HOSPITAL MAINTENANCE

A year ago, your committee was deeply concerned with the physical condition of many Veterans' Administration hospitals. You have given significant emphasis to the importance of maintaining these properties so that they will meet the needs of modern medicine.

Members of your committee played an important part in securing an increased appropriation for the improvement of this hospital system. Your continued interest in this field gives the best possible assurance that the number of hospital beds, already inadequate as to the mentally ill, will not be further reduced. We are intensely interested in the reports you will receive as to the manner in which this program is administered.

There are still three hospital projects on the Veterans' Administration construction program which have not been completed. They are at Washington, D. C. (GM 500 beds); Cleveland, Ohio (GM 500 beds); and San Francisco, Calif. (NP 1000 beds). Those at Washington and Cleveland are replacements for old institutions, and the one at San Francisco a long-needed hospital for the mentally ill. They were approved in the 1947 and 1948 fiscal year schedule. The American Legion is intent upon seeing that these projects are completed as promptly as possible.

SURVIVORS' BENEFITS

Your attention to the work of the House Select Committee on Survivor Benefits has been most helpful. You may know that our 1955 national convention placed the American Legion on record approving H. R. 7089 with the proviso that we seek amendments to the measure in the Senate.

Should this bill be approved, experience will show whether further amendments will be needed to provide adequately for those with whom it is concerned. To your committee, we will bring such recommendations as we may have for remedial legislation in those areas in which jurisdiction is vested in you.

Another item of real importance to us in the field of survivors' benefits is a change in the present law to provide awards of death pension to widows and children of World War II and Korean conflict veterans on the same basis as now provided for those of World War I. Our organization has expressed itself many times on this subject. We have testified in favor of pending legislation designed to bring this about. We sincerely urge its enactment.

SECOND HOOVER COMMISSION

The American Legion has given attention to the recommendations of the Second Hoover Commission. The Second Hoover Commission made 314 recommendations. Some may be accomplished by legislation. Some may be accepted through Executive or administrative orders. Reorganization plans may be submitted to give effect to others.

The American Legion analysis of all of these recommendations indicates there are 77 which will affect veterans' benefits and services. Of this number, we favor 31 and we oppose 46. An analysis giving the reasons for the American Legion's position on these recommendations will be furnished the committee in the near future.

You are aware that there is a big backlog of bills which have been introduced to give effect to some of the Second Hoover Commission recommendations. Not all of them are within the jurisdiction of your committee.

We anticipate that we will be permitted to testify before the appropriate committees when hearings are held on Hoover Commission bills and reorganization plans. We are making our position known to those charged with considering executive and administrative steps to give effect to the Hoover Commission recommendations.

Members of your committee, we believe, will want to give careful attention to the nature and progress of the legislation proposed in the Congress. Certainly your committee will assert its right to be fully informed of any executive and administrative plans to carry out the recommendations. We are confident that, in evaluating these proposals, you will be mindful of the harmful effects that may be done to existing veterans' benefits and services. We are particularly fearful of some of the Hoover Commission recommendations affecting Federal medical services, compensation and pensions, veterans' preference and civil service.

BRADLEY COMMISSION

We attach equal importance to the operations of the President's Commission on Veterans Pensions. We have maintained liaison with the Commission and its staff. Meanwhile, a special American Legion committee is appraising the existing structure of veterans compensation and pension laws. Through this committee's work we shall be better prepared to consider the recommendations of the President's Commission.

Since the findings of the President's Commission have not been released, we do not know what they contain. We have endeavored to be alert to any trend adverse to veterans programs. We have authority in national convention action to take whatever steps are necessary when the President's Commission releases its findings.

We continue to study the budgetary needs of the Veterans' Administration and other agencies conducting veterans programs. Last November a VA official testified before the Subcommittee on Manpower Utilization and Departmental Personnel Management (House Committee on Post Office and Civil Service) on whether or not the Veterans' Administration could set an additional numerical goal for personnel reduction by June 30, 1956. It was pointed out then that during the period from June 30, 1953 to August 31, 1955, the VA had effected reduction of 9,206 employees in veterans benefits, insurance, central and field offices in the Washington area. At the same time, there was an addition of 6,436 employees in the Department of Medicine and Surgery. This latter was due to the increase in the number of authorized beds from 109,035 to approximately 120,000.

The net of all this, according to reports received from American Legion department service officers and field representatives, is that the Veterans' Administration workforce is down to the bone. Under the circumstances, there is no way consistent with good service for the VA to guarantee further personnel reduction as of any certain date. Moreover, the agency may have to come to Congress for supplementl funds in order to overcome backlogs of work which our representatives report are causing delays and dissatisfaction among VA beneficiaries.

This situation is particularly urgent and dangerous in Department of Veterans' Benefits and the Department of Medicine and Surgery.

The disabled veteran is the victim when production-line tactics are applied in rating agencies. That is precisely what is happening today. We believe that this problem should be resolved before it causes widespread and irreparable hardship.

In the Veterans' Administration Department of Medicine and Surgery, the allocations of funds to hospitals and Regional Offices for medical purposes are pared so fine, and apparently are so inflexible that managers are hard put to maintain the quality of medical service. The morale of professional staff members is lowered. The hard-won supremacy of veterans medicine is being jeopardized.

Sometimes the American Legion is able to intervene to save a service. This happened recently in the Boston-Worcester area. Due to lack of funds for outpatient care for service-connected veterans, a field office was about to be closed. The American Legion was able to assist in securing a new allocation and the office is being maintained.

In Minneapolis, a new unit of the VA hospital is to be activiated at the beginning of 1956. Due to shortage of funds for equipment and personnel, 16 of the beds will not be put in operation before next June 30. This situation may be corrected, but the immediate shortage reduces the number of beds for the benefit of sick veterans.

In the Minneapolis regional office a situation exists where, because of the immediate shortage of funds, outpatient care for service-connected is seriously impaired. Funds to employ available and urgently needed medical personnel are not in the hands of the Chief Medical Offices.

Also in Minneapolis, a long-time VA pharmacist is being retired for physical disability. On retirement this employee will take title to an extended period of sick and annual leave. Funds at this facility are so short that, until the sick and annual leave

has been paid, a replacement may not be employed. This, too, may be corrected, but the condition of such a tight allocation should not exist.

At the Fargo VA hospital, authorized beds were about to be closed due to the shortage of funds. The American Legion intervened and was helpful in securing a new $25,000 allocation which prevented this closing of beds.

HOME LOAN EXTENSION

This is a year of decision for the home loan guaranty program.

Originally, World War II veterans were entitled to this benefit for 2 years after discharge, or the termination of war, whichever was the later date. In no event was the privilege granted for more than 5 years after termination of the war.

Subsequently, to make the period of entitlement more realistic, there was an amendment granting an extension. This brought the termination date to 10 years after the official termination of the war. Also, Korean conflict veterans were granted entitlement to the same benefits.

As it stands now, this law calls for termination of entitlement for World War II veterans on July 25, 1957. Our organization has given considerable thought to the impact this termination date may have on the program. It is our considered opinion that the date should be further extended until July 25, 1960, or a period of 3 years.

Approximatey 4 million veterans have availed themselves of this benefit. Among the millions who have not applied are many who now have, for the first time, the means and the need for home ownership. We believe that the present termination date would in effect encourage not only veterans, but lenders and builders, to act with haste in order to meet the program deadline. Such haste would, in our opinion, create an unhealthy economic situation and tend to nullify the purpose of the program.

The American Legion advocates a 3-year extension to permit more orderly termination of a program which has recorded excellent results.

VETERANS' PREFERENCE

The American Legion has a deep interest in the protection of the rights granted under the Veterans' Preference Act of 1944. While we realize that this is not a matter coming within the jurisdiction of your committee, we believe it merits attention at this time. Certainly, as individual Members of Congress, you share our concern for this basic benefit.

DISABILITY AND DEATH PAYMENTS

In the field of disability and death compensation and pension awards, we seek legislation to provide increases in all monthly rates. This is a part of the compensation and pension legislative program adopted by our 1955 national convention. The increase sought is an effort to keep such payments in line with the increased cost of living.

VETERANS PENSION

The matters I have mentioned pertain directly to the welfare of veterans and their dependents. Many of them reflect the American Legion's intense concern for the welfare of war-disabled veterans who certainly have first claim on the Government's responsibility. Without in any way minimizing the needs of those veterans, I respectfully call your attention to another proposal which, in our judgment, is most important in terms both of need and of national obligation.

We ask your committee and your colleagues of the Congress to liberalize the existing veterans' disability pension law so that every war veteran meeting other requirements who needs a pension shall have it. We suggest that you do this by amending regulation 1 (a), part III, of Veterans Regulations.

It is our belief that the war-veterans pension system, to be fair and practicable, must include all war veterans who meet the basic requirements. A considerable number of World War I veterans have passed the age of 65. Some veterans of World War II have reached that mark. Many more veterans, including a growing number of those from the Korean conflict, have been made invalids for life through accident or illness.

Let me emphasize that we are not seeking a so-called general pension based on age alone. Our 1955 national convention considered, debated, and, by a decisive vote, rejected that proposal. We do not ask pensions for veterans regardless of income. We do ask, urgently, and as a matter of simple justice, modest support for every veteran who, by reason of age or physical disability, cannot support himself.

May I stress this again. Our organization submits this as a measure based upon existing law. It is not a departure in any sense of the word. We are not entering into the field of general pensions, that is those payable without regard to qualification, other than service and age.

We think the pension program we propose is of value to the military establishment. We are constantly getting reports that there is difficulty in maintaining the strength of the Armed Forces. In large degree this difficulty is based upon the difference between the earnings from military and from civilian life. If our program were accepted it would add one more morale builder to those already existing. The assurance of added security that such a program would give to the man who must be on active duty before he becomes a veteran is well worthwhile, whatever it costs.

THREE CHANGES URGED

We submit that this objective can be reached if the Congress will direct three changes in the pension system already in force.

1. The current monthly pension award is inadequate in the light of today's living costs. The rates now paid are $66.15, $78.75 and a maximum of $135.45 for the small number of veterans who are blind or helpless and need attendance. We ask that these rates be increased to $85, $105 and $150 respectively. These increases are modest. We believe they are realistic. We hope that your committee and the Congress will agree.

2. Presently the veteran applying for part III benefits is limited to a yearly income of $1,400 if he has no dependents, and of $2,700 if he has dependents. We request that these income limitations be increased to $1,800 and $3,000.

3. By commonly accepted standards, a veteran at age 65 is classed as having negligible employment potential. Federal Government benefits are granted those who retire from the work force at age 65 and are denied those who do not. In private employment, 65 is generally accepted retirement age. We therefore ask that the veterans pension law recognize age 65 as the statutory age of unemployability. This means that a veteran reaching that age, and meeting income and service requirements, will qualify for a pension.

NO. 1 OBJECTIVE

Our national executive committee, meeting after the national convention, assigned this pension legislation the No. 1 priority in our legislative program for 1956. At the direction of the national executive committee, I have appointed a special American Legion committee to coordinate our pension effort.

Serving as members of this new committee—and I am identifying these individuals for the first time here this morning—are the following:

John Stelle, of Illinois, past national commander of the American Legion, and former Governor of Illinois.

Herman F. Luhrs, of Michigan, chairman of the national legislative commission of the American Legion.

George N. Craig, Governor of Indiana, and past national commander of the American Legion.

Erle Cocke, of Georgia, past national commander of the American Legion.

Maurice Stember, of New York, adjutant of the Department of New York, the American Legion.

Michael M. Markowitz, of Pennsylvania, director of rehabilitation of the Department of Pennsylvania, the American Legion.

The first two named are cochairmen.

This committee, together with our standing legislative and rehabilitation commissions, is available and eager to contribute in every helpful way to your consideration of the matter.

Obviously, we attach tremendous importance to revision of the pension system. The changes we seek may appear slight in relation to the entire veterans benefit program. For thousands of veterans, however, they spell the difference between existing and living—between despair and hope.

Like your committee, we are cognizant of a responsibility to equate the welfare of veterans with the welfare of the country. We believe this is a thoroughly responsible approach to the needs of the aged and unemployable veteran. We solicit your active leadership and we trust your good judgment to legislate fair and sound assistance this year for a group of war veterans who sorely need it.

COST CONSIDERED

We are aware of the importance of considering the cost of legislation to amend and liberalize pension and compensation laws. We have no final estimates available. However, we do have a tentative estimate of the first year's additional cost—$528,000,000. We shall be dependent, to a great extent, upon official reports and projections. Experience in the past indicates that initial or tentative estimates of this character have exceeded actual expenditures. In considering the equity of our requests and the nation's obligation to the war veterans, we ask that you evaluate all such cost estimates in their relation to the national income and other pertinent factors.

In the past those who have been critical of the dollar cost of veterans benefits and services have sought to isolate such costs without relation to any other factor. It is our belief that the cost of all veterans benefits and services should be considered in terms of increases in all other fields. Past estimates have shown that the 1955 costs of veterans programs are approximately 1 percent of the national income. Virtually the same percentage applied in the period 1890–1900.

We believe that the Nation's expanded and expanding economy must be reckoned with when veterans legislation is considered.

In my presentation thus far, my remarks have been limited to those features of our legislative program which have the most compelling general interest. I believe you know there are many other important items where we seek modification and adjustment of existing law.

With your permission, the detailed report of our legislative program will be filed with the committee.

In conclusion, may I say that we stand ready to serve your committee to the very best of our ability. Our Washington and other national headquarters staff personnel are ready and willing to supply data which you may need before taking final action on our requests. Personally, I shall make myself available to your committee at any time when, in your judgment, I can make a further contribution to your work.

Selection of Claude Garvin as Most Popular Boy at Washington High School, Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. NEUBERGER. Mr. President, all of us stand in awe before the courage and valor of people who are afflicted by blindness. In my home city of Portland, Oreg., we are proud and humble because of the splendid achievements of 18-year-old Claude Garvin, who was born blind but has just been voted the most popular student at a great high school, Washington High.

Claude is an honor student, and 1 of 10 children of Mr. and Mrs. John W. Garvin. His seeing-eye dog, Penny, guides Claude to and from school and on the many activities in which Claude is outstanding, such as his membership in the Young Democratic Club of Multnomah County.

I am happy to present for the RECORD a fine tribute to Claude Garvin which appeared in the Oregonian of Portland, on Sunday, January 8, 1955, and ask unanimous consent to have it printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON HIGH'S POPULAR STUDENT PROVES BLIND, ABLE, OUTSTANDING

(By Red Hurd)

Washington High School's vote for the "most popular" boy wouldn't go to an outstanding athlete.

If the school took such a vote, it would undoubtedly go to a courageous 18-year-old senior who has never played football or basketball—and never will.

He is Claude Garvin, a blind boy.

Young Claude, one of 10 children of Mr. and Mrs. John Wesley Garvin, 3730 SE, Alder Street, has been blind since birth.

Garvin is an honor student and president of his class and he is scheduled to speak to the Optimist Club Wednesday on the 18-year-old vote issue.

It just seems to follow that a boy such as Claude would earn these honors.

BOY PROVES CHEERFUL

His cheerful philosophy on life and his sharp sense of humor make everyone sit up and take notice—and feel a little ashamed.

He shows not one speck of reticence in discussing his handicap—although it's not easy to realize he is handicapped.

He hopes someday to be a lawyer and is planning to attend Willamette University after graduation in June.

An expert in the Braille system for the blind, young Claude chuckled when discussing the so-called pocket edition of the Braille dictionary. The pocket edition includes four volumes, Claude explained, each three inches thick and 12 inches square. "Imagine putting all that in your pocket," Claude remarked with a grin.

Rather than feeling sorry for himself, Claude has a sincere desire to help other blind persons. His best friend and constant companion is "Penny," a seeing-eye dog Claude obtained a year and a half ago at Guide Dogs for the Blind, Inc., San Rafael, Calif., after a month's training with the dog.

Claude attended the Oregon State School for the Blind in Salem through seven grades, then enrolled at Washington High as a freshman.

STUDENT PROVES SPEEDY

He was born July 10, 1937, in Henryetta, Okla. The Garvin family moved to Oregon in 1944, in time for Claude to enter the Salem school as a first-grader.

He has 4 brothers and 5 sisters. They are all married now except Claude and his youngest sister, 14-year-old Carolyn, a freshman at Washington.

Claude would make a fast typist look slower than a freight train crossing Portland's Powell Boulevard the way he operates his Braille slate and stylus, an instrument he uses to take notes in class, including shorthand.

"Penny gets along fine in school," Claude said, "except in an assembly.

"Then she puts up a howl when there's too much applause," he went on to explain.

Dean Hazel Ohmert said a move is underway to present Penny with a diploma, too. "After all," she explained, "Penny has helped Claude through school."

"But, please, Miss Ohmert, no applause," Claude laughed.

Speech of the Honorable George M. Leader, Governor of Pennsylvania, at the Biltmore Bowl, Los Angeles, Calif.

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. QUIGLEY. Mr. Speaker, under leave to revise and extend my remarks, I include the text of a speech delivered by Pennsylvania's great young Governor, the Honorable George M. Leader, at Los Angeles on September 15, 1955:

We each of us came here tonight as men and women interested in the success of the Democratic Party.

We came to strengthen our party; we came to talk politics; we came to plan our way back to victory in 1956.

And, if we can carry Pennsylvania, where I come from, and California, where most of you come from, we very nearly have it made. It's that simple, if you include the South.

That's what is nice about being a Democrat. We are always hopeful, always optimistic, good and sore if we lose, ready to bounce back, sure of ourselves and sure of the country.

That song in Damn Yankees—You Got To Have Heart—ought to be our theme. The other fellows have most of the money, almost all of the newspapers, all of the slick magazines, all the respectability, and an odor of sanctity they spray about themselves.

All we have is heart—and about 20 million more Americans who think of themselves as Democrats, rather than Republicans.

We also have the habit of producing great men—great-hearted men—the Franklin Roosevelts, the Harry Trumans, the Adlai Stevensons. And we have the habit of winning elections, as we have been steadily doing before and since the abnormal election of 1952.

That election of 1952 was abnormal because the minority party—the conservative party—despairing of its own dull creatures went Hollywood and got itself a box-office name. It nominated a military hero with a folksy nickname and a wide smile.

The country did not vote Republican.

It voted Eisenhower.

The Republicans, being human and reacting to victory, will nominate him again. It is reasonable to expect that Eisenhower, being human, will accept the nomination.

History shows no record of a voluntary surrender of the Presidency of the United States, except as tradition or party discipline enforced it.

Consequently, the next presidential election will be the Democratic Party and the Democratic nominee against Dwight D. Eisenhower.

We will win it or lose it on that basis.

Certainly we are not going to settle for a holding action to keep control of Congress, vital though that has proved to be for the welfare of this Nation and the world.

In almost 3 years in office, the President has enjoyed a tenderness of approach that is unique in America's political history. Even George Washington, who became President by acclamation, before the days of political parties, enjoyed no such protection in press or politics.

Skilled and seasoned politicians obviously have been in grave doubt as to how they should grapple with such a political freak.

Now I am neither skilled nor seasoned, but it seems to me that there is no choice in the matter. Eisenhower has not chosen to put himself above party. He campaigned as hard and as shabbily as he knew how for a Republican Congress in 1954—and was rebuffed by the people. He has enlisted no genuine Democrats in such supposedly nonpartisan areas as national defense and foreign policy. He repaid the Democratic leadership in the 84th Congress for its numerous rescues of administration measures with words of churlish ingratitude.

Dwight Eisenhower is no constitutional monarch, a symbol of the state removed from party contention.

He is a Republican partisan President, and except where the best interests of America and of world peace are involved, he should be so recognized and treated.

He is the responsible executive of our National Government, and the policies of his department heads are his policies.

There is no Benson farm policy that is creating an agricultural depression in this country. It is an Eisenhower policy.

There is no Brownell security policy in this country that has built up a shocking crew of Government paid informers and perjurers. It is an Eisenhower policy.

There was no Hobby snafu on the polio vaccine. It was the Eisenhower administration's snafu.

The Humphrey blooper that cost the Treasury a billion dollars in corporate taxes, the Humphrey hard money policy that gave us a quickie recession, are misnamed. They were Eisenhower's responsibilities. Eisenhower's blooper, Eisenhower's handout to the banks.

There is a simple piece of logic here.

Either the President doesn't know what is happening in his administration, in which case a Dwight Eisenhower Slept Here sign should be ordered for the White House, for the Doud House in Denver, and for the Gettysburg farm, and perhaps even the Burning Tree Country Club.

Or he does know what is happening, approves of it, and supports it.

In either case, he is legitimately subject to legitimate criticism.

Before a single editorial writer has a chance to jump down my throat, I want to make it clear that I am not calling for a smear campaign, for personal abuse, or a Democratic policy of congressional obstruction.

I am calling for a normal exercise of the two party system, to which the same editorial writers gave such consistent adulation when the Democrats held the Presidency and Congress.

If Mr Eisenhower is a candidate, he will be running on a record he himself will point to with all of a candidate's pride.

Our duty will be to review that record as we see it—to point to its failures as well as its successes—to illuminate these places where Dwight D. Eisenhower has been a less than perfect President of the United States.

To do so, to penetrate the screen of protective armor that has been put around Dwight Eisenhower, we are going to need sharp weapons, well laid on.

Harry Truman's broadax alone won't do it. Neither will Adlai Stevenson's rapier thrusts. Every Democrat who is active in the party, from the election district to the statehouse, from the town council to the Halls of Congress, has a part to play in this work.

And the avenue of attack is wide and beckoning.

For, under the Eisenhower administration tion, the Republican Party has violated a basic principle of American public life. These men do not understand the genius of our political institutions. The American people, through their history, have expected their major parties to be cross sections of the Nation. They have never, even in the most industrial of our States and cities, adopted and supported a labor party. They have never, even in the Wheat Belt or in the cotton districts of the South, established and preserved a farm party.

They instinctively reject a political organization based on class and economic lines.

They expect their parties to maintain a balance, to provide for the interplay of forces, to equalize pressures—so that our whole society may achieve harmony and progress.

Today's Republican Party, this Eisenhower administration, has thrown all of this overboard.

The Eisenhower administration is building something that is really unique—a millionaires' party.

It's hard to see how they hope to make it a majority even in the oilfields of Texas.

Every influence that counts in this national administration is the influence of wealth, of corporate power.

I think this should be made clear. Business and corporate enterprise are not evil forces. They are making an immense contribution to the material progress of this country. Men of great ability and unquestioned integrity are active in the management of banks and corporations. I hope that business enterprise in my own State will actively participate in our commonwealth's affairs. President Roosevelt and President Truman called upon many business executives to serve their administrations and our country.

But men of great wealth, and men who control great wealth through their corporate power, tend to represent only one set of values, one outlook on our problems, one force in our society.

To turn the vast machinery of the Federal Government—its great economic influence—its power to enrich or to impoverish—over to one group of our people is as dangerous as it is unjust.

I am not now thinking of such surface manifestations as the Dixon-Yates case, with all its grimy undertones, nor of Air Secretary Talbot, driven from office because of ethical insensibility where a dollar is concerned.

The root of this matter is something far more deep than these personal involvements of people in the Eisenhower administration. It is the direction of the American economy; the distribution of income; the impact of taxation; the management of money and the interest rate; the vast complexities of our economic system.

This Eisenhower administration, because of its exclusive orientation toward what we classify as "big business" and "Wall Street," is incapable of sympathy for the farmer, the workingman, and the small businessman.

It is an attitude, a habit of mind, a frame of reference—and it cannot be eradicated so long as this Eisenhower administration remains in office. It is stacked, packed, and philosophically loaded. And it cannot shake loose its thought patterns.

Ever so often a chance phrase comes through; a natural thought, naturally expressed, without benefit of public-relations counsel.

Last year it was the Defense Secretary and his comparison of factory workers to bird dogs and kennel dogs.

This year the slip comes from the Department of Agriculture. Don Paarlberg, the principal economic adviser to the Secretary of Agriculture, said a few weeks ago that the farmer who expects to share equally in our booming economy is living in a dream world.

Fifteen percent of the American people live on farms.

Their share of the national income, relatively and absolutely, has been dropping, dropping, dropping.

Three years ago, under a Democratic administration, the farm families in this country had an annual income that came to $13,-500,000,000. This year, under the Eisenhower administration, farm income will be down to $11,400,000,000.

In 1947 farm families received 10.3 percent of the total national income. In 1955 this figure is down to 6 percent.

To the men who do the thinking in agricultural economics for Eisenhower this is nothing to worry about. Anything better would be the stuff of dreams.

What's wrong here, of course, is that farm families are not listed on the New York Stock Exchange. Not much in the way of dividend or investment income comes from farms. Farmers aren't big business. Farmers don't count. The business philosophy which dominates the Eisenhower administration simply doesn't function in this area. Their real thought is that too many people are farming; that too many inefficient farmers exist; the law of survival should apply, and the weak should get out of the business.

Their solution would be an economic shakeout, as the corporate mind would expect if the problem were in automobiles or oil. That's the way that business thinks, instinctively.

And that is the way this Eisenhower administration thinks.

There may be some gesture toward the farmer as election day comes closer and the Republican politicians from the Farm Belt cry the blues. They may decide to sacrifice Benson, but they will never, in their hearts or in their actions, concede that the farmer has a true right to parity in the American economic system.

The Republican advertising men are getting them to chant that everything is booming but the guns.

If they chant it too loud in the farm country, they are liable to hear the boom of the farmer's traditional shotgun.

In this same boom, with corporate profits so satisfactory in the great companies, there are some accumulating symptoms that small business is having its troubles. And I don't mean the unsold cars on the dealers' lots. In the first 6 months of this year, more than 5,600 businesses went broke. That is the largest number of business failures in 14 years.

In the same boom, we still must recognize that we have more unemployment than we had in 1953. The Nation is turning out steel at full capacity, but it is doing it with 50,000 less people employed in the industry, turning out the same tonnage just 2 years ago.

With that exception, labor is doing well in this economy.

But it owes its participation to its own strength, and not to the economic philosophy of the Eisenhower regime.

Corporate profits are rising faster than employee income. So are dividends. But labor has not been helpless, as the farmer has been helpless, in an economic squeeze.

The balance of forces that was achieved in 20 years of Democratic government has protected the organized workingman and woman. George Meany and Walter Reuther, David J. McDonald and John L. Lewis know what to do with economic power.

They have used it, and they have protected their people.

In so doing, they have protected the rest of us.

The business philosophy that would relegate the farmer to a second-class economic citizenship would also give the industrial worker no real consideration, except as the needs of production dictated.

It is the fact that labor can exert its strength to gain a share of this expanding economy which keeps this economy expanding. Otherwise, the economy would contract as purchasing power diminished. It is an ominous thing for our prosperity that labor has no representation in the Eisenhower Republican administration.

As Democrats, as an opposition party, we are looking for neither gloom nor doom.

After all, you cannot tell the voter whether he is prosperous or not. He knows. You can suggest to him the basis of his prosperity and how long he may expect it to endure.

You can examine with him how the cards are falling, whether or not he's betting against loaded dice.

If he is convinced that the direction of the country's affairs is concentrated in a group of men who have no essential concern for his welfare, who by training and associations are incapable of understanding his problems and acting sympathetically toward them, he is not likely to maintain that crowd in office.

He will want an administration which is a fair composite of the American people, instead of a selection from the blue chip corporations of America.

There are lots of symptoms, lots of illustrations.

The White House is so sensitive that it will no longer publish the guest list of those comfortable little dinners where the President feels the pulse of the country.

Dixon-Yates has become a symbol of the intrusion of special interests into public life.

The Federal regulatory commissions have been packed with lobbyists for the interests they are supposed to regulate.

Federal services, in every field from the National Parks to the housing agencies, are withering because of nonsupport.

A Robert Stevens, drawn from business, is an abject, pitiful, public failure as Secretary of the Army.

A Harold Talbott, drawn from business, uses the Air Force to advance his private partnership.

Singly, these things are incidents.

Together, they make a pattern of behavior.

They illustrate the fatal weakness of the Eisenhower administration.

This country has a great, and expanding economy. The safeguards built into it by the Democratic administrations have proved their worth. The protections thrust into the economy by organized labor are helping to maintain our advance. American business has unequalled resourcefulness and technical skill. American agriculture's only weakness is its strength—its unparalleled abundance.

These are the elements of enduring prosperity, of great advances still to come in living standards for all Americans.

The present has much that is good; the potential for the future is enormous.

All the country needs is leadership to see that our advances and our progress fall across the board to all Americans, a leadership that will make sure that all Americans have their even chance to participate in the good things that are ahead.

The Eisenhower administration does not furnish such leadership.

It does not have the wisdom; it does not have the imagination; it has invited and joyfully accepted its captivity.

And in that acceptance, it has invited its rejection by the broad masses of the American people.

There will be nothing abnormal about the election next year, nothing freakish, nothing strange.

The American people, by the tens of millions, will once more vote themselves into control of their own Government, once more elect a Democratic president.

The American Legion's Stand on UNESCO

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PURTELL

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. PURTELL. Mr. President, on behalf of the senior Senator from Ohio [Mr. BRICKER], I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by J. Addington Wagner, national commander of the American Legion, explaining the American Legion's stand on UNESCO.

Commander Wagner's address was delivered to the American Legion Department of the District of Columbia at the Shoreham Hotel on November 10, 1955.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Chairman Hill, Commander Zindel, distinguished guests and my fellow-Legionnaires, this annual banquet of the Department of the District of Columbia, American Legion, on the eve of Veterans Day, is an event to which I have looked forward eagerly.

You are kind enough to salute the national commander in this very generous and significant way. I appreciate that more than I can say. I appreciate, too, that the object of your respect here tonight is, in fact, the office of national commander and the ideals of leadership and service which it represents.

It is now my duty and my opportunity, given me by you and your fellow Legionnaires in all of the departments, to occupy that office in a manner befitting its responsibility and honor. I shall try, sincerely and vigorously, to do just that.

In anticipating this gathering several weeks ago, I intended to discuss with you some of the general aspects of the new American Legion program adopted at our national convention in Miami. I had hoped to describe our major objectives, particularly in the fields of veteran rehabilitation and community service activities. It seemed to me then, as it does now, that these matters must assume a very special relevance on the eve of the second annual observance of Veterans Day.

However, developments since the Convention have dictated a different course. I feel that in fairness to you and to the requirements of my office I must report to you tonight on a national issue of serious import to The American Legion and to all Americans.

I want to talk to you about the American Legion and UNESCO.

Thousands of words have been printed and broadcast on this subject during the past few months, and particularly since our national convention in Miami last month. Yet, the American people still don't have a clear, accurate understanding of how the American Legion stands with respect to UNESCO. They are not sure why we oppose UNESCO.

This is no mere assumption. The questions which I have been asked and the letters which I have received since our convention make it clear that the American Legion convention's action on UNESCO is not well enough understood. These questions and letters also demonstrate the sincere interest of the American people in learning our position on this most important issue.

Certainly the American people are entitled to an honest, accurate and complete explanation by the American Legion of its views on UNESCO. I hope to furnish such an explanation tonight.

That is my only purpose in discussing the subject of UNESCO. I have no desire or intention of keeping the UNESCO pot boiling by adding fuel to the fire through speeches on this issue to American Legion audiences throughout the country. On the contrary, I hope that my remarks tonight finally will answer the questions and resolve the doubts about the American Legion's stand on UNESCO.

There are three principal objectives which must be reached if we are to answer finally the earnest questions of an increasing number of our fellow citizens, concerning UNESCO.

The first is to explain briefly the largely unreported, fundamental and historical philosophies and principles of the American Legion which are the foundation of our position on UNESCO and on every other national and international issue.

The second is to correct certain distorted versions of the American Legion's carefully considered national convention action on UNESCO.

And the last is to make it clear that the American Legion has more than enough reason to consider UNESCO as the international sanctuary of impractical one-worlders, red-tinged radicals, and apparently deserters from the ranks of loyal Americans.

What are the philosophies and principles underlying the American Legion's approach to UNESCO and to every other national and international issue?

They can be summed up in these five words: What is best for America.

In some quarters, this concept is considered old-fashioned and out of date As far as the American Legion is concerned, however, this principle is as valid and essential at this very moment as it was when our Nation was born, and as it has been throughout our history.

To whom can we look besides ourselves to preserve America as the hope and strength of the free world in its struggle against the evil, Godless tyranny of communism?

We can look to no one but ourselves.

What other nation could accept America's destiny as the leader of the free world, if our Nation should fail its trust because we failed our trust to do what is best for America?

There is none.

If doing what is best for America is synonymous with nationalism, then it is an enlightened and constructive form of nationalism. For it inspired the American Legion to be first among the Nation's great veteran, patriotic, civic, fraternal, and business organizations to support the Marshall plan, to fight for the establishment of NATO, to endorse former President Truman's action in committing American forces to the defense of the Republic of Korea, to call for a security force in the Pacific similar to NATO, to support President Eisenhower's decision to defend Formosa.

These actions are part of the record—record which clearly shows the American Legion's awareness that collective security agreements, economic and military aid to our allies, and continued United States participation in the United Nations are in America's best interest.

To some, the American Legion's convention approval of continued United States participation in the United Nations is in direct contradiction to our action on UNESCO. It is not, of course.

It is, instead, but another example of the American Legion's policy of supporting organizations, policies, and programs which contribute to our Nation's best interest, and of opposing those which do not.

You understand this, just as you appreciate that the American Legion's convention action on UNESCO climaxed the most extensive study, debate, and discussion ever given to any subject by Legionnaires.

Unfortunately, some segments of the press created the impression that the UNESCO resolution was passed without sufficient study and discussion. Nothing could be further from the truth. Aside from the 2 days of discussion and debate given the subject by the members of the joint foreign relations-Americanism convention committee and by witnesses who appeared before it, UNESCO was considered by delegates to many of our department conventions this year. As a matter of fact, 10 department conventions adopted resolutions on the subject. All 10 supported existing American Legion policy in opposition to UNESCO.

It's a matter of record, of course, that this subject has also been thoroughly studied and discussed by the national executive committee of the American Legion.

On every hand is evidence refuting completely the charge that we acted hastily and without sufficient study on UNESCO.

Before citing the specific provision of the UNESCO resolution passed by our 37th annual national convention, which have been the subject of widespread editorial reaction, let me assure you that many of America's most influential and widely circulated daily newspapers strongly support our action on UNESCO. I mention this to correct any impresion you may have gained that the Nation's press is critical of our action.

I need not add that the American Legion is deeply grateful to the many papers which have given us such magnificent editorial support. And we are especially grateful for the complete and accurate manner in which they reported the action of our convention with respect to UNESCO. It would be unnecesary for me to talk about UNESCO tonight if all the Nation's papers had been as accurate in their reports.

After reaffirming the action of the national executive committee in May 1953, the 37th convention then resolved, and I quote:

"That the American Legion will not name a delegate to the United States National Commission for UNESCO.

"That the American Legion urges Congress to repeal the laws creating the United States National Commission for UNESCO and its Secretariat; and that Congress deliver mandates to all Administrative Departments of the United States Government to desist from further dissemination of UNESCO and United States National Commission for UNESCO materials, reports and programs within the territorial jurisdiction of the United States.

"That Congress be urged to make a complete current investigation of the operations of UNESCO to determine whether or not that agency has complied and is complying with the terms and conditions of Resolution 215

of the House of Representatives and Resolution 122 of the United States Senate, 79th Congress; said resolutions being the basis of the United States participation in UNESCO; provided further, that investigation be especially made to ascertain 'explicitly whether there has been violation of the provision' of the final portion (which reads): 'provided, however, that such agency shall not interfere with educational systems or programs within the several nations, or their administration'."

Continuing to quote the convention resolution: "And if, upon investigation, it is determined that UNESCO has violated any of the conditions as set forth in the resolutions, that Congress be urged to take appropriate action to enforce compliance therewith."

I fail to find in any of this language any suggestion whatsoever, as has been charged, that the American Legion urges United States withdrawal from UNESCO. We urge only that Congress repeal the laws creating the United States Commission for UNESCO.

In effect, we ask only that the channel for the distribution of UNESCO world government propaganda in the United States be abolished.

To those who may think that this request amounts to the same thing as urging that the United States pull out of UNESCO, let me say this:

If the American Legion intended the result which UNESCO apologists misrepresent as having occurred, we would have asked that the Congress appropriate no further funds as the United States contribution to UNESCO. Not only would this pull the United States out of UNESCO, it would pull the foundation out from under UNESCO itself.

Uncle Sam each year foots one-third of UNESCO's eight to nine million dollar annual bill. We do so despite the fact that only a fraction more than 1 percent of the total number of UNESCO's representatives are American citizens.

The American Legion doesn't object to this contribution, but we do object to the fact that, despite this contribution, the United States Government has no control over UNESCO's hiring or firing of American employees. Any disloyal Americans employed by UNESCO could flout the authority of the United States Government, and there's nothing we can do about it.

This isn't just an opinion. It's an undeniable fact, deplored by America's highest representative to the United Nations, Ambassador Henry Cabot Lodge, Jr.

In a statement on the loyalty problem among United States employees of UNESCO, released a little more than a year ago on October 16, 1954, Ambassador Lodge stated, and I quote:

"It is now clear that eight United States citizens employed by UNESCO have had adverse loyalty reports from the United States International Organizations Employees Loyalty Board. Concerning these eight persons the Board found reasonable doubt as to their loyalty to the United States. Only 1 of these 8 persons condescended to accept the Board's invitation merely to meet with it when it was in Paris last summer. The seven others were in such contempt of the whole procedure that they did not bother to appear at the Board's meeting.

"Although Dr. Luther Evans, the Director-General of UNESCO, after a long period of consideration, has stated he will not renew the contracts of 4 of these persons when their contracts eventually expire, he has taken no action to separate these 8 United States citizens now. The failure of Dr. Evans to act on these cases actually frustrates the efforts of the United States, conducted in close collaboration with the heads of the other international organizations, to insure the highest standards of integrity on the part of those United States citizens who are members of the staff of these organizations.

"Although UNESCO is a specialized agency and is, therefore, outside of my jurisdiction, I have a responsibility as United States representative to the United Nations to see that fair play exists. It should, therefore, be crystal clear that there have been no such problems in the United Nations itself.

"The other international organizations, particularly the United Nations (with which I have personal familiarity) have dealt with the problem in a fine way. In all fairness, therefore, public opinion should distinguish between the policies which are being followed by the Director-General of UNESCO and the policies which are being followed by the United Nations and the other international organizations."

I need not remind you that Dr. Luther Evans, the Director-General of UNESCO, is an American citizen.

The record on this problem of loyalty among United States employees of UNESCO, and the very recent record at that, reveals another galling fact.

On October 29, 1955, 2 weeks after the American Legion convention, the highest tribunal of the United Nations ordered UNESCO to reinstate four United States citizen employees of UNESCO who had been discharged for failure to cooperate with a United States Loyalty Board. When UNESCO finally felt compelled to refuse to reinstate these employees, the tribunal ordered UNESCO to pay each of them 2 years' salary plus legal costs. These indemnities amounted to more than $30,000.

Thus we have the situation where the United States, based on its one-third contribution to UNESCO, had the questionable privilege of paying $10,000 to American citizens fired because they refused to cooperate with a United States Loyalty Board.

And this is no isolated instance. Last April the same tribunal awarded three American employees of UNESCO $43,000 after they had been dismissed for refusal to face the United States Loyalty Board. The American taxpayers' share of this award was nearly $15,000.

The moral to be drawn from these examples would seem to me to be: If you want to ignore or flaunt the authority of legally constituted United States loyalty boards, get a job with UNESCO and be paid by Uncle Sam for the privilege of kicking him in the teeth.

There can be no question that just the small part of UNESCO's record which I have read to you more than justifies the American Legion's opposition to this specialized agency of the United Nations. I am confident that this record also inspired many of America's greatest patriotic organizations to join with the American Legion in this fight.

You know, of course, that the American Legion's opposition to UNESCO is not based exclusively on the facts I have cited, damaging and conclusive as they are.

We are strongly opposed to UNESCO because of its propaganda in this country for world government.

The record clearly shows that from its inception UNESCO has been identified with the idea of world government. And the record also shows that UNESCO has tried to peddle its global-minded concepts to the one group in America most likely to be persuaded by its propaganda—our school children.

They are likely targets only because they have not yet acquired the maturity and experience to understand the true danger of world government.

These world-government propaganda efforts are in direct violation of the act of Congress authorizing United States participation in UNESCO. Congress specifically prohibited UNESCO interference in America's educational system.

It is not surprising, in view of this complete lack of respect for the sovereign laws of the United States, that UNESCO should state in its publication entitled "In the Classroom with Children under Thirteen Years of Age" that "as long as the child breathes the poisoned air of nationalism, education in world mindedness can produce only rather precarious results."

This same publication further states that "education for world-mindedness at present encounters obstacles outside the school. The principal one certainly is nationalism."

This is only one example of UNESCO's world-government advocacy. Another can be found in UNESCO's publication the United Nations and World Citizenship. In discussing world citizenship, this publication states:

"World-wide organization for the conduct of human affairs is, therefore, essential. No teacher with a sense of realism and even elementary knowledge of world affairs will ignore this basic need or be indifferent to its consequences for education. World machinery is required; and human beings with the right outlook are required to utilize it or to insist that it be utilized. The educator thus has a double task; to teach about the machinery of world cooperation and to foster the growth of the spirit that will make it function. Education has, in short, the urgent duty to develop informed and competent world citizens."

There are some who contend the UNESCO did not publish these documents or that UNESCO no longer is endeavoring to peddle these ideas. They have seriously deceived themselves, for here is the record:

The publications, In the Classroom With Children Under Thirteen Years of Age and The United Nations and World Citizenship are listed on page 26 of UNESCO's own catalog of available English language publications in the field of education issued by UNESCO up to September, 1955.

Incidentally, the cover of this catalog proves rather conclusively that UNESCO does intend to get its material into our school system in violation of the prohibition by Congress. It reads, and I quote:

"Education of interest to primary school, secondary school and university teachers, students, teachers training colleges, education officials, adult education instructors and fundamental educators."

It is not necessary to examine each and every one of the UNESCO's publications to determine whether this agency is not only propagandizing for world government, but seems also to be the sanctuary for red-tinged radicals.

We need only follow that famous axiom: "Consider the source."

The list of authors of UNESCO publications who have been identified with organizations listed as subversive by the Attorney General or the House Un-American Activities Committee is too long to read tonight. So that there can be no question, however, that there are such individuals, let me read you the names of just a few of these UNESCO authors.

Frederich L. Schuman, coauthor of UNESCO Contemporary Political Science, has been identified as affiliated with 16 organizations listed as subversive by the Attorney General or the House Un-American Activities Committee.

Dr. Linus Pauling, author of The Importance of Chemistry in the Life of Modern Man, has been identified as affiliated with 10 organizations listed as subversive by the Attorney General or the House Un-American Activities Committee.

Leslie C. Dunn, author of Race and Biology," has been identified as affiliated with nine organizations listed as subversive by

the Attorney General or the House Un-American Activities Committee.

I hardly think in the light of their records that the American Legion has misjudged these individuals.

UNESCO is also active in the field of visual education. And so are some of its left-wing representatives.

Let me cite just one example. For a number of years the UNESCO Film Section was headed by John Grierson. This individual resigned as head of the National Film Board of Canada at the time of the Canadian espionage hearings. Denied a visa to this country, he came in through UNESCO and headed the film section of that organization.

There are many others, of course, whose identification with UNESCO gives the American Legion more than sufficient cause to oppose this agency. The most prominent of these were Alger Hiss and Harry Dexter White.

The American Legion's conclusion based on official congressional reports, that Hiss and White were, in fact, associated with the formulation of UNESCO has been denied or discounted in some quarters. Let me again cite the record so you can judge for yourself whether we are right.

In its January 3, 1955, report, the Senate Subcommittee To Investigate the Administration of the Internal Security Act and Other Internal Security Laws concluded, and I quote:

"1. Alger Hiss, Harry Dexter White, and their confederates in the Communist underground in Government had power to exercise profound influence on American foreign policy and the policies of international organizations during World War II and the years immediately thereafter.

"2. They had power to exercise profound influence on the creation and operation of the United Nations and its specialized agencies.

"3. This power was not limited to their officially designated authority. It was inherent in their access to and influence over higher officials, and the opportunities they had to present or withhold information on which the policies of their superiors might be based.

"4. Hiss, White, and a considerable number of their colleagues who helped make American foreign policy and the policies of international organizations during crucial years have been exposed as secret Communist agents."

In the second report on activities of United States citizens employed by the United Nations of the Senate Subcommittee To Investigate the Administration of the Internal Security Act and Other Internal Security Laws is this statement, and again I quote:

"Harry Dexter White was the Treasury's representative at the United Nations San Francisco Conference where he gave particular attention to the establishment of UNESCO."

There is one final question which I would like to answer.

I have been asked, and I'm sure that many of you have also been asked: Why can't Ambassador Henry Cabot Lodge, America's representative to the United Nations, do something to clean up UNESCO so that it will be acceptable to the American Legion and the American people?

Ambassador Lodge best answered this question in his testimony before a House subcommittee on appropriations on January 27, 1954, when he said, and I quote:

"I think the lack of an administrative framework for the specialized agencies is something that has proved very baffling. UNESCO and all these other agencies are more or less laws unto themselves. They are entirely outside of my jurisdiction. The Secretary-General of the United Nations cannot touch them. It is a constant source of confusion and embarrassment.

"I think that is something that the Congress might do well to look into."

The American Legion thinks so, too. We have asked the Congress to make a complete current investigation of UNESCO to determine whether or not that agency has complied with and is complying with the terms and conditions set down by Congress in authorizing United States participation in UNESCO.

We sincerely hope that the Congress will act upon this request contained in the UNESCO resolution passed overwhelmingly at our convention last month in Miami. We are certain that such an investigation will confirm the American Legion's findings with respect to UNESCO.

I regret the length necessitated by this report tonight. However, I believe that the issue I have discussed is important to the American Legion and to our Nation, and justified the time required. I hope you agree.

Thank you for your courtesy and patience. It has been a privilege being with you tonight.

Memorandum on the Spirit of Geneva

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. FEIGHAN. Mr. Speaker, the mythical character of "the spirit of Geneva" is by now appreciated by most Americans and many nations in the free world. There were many, however, who perceived it even before the Big Four Foreign Ministers' Conference in Geneva. The following memorandum submitted to the Secretary of State on the spirit of Geneva in true application to Ukraine and other captive non-Russian nations in the U. S. S. R. is one example of a well-founded national skepticism toward what most had accepted as a real spirit of Geneva.

This carefully thought out memorandum, which was prepared by Dr. Lev E. Dobriansky, professor of economics in the Graduate School of Georgetown University and national chairman of the Ukrainian Congress Committee of America, becomes more practical with each passing day in its primary proposal that we begin to exploit through our various psychological media the tremendous area of Russian Communist imperialism and colonialism, namely the non-Russian countries in the Soviet Union itself. While skillful Russian Communist propaganda capitalizes on the issues of imperialism and colonialism in southern Asia, the most tyrannical colonial empire in the pages of human history, now in the guise of the Soviet Union, goes relatively unnoticed in the free world.

This sad condition is a most ironical one. We have at our disposal the great opportunity to undo the terrible evil caused by the lies of Bulganin and Khrushchev, but we have failed to take full advantage of it. In the earnest hope that we may be stirred to seize this opportunity, and under leave to extend my remarks, I submit the memorandum for the RECORD:

MEMORANDUM ON THE SPIRIT OF GENEVA IN TRUE APPLICATION TO UKRAINE AND OTHER CAPTIVE NON-RUSSIAN NATIONS IN THE U. S. S. R.

(Submitted to the Secretary of State by the Ukrainian Congress Committee of America, relative to the Big Four Foreign Ministers' Conference, in Geneva, Switzerland, October 1955)

The Honorable JOHN FOSTER DULLES,
Secretary of State,
United States Department of State,
Washington, D. C.

MR. SECRETARY: Since the summit conference in Geneva this past summer the phrase, "the spirit of Geneva," has received through divers media worldwide circulation and, in many quarters, uncritical and even readied acceptance. This spirit is generally interpreted to materialize progressively or, as some put it, through evolutionary change in lessened tensions between the free world and the Russian Communist Empire, in some sort of peaceful coexistence between these broad areas, indeed, in the very culmination of the cold war itself. As a procedural effect of the spirit of diplomatic cordiality that prevailed at the summit, the Big Four Foreign Ministers' Conference is evidently purposed to translate this spirit into concrete agreements and courses of action aimed at the eventual elimination of the basic causes of conflict between Moscow and the West.

On this occasion the Ukrainian Congress Committee of America, in its united representation of all non-Communist American organizations of Ukrainian background, expresses its most fervent hopes for the success of your mission at this crucially important meeting. We wish also, on the basis of a direct reflection of the views and thoughts of 1,500,000 citizens regarding the relations of our country with the Soviet Union, to take the opportunity of this occasion to present several founded observations on "the spirit of Geneva" in its true application to Ukraine and the other captive non-Russian nations in the U. S. S. R. Unless the phrase is to bear only hollow significance and to serve as a barren utterance for the frustrated hopes of millions throughout the world, in our judgment, as well as in the grounded opinion of all informed observers of the Soviet Union, it is unthinkable that "the spirit of Geneva" could be repressed from any direct application to one of the most fundamental and certainly efficient causes of conflict, namely the original captivity of 120 million non-Russians in the Soviet Union.

APPLIED PRESSURES FOR FREEDOM AND INDEPENDENCE

At the time of the summit Conference it was our privilege to set forth in systematic exposition the just cause of national freedom for Ukraine and the other captive non-Russian nations in the U. S. S. R. in a detailed memorandum presented to the President on the Summit of Freedom: Its Indivisibility, a copy of which was transmitted to the Department for studied analysis. It is surely not our purpose here to reiterate the views and reasoned interpretations contained in that memorandum or to reproduce much of the historical evidence and contemporary experiences upon which they are firmly based. Instead, in line with the permanent contents of the preceding memorandum, our paramount aim in this instance is to focus attention on the real possibilities and opportunities that "the spirit of Geneva" might invite in behalf of the advancement of freedom and national independence in the slave half of the world. In short, this memorandum supplements the previous one in calling for applied pressures at this conference

and subsequent ones for the freedom and independence of all nations, including the large and populous non-Russian nations in the Soviet Union, as was stated by our President in his illuminating address to the American Bar Association August 24, 1955.

Nothing that has occurred on the international scene since the summit Conference causes us to alter in any way the analytic contents provided in the original memorandum. In point of fact, the outstanding events and developments of this period brilliantly confirm the generalizations and conclusions drawn in it on such essential subjects as the necessary abolishment of the Russian Iron Curtain, controlled relative disarmament, and the wholesale exploitation of the anticolonial challenge, directed especially at the Russian Communist Empire. The skillful Russian exploitation of the weapon of nationalism in Africa and Asia, the preferred shipment of Communist arms to Egypt, Syria, Saudi Arabia, and elsewhere in Africa and Asia, the further penetration of conspiratorial Communist influence into Indochina and Indonesia, and deceitful Russian sponsorship of the anticolonial challenge in the United Nations, leading to the withdrawal of France from the current sessions of the assembly as well as to a pronounced depreciation in the overt power of our moral and political leadership in the world, clearly constitute stubborn facts of recent occurrence that fully justify our stated position on the trained chicanery of Moscow and now, more than ever, necessitate positive American action poised on certain applied pressures for national freedom and independence.

The prodigious irony of Communist Russia successfully pretending to be the defender of dependent and colonial nations in their struggle for national freedom and independence is in itself serious cause for grave concern to all informed Americans. In the face of a long and bloody record of Russian Communist conquest and imperialist colonialism since 1917, destroying the independence of Ukraine, Beyelorussia, Georgia, Armenia, Azerbaijan, Turkestan, Cossackia and a series of other non-Russian nations down to present date, Mr. Khrushchev freely exercises an unopposed mendacity in declaring lately that "the position of the Soviet people is the position of moral support and sympathy for the aspirations of the national liberation movement of the peoples. This has long been known throughout the world." (New York Times, October 4, 1955.) Unfortunately, this fiction has made significant inroads in the thinking of countless freemen and in great measure we are responsible for this by our relative inactivity to take full advantage of the unsurpassed record of Russian Communist imperialism and colonialism since 1917. During the recent Algerian issue in the United Nation, once again our delegate missed a golden opportunity in failing to press debate on this complete Russian Communist record and to persuade France to retaliate with us in a maneuver that bears all the earmarks of a cold war phenomenon and one in which our success would be guaranteed by the factual record itself. This would have magnificently exemplified positive American action generating pressures for national freedom and independence which, after all, form the kernel of the American democratic tradition and the very negation of traditional Russian totalitarianism.

Briefly, these several major developments since Geneva in July point unmistakably to the predominant fact that the spirit of Geneva, instead of becoming the dissolvent of the cold war, has itself been transmuted by unchangeable Russian Communist intentions and objectives into a deceptive tool of the cold war. The present phase of the cold war represents, as a consequence, the most perilous one yet. It places Moscow in a most advantageous position to wage behind the facade of good will frills, staged to the tune of the spirit of Geneva, an intensified psychological warfare campaign which capitalizes on the problems harassing the free nations and, as on the issue of colonialism, produces almost paralyzing dilemmas for the United States. Also, as we stressed in our previous memorandum, it enables Moscow to purchase the necessary element of time to overcome the known weakness and problems in its consolidation of empire and own political structure, to advance further its armament buildup, to realine and strengthen its world conspiratorial network, and in deflecting moves to undermine the structure of allied unity. There is no substantial evidence of Russian sincerity in the spirit of Geneva nor is there likely to be any while time works in their favor. Unless our passivity is also to be permitted to work in their favor, Geneva in October should with all urgency provide strong expression for pressures for freedom and independence consonant with the tenets of our policy of peaceful liberation and its dynamic force of innovation as against wishful evolution.

THE FREEDOM FORCE OF NATIONAL SELF-DETERMINATION

Undoubtedly the most powerful pressure for freedom in the context of this century is the moral and political force of national self-determination, a product of American spirituality, defined by President Woodrow Wilson. The Congress recently underscored this truth by its unanimous passage of House Concurrent Resolution 149, opposing colonialism and Communist imperialism, and of Senate Resolution 127 which supports the right of once independent nations to self-determination again. It is highly significant and of creditable importance that both of these carefully prepared resolutions do not restrict the compass of national freedom and independence, insofar as concerns Europe, to the poorly classified satellite countries. They accommodate, and properly so, the once independent non-Russian nations now enslaved within the nominal framework of the Soviet Union. They accurately reflect in thought and meaning the indivisibility of freedom.

In fact and principle, the freedom force of national self-determination, which logically means the exercise of independence and principled opposition to empire, cannot possibly be circumscribed within the limits or area of any single sector of the present Russian Communist empire. Formerly independent non-Russian nations now in the Soviet Union are as much the proper object of this force, in several respects even more so, as the countries loosely referred to as satellites. All unhappily share an essential captivity under the yoke of imperialist Moscow and, in historical truth, all are by nature captive states and countries, despite the nominal and legal sham of the framework of the Soviet Union. Thus, as many commentators and journalists are notoriously wont to do, to speak or write of any real distinction between the two captive groupings of non-Russian nations evinces either a striking lack of historical understanding or an inadequate grasp of the meaning of indivisible freedom as expressed by the force of national self-determination.

This intrinsic quality of indivisibility and universal scope has been effectively underlined by our President in several of his recent addresses. Speaking to the West Point graduating class of 1955, for example, he stressed that "militarily and materially we are strong. More important, we are strong in the partnership of many allies. But above all, our Nation is strong in the support of principle: We espouse the cause of freedom and justice and peace for all peoples, regardless of race or flag or political ideology" (New York Times, June 8, 1955). Mr. Secretary, your own address before the United Nations this past June gives eloquent expression to this prime quality in these words: "The peace of the Charter is a peace of justice: It is a peace which will assure all nations, great and small, the right to be genuinely independent * * *" (New York Times, June 25, 1955). It is therefore evident, in the light of these statements and the known facts of Central-Eastern and East Europe and Central Asia, that any publicized attempt to seek the freedom of only the so-called satellite countries is patently inconsistent with both objective fact and declared principle.

The freedom force of national self-determination finds its most fertile ground in the areas of the non-Russian nations of the Soviet Union. For most of them, despite 35 years of Russian Communist domination and genocidal oppression, the ineradicable mark of national consciousness shows itself persistently in their unbroken resistance, both passive and armed, against the alien despotism of Moscow. The monumental reports and hearings of the Select House Committee on Communist Aggression, particularly its official record on the Investigation of Communist Takeover and Occupation of the non-Russian Nations of the U. S. S. R., brilliantly relate the relentless drive of these captive nations and peoples for the restoration of their national freedom and independence. In the most authoritative and finest official account yet, they demonstrate the series of imperialist aggressions upon which the Soviet Union itself was founded and the thoroughly illegitimate character of this spurious voluntary union of states. In what is really an empire built upon acts of imperialist aggression and characterized by the worst colonialism in history, constitutional terms, such as secession and separation, become only additional instruments of characteristic Russian Communist deception serving to delude the Western mind with suggested but unfounded parallels elsewhere.

Both scholarship and official experience attest to the fundamental truth that the real enemy behind the mask of Communist ideology is traditional Russian imperialism, an autocratic phenomenon that for centuries has deprived the Russian Nation itself of opportunities for democratic growth, economic advancement, and amicable relations with neighboring non-Russian nations. The compatible ease with which the grandiosity of Communist ideology has been fitted into the psychological pattern of traditional Russian imperialism may readily be reduced from a typical account furnished by a close witness of this institutional phenomenon in the last century. Our Minister to the Russian Empire, Mr. Neill S. Brown, observed in 1852 that "a strange superstition prevails among the Russians, that they are destined to conquer the world, and the prayers of the priests in the church are mingled with requests to hasten and consummate this 'divine mission,' while appeals to the soldiery founded on this idea of fatality and its glorious rewards are seldom made in vain." Many knowledgeable and perceptive witnesses at close hand have followed since, and also have attested to this in similar vein. To quote a contemporary one, Admiral William H. Standley could not help but observe that "over the ancient skeleton of Russian imperialism, Lenin and Stalin threw a cloak of Communist ideology, but the bones of the skeleton show through. Even as in Czarist times, when the Russian Bear stands on its hind feet with its front paws held up as if in prayer, we must 'beware of the Bear that walks like a Man'" (Ambassador to Russia, p. 508).

UNITED STATES UTILIZATION OF UKRAINIAN AND BYELORUSSIAN MEMBERSHIP IN THE U. N.

It is obviously one thing to understand, to resolve and to witness, but it is another to apply, to implement and to utilize, as steps in pressures for freedom and independence would demand. At this stage the channels

for prudent action are open to us and, fortunately, they are being increasingly recognized by many observers. As one analyst described it subsequently to the Summit Conference, "Serious American thought also must be given to the nationally conscious Soviet components such as the Ukraine and Byelorussia. The fact that these two nations have their own representatives in the U. N. has never been properly utilized by the United States. To encourage their independence and to strive for the decentralization of the Soviet Union into its separate though not necessarily unfriendly components is likely to become one of the chief United States objectives" (Edward Weintal, Newsweek, August 29, 1955). Most appropriately, this objective might well now be reflected in the discussion at Geneva.

Numerous measures utilizing these representations may be taken directly in the United Nations, such as we have advocated in a number of Congressional testimonies (e. g. Review of the United Nations Charter, 1955). However, the Foreign Ministers' Conference affords an excellent occasion for certain concrete steps that would give ample evidence of our intention to translate "the Spirit of Geneva" into a reality for all peoples and nations. These steps may now be pitched to the classic statements made by Molotov and Stalin at the Yalta Conference. As reported by Edward R. Stettinius, Jr., "The Soviet Union, Molotov announced also for the first time, would be satisfied with the admission of 3 or at least 2 of the Soviet Republics as original members. The 3 were the Ukraine, White Russia, and Lithuania. The Soviet attitude, Molotov explained, was based on constitutional changes of February 1944, whereby, he said, the Soviet Republics have achieved control of their own foreign policy. Furthermore, not only were these 3 republics heavily populated, but, he said, they had borne the greatest sacrifices of the war, particularly the Ukraine" (Roosevelt and the Russians, p. 161). Reporting on Stalin's significant observations, Stettinius writes, "In reviewing the entire matter of additional seats for the Soviet Union, the President told me that evening at Yalta that Stalin felt his position in the Ukraine was difficult and insecure. A vote for Ukraine was essential, the Marshal had declared, for Soviet unity" (p. 169).

In view of the obvious importance of Ukraine—the largest and richest non-Russian nation in Eastern Europe—not only to the maintenance of empire by Moscow but more so to the advancement of peace with freedom by the United States, we strongly recommend for your studied consideration at this time the following steps in peaceful pressures for freedom and independence: (1) a demonstrated interest by our delegation to Geneva in the progress achieved by Ukraine, Byelorussia and others in "the control of their own foreign policy" since the reported statement made by Mr. Molotov over a decade ago. Implying overt sovereignty, this alleged condition of national control should prompt very significant inquiries into the existence of distinct Ukrainian and Byelorussian military forces, their diplomatic establishments in other countries, and the means by which such control of foreign policy reflects the will of the Ukrainian and Byelorussian peoples; (2) as a demonstration of the true spirit of Geneva, transporting peace with freedom and justice, the submission of a proposal by our delegation for free elections not only in the so-called satellite countries but also, of logical necessity, in countries such as Ukraine and Buelorussia which are recognized by all members of the United Nations and which, as Mr. Molotov reportedly argued, enjoy "control of their own foreign policy." It is crystal clear, on Mr. Molotov's terms, that this proposal cannot be construed as a contravention of the legal norm of noninterference in the internal affairs of any state; (3) in the true spirit of Geneva, promoting friendship and understanding between nations, the proposal by our delegation for American publication and distribution of newspapers and periodicals in the native languages of Ukraine, Byelorussia and others to be read by the peoples of these nations; and (4) in the peaceful interest of understanding Russian communist institutions, an open request by our delegation to send an official mission, headed perhaps by Mr. George Meany of the American Federation of Labor, to visit freely chosen parts of the forced labor system in both the European and Asiatic regions of the Soviet Union and "particularly the great cultural center at Vorkuta."

NO TRADE WITHOUT POLITICAL EXTRACTIONS

Related to these recommendations is our vigorous support of the foreign economic policy of no trade without political extractions in connection with the Soviet Union and other parts of the present Russian Communist Empire. Utterly naive statements made this past summer by individuals who should know better impel us to place great emphasis on this formula in dealing with Moscow. Business as usual, aimed at pecuniary gain and spuriously rationalized as a medium of international amity and understanding, is completely inapplicable to the Soviet Union and the framework of the Russian Communist Empire. The ethics of behaving with relative passivity toward an avowed enemy gaining time to implement his designs for our destruction as a nation is questionable in itself, but to assist him in this in the delusion of furthering peace through normal trade borders on criminality. Moscow needs expanded trade in order to overcome its present economic weaknesses and to keep its empire intact. As was stressed by this committee in testimony before the House Committee on Ways and Means early this year, considerable volumes of even consumer goods traded to the Russian Communist Empire are of strategic significance in a warlike totalitarian economy (Trade Agreements Extension, part 2, 1955). We must preserve our economic leverage for political gains in behalf of peace with justice and freedom. Calculated trade may be had but not without compounded political concessions from Moscow.

Once again we are confronted by politically naive utterances on the shipment of American surplus foodstuffs as a gift to the Soviet Union. Variously motivated, this proposal is likewise garnished with superficial slogans. Once again we wish to repeat the necessary conditions for such an offer as stated in our letter of March 8 to the President: "(1) a verbal stipulation of our desire to witness an equitable distribution of the gift among all the affected nations in the U. S. S. R., (2) in the effectuation of this desire, the admission of carefully selected neutral distribution teams, and (3) the offer of a limited supply measured according to terms not offsetting the basic effects of resistance in the U. S. S. R. and not overlooking the needs of many impoverished areas in the free world itself." America is known for its warm humanitarianism, but even this can be prevented by Russian Communist duplicity.

UNITED STATES INITIATIVE FOR TRUE SPIRIT OF GENEVA

The spirit of Geneva, as conceived by the summit conference will remain only a hollow phrase for those who sincerely have placed their faith and hopes in the possibility of a historic turn of events. It will continue to be a successful instrument of the cold war for Moscow, aimed at the psychological isolation and paralysis of the United States. These are the logical results of the current situation unless the United States, unbeguiled by the perilous doctrine of evolution concerning the conversion of imperialist Russian communism to civilized norms of political existence, commences now to exercise dynamic initiative for a true spirit of Geneva in application to the whole world and especially to the entire Russian Communist empire, including Ukraine and the other captive non-Russian nations in the U. S. S. R.

Such initiative now requires applied pressures for freedom and independence. Truly expressive of our policy of liberation through peaceful means, it would harness the freedom force of national self-determination in application to all enslaved nations in the Russian Communist empire and in splendid vindication of the principle of indivisible freedom. Such initiative can only be based on the secure doctrine of innovation and its dynamic processes of creative development in the expansion of freedom and the positive encouragement of national independence in the captive areas of this empire.

It is in the great hope cherished by the extensive membership of this national body in the supremacy of American idealism and its realistic defense of the innovating principle of national self-determination for all peoples and nations, as well as in a true translation at this meeting of the spirit of Geneva that the undersigned respectfully submits this memorandum.

UKRAINIAN CONGRESS COMMITTE OF AMERICA,
LEV E. DOBRIANSKY, *Chairman,*
Professor, Georgetown University.

Results of McGregor Poll on National Issues

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. McGREGOR. Mr. Speaker, under permission to extend my remarks, I would like to place in the RECORD the results of a questionnaire I sent to the citizens in the 17th Ohio District of whom it is my proud honor to represent in the Congress of the United States. The questions were concerned with pertinent national and international problems facing Congress today.

I regret I could not send a questionnaire to each of my constituents in the district but it is my belief that the replies received represent the opinions of a cross section of those I represent. In the questionnaire I ask them to list their occupation or profession, this gives me the opportunity to tabulate them as separate groups, which in turn, helps me obtain a more complete analysis of their thinking. Especially gratifying to me is the large percentage of the completed forms which contain comments on the questions and proves to me that the average constituent of my district is interested in the important issues now before this legislative body and is anxious to express his views on them.

The population of my district is composed of about half rural and half urban with nearly all of the labor and farm organizations represented as well as large and small business. Included also are 2 colleges and 2 universities. Through the medium of this questionnaire I feel that I have gained the majority opinion of those I represent.

The questionnaire and the results are as follows:

A QUESTIONNAIRE

In an endeavor to learn the views of the "folks back home" relative to several subjects of national importance that will be before the next session of the Congress, may we have your considered opinion?

THE FARM PROGRAM

Which plan do you favor?

(a) 100 percent price support with acreage control. Yes, 0.7 percent; no, 99.3 percent.

(b) Flexible price support with acreage control. Yes, 37 percent; no, 63 percent.

(c) Elimination of all price supports and acreage controls. Yes, 54 percent; no, 46 percent.

THE TAX REDUCTION PLAN

Which plan do you favor?

(a) A uniform (percentage) tax reduction for all. Yes, 50 percent; no, 50 percent.

(b) An increase in the amount allowed for each dependent. Yes, 47 percent; no, 53 percent.

TARIFF ON IMPORTS

Do you favor?

(a) Tariff rates be increased on manufactured items brought into this country. Yes, 48 percent; no, 52 percent.

(b) Tariff rates be increased on agricultural products brought into this country. Yes, 60 percent; no, 40 percent.

Junkets Should Provide Badly Needed Information

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. SCHWENGEL. Mr. Speaker, the Pioneer-Republican, of Marengo, Iowa, carried an editorial in its December 8, 1955, issue on the junkets Congressmen take and I commend it to the Members of Congress. Under leave to extend my remarks in the RECORD, I include this editorial:

JUNKETS SHOULD PROVIDE BADLY NEEDED INFORMATION

Occasionally one notes in the press some comment regarding the junkets various Congressmen engage in during the summer months, accompanied now and then by laments about the cost of the project to the Federal Government and almost always by the inference that the practice is a somewhat questionable one.

Sometimes we wonder if maybe we form our conclusions about these trips too hurriedly and too thoughtlessly. We doubt not that such trips are sometimes taken more for the sake of pleasure than for congressional study and we are aware that it should not be too necessary always to include the wife on the jaunt when only official business is the objective. We understand, however, that the wives do not ride at Federal expense—at least not often.

Personally we'd have less enthusiasm for a Congressman who doesn't have enough initiative to take such a trip when it is possible to become better informed on a subject within the scope of a committee, of which he is a member. We think he owes it to his job to be as well posted as possible. The Congressman who merely beats it for home when Congress adjourns and stays holed up there until the next begins will never be a very valuable Representative.

Not many Representatives are supermen. When a Congressman is elected the first time we can usually think of a dozen men in our own county that are equally well qualified for the job. A few Congressmen are counterfeits and would be liabilities if they worked without pay. The worthwhile official loses little time in getting informed, but the duties of a Representative in Congress are so varied and so important that the fellow who holds the office cannot afford to pass up an opportunity to learn more about the project at hand.

Sometimes there is nothing like a journey abroad, or even to other points in our own country, to provide the knowledge that a good lawmaker should have. The Nation already has so much money invested in the officer's salary and the salaries of those on his staff that it cannot afford to wince at a little carfare or hotel bills when he goes away from home to learn more about some subject on which he must pass judgment when the roll is called.

You can't really do much investigating sitting in a chair on your front porch.

We Underestimate the Soviets

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. PRICE. Mr. Speaker, Mr. Joseph Alsop and Mr. Stewart Alsop are continuing their brilliant series of articles on the growing air-atomic power of the Soviets. I consider it my privilege to continue to insert these articles in the RECORD as they appear. As the Alsops say, in our present national prosperity, most people are inclined to think that facts which prove anything unpleasant are really not facts after all. And the most unpleasant fact of all is that in every case where there has been a test to date, the result has shown, alas, that Soviet capabilities had been sadly underestimated.

Most of our intelligence about Soviet capabilities has been produced by the

National Security Council, headed by Mr. Sherman Kent, and consisting of experts from the CIA, the armed services, and the State Department. It is assessed by the National Intelligence Advisory Committee, on which sit high-level representatives of the armed services, the Office of the Secretary of Defense, and the FBI. As the Alsops say, "Any national estimate which emerges from the committee is a synthesis of the best opinion from all the different sources listed." I mean it as no criticism of this committee that all national estimates of future Soviet-military industrial achievements have always turned out to be far too conservative when finally tested by events. I do mean it as criticism of the planners of our military buildup and of our budget makers, that no allowance has been made for this error in the planning of our military programs. The true situation in which we find ourselves today is serious indeed. It will grow immeasurably worse if we continue consistently to underestimate the Soviets.

Mr. Speaker, with the consent of my colleagues I shall insert the article by the Alsop brothers from the New York Herald Tribune of Sunday, January 8, 1956.

The article follows:

WE UNDERESTIMATE THE RUSSIANS

(By Joseph and Stewart Alsop)

Every so often nowadays, anyone who still bothers to report the life-and-death facts of the American national situation gets a very peculiar feeling. It is the feeling of being suddenly transformed into one of those super-super bores who insist on reciting last night's bad dream at next morning's sunny breakfast table.

These reporters must confess to having this feeling at the moment. The last three reports in this space have been filled with an admittedly ugly and repellent mass of facts. Those facts were not printed because it is enjoyable to deal in what is repellent and ugly. They were printed because they unfortunately but all too conclusively prove a point of vital national importance.

The point is simple. The American air-atomic superiority which has served so long as the free world's sole defense is now rapidly melting away. The Soviet Union, by making vastly greater efforts than this country is now making, is beginning to surpass us in the one area of strength that used to be exclusively our own.

It might be supposed that the merest suggestion that this could happen would stir things up a bit. The knowledge that it is happening, and the virtual certainty that nothing is going to be done about it, sometimes fills these reporters with an almost irresistible impulse to run around in circles barking like dogs. But in our present national condition of prosperous euphoria, most people are inclined to think that facts which prove anything unpleasant are really not facts after all.

So there is one further thing that needs to be said before this painful subject can be finally dropped. The facts are facts (one is almost inclined to shout it), or at least they are as near to facts as any information about the Soviet Union can ever be.

What then is the origin of these facts concerning Soviet output of advanced aircraft types, Soviet missile development, and the like which we have been publishing? The answer is simple. They are squarely based on undoubted information concerning the national estimates which are, or at least ought to be, the basic building blocks of American policymaking.

A complex machinery to produce these national estimates has been set up under our highest policymaking body, the National Security Council. There is first of all an estimates board, composed of brilliant specialists from the Central Intelligence Agency, the armed services and the State Department and headed by the author of the most important postwar book on strategic intelligence, Sherman Kent. The board has the task of making what may be called staff studies of special problems, such as the rate of Soviet aircraft output, for example.

But the process by no means ends there. The output of the estimates board, or any intelligence from other sources for that matter, cannot be accepted as official and therefore national until the problem has been examined by the National Intelligence Advisory Committee.

The committee is called advisory because the director of the Central Intelligence Agency, Allen W. Dulles, has the exclusive statutory duty of providing intelligence to the National Security Council. Dulles serves as chairman of the committee, which in theory advises him. But the committee exists so that the final opinion offered to the Security Council by Allen Dulles may be fully agreed and approved by all interested parties.

High-level representatives of the three armed services, the office of the Secretary of Defense, the State Department and the FBI sit on this committee. Unanimity of opinion is required. Any national estimate which emerges from the committee is a synthesis of the best opinion from all the different sources listed.

Experience has proved, however, that the national estimates can be safely relied on except in one important way. Perhaps because the unanimity requirement works in favor of the lowest common denominator, all national estimates of future Soviet military-industrial achievements have always turned out to be far too conservative when finally tested by events. It was true with the Soviet A-bomb and the Soviet H-bomb. It was true with the MIG–15 and the TU–4. It was true again with the Badger and Bison bombers and the Farmer and Flashlight fighters.

In every case where there has been a test to date, the official American intelligence forecast indicated that the Soviets could not do the job so soon, or that they could not do it on such a large scale, or that they could not do it really well. And in every case where there has been a test to date, the result has shown, alas, that Soviet capabilities had been sadly underestimated.

No allowance has been made for this built-in error in the facts and figures which have been printed in this space to show the massively growing air-atomic power of the Soviets. Most probably the true situation is measurably worse than we have represented it. In any case—to revert to our original image—it is the bad dream that is likely to turn out to be reality and the sunny breakfast table that will prove to be a dream.

Frank D. Merrill

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. MERROW. Mr. Speaker, New Hampshire and the Nation recently suffered a great loss in the untimely passing of Maj. Gen. Frank D. Merrill, who was serving as the highway commissioner of New Hampshire at the time of his death. General Merrill won national fame as a great courageous leader of the famous Merrill's Marauders in World War II. His outstanding military record is an imperishable monument of his great service to our country.

Over a period of years under his leadership, New Hampshire made most significant advances in road building. General Merrill's contribution to his country in both war and peace constitutes an unparalleled record. As Governor Lane Dwinell of New Hampshire so aptly said:

New Hampshire and the whole Nation have lost a devoted, courageous public servant who gave unsparingly of himself when other men might have chosen to retire.

Under leave granted to extend my remarks in the RECORD, I include therein an article which appeared in the New Hampshire Highways Magazine, Concord, N. H., December 1955, paying tribute to the late Maj. Gen. Frank D. Merrill, New Hampshire Highway Commissioner:

FRANK D. MERRILL

A heart attack has taken the life of Maj. Gen. Frank D. Merrill, 52, New Hampshire highway commissioner and leader of a famed band of World War II jungle fighters. The commissioner was stricken in Florida on December 11 while returning to New Hampsire after attending the annual meeting of the American Association of State Highway Officials in New Orleans where he had been elected president.

General Merrill, whose three battalions of specially trained jungle fighters in the Burma campaign called themselves Merrill's Marauders, was a graduate of the United States Military Academy at West Point, N. Y. In accordance with his wish, his body was sent there for funeral services. Memorial services were held at St. Andrew Episcopal Church in Hopkinton, N. H., where he was a member.

He is survived by his wife, Mrs. Lucy Wright Merrill; two sons, Frank D., Jr., a student at New England College, Henniker, N. H.; and Thomas, a preparatory school student in Lebanon, N. Y.; and a sister, Mrs. Stanley Fifield of Hoosick Falls, N. Y.

General Merrill was a native of Hopkinton, Mass., entered West Point from the Regular Army on his sixth attempt. Five times the doctors termed him physically unfit. Upon graduation from West Point, he went to Massachusetts Institute of Technology where he earned a degree in engineering.

Later, he went to Japan as a language student, and remained in Tokyo as a military attaché for 3 years. In 1941 he went to Manila as an intelligence officer on the staff of Gen. Douglas MacArthur, and at the time of the Pearl Harbor attack he was on a flying mission to Rangoon, remaining there with the British forces until his assignment to Stillwell's command.

Twice during World War II he was forced to retire from active command in Burma because of ill health. During the early stages he suffered a heart ailment but refused to be evacuated. He finally accepted a liaison assignment for the China-Burma-India theater. Later he was deputy United States Army commander in the India-Burma theater. In July 1945, he became chief of staff in the Pacific theater and in 1947 deputy chief of the American Military Mission of the Philippine Government.

When Japanese troops drove allied forces out of Burma, General Merrill was on the staff

of Lt. Gen. Joseph W. Stilwell, who picked him to lead an advance raider force which spearheaded a Chinese-American attack on northern Burma to redeem Stilwell's pledge to recapture it. Merrill's Marauders was a 3,000-man volunteer unit that fought some of the toughest close-quarter battles of the war, many of them behind Japanese lines where they revolutionized jungle fighting. The unit was officially designated the 5307th Composite unit, and informally it included a little of everything—all of it tough.

The Marauders, fighting for 5 months early in 1944, played an important role in reopening the Burma road, former lifeline of Nationalist China to Burmese ports and railroads. The specially trained fighters engaged in 5 major and 30 minor engagements, winning them all. The Marauders climaxed their operations by moving secretly across an 8,000-foot range to capture the vital Mytkyina airfield and secure a way to move supplies over the Lido Road to China.

He was chief of staff of the Tenth Army which took Okinawa, and of the Sixth Army which took the Philippines, and he was aboard the battleship Missouri when the Japanese surrendered there.

His decorations include the Distinguished Service Medal, Legion of Merit, Purple Heart, Bronze Star, Pacific campaign medal and other campaign medals. He was commander of the Legion of Honor (French), a member of the Order of the Indian Empire (British), and a member of the Order of the Cloud Banner (Chinese).

After the war he served as special assistant to the Secretary of State. He was a member of the Commission on Intergovernment Relations, and served on its highway committee.

General Merrill's training at West Point and at Massachusetts Institute of Technology, along with his Army experience, well equipped him for his subsequent appointment of Public Works and Highways Commissioner in August 1949 by the then Governor Sherman Adams, now presidential assistant in the White House.

Under General Merrill New Hampshire's move into a toll road program began with the State building the 15-mile eastern New Hampshire Turnpike, which runs from the Massachusetts border at Seabrook to Portsmouth, and the 20-mile central New Hampshire Turnpike which runs from Nashua to Manchester. A 20-mile extension of the Eastern Turnpike to Dover and Rochester is scheduled for completion next year. And a 20-mile extension of the Central Turnpike to Concord is now under construction. Both are toll roads built and administered by the State.

John O. Morton, deputy commissioner and chief engineer of the department of public works and highways, said: "In the passing of Commissioner Merrill the department of public works and highways and the State of New Hampshire have suffered a severe loss.

Commissioner Merrill was in every way an outstanding public servant. His life was colorful and dynamic. He was unsparing in his demands for more and better work from his subordinates; at the same time he was particularly kind and considerate of their welfare.

After assuming office in the summer of 1949, General Merrill's first action was to initiate the development of a 15-year-highway construction program. The facelifting which New Hampshire's roads have received under General Merrill affords concrete physical evidence of Frank Merrill's vision and thinking. His works are a fitting monument to the memory of one of New Hampshire's most distinguished citizens.

Gov. Lane Dwinell said, "General Merrill was a leader whose passing will be mourned in all parts of the world.

"New Hampshire and the whole Nation have lost a devoted, courageous public servant who gave unsparingly of himself when other men might have chosen to retire. It is particularly significant that General Merrill was returning from a meeting of the National Association of Highway Executives of which he had just been elected president.

"General Merrill's brilliant record as a combat soldier is legend, and our State was indeed fortunate to have the services of this man. As a result of his comparatively short time among us, he endeared himself to those with whom he worked, and his imagination, initiative and foresight certainly have made our State a better place. His contribution to the development of better highways was not limited to the State of New Hampshire as he played a leading part in the development of a national highway program which will be actively under consideration in the next session of the Congress.

"General Merrill was loyal to any undertaking in which he had a hand and his integrity was an example to those of us who had planned the future of New Hampshire with him. We have lost an invaluable friend and coworker and my own sense of loss is the greater because General Merrill was one upon whom I had come to rely for advice and help.

"Although he had been in failing health in recent years and this was known to him, he continued to vigorously apply himself to the work to which he was dedicated. Surely, this is the mark of a man of courage with a true spirit of sacrifice."

Clayton W. Chase, president of the New Hampshire Good Roads Association, stated, "With the passing of Commissioner Merrill the Nation and the State of New Hampshire have lost a great leader. His peacetime leadership in the improvement of our highways was carried on with the same energetic and dynamic strength that he exhibited in his work as a wartime general.

"Since his appointment as highway commissioner he has incorporated many important principles into highway practices of New Hampshire. Among them were the development of a 15-year program which intended to put the highway system in order in a reasonable time and within the financial means of its citizens. He then supplemented this program with the beginning of an expressway system of highways which greatly boosted our economic life.

"These accomplishments will remain as a monument to a truly great leader."

The Shocking Story of Approved Killing in Mississippi

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. DIGGS. Mr. Speaker, the following article from Look magazine, dated January 24, 1956, relives the infamous Emmett Till case of last year. The stunning revelations are so detailed and stated so positively, the magazine's journalistic integrity and knowledge of libel law is so well established there is no doubt in my mind that the information came directly from the killers themselves, J. W. Milam and Roy Bryant. Safe within the legal confines of immunity from another trial for the same offense provided by the very Constitution which they and others of their breed have challenged, these men apparently grasped at the opportunity of selling this exclusive story for an undoubtedly handsome financial reward.

Their revolting attempt to justify the murder of the Till boy by emphasizing his alleged familiarity with Mrs. Milam and other white women is the product of incurably prejudiced minds.

The substance of this unsigned confession confirms the observations and investigations I made during my attendance at the trial for the defendants last September. I said, following their acquittal, that in my judgment the testimony of the defense witnesses was replete with perjury. The case itself had become obscured by obvious efforts to defy any criticism of Mississippi racial custom. Nothing more graphically illustrates the immediate need for corrective legislation by the Congress of the United States. Negroes must be guaranteed the right to vote without interference, intimidation, or unwarranted restrictions so they may qualify to serve on juries and exercise influence in the election of fair-minded public officials. Armed with this weapon, considering their numerical strength in Mississippi, the problems which confront them could probably be resolved on a local level, which is not inconsistent with the position of those who support the theory of States rights. The Attorney General must be granted sufficient power to intervene in those cases where individual States refuse to provide equal protection of the law to all citizens. This should not preclude, however, such action as he can pursue under present statutes. We are pleased to see our interpretation of this article shared in an excellent editorial in the New York Post, dated January 11, 1956, which we also herewith submit for the RECORD:

[From the New York Post of January 11, 1956]

BOMBSHELL IN THE TILL CASE

The current issue of Look magazine publishes what amounts to nothing less than a confession by J. W. Milam that he and his codefendant in the Emmett Till trial were guilty of the murder of which they were acquitted by a Mississippi jury.

In what are presented as direct quotations from Milam the magazine prints his version of the circumstances of the murder and the alleged self-justification.

The Look article isn't a conventional piece of journalism. Signed by William Bradford Huie, it does not tell the reader whether Milam's statements were made directly to the writer or obtained in some other fashion. But the magazine says flatly that it is prepared to document the story in the event of legal challenge.

It isn't every day of the week that a responsible national publication quotes a freed defendant as confessing—even boasting about—a killing, and freely invites a legal test of the validity of its story. In the light of the issues stirred by the Till case the publication of such a story itself constitutes big news.

It is hard to believe that either the defendants or the State of Mississippi can let the record stand uncontested unless the defendants are guilty as quoted and the State is officially prepared to condone the crime.

Many of the quotations attributed to Milam in this article offer the picture of Emmett Till that Milam would like the country to accept. It is a portrait of provocation and arrogance. Needless to say, this portrait is unsubstantiated, and the article should be read with that in mind.

But that is not the crucial point. The point is that a killing has gone unpunished and that there is nothing in Milam's pur-

ported recital of Till's sins, self-serving as it is, that justifies the crime.

Both Milam and Bryant have denied the authenticity of the article. Their recourse is obvious if their denials mean anything.

As for Mississippi, there can, of course, be no reopening of the murder charge. But surely the Look article provides the basis for reconvening of the grand jury which has so far refused to return a kidnaping indictment.

It also underlines the need for a sweeping Justice Department investigation of the breakdown of law and order in Mississippi. For if a slaying cannot only be committed but proclaimed—and that is what the Look report suggests—there is no longer any semblance of protection for the civil rights of Negroes in that State.

Certainly the Look article cannot be ignored or dismissed. The Till case haunts the national conscience, and this article, until or unless successfully disputed, is a sensational and decisive exhibit.

[From Look magazine of January 24, 1956]

THE SHOCKING STORY OF APPROVED KILLING IN MISSISSIPPI

(By William Bradford Huie)

(EDITORS' NOTE.—In the long history of man's inhumanity to man, racial conflict has produced some of the most horrible examples of brutality. The recent slayings of Emmett Till in Mississippi is a case in point. The editors of Look are convinced that they are presenting here, for the first time, the real story of that killing; the story no jury heard and no newspaper reader saw.)

Disclosed here is the true account of the slaying in Mississippi of a Negro youth named Emmett Till.

Last September, in Sumner, Miss., a petit jury found the youth's admitted abductors not guilty of murder. In November, in Greenwood, a grand jury declined to indict them for kidnaping.

Of the murder trial, the Memphis Commercial Appeal said: "Evidence necessary for convicting on a murder charge was lacking." But with truth absent, hypocrisy and myth have flourished. Now, hypocrisy can be exposed; myth dispelled. Here are the facts: Carolyn Holloway Bryant is 21, 5 feet tall, weighs 103 pounds. An Irish girl, with black hair and black eyes, she is a small farmer's daughter who, at 17, quit high school at Indianola, Miss., to marry a soldier, Roy Bryant, then 20, now 24. The couple have 2 boys, 3 and 2; and they operate a store at a dusty crossroads called Money: Post office, filling station, and three stores clustered around a school and a gin, and set in the vast, lonely cotton patch that is the Mississippi Delta.

Carolyn and Roy Bryant are poor; No car, no TV. They live in the back of the store which Roy's brothers helped set up when he got out of the 82d Airborne in 1953. They sell snuff and fatback to Negro field hands on credit; and they earn little because, for one reason, the Government has begun giving the Negroes food they formerly bought. Carolyn and Roy Bryant's social life is visits to their families, to the Baptist church and, whenever they can borrow a car, to a drive-in, with the kids sleeping in the back seat. They call Shane the best picture they ever saw.

For extra money, Carolyn tends store when Roy works outside—like truck driving for a brother. And he has many brothers. His mother had 2 husbands, 11 children. The first 5—all boys—were "Milam children"; the next 6—three boys, three girls—were "Bryant children."

This is a lusty and devoted clan. They work, fight, vote and play as a family. The 'half" in their fraternity is forgotten. For years, they have operated a chain of cotton-field stores, as well as trucks and mechanical cotton pickers. In relation to the Negroes, they are somewhat like white traders in portions of Africa today; and they are determined to resist the revolt of colored men against white rule.

On Wednesday evening, August 24, 1955, Roy was in Texas, on a brother's truck. He had carted shrimp from New Orleans to San Antonio, proceeded to Brownsville. Carolyn was alone in the store. But back in the living quarters was her sister-in-law Juanita Milam, 27, with her own two small sons and Carolyn's two. The store was kept open until 9 on week nights, 11 on Saturday.

When her husband was away, Carolyn Bryant never slept in the store, never stayed there alone after dark. Moreover, in the Delta, no white woman or group of white women ever travels country roads after dark unattended by a man.

This meant that during Roy's absences—particularly since he had no car—there was family inconvenience. Each afternoon, a sister-in-law arrived to stay with Carolyn until closing time. Then, the two women, with their children, waited for a brother-in-law to convoy them to his home. Next morning, the sister-in-law drove Carolyn back.

Juanita Milam had driven from her home in Glendora. She had parked in front of the store and to the left; and under the front seat of this car was Roy Bryant's pistol, a .38 Colt automatic. Carolyn knew it was there. After 9, Juanita's husband, J. W. Milam, would arrive in his pickup to shepherd them to his home for the night.

About 7:30 p. m., 8 young Negroes—7 boys and a girl—in a '46 Ford had stopped outside. They included sons, grandsons, and a nephew of Moses (Preacher) Wright, 64, a sharecropper. They were between 13 and 19 years old. Four were natives of the Delta, and others, including the nephew, Emmett (Bobo) Till, were visiting from the Chicago area.

Bobo Till was 14 years old; born on July 25, 1941. He was stocky, muscular, weighing about 160, 5 feet 4 or 5. Preacher later testified: "He looked like a man."

Bobo's party joined a dozen other young Negroes, including two other girls, in front of the store. Bryant had built checkerboards there. Some were playing checkers, others were wrestling and "kiddin' about girls."

Bobo bragged about his white girl. He showed the boys a picture of a white girl in his wallet; and, to their jeers of disbelief; he boasted of his success with her.

"You talkin' mighty big, Bo," one youth said. "There's a pretty little white woman in the store. Since you know how to handle white girls, let's see you go in and get a date with her?"

"You ain't chicken, are yuh, Bo?" another youth taunted him.

Bobo had to fire or fall back. He entered the store, alone, stopped at the candy case. Carolyn was behind the counter; Bobo in front. He asked for 2 cents' worth of bubble gum. She handed it to him. He squeezed her hand and said: "How about a date, Baby?"

She jerked away and started for Juanita Milam. At the break between counters, Bobo jumped in front of her, perhaps caught her at the waist, and said: "You needn't be afraid o' me, Baby, I been with white girls before."

At this point, a cousin ran in, grabbed Bobo and began pulling him out of the store. Carolyn now ran, not for Juanita, but out the front, and got the pistol from the Milam car.

Outside, with Bobo being ushered off by his cousins, and with Carolyn getting the gun, Bobo executed the "wolf whistle" which gave the case its name: The Wolf-Whistle Murder: A Negro "Child" or "Boy" Whistled at Her and They Killed Him.

That was the sum of the facts on which most newspaper readers based an opinion.

The Negroes drove away; and Carolyn shaken, told Juanita. The two women determined to keep the incident from their "menfolks." They didn't tell J. W. Milam when he came to escort them home.

By Thursday afternoon, Carolyn Bryant could see the story was getting around. She spent Thursday night at the Milams, where at 4 a. m. (Friday) Roy got back from Texas. Since he had slept little for five nights, he went to bed at the Milams' while Carolyn returned to the store.

During Friday afternoon, Roy reached the store, and shortly thereafter a Negro told him what "the talk" was, and told him that the "Chicago boy" was "visitin' Preacher." Carolyn then told Roy what had happened.

Once Roy Bryant knew, in his environment, in the opinion of most white people around him, for him to have done nothing would have marked him a coward and a fool.

On Friday night, he couldn't do anything. He and Carolyn were alone, and he had no car. Saturday was collection day, their busy day in the store. About 10:30 Saturday night, J. W. Milam drove by. Roy took him aside.

"I want you to come over early in the morning," he said. "I need a little transportation."

J. W. protested: "Sunday's the only morning I can sleep. Can't we make it around noon?"

Roy then told him.

"I'll be here," he said. "Early."

J. W. drove to another brother's store at Minter City, where he was working. He closed that store about 12:30 a. m., drove home to Glendora. Juanita was away, visiting her folks at Greenville. J. W. had been thinking. He decided not to go to bed. He pumped the pickup—a half-ton 1955 Chevrolet—full of gas and headed for Money.

J. W. "Big Milam" is 36; 6 feet 2, 235 pounds; an extrovert. Short boots accentuate his height; khaki trousers; red sport shirt; sun helmet. Dark-visaged; his lower lip curls when he chuckles; and though bald, his remaining hair is jet black.

He is slavery's plantation overseer. Today, he rents Negro-driven mechanical cotton pickers to plantation owners. Those who know him say he can handle Negroes better than anybody in the county.

Big Milam soldiered in the Patton manner. With a ninth-grade education, he was commissioned in battle by the 75th Division. He was an expert platoon leader, expert street fighter, expert in night patrol, expert with the "grease gun," with every device for close-range killing. A German bullet tore clear through his chest; his body bears multiple shrapnel wounds. Of his medals, he cherishes one: Combat Infantryman's Badge.

Big Milam, like many soldiers, brought home his favorite gun, the .45 Colt automatic pistol.

"Best weapon the Army's got," he says. "Either for shootin' or sluggin'."

Two hours after Big Milam got the word—the instant minute he could close the store—he was looking for the Chicago Negro.

Big Milam reached Money a few minutes shy of 2 a. m., Sunday, August 28. The Bryants were asleep; the store was dark but for the all-night light. He rapped at the back door, and when Roy came, he said: "Let's go. Let's make that trip now."

Roy dressed, brought a gun: this one was a .45 Colt. Both men were—and remained—cold sober. Big Milam had drunk a beer at Minter City around 9; Roy had had nothing.

There was no moon as they drove to Preacher's house: 2.8 miles east of Money.

Preacher's house stands 50 feet right of the gravel road, with cedar and persimmon trees in the yard. Big Milam drove the pickup in under the trees. He was bareheaded, carrying a 5-cell flashlight in his left hand, the .45 in his right.

Roy Bryant pounded on the door.

PREACHER. "Who's that?"

BRYANT. "Mr. Bryant, from Money, Preacher."

PREACHER. "All right, sir. Just a minute."

Preacher came out on the screened-in porch.

BRYANT. "Preacher, you got a boy from Chicago here?"

PREACHER. "Yes, sir."

BRYANT. "I want to talk to him."

PREACHER. "Yes, sir. I'll get him."

Preacher led them to a back bedroom where 4 youths were sleeping in 2 beds. In one was Bobo Till and Simeon Wright, Preacher's youngest son. Bryant had told Preacher to turn on the lights; Preacher had said they were out of order. So only the flashlight was used.

The visit was not a complete surprise. Preacher testified that he had heard of the "trouble," that he "sho' had" talked to his nephew about it. Bobo himself had been afraid; he had wanted to go home the day after the incident. The Negro girl in the party had urged that he leave. "They'll kill him," she had warned. But Preacher's wife, Elizabeth Wright, had decided that the danger was being magnified; she had urged Bobo to "finish yo' visit."

"I thought they might say something to him, but I didn't think they'd kill a boy," Preacher said.

Big Milam shined the light in Bobo's face, said: "You the nigger who did the talking?"

"Yeah," Bobo replied.

MILAM. "Don't say 'Yeah' to me; I'll blow your head off. Get your clothes on."

Bobo had been sleeping in his shorts. He pulled on a shirt and trousers, then reached for his socks.

"Just the shoes," Milam hurried him.

"I don't wear shoes without socks," Bobo said; and he kept the gun-bearers waiting while he put on his socks, then a pair of canvas shoes with thick crepe soles.

Preacher and his wife tried two arguments in the boy's behalf.

"He ain't got good sense," Preacher begged. "He didn't know what he was doing. Don't take him."

"I'll pay you gentlemen for the damages," Elizabeth Wright said.

"You niggers go back to sleep," Milam replied.

They marched him into the yard, told him to get in the back of the pickup and lie down. He obeyed. They drove toward Money.

Elizabeth Wright rushed to the home of a white neighbor, who got up, looked around, but decided he could do nothing. Then, she and Preacher drove to the home of her brother, Crosby Smith, at Sumner; and Crosby Smith, on Sunday morning, went to the sheriff's office at Greenwood.

The other young Negroes stayed at Preacher's house until daylight, when Wheeler Parker telephoned his mother in Chicago, who in turn notified Bobo's mother, Mamie Bradley, 33, 6427 South St. Lawrence.

Had there been any doubt as to the identity of the "Chicago boy who done the talking," Milam and Bryant would have stopped at the store for Carolyn to identify him. But there had been no denial. So they didn't stop at the store. At Money, they crossed the Tallahatchie River and drove west.

Their intention was to "just whip him * * * and scare some sense into him." And for this chore, Big Milam knew "the scariest place in the Delta." He had come upon it last year hunting wild geese. Over close to Rosedale, the Big River bends around under a bluff. "Brother, she's a 100-foot sheer drop, and she's a 100 feet deep after you hit."

Big Milam's idea was to stand him up there on that bluff, "whip" him with the .45, and then shine the light off down there toward that water and make him think you're gonna knock him in.

"Brother, if that won't scare the Chicago ———, hell won't."

Searching for this bluff, they drove close to 75 miles. Through Shellmound, Schlater, Doddsville, Ruleville, Cleveland, to the intersection south of Rosedale. There they turned south on Hississippi No. 1, toward the entrance to Beulah Lake. They tried several dirt and gravel roads, drove along the levee. Finally, they gave up: in the darkness, Big Milam couldn't find his bluff.

They drove back to Milam's house at Glendora, and by now it was 5 a. m. They had been driving nearly 3 hours, with Milam and Bryant in the cab and Bobo lying in the back.

At some point when the truck slowed down, why hadn't Bobo jumped and run? He wasn't tied; nobody was holding him. A partial answer is that those Chevrolet pickups have a wraparound rear window the size of a windshield. Bryant could watch him. But the real answer is the remarkable part of the story.

Bobo wasn't afraid of them! He was tough as they were. He didn't think they had the guts to kill him.

Milam: "We never were able to scare him. They had just filled him so full of that poison he was hopeless."

Back of Milam's home is a tool house, with two rooms each about 12 feet square. They took him there and began "whipping" him, first Milam, then Bryant smashing him across the head with those .45's. Pistol-whipping: a court-martial offense in the Army * * * but MP's have been known to do it * * * and Milam got information out of German prisoners this way.

But under these blows Bobo never hollered—and he kept making the perfect speeches to insure martyrdom.

Bobo: "You bastards, I'm not afraid of you. I'm as good as you are. I've 'had' white women. My grandmother was a white woman."

Milam: "Well, what else could we do? He was hopeless. I'm no bully; I never hurt a nigger in my life. I like niggers—in their place—I know how to work 'em. But I just decided it was time a few people got put on notice. As long as I live and can do anything about it, niggers are gonna stay in their place. Niggers ain't gonna vote where I live. If they did, they'd control the Government. They ain't gonna go to school with my kids. And when a nigger even gets close to mentioning sex with a white woman, he's tired o' living. I'm likely to kill him. Me and my folks fought for this country, and we've got some rights. I stood there in that shed and listened to that nigger throw that poison at me, and I just made up my mind. 'Chicago boy,' I said, 'I'm tired of 'em sending your kind down here to stir up trouble. Goddamn you, I'm going to make an example of you—just so everybody can know how me and my folks stand.'"

So big Milam decided to act. He needed a weight. He tried to think where he could get an anvil. Then he remembered a gin which had installed new equipment. He had seen two men lifting a discarded fan, a metal fan 3 feet high and circular, used in ginning cotton.

Bobo wasn't bleeding much. Pistol-whipping bruises more than it cuts. They ordered him back in the truck and headed west again. They passed through Doddsville, went to the Progressive Ginning Co. This gin is 3.4 miles east of Boyle: Boyle is 2 miles south of Cleveland. The road to this gin turns left off U. S. 61, after you cross the bayou bridge south of Boyle.

Milam: "When we got to that gin, it was daylight, and I was worried for the first time. Somebody might see us and accuse us of stealing the fan."

Bryant and Big Milam stood aside while Bobo loaded the fan. Weight: 74 pounds. The youth still thought they were bluffing.

They drove back to Glendora, then north toward Swan Lake and crossed the new bridge over the Tallahatchie. At the east end of this bridge, they turned right, along a dirt road which parallels the river. After about 2 miles, they crossed the property of L. W. Boyce, passing near his house.

About 1.5 miles southeast of the Boyce home is a lonely spot where Big Milam has hunted squirrels. The river bank is steep. The truck stopped 30 yards from the water.

Big Milam ordered Bobo to pick up the fan.

He staggered under its weight—carried it to the river bank. They stood silently—just hating one another.

Milam: "Take off your clothes."

Slowly, Bobo sat down, pulled off his shoes, his socks. He stood up, unbuttoned his shirt, dropped his pants, his shorts.

He stood there naked.

It was Sunday morning, a little before 7.

Milam: "You still as good as I am?"

Bobo: "Yeah."

Milam: "You've still 'had' white women?"

Bobo: "Yeah."

That big .45 jumped in Big Milam's hand. The youth turned to catch that big, expanding bullet at his right ear. He dropped.

They barb-wired the gin fan to his neck, rolled him into 20 feet of water.

For 3 hours that morning, there was a fire in Big Milam's back yard: Bobo's crepe-soled shoes were hard to burn.

Seventy-two hours later—8 miles downstream—boys were fishing. They saw feet sticking out of the water. Bobo.

The majority—by no means all, but the majority—of the white people in Mississippi (1) either approve Big Milam's action or else (2) they don't disapprove enough to risk giving their "enemies" the satisfaction of a conviction.

Ice Cream and Milk Demonstrations at International Fairs

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report on the milk and ice cream demonstrations at the Bogota International Fair.

This is the sort of thing I had hoped would develop at the time we started the idea of the United States participating in international trade affairs. It was accomplished first by a Presidential letter addressed to the Committee on Appropriations. The Committee on Appropriations took action by appropriating $5 million. We are now getting results. We are getting excellent reports on accomplishments at international trade affairs which indicate that America is being shown in its very best light at these international trade fairs.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

DEMONSTRATION OF ICE CREAM AND MILK RECOMBINING AT BOGOTÁ FAIR HUGE SUCCESS

Operation Crush, the first United States exhibit at one of the great International Trade Fairs to feature milk and dairy products, was labeled a smashing success at the close early in December of the International Fair in Bogotá, Colombia. The exhibit, de-

veloped by Dairy Industries Society, International at the request of the United States Departments of Commerce and Agriculture, literally stole the show as Colombians pressed through the aisles to watch the making of soft-serve ice cream and recombining of milk from United States dry components and to receive samples of the product.

Cooperating in this demonstration of how milk and dairy products can reach a public thousands of miles from the producing cows were the dairy industries of Colombia and the United States, as represented by DISI, and the Governments of the two republics. Almost all of the full scale recombining and ice-cream-making equipment used in the demonstration and much of the supplies for the ice cream and for the dispensing of the two products were loaned or donated to the society by United States or Colombian firms. Colombian dairy processing members of the society, notably El Rodeo and Heladeria California, placed their plants and their trucks at the society's disposal to supplement the production of the recombined milk and ice cream mix possible on the exhibit floor. Industry members of DISI, from both the United States and Colombia, temporarily abandoned their private careers to help William M. Taylor, DISI secretary, install and man the booth.

Dry non-fat milk solids and anhydrous butterfat from the United States Government's Commodity Credit Corporation's surplus stocks were used for the recombining and as a basis for the ice cream. Funds for the exhibit were made available in Colombian pesos under a United States Public Law 480 market development agreement signed between the two countries.

American Dairy Association sent its dairy princess, Miss Ruth Peterson of Austin, Minn., and her chaperone to the fair, and National Dairy Council, a month before the opening of the exhibit, loaned E. J. Rowell to the society to help in developing literature and visual material for the exhibit. In charge of the United States pavilion at the fair was Frank Schull of the Department of Commerce. J. Grant Lyons of the Department of Agriculture was manager of the United States agricultural exhibits.

DISI, an industry-spearheaded group with members in nearly 50 countries, is concerned with stimulating the use of milk throughout the world. Officials of the society, represented by Mr. Taylor, recommended to the Departments of Commerce and Agriculture that a demonstration of recombining and of ice cream making should be introduced at one of the international trade fairs. Bogotá was selected as the test fair, and the society was asked to develop the exhibit and install and manage the booth.

Background for the recombining and ice cream equipment was a series of photographs donated by United States dairy groups and magazines, telling the story of milk from the cow to the consumer. A fence of pipe bent along one frontage of the area into milk-bottle shapes and along another frontage into ice-cream-cone shapes helped keep the exhibit from being overrun by the pressing crowds, some 170,000 persons 1 day alone, which surged through the United States pavilion to watch the demonstrations, and, 3 times a day, receive 4-ounce cups of milk and filled ice cream cones. For many Colombians this was the first taste of fluid milk and the first real ice cream.

"What I will always retain as the most vivid memory of this great fair," Mr. Taylor said on his return to Washington, "is the reaching of hands and the appealing eyes of the people who came up to our dispensers or our ice cream machines. I do not forget, either, the people who came to our tables where we had our spread of literature, our simple locally printed pamphlet telling the story of milk, and our little cutout cows which the children called quitos (pronounced keetos), this being short for vanquitos, meaning "little cows." They would reach out with their hands, their eager fingertips almost, but not quite, touching these pamphlets and these little cows, but never did they snatch; never did they grab, unless one of our girls or ourselves gave the word. We passed out about 70,000 of these little cows, and over 60,000 pamphlets, and every night I made it my business to walk around to look for discards. One day we had 170,000 people at that fair. I walked around the exhibits and through the door to the great plaza outside. I found 9 pamphlets and 2 broken cows. The literature was going home.

"We served over 40,000 ice cream cones and over 40,000 cups of milk, and never once did we have an unpleasant incident. It is true that the crush of the crowds was sometimes frightening, and there were occasions when we had to haul little children bodily out of their mothers' arms as a preventive measure, but no one was rude; no one snatched."

Absent, too, Mr. Taylor reported, was the usual pilfering which accompanies a big exhibition. The only explanation given by the Colombians was that the dairy exhibit had been adopted as their own by the people of Bogotá. Colombian officials of the fair credited the dairy exhibit and the DISI and other people who had made it possible, with being the biggest factor in making the fair a success.

"This is because you have been so good to our mothers and our children," the Fair's manager, Sr. Jorge Reyes G., added.

Later Sr. Reyes sent the society a letter of commendation for the magnificent cooperation of the dairy industries of the two nations in making the fair an outstanding success and expressed the hope that the society would participate in the Third International Fair in Bogotá to be held in November and December of 1956.

From the standpoint of the development of recombining or ice cream manufacturing operations in Colombia, DISI officials report, the fair showed great promise. Numerous requests for quotations on equipment and supplies came to both DISI and the Foreign Agricultural Service's representative at the fair, D. R. Strobel. The public constantly asked where this milk and ice cream could be bought.

"It is our belief that the experience at the Bogotá Fair demonstrates that there exists in many areas not now consuming large quantities of dairy products, a consumer demand for milk and dairy products, particularly for ice cream," a DISI spokesman said. "We also believe that we demonstrated there that a good product can be made from the easily shipable dry milk components. We believe that, with the cooperation of the local dairy industries, such as we received so overwhelmingly in Colombia, the dairy producing nations can develop entirely new markets throughout the world which might absorb all—or at least almost all—of the dairy surpluses and serve as a supplement to the local dairy industries."

The team of industry men, characterized by Mr. Taylor as "magnificent," which worked night and day to process the milk and ice cream, under difficult conditions; to dispense it to the pressing crowds; and to tell the story of milk, were, with one exception, DSI volunteers. They were Frank Thomas, president of General Equipment Sales of Indianapolis, who spent almost 2 weeks there; John McCracken of the Department of Commerce, who handled the ice cream machine, and helped out wherever help was needed; Dr. Elmer Thomas of the University of Minnesota, who made the mix and the milk; and Phil Hanapole, manager of Ideal Dairy Farms, of Union, N. J., all from the United States.

Among the many Colombian firms and individuals who helped make the dairy exhibit a success were, in addition to El Rodeo, owned by the Pradilla family, and Heladeria California, DISI area director Dr. Joaquin Molano-Campuzano, who arranged for translations of the United States Department of Agriculture's pamphlet on recombining and other materials for the booth and for radio appearances for dairy people; Eduardo Moreno of Rimo; the men of Refrigeracion Praco and of Ancira de Colombia, Guzman Hnos, Ltda.; J. Sinistera; Jorge Herrera of Herrera y Hijos, and Jorge and Jaime Pradilla. Colombian officialdom was most helpful, in particular Minister of Agriculture Juan Restrepo J.; Dr. Jean Rogier and his wife, who enlisted the interest of the Women's Club of Bogotá and of the various charitable organizations.

"We all scrubbed floors, cleaned vats, operated equipment, served ice cream, served milk, distributed literature, chased around for supplies, told the story of milk thousands of times, and did everything that had to be done when it had to be done," Mr. Taylor said.

"At no time during the show did we fail to serve either milk or ice cream on time, although there were times when we had to stop serving because of the terriffic pressure of the crowds. Even with police assistance there were times when the demand was so great that in order to keep from crushing people in the rush for these dairy products we cut off the supply.

"We gave numerous special demonstrations, also. We demonstrated recombining to the Governor of the province of Antiochia and his party, together with representatives from the Food and Agriculture Organization of the United Nations, UNICEF of the United Nations, the Rockefeller Institute, and a delegation from 'Sendas.' 'Sendas' is a charitable organization headed by Senora Dona Eugenia R. de Moreno, the daughter of the President of the Republic.

"We demonstrated to the United States Ambassador and his people. Another time to the Colombian Minister of Agriculture, and on several occasions to the Colombian Minister of Health and Welfare, and to the local board of Health for the City of Bogotá. We discussed with all official guests the benefits from milk and dairy products to be had by the people of Colombia."

Pearl Harbor Memorial

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. SCHWENGEL. Mr. Speaker, December 7, 1955, was a memorable day in naval history because it marked the dedication of the first public memorial to the men who died in the attack on Pearl Harbor in 1941.

This memorial was made possible through the efforts of the Navy Club of the United States of America under the leadership of its national commandant, Charles R. Topp, of Davenport, Iowa, in cooperation with the Secretary of the Navy, Charles Thomas.

Because of the significance of the memorial and what it means to all of us, I commend to my colleagues the dedicatory messages which were delivered at the ceremony.

Under leave to extend my remarks in the RECORD, I include the address of Alton G. Meyer, chairman, Pearl Harbor Memorial Commission, Navy Club of the

Navy Club of the United States of America; the dedication speech by Charles R. Topp, commandant of the Navy Club of the United States of America; and the reply and acceptance of Rear Adm. C. E. Olsen, United States Navy, Commandant, Fourteenth Naval District:

REMARKS BY MR. ALTON G. MEYER, CHAIRMAN, PEARL HABROR MEMORIAL COMMISSION, NAVY CLUB OF THE UNITED STATES OF AMERICA, AT MEMORIAL DEDICATION CEREMONIES, FORD ISLAND, PEARL HARBOR, DECEMBER 7, 1955

Mr. Gratz, Mr. Farrant Turner, Admiral Olsen, Commandant Charles R. Topp, distinguished guests, and friends. On behalf of the Navy Club of the United States of America, we humbly accept your most gracious welcome. To you Mr. Turner, we wish to express our sincere appreciation of the warm hospitality shown us by the citizens of your great territorial islands. Our wholehearted thanks go to the Navy whose cooperation has made this solemn occasion possible.

The preamble to the constitution of the Navy Club of the United States of America exemplifies the solemnity of this occasion. Quote: "In reverent recognition of divine guidance, we associate ourselves together, pledging ourselves to maintain true allegiance to the Government of the United States of America and fidelity to its Constitution and laws.

"The objects of this association are to further, encourage, promote and maintain comradeship among our members; to revere, honor and perpetuate the memory of our departed shipmates; and to promote and encourage further public interest in the United States Navy and its history and to uphold the spirit and ideals of our Navy."

We have just passed through the national observance of Thanksgiving and we Americans have every reason to be thankful, thankful not only for the system of Government, under which its people are privileged to live in freedom—

Not only for the ideals which grip the imagination and attention of our citizens everywhere;

Not only for the keen appreciation which all true Americans have for the laws of our land guaranteeing the freedoms of which we boast;

Although we have every reason to be thankful for the opportunity to so live, we must never forget that such privilege carries with it the obligation to defend and preserve these liberties against those who would foist upon our way of living those insidious ideologies which are inimical to the best interests of our well being. Let us be strong, possessed of broad minds and expanded intellect, and let us hold no brief for intolerance, national or personal greed, bigotry or hate.

We are now entering upon the season of peace on earth and good will toward all men. So let us be men of good will, that the influence of our Nation, expressed through the will of our people, and through the voices of their servants may bring to this troubled world that measure of peace which will place all peoples upon a basis calculated to stabilize, strengthen, and to support.

It has been 14 long years since Sunday morning, December 7, 1941, when, while their emissaries were negotiating with our Government, the Japanese came streaking in over Oahu from the west at 7:40 a. m. They caught us alseep. Japanese planes struck at Schofield Barracks and adjoining Wheeler Field. Then they swung eastward, struck Bellows Field and Kaneohe Naval Air Station. The attacking wave of aircraft was then split to hit, simultaneously, grounded aircraft at the naval air station here on Ford Island, Hickam Field, the Army's airbase bordering the naval shipyard, and the Marine Air Corps station at Ewa, adjacent to the present Barbers Point Naval Air Station.

We are here to place a memorial to the memory of our men who died as a result of that insidious attack.

What purpose can such a memorial serve? It can only serve to remind us of the men who gave up their lives in the first hour of World War II. Those men fought back nobly and died heroically. The lessons of Pearl Harbor are obvious. They indelibly stamp the necessity for preparedness and serve as a clear reminder that vigilance must be maintained. The tactics and techniques of modern warfare are most effectively employed in a sneak surprise attack. Let us consider for a moment, being not unmindful of the terrible destruction that was wreaked upon Pearl Harbor in 1941 with so-called conventional bombs, what might today happen with nuclear weapons.

That Sunday, 14 years ago, spells out for all to see what our roles as American citizens must be as we face a larger adversary today.

On December 7, 1951, a group of Navy Club of United States of America officials were guests here of the Navy Department in observance of the 10th anniversary of the bombing of Pearl Harbor. This monument is the culmination of the ideas and thoughts of those men. It is with great pride that the Navy Club Pearl Harbor Memorial Commission presents to the Navy Club of the United States of America this memorial monument erected in memory of those who have so gallantly given their lives in defense of democracy and freedom.

REMARKS BY MR. CHARLES R. TOPP, NATIONAL COMMANDANT, NAVY CLUB OF THE UNITED STATES OF AMERICA, AT MEMORIAL DEDICATION CEREMONIES, FORD ISLAND, PEARL HARBOR, DECEMBER 7, 1955

Mr. Gratz, Admiral Olsen, distinguished guests, and fellow Americans, we meet here today to remember—to pay a debt.

We meet here as beneficiaries of a great inheritance—one of freedom and liberty.

In our Nation, government exists as a servant of the people. A man is not a tool of the state. His liberties are guaranteed and he lives in an environment where his freedom may be exercised.

It is in that type of inheritance that we gather on an occasion such as this.

In opposition to that American pattern is the despotic type of state such as the coalition or axis that attacked Pearl Harbor 14 years ago. They held to the idea that a man was subservient to the state—that he existed to be used by the government—and that he had no inherent dignity and self-respect himself as an individual.

If that pattern had been successful in their attack upon our Nation throughout the period of World War II and since then in Korea, the freedoms we enjoy would have gone by the board and slavery would have been the order of the day.

Our opponents' attack came on a quiet Sabbath day—14 years ago almost at this hour—a day that will always live in infamy.

All of a sudden we were included among the nations marked for conquest.

It is to our credit as a nation that we take up the sword reluctantly and only under extreme provocation. It is only in utter necessity that we fight. We never have been and we never will be a warlike people, but when our freedom is jeopardized and there is no choice between liberty and slavery, then our citizens flock to the colors.

The purpose of our World War II effort was not alone the defeat of the Axis nations, not alone the preservation of our Nation, but rather the continuation in the world of the idea that a man's freedom is inviolate. We were dedicated to that principle because it is a foundation stone in our Republic.

It was a terrific struggle. Many heartaches—blood, sweat, and tears—and to that struggle came men and women from every walk of life, answering the call of their country in her hour of need.

We paid a high price along a rough way and at a cost that staggers the imagination, but it meant our survival as a nation, and it meant survival of the dignity of a man, to have freedom of speech, press, and religious worship.

Today it remains for us to do something further in advancing this cause for which our shipmates gave their lives. Your job and ours today is to see that the freedom that they worked, labored, and died for is not only retained but has an opportunity to grow and advance.

Isn't it a tragedy that after a great war, in which we fought to abolish bigotry and dictatorial methods—that those same things are still very much with us? The idea that a man is a tool of a state is still a paramount issue in the world today.

We are confronting those issues—and in doing so we must remember the service and sacrifice of each and every one who gave his life that our freedom might live.

We have a tendency—all too soon—to forget our heroes—and what is even worse—to forget the principles of which they dreamed and for which they died.

We recognize their service and their sacrifice—we appreciate it—but that is not enough. We must pay our debt by meeting their obligation and carrying on their crusade—by dedicating ourselves—each and everyone—as citizens—to those principles of freedom on which our Nation is established. And only as those principles are maintained and practiced can they be cherished and kept inviolate.

Peace is an expensive proposition—and just how high, we are realizing more and more as time passes. It takes just as much intelligence, dedication and devotion as does a war effort. Our business today and tomorrow—yours and ours—is to so live and serve that the service and sacrifice of our shipmates in arms shall not have been in vain.

Today—as a Nation—we confront the multiple problem of a chaotic and confused world. We are trying to find the path to a just and lasting peace. On this Pearl Harbor Day let us determine—each and every one of us—that we are going to meet these problems courageously—that we are going to deal with them intelligently to the end that our Nation under God shall continue increasingly to be the custodian of moral leadership in the world and provide a guarantee to the world that men must be free.

We are going to meet these problems—and achieve these goals only as we—individually—meet them and achieve them—because in this Nation of ours—we are America. We are its citizens and we determine its policies and guard and guide its destinies.

We are going to pay this debt we owe and recognize today—to our hero dead—by doing something as citizens for our Nation to the end that there may never be a second Pearl Harbor—any repetition of the tragedy that we commemorate on this day and with this memorial.

As we face this future and meet these problems we have the confidence that back of it is an Almighty God who never sounds retreat. His truth is marching on through life, through our Nation, and under His banner and benediction we cannot and will not fail.

Let us never forget this day what this observance signifies. Here today we have dedicated the first memorial to be erected by a veterans' group at Pearl Harbor which becomes a part of the Pacific War Memorial system. We know the price of negligence; we know the cost of not being prepared.

We are the custodians of a great heritage; of freedom and independence. We must keep

faith with those who fought and died to uphold it; who sacrificed to maintain it. How do we do it? By resolutely facing the unfinished problems that are connected and associated with what they fought to prevent. We can never deserve the honored and cherished title of Americans unless we assume our responsibilities as citizens of a nation that is destined to direct the world into channels of freedom and of goodwill.

That is a solemn obligation. It is ours.

That thought we face up to today, as a pledge, throughout our Nation by all our citizens; a pledge to those we honor this day and with this memorial who died that we might have the opportunity to make this pledge anew and to work to bring it to pass. God help us in meeting such an obligation.

It is with these thoughts, Admiral Olsen, that we present this humble memoiral bearing our solemn tribute to our shipmates and to the Navy Department, to guard and maintain in their behalf, as they did, and as we will throughout the ages.

REMARKS BY REAR ADM. C. E. OLSEN, USN, COMMANDANT, 14TH NAVAL DISTRICT, AT DEDICATION CEREMONIES OF THE NAVY CLUB OF THE UNITED STATES OF AMERICA PEARL HARBOR MEMORIAL, DECEMBER 7, 1955, AT FORD ISLAND

Mr. Gratz, Secretary Turner, Commandant Topp, Judge Meyer, members of the Navy Club Pearl Harbor Memorial Commission, and distinguished guests:

The Navy has many friends. From all over the world, by instances large and small, this is unfolded to us daily.

Quite naturally, the closest members of our Navy family are the alumni, particularly when they are grouped together in strong and influential organizations such as the Navy Club of the United States of America.

The loyalty and devotion of the Navy Club has been of invaluable importance to the Naval Establishment. It is therefore supremely fitting that the memorial being dedicated here today has been conceived and executed by the members of the Navy Club, who by experience, conviction, and action have become an integral part of naval tradition.

We are here in a humble gesture of remembrance. Along battleship row before you—about a mile of now-placid water—more than 2,000 members of the naval service died on that Sunday morning 14 years ago.

Our debt to those who died here has not been discharged. It will never be discharged until a firm, just, lasting peace can give meaning to their passing.

It is therefore well for us to constantly recall the events of the past 14 years and remember that we still have much to accomplish.

I think the people of the United States do realize today, as never before in their history, that they are confronted with a powerful force which hates freedom and democracy and which seeks to conquer the world. To meet the threat, they are moving through sound leadership and technological progress to make their Armed Forces stronger and stronger.

They know this is the one means of keeping peace—and their democratic way of life.

In his remarks a few moments ago Judge Meyer enumerated the objectives of the Navy Club of the United States of America. One objective was to "perpetuate the memory of departed shipmates." This is being magnificently met here today with this fine memorial.

Another objective, Judge Meyer said, was to "encourage further public interest in the United States Navy and its history and to uphold the spirit and ideals of the Navy."

A powerful and mobile air and surface Navy, properly balanced with Air Force and Army components, is absolutely essential to our national well being.

By furthering public interest in the Navy, its capabilities and its traditions, the Navy Club can therefore continue to make important payments toward that solemn debt we all owe to the gallant dead of December 7, 1941.

With these things in mind, Commandant Topp, I gratefully accept this Pearl Harbor Memorial for the United States Navy—for its living members, who are dedicated to the search for a lasting peace, and for its heroes who made the supreme sacrifice here in defense of our freedoms.

Federal Regulation of Independent Natural Gas Producers Is Essential

---

EXTENSION OF REMARKS
OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, January 12, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which I wrote for the October issue of the Public Utilities Fortnightly. The article is entitled "Federal Regulation of Independent Natural Gas Producers Is Essential," and contains my general views on this question.

I wish to point out, however, that because of its length, I was not able to include all the supporting data which I shall later present to the Senate when the gas bill is debated. In addition, we now have figures for 1954 and, in some cases, for 1955, which have been provided to me by the Federal Power Commission since the article was published. In every case the new figures strengthen the position against exempting from Federal regulation the sales for resale of natural gas in interstate commerce. In fact, new figures for the price of gas, the domination of supplies by a few, and the ultimate costs to consumers involved if the bill is passed, all fortify the case against exemption.

The Public Utilities Fortnightly deserves credit for making available to its readers various views on the natural gas bill, and I wish to commend them for the fairness with which they have presented divergent views to their readers and the public.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL REGULATION OF INDEPENDENT NATURAL GAS PRODUCERS IS ESSENTIAL

(By the Honorable PAUL H. DOUGLAS, United States Senator from Illinois)

The United States Senate will have before it in January the Fullbright bill to exempt sales of natural gas for resale in interstate commerce by the so-called independent nontransporting producers from regulation by the Federal Power Commission. The bill would also provide large windfall profits to interstate pipeline companies owning natural gas reserves. I have opposed similar legislation in the past. And I am opposed to this bill and its counterpart, the Harris bill, which passed the House of Representatives by a very narrow margin at the end of the 1st session of the 84th Congress.

I

Historically, the legislative efforts to win exemption for these producers' sales and to provide bonanzas for pipeline companies began with the Moore-Rizley bill in 1947–48. This bill was too extreme even for the Republican 80th Congress. It was shelved. An exemption measure (the Kerr bill) was unfortunately passed in 1950, but President Truman courageously vetoed it.

A majority of the Federal Power Commission in 1951 held in the Phillips Petroleum Co. case that the Commission did not possess jurisdiction over sales of natural gas in interstate commerce which were related to the activities of production and gathering.

The Supreme Court in 1954 reversed this self-denial of jurisdiction. The Court held that the Natural Gas Act gave the Commission power to regulate the interstate sales of producers and indicated that it should get on with the job of protecting the consuming public against exploitation at the hands of natural gas companies. Now the oil and gas producers are back again seeking clarification of the Natural Gas Act or—more precisely—exemption therefrom.

At the present time, then, the Federal Power Commission has the legal power to regulate the rates charged for natural gas sold in interstate commerce for resale at all points in its interstate journey, commencing at the wellhead. The various State regulatory commissions have the authority to regulate the sales to ultimate consumers. The regulatory scheme is complete, and no regulatory gap exists.

The effect of the Fulbright Bill would be to reopen the gap and permit producers to charge all that the traffic will bear for this much-sought-after-fuel. Whatever is charged would be passed along by the pipeline companies and the distributing utilities, and included as a legitimate cost in determining the final price to consumers.

I oppose this legislation because it would exempt from Federal regulation a vital segment of an industry engaged in interstate commerce which is affected with a public interest just as much as electricity, water, public transportation, or the telephone industry. This fact was established legally by Congress in 1938. The decisions of the Supreme Court have confirmed it.

Basically, however, it was neither Congress nor the Supreme Court which made the industry one affected with a public interest and therefore subject to reasonable regulation. This is due instead to the fundamental nature of the industry itself. An examination of the industry structure and its business methods and operations led me, and many of my colleagues, to the view that continued regulation by the Federal Power Commission of the type of sales covered by the Phillips decision is clearly in the public interest.

Natural gas is a necessity in the daily lives of millions of Americans just the same as electricity, telephones, and water. These services are furnished by utilities. If a householder needs such services, there is only one place where they may be obtained on a practical or economical basis, and that is from the local utilities. In the economic sense, these householders are captive customers of the utilities.

It is true that there are alternatives. Candles and oil lamps may be used for light in place of electricity. Water may be bought in bottles, or one can dig one's own private well. However, the investment made by the American consumer in appliances negatives the opportunity afforded by such alternatives. Once the consumer has purchased a gas furnace, gas range, gas water heater, gas refrigerator, or gas clothes dryer, or other gas-burning appliance, he has no real alternative to gas as fuel.

Americans have now invested upwards of $10 billion in gas furnaces and appliances

which cannot be economically or physically converted to electricity, coal, oil, or wood. Even if the conversion were practical, few consumers would shift because gas is cleaner, more convenient, and its utilization requires little physical labor. But the conversion is impractical: The costs would be prohibitive for the consumer to junk his existing gas-burning equipment and replace it by electric appliances or by coal- or oil-burning furnaces.

The argument that the residential consumer has an effective alternative to the continued use of natural gas and can switch to another fuel if he objects to high gas rates is pure sophistry.

II

A phenomenal increase in the prices of natural gas in the producing fields has taken place since the close of World War II, and, more particularly, in the last 2 or 3 years. This rising cost of gas in the field has had a pronounced effect upon the rates of the interstate pipeline companies and has likewise been reflected in the natural gas retail rates in many sections of the country. These increases have been so drastic that many distributing utilities actively participated in the hearings on the Fulbright bill in the Senate and the Harris bill in the House, strongly opposing this give-away legislation. Likewise, State regulatory commissions and State and municipal officials joined in opposition to these measures.

The magnitude of the increases in the field cost of gas is demonstrated by the experience of 17 major pipeline companies, which in 1953 acquired 96 percent of the total volume of gas purchased from independent producers by companies reporting to the Federal Power Commission. In 1946 the weighted average price paid by these companies was 4.4 cents per thousand cubic feet. In 1953 the average cost had risen to 8.857 cents per thousand cubic feet. Based on filings for rate increases in the year 1954, the weighted average price had reached 9.723 cents per thousand cubic feet, an increase of 120 percent above the 1946 level. Almost two-thirds of this increase has occurred since 1951. The increased cost of natural gas in the field to the 17 major pipeline companies when placed upon an annual basis amounts to $196 million. This is no small sum, even in our billion-dollar economy.

In turn, these increases in the field cost of gas have meant higher resale rates. Between July 1, 1949, and March 1, 1955, natural gas pipeline companies filed 163 requests with the Federal Power Commission for increases in their resale rates aggregating more than $505 milion on an annual basis. Of this amonnt, $157 million was disallowed or withdrawn; $199 million was placed in effect; and $149 million was pending as of March 1, 1955.

Natural gas distributing utilities have been forced to pass on the higher cost of gas purchased from the pipeline companies to their customers. This fact is reflected clearly in the statistics published by the American Gas Association. On a nationwide basis the average unit cost of natural gas to residential consumers increased during the period 1945–54 from 6.32 cents to 8.06 cents per therm; for commercial customers the increase was from 4.16 cents to 6.19 cents per therm; and for industrial users from 1.65 cents to 2.37 cents per therm. In some States the increases are even more striking.

At the same time that the cost of natural gas has been going up, the unit cost of electricity to the residential consumers has been declining. In fact, between 1945 and 1954 the residential unit cost of electricity dropped from 3.47 cents to 2.79 cents per kilowatt-hour, a decrease of 24.3 percent. The residential cost of natural gas, however, increased 27.5 percent.

Convincing evidence was presented by representatives of distributing utilities before the congressional committees to the effect that the increased cost of natural gas was seriously hampering their efforts to expand natural gas sales, that in some areas they were being priced out of the market, and that if the upward trend in field prices continued, they would meet with financial disaster. The difficulties faced by the distributing utilities are evidenced not only by the statements made before the congressional committees, but are to be found in testimony in rate proceedings before the State utility commissions and before the Federal Power Commission and in articles in trade magazines.

The problem of distributing utilities in coping with the rising cost of gas is not confined to those companies in the consuming States of the North. The problem is being faced by distributors in the producing States as well. Illustrative is the following statement made by Arkansas Louisiana Gas Co. in its annual report to stockholders for the year 1954:

The serious problem of increasing costs of purchased gas discussed in the annual report of 1953, became even more severe in 1954. These increased prices, together with increasing volumes required from purchased sources, have been a major factor in the decrease of the company's earnings. The system-wide average price paid by the company for purchased gas has increased from 4 cents per thousand cubic feet in 1949 to 9 cents per thousand cubic feet in 1953, and in 1954 increased to 10 cents per thousand cubic feet. The cause of this upward spiral is the tremendous competition for new gas reserves by the many long-line transmission companies serving other sections of the country, compounded by the fact that the development of gas reserves has not kept pace proportionately with the increased demand for natural gas throughout the United States. Competing companies are presently paying more for large gas reserves in the field under new long-term contracts than our company is receiving as a retail price from large industrial customers. This is a dramatic illustration of the company's inability to maintain adequate reserves with its present rate structure.

Now the big oil and gas producers are making an allout effort to explain away these increases in the retail prices of natural gas and to shift the blame for such increases from their own shoulders. The producers' representatives, in their congressional appearances and through the so-called educational campaign which they have conducted in the press and by other means, have sought to show that the drastic increases in the field price of gas have had only a small percentage effect on the bills of the ultimate consumers and further that the field cost of gas itself is a small percentage of the total bill. It was implied that consumers were being gouged by the local gas utilities with the acquiescence of the State regulatory commissions.

These sorry diversions were part of a none-too-subtle scheme to turn public opinion into channels favorable for the exemption legislation being demanded of Congress. It was repeated over and over again that since these increases in retail gas rates were authorized by regulatory agencies, further increases in natural gas rates would surely be forthcoming if the producers were placed under regulation. In other words, rate increases according to them were the natural product of regulation.

Industry spokesmen cast the Federal Power Commission (which I, too, have had some occasion to criticize), the State regulatory commissions, and the distributing utilities in the role of the principal villains who were responsible for the increasing cost of gas to the ultimate consumer. Regulation of producer rates was described on the other hand as confiscatory and therefore destructive of our free-enterprise system, socialistic, and very close to communism.

Efforts were even made to cause a congressional investigation to be made of the transmission and distribution segments of the industry. It was charged by proponents of the legislation that interlocking relationships and combinations in these segments of the industry were responsible for the increases in gas rates, and not the producers.

They have cast aspersions on the cost of operations and profits of the regulated pipeline and distributing companies, which are a matter of public record. But no producers have come forward to reveal their own profits from gas-producing operations or furnish any comparison with pipeline and distributing profits which would clearly reveal the responsibility for rising retail gas costs.

Whether these unfair and diversionary tactics will pay off, of course, remains to be seen. I doubt, however, if the producing segment of the industry won any friends among the marketeers of their product or shed any real light on the picture by such machinations.

III

Spokesman for the producers pitch their plea for exemption from regulation upon the proposition that the producing segment of the industry is intensely competitive and thus regulation is not necessary to maintain reasonable prices for natural gas.

If the industry really were as competitive as claimed, and if one could depend upon the natural processes of supply and demand to keep prices to the consumer at reasonable levels, neither I nor my colleagues could reasonably oppose the exemption. That is why the industry has worked so hard in its efforts to argue the slogan of "free enterprise" while ignoring the facts about the concentration of power within the industry. But competition of the nature claimed is not present, and an examination of the facts concerning the so-called independent producers and the conduct of their business of producing and selling gas will show that competition cannot be depended upon to protect the consumer against exploitation.

The latest available figures compiled by the Federal Power Commission show that in 1953 a total of 4,365 nontransporting producers sold natural gas to interstate pipeline companies reporting to the Federal Power Commission. These producers sold 4.249 trillion cubic feet to the pipeline companies. Abundant evidence of concentration in the production phase of the industry is found in the fact that of the 4,365 producers, 85.59 percent of the number, or 3,736, sold only 2.1 percent of the total gas purchased by the pipeline companies. Thus, only 629 producers, accounting for 14.41 percent of the total volume purchased.

Broken down even further, 90.7 percent of the sales were made by 174 producers. Twenty-nine producers—whose sales exceeded 35 million thousand-cubic-feet in 1953—produced almost two-thirds of the natural gas sold to interstate pipeline companies. The 29 largest producers who sell two-thirds of the natural gas are not a poor or impecunious group. Over half of them are on the most recent list of America's 100 largest industrial corporations. The argument used by industry spokesmen, that intense competition exists in the producing fields between many thousands of producers and that reasonable prices of natural gas are thus assured, is not borne out by the facts.

The producing segment of the natural-gas industry, although not necessarily monopolistic in the legal sense, is certainly monopolistic in the economic sense. Natural-gas transmission lines are expensive. Their cost is estimated at from $40,000 to $100,000 per mile. They are not easily moved. Once they have been laid the interstate pipeline

company is practically at the mercy of the producers. For these lines cannot be picked up and relaid to other fields to escape an increase in the price of gas or to secure gas at a lesser cost. Thus, the pipeline company buyer is a captive customer of the relatively few nontransporting independent producers who provide the overwhelming share of natural gas for the utility market.

There are other reasons why competition among the so-called independent producers is ineffective and furnishes no protection to consumers against unreasonable prices. The first is that there now appears to be a diminishing supply of natural gas and an expanding market. With demand exceeding supply, the result is a seller's market.

As evidenced by the testimony before the congressional committees and in the certificate and rate proceedings before the Federal Power Commission, the competition for natural gas is between buyers seeking a supply rather than between sellers seeking a market for their product. We have then a natural resource which is diminishing in relation to annual use and which is a necessity to most users, and, on the other hand, a demand which is increasing. Fair and reasonable regulation in such circumstances is necessary to protect the consumer against skyrocketing prices. Competition among producers cannot be depended upon to do so.

Second, because the large blocks of reserves which must be secured in order to make feasible any major expansion of transmisson line capacity are held by the major oil companies who control most of the gas reserves in the Southwest, it is necessary for the pipeline companies to deal with these relatively few large producers. This also limits competition. Thus, if a pipeline company desires a large block of reserves it has no practical alternative but to go to the major producers and accept the prices which they dictate. The many thousands of small producers have been and will continue to be an ineffective source of competition in such circumstances. Moreover, while the southwest region supplies more than 95 percent of the gas supply of the interstate pipeline companies, more than 60 percent of the 4,365 producers are located in the Appalachian area which produces only 3.4 percent of the total gas supply.

The competitive situation in the gas fields in nowise resembles the normal competition involved in the buying and selling of commodities on the open market. If producers of coal or fuel oil raise their prices, buyers can use several transportation media to obtain supplies from other sources. Because of the high-cost fixed investment in gas transmission lines, the expense of tearing up a pipeline and laying a new one prevents the pipeline company from shopping around for lower prices. Thus, the type of competition which is resent today in the gas fields does not and cannot operate to maintain reasonable prices of natural gas.

The almost universal inclusion of escalation clauses of one or more types in gas purchase contracts entered into in the last few years is conclusive demonstration of the lack of bargaining power on the part of pipeline companies. These clauses, which provide for future increases in the price of gas, many of them by reason of actions over which the buyer has no control, place burdens upon pipeline buyers which anyone having a free choice of suppliers would refuse to accept. The evidence is clear that the pipeline companies had no choice. If they wanted natural gas they were compelled to accede to the demands of producers that such clauses be inserted in the gas purchase contracts.

The existence of such clauses in gas purchase contracts belies assertions by producer representatives that there is free and open competition in the purchase and sale of natural gas in the producing fields of the Southwest.

IV

It has been asserted time and time again by proponents of this legislation that the regulation of independent producers is not feasible, that the cost of regulation will be staggering and the benefits, negative. I do not believe there is any merit to these assertions. Regulation of natural-gas companies—pipeline companies—who are engaged in exploration, development, and production of natural gas in most of the fields in which the nontransporting producers conduct their operations has been conducted by the Federal Power Commission since 1938. As a matter of fact, approximately 50 percent of the total number of gas wells in the United States are owned by pipeline companies reporting to the Federal Power Commission. Thus, the Commission has had considerable experience in dealing with a major producing segment of the industry and has successfully regulated that segment.

Since the Phillips decision by the Supreme Court, the Commission has been going forward with the regulation of the so-called independent producers. It has adopted rules and regulations. It has required the compliance filing of rate schedules and of applications for certificates. According to a press release of the Commission issued on March 10 of this year, 10,000 rate schedules of producers had been processed, and the situation was current.

While the certificate applications had not been processed quite so rapidly since each application requires a mandatory hearing, remarkable progress is being made in clearing up the backlog. Thus, there is no substance to the charge that regulation of producers is an impossible task which will bog down the Commission.

Some of us are quite willing, however, to reduce the regulatory burden very substantially by exempting the interstate sales of all those producers who sell for resale less than 2 billion cubic feet of gas a year. The 174 producers whose sales would be thus kept subject to Federal regulation sell more than 90 percent of the gas purchased for interstate commerce by the pipelines. I am confident that adequate protection can be afforded the consumers and distributing companies if regulation is concentrated on this major segment of the nontransporting producers.

No one expects the commission to handle this regulatory task without some turmoil and strife. With less than a year of actual experience in processing rate and certificate applications filed by nontransporting producers, it would be too much to expect that all of the regulatory bugs have been eliminated and the problems solved. But these problems do not appear to be any more insurmountable than the problems and legal attacks which the commission experienced after the Natural Gas Act became law in 1938. The road ahead may not be smooth, but at least the commission has started on a task which, if it is permitted to complete the job, would be of immeasurable value to the people of the United States.

V

The sponsors and proponents of the Fulbright bill and the Harris bill point to certain provisions of these bills as furnishing all the protection necessary to save natural gas consumers from unreasonable rates. I have examined these alleged protections. My analysis shows they are ineffective, futile, and of doubtful legality, and will not work to protect the natural gas consumers. They were not designed to do so and are mere sugar-coating which has been applied to give the appearance of regulation without providing its substance.

One provision of the bill purports to give the commission authority to disallow as an operating expense of the pipeline company that part of the price paid for natural gas in a new or renegotiated contract which is in excess of the reasonable market price. Aside from the doubtful legality of this provision (which would deny recovery through rates of payments made by a pipeline company in good faith under contracts entered into at arm's length), it is incomprehensible to me that the Federal Power Commission would require the regulated utility to suffer losses through the disallowance of payments in excess of the reasonable market price while the producers selling the gas were able to secure excessive profits under the contract arrangement. Such a proposal is illogical, unfair, and completely contrary to regulatory purposes. The results would be inevitable. Contract prices would be accepted as the reasonable market price. The proposed control is of no help whatsoever to the consumer.

Another section of the bill dealing with certain types of escalation clauses in existing contracts purports to relieve the pipeline company from paying producers any amount for gas which is in excess of the reasonable market price as determined by the Commission. This proposal flies directly in the face of section 1 of the Fulbright bill, which defines such sales as not being in interstate commerce. The validity of such proposal is very much in doubt, since it would appear impossible for the Federal Power Commission to regulate a sale by a producer to a pipeline company which Congress has declared not to be a sale in interstate commerce.

The reasonable-market-price standard, as it is defined in the bills and in the reports of the Interstate and Foreign Commerce Committees of the Senate and House, is of no practical benefit in providing reasonable natural-gas prices. This is so because as the standard is defined it can mean only the contract price which has been agreed upon by the buyer and seller. The reasonable-market-price standard is contrary to utility regulatory principles. Its adoption would result in no effective control being imposed on field prices of natural gas.

Moreover, these alleged consumer protections apply only where the pipeline company is seeking a rate increase from the Federal Power Commission. They do not apply to the pending rate increases or to the excessive contract prices which have already become eeffctive. In my opinion, it would be far better to repeal the Natural Gas Act in its entirety than to give the natural-gas consumer the illusion that he would be protected by Federal regulation of the character proposed in the bills.

VI

The provision in the Fulbright bill requiring the Federal Power Commission to allow natural-gas pipeline companies owning gas reserves to include in operating expenses the reasonable market price of the gas produced from their own leases is nothing less than an invitation to the pipeline companies to pay higher and higher prices to the independent producers for the gas which they purchase, since such higher prices can be passed on to the consumer and at the same time act as a basis for increases in their profits from their own produced gas.

What possible justification can there be for this windfall to the pipeline companies? As the pipeline companies and producing affiliates own more than 28 trillion cubic feet of natural gas, they stand to gain huge profits over and above a fair return under this section of the Fullbright bill. The values of their reserves will increase as the prices rise. An indication of the bonanza which will come their way is to be found in the 1954 annual report of Panhandle Eastern Pipe Line Co. to its stockholders. The report states that the company's owned reserves are carried at a book cost aggregating less than $3 million, which the company estimates is approximately 1 percent

of their replacement cost under present conditions.

In other words, natural gas reserves which cost $3 million and the costs of exploration, acquisition, and development, of which the customers of the company paid through rates, would under the Fullbright bill be sold to their customers for 100 times that cost or $300 million. Under these circumstances, how is it that the pipeline companies can be counted upon as guardians of the consumer interest in the purchase of natural gas from producers as some propaganda argues?

As a matter of fact, 7 of the major pipeline companies already have pending or have received rate increases from the Federal Power Commission based in part on the substitution of the commodity value or average field price of gas in the field, for their cost of production plus a fair return on producing properties devoted to the public interest. These requested or allowed increases cost consumers approximately $40 million annually. The Fullbright bill would make this method of regulation mandatory. Thus the reasonable gas rates which consumers have secured over the years through regulation under the Natural Gas Act would be obliterated.

VII

What will be the effect on natural gas consumers if the oil and gas industry is successful in its campaign against fair and reasonable regulation? To answer this question we need only to look at the trend of gas prices in recent times and to statements by industry spokesmen that higher gas prices are anticipated.

We have seen that the average cost of natural gas at the wellhead in the Southwest has increased from about 5 cents to 10 cents per thousand cubic feet between 1947 and 1953. Prices in new contracts range from 15 cents to 24 cents per thousand cubic feet. These increases in the field cost of natural gas occurred in the absence of effective Federal regulation because of the Commission's self-denial of jurisdiction. In 1954 utilities sold approximately 5.8 trillion cubic feet of natural gas to ultimate consumers, an increase of approximately one-half trillion cubic feet over the volume sold in 1953. However, using a volume of 5 trillion cubic feet, a modest 5 cents per thousand cubic feet increase in the average cost of natural gas at the wellhead—a rise from 10 cents to 15 cents—would cost consumers and additional $200 million a year. If the average cost of gas rises to 25 cents per thousand cubic feet, and this price has been indicated by industry spokesmen to be in range of what may be expected in the future, the consumer would be hit for $600 million a year above present gas costs. This is the kind of bonanza which motivates the $1,500,000 war chest which the industry has gathered to finance its campaign.

The attempt to minimize the impact of higher prices on gas consumers by saying "it will cost each family only a few pennies a day" is a shocking argument. Pennies extracted from the many will mean millions for the few. The whole purpose of rate regulation is to save modest sums for the users of utility services by restricting profits to a reasonable level.

Much of the industry propoganda also argues that with no regulation there will be more exploration and more gas for consumers, the implication being that reasonable regulation will stifle discovery of natural-gas reserves. No reasonable person can believe, however, that the mammoth oil industry, whose discovery and marketing of gas is incidental to its exploration and development of oil, will ever stop or slow down or speed up its primary oil exploration work because the sideline, natural gas, is subjected to fair regulation. The exploration for oil and gas will not subside in any case.

This argument then gets down to an implied threat by the oil industry that it will waste or flare the gas rather than let it come to the consumers outside of the producing States under fair regulation. I just do not believe that the industry would be guilty of such a holdup, and I do not feel that Congress should fix national policy on the basis of such implied intimidation.

One final point should be noted: If the industry succeeds in gaining exemption from Federal regulation and the average prices at the wellhead increase from the present 10 cents to 15 cents or 20 cents or 25 cents, the industry stands to gain enormous windfalls from the increased value of the natural-gas reserves which they own. At the present time such reserves amount to about 210 trillion cubic feet of gas. An increase of only 5 cents per thousand cubic feet would result in an increase in the value of the gas reserves of over $10 billion. If the prices go to 20 cents or 25 cents this windfall would be doubled or tripled. These are the vast sums which the industry stands to gain from exemption, and no one should be fooled by claims made in the name of free enterprise, freeing the small producer from Federal red tape, States' rights, or the sanctity of contracts.

Free enterprise is an essential part of our national welfare. It should by all means be preserved. But freedom of private enterprise and of contract cannot be allowed, nor has it ever been allowed, to supersede the public interest and justify exploitation of captive consumers by a noncompetitive supply system of a basic necessity. Wherever there is a conflict, it has been our traditional national policy to establish reasonable regulation to protect the public interest. That policy with respect to interstate sales of natural gas was established in 1938, and it should be preserved.

VIII

In summary, competition cannot be relied on to protect the consumer against exorbitant prices for natural gas. The industry is not really competitive at the production, transmission, or distribution levels. Once the pipelines and the gas mains are laid and the consumers have invested in appliances, a natural monopoly with captive customers is created. The natural gas industry is an industry affected with the public interest, and regulation has been and should continue to be applied. The industry has grown to the sixth largest in the Nation and has become extremely profitable. It will gain billions of dollars in windfall profits if it is exempted from regulation. It is an industry which already receives special tax treatment through the 27½ percent depletion allowance.

The industry seeks protection against loss by way of tax policy, escalation clauses, minimum wellhead prices, and conservation agreements, and at the same time complete freedom to charge what the traffic will bear to captive customers. It is my considered judgment that legislation should not be passed by this Congress, the effect of which will be complete nullification of the Natural Gas Act as an effective regulatory instrument.

Farmers Should Be Relieved From Federal Gasoline Tax

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. REED of New York. Mr. Speaker, I have just introduced a bill which carries out President Eisenhower's recommendation that farmers be relieved of the burden of the present Federal excise taxes on gasoline and lubricating oil when used in tractors, trucks, and other farm equipment for agricultural purposes. I predict that Congress will act promptly and favorably on this proposal.

I do not consider this to be a tax-reduction measure but an act of simple equity designed to correct a long-standing injustice against the American farmer. These Federal excises merely serve to increase the farmer's production costs. In so doing, they add materially to the severe price-cost squeeze from which, in the words of President Eisenhower, "our farm people, with the help of Government, must be relieved."

Of course, it is true that the farmer today can deduct, in computing his income taxes, these Federal excises to the extent that they are business expenses. By this means, he is partially relieved of their burden. Unfortunately, this relief varies widely between different taxpayers. The average small farmer with only a small taxable income gets very little benefit from the deduction. The farmer who does not have enough income to be subject to the income tax at all gets absolutely no benefit whatsoever. My bill will correct this discrimination and will relieve all farmers of this burden.

Congress will again consider this session a highway program. It has been widely proposed that the cost of this program be met, at least in part, by increased taxes on gasoline. In my opinion, it would be unconscionable for nonhighway farm operations to be forced to share this burden when such operations would receive no benefit from the program. I consider this to be an important reason for prompt action on my bill.

Congressman Jackson Urges Continued Policy of Strength in Pacific

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial which appeared in the Santa Monica (Calif.) Evening Outlook for January 6, 1956. This editorial discusses the sound views expressed by our distinguished colleague the gentleman from California [Mr. JACKSON] upon his return from the Far East. I also wish to place in the RECORD an editorial from the same newspaper which discusses President Eisenhower's state of the Union message.

The editorials follow:

WHAT THE PACIFIC OCEAN MEANS TO US

Back from a tour of active duty in the Pacific area with the Marine Corps, Representative DONALD L. JACKSON brought a message which should be heard by all Americans and not merely those on our west coast. It is: Any retreat from the United States' position of strength in the Pacific would

insure the complete domination of Asia and the Western Pacific by the Soviet Union and their Red Chinese allies.

"As a Nation we are confronted with 1 or 2 alternatives in the Far East," JACKSON said. "Either we maintain a posture of strength as contemplated under the resolution passed by the Congress last year, expressing our determination not to retreat further in that portion of the world; or we must withdraw to a new defense line running from the Aleutians to Pearl Harbor, and thence to the Panama Canal."

Should this Nation ever let the Chinese Reds take Formosa, we would find it immensely difficult to hold our present line of naval and air defense protecting the Philippines, Okinawa, Japan, and South Korea. The Reds would not stop with Formosa but would be on their way to attack all those vital bastions of the free world. Our friends and allies, the Filipinos, the Japanese, the Koreans—all present defenders of freedom and targets for communism—would be in mortal danger.

From 1945 down through 1952 our record in the Far East was one of tragic blundering, which began with the monumental error of begging Soviet Russia to enter the war against Japan in its final weeks, and then permitting her to walk off with the major spoils in that area. There followed the loss of mainland China, largely caused by the muddle-headed policy of General Marshall and Secretary of State Acheson; the Korean war, which we were prevented by our allies from winning, after 30,000 Americans had died and 130,000 were wounded; the uncalled for and shameful dismissal of Gen. Douglas MacArthur by Truman, marking our acceptance of a truce which in effect was a defeat. Considering this record, it is a wonder we have any friends left in Asian nations still resisting communism.

Yet we do have such friends who want no part of communism, and we have a solemn moral obligation to stand back of them. As Representative JACKSON says: "Any sign of weakness or any indication of a lack of determination on our part will cause widespread fear and hopeless resignation among millions in the Far East who see the United States as their only hope of delivery from Communist tyranny or the prevention of further conquests."

The question of whether we will stand firm in the Far East will soon be revived by the expected visit of British Prime Minister Anthony Eden to Washington. He will likely urge that the United States agree to the admission of Communist China to the United Nations and to a relaxation of trade with the Reds. In any such enterprise he should be promptly rebuffed, and our answer should include a continuous buildup of American forces in the Pacific theater. Only that will discourage further Communist aggression in this most vital area, where any further retreat on our part would invite disaster.

THE STATE OF THE UNION

President Eisenhower's State of the Union message to Congress emphasizes the "peace, prosperity—and prudence" which have been the keynotes of the first 3 years of his successful administration. There is the promise that the budget will be balanced, come June and the new fiscal year. That means a start then can be made toward reducing the $280 billion debt.

But in the same breath—and here his prudence is exemplified—the President cautions that this balancing of the budget justifies a tax reduction only if it will not put the Government in the red again. And looking forward to protecting the rights of oncoming generations, he wisely holds that "taxes should be reduced when we prudently can, but under the conditions of high peacetime prosperity such as now exist, we can never justify going further into debt to give ourselves a tax cut at the expense of our children."

This is just sound common sense, the advocacy of a financial policy which will redound to the greatest benefit for the largest number of people and make our ship of state seaworthy for the years of rough "cold war" water ahead.

Likewise, all Americans will be interested in Mr. Eisenhower's statement that his administration has cut Government spending by $10 billion and abolished 300,000 Federal jobs. This bespeaks the financial care which his administration has manifested in our governmental operations.

At this time he warns the Nation that we must be prepared to meet current Soviet tactics of "division, enticement and duplicity," instead of the old formula of violence and threats of violence, with dynamic and flexible policies, yet persevere in seeking a general reduction of armaments under effective inspection and control. For Asia, in which we of the Pacific Coast are vitally interested, he promises that we shall continue to help those nations struggling to maintain their freedom against the threat of Communist coercion and subversion.

The President's proposal for a 25-billion-dollar Federal aid to highways program is minus his former plan that it should be financed by long-term borrowing instead of short-term money raising. With this change it should receive quick approval by Congress.

The farm problem, including the Administration's "soil bank" proposal, as well as water conservation, slum clearance, statehood for Hawaii and possibly Alaska, and changes in immigration quotas will be dealt with specifically in later messages, starting next week.

Summed up, the State of the Union paper is a noteworthy demonstration of Eisenhower moderation and sound achievement, as when he said that "our country is at peace and our economy approaching the 400-billion-dollar mark finds us at an unparalleled level of prosperity. The national income is more widely and fairly distributed than ever before. The number of Americans employed has reached a new all-time high. As a people we are achieving even higher standards of living—earning more, building more and investing more than ever before."

This all-American message leaves little politically for Adlai Stevenson to stand on in this year's campaign.

Illicit Stills Brew Economic Poison

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks, I insert herewith the following article which appeared in the Hearst papers called Illicit Stills Brew Economic Poison:

ILLICIT STILLS BREW ECONOMIC POISON

Moonshine is big business—and it's getting bigger.

Across the United States, illicit stills are cooking overtime, heated by the highest Federal excise tax on record, averaging $2.10 per fifth of 100-proof whisky, 6 times higher than in the repeal year, 1933.

As a result, legitimate distillers are being hurt, Uncle Sam is losing hundreds of millions in yearly revenue and the bottle you nip from is being taxed right off your bar or kitchen shelf.

The moonshiner no longer is the traditional southern hillbilly running a little pot still.

Today he is boss of a well-organized business that has spread to all sections of the country. He has technical know-how, modern equipment, counterfeit bottles and labels.

But sometimes he poisons you. Since 1951 there have been at least 70 deaths attributed to bad moonshine.

A survey just completed by the authoritative Licensed Beverage Industries, Inc., among local, State, and Federal law enforcement officers and agencies, clearly demonstrates how the moonshine racket is booming.

In 1954 the law seized 22,913 illegal stills, 14.5 percent more than in 1953.

These stills produced an estimated 36 million gallons of moonshine. Mash seizures totaled over 7 million gallons.

On the premise that at least 1 still kept operating for every 1 seized, possibly as much as 72 million gallons of moonshine flooded the country last year. This means that over 25 percent of all distilled spirits consumed in the United States in 1954 was illegally made and sold.

Over the same 12-month period the legal liquor industry sold 189 million gallons of its product.

According to LBI reports, only 15 percent of southern homemade whisky now stays put. The rest is shipped over States lines, largely to the East.

Biggest increase in moonshine production is in the Northeast. One still recently seized at Coney Island on New York City's edge had a daily capacity of 2,000 gallons.

An estimated 85 million Americans drink spirituous liquors in one form or another, far more than during the war years. Yet consumption of legally distilled liquor is declining. Per capita consumption in 1942 was 1.42 gallons. Last year it was 1.18 gallons.

What is the explanation? Moonshine reflects a "tax rebellion" in the average-income class. Illegal booze, doctored to look and taste like legitimate stuff now costs about $1 less a bottle.

Translated in terms of revenue loss, the Government is being clipped by the moonshiner—who pays no taxes—at the rate of approximately $700 million a year.

In the face of this, the Treasury Department's enforcement agency, the Alcohol and Tobacco Tax Division, had only 812 investigators in the field last year, compared to 1,022 in 1946.

Can the moonshine racket be broken?

The LBI study says it can, by tightening up enforcement procedures, removing the moonshiner's profit incentive and bringing down taxes to a fair level that will enable the consumer to buy good legal liquor at a price he can afford. Says the LBI:

"Tax reduction will make it unprofitable for the moonshiner to operate. More rigid enforcement with stiffer penalties will drive him out of business."

Oscar Johnston

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SMITH of Mississippi. Mr. Speaker, on October 3, 1955, Oscar Goodbar Johnston, the greatest leader our American cotton industry has ever produced, died at his home in Greenville, Miss. Under unanimous consent, I include tributes paid to Mr. Johnston by W. T. Wynn, president of the National

Cotton Council, and Walter Sillers, speaker of the Mississippi House of Representatives, as well as editorials from the Progressive Farmer, the Memphis Commercial Appeal, and the Greenville Democrat-Times:

OSCAR JOHNSTON

The happiness of this occasion has been clouded by the passing on October 3 of the cotton industry's most beloved leader and stanchest champion—Oscar Johnston. It was for Oscar that this fine building was named. And it is for Oscar that we are here today.

I thank all of you for joining with us in honoring a man whose name for many years was synonymous with cotton and whose contribution to the industry's welfare has exceeded that of any other individual of his generation. The rich heritage of service and leadership that he left us will be a constant source of inspiration in the years ahead.

I was privileged to know Oscar Johnston for many years. I knew him as an attorney in Clarksdale, Miss., as a bank president, as the head of the 50,000-acre Delta & Pine Land Co. in Scott, Miss., as director of finance of the Agricultural Adjustment Administration, as vice president of the Commodity Credit Corporation, as manager of the Government cotton pool, and as assistant to the Secretary of the Treasury. I knew him as a friend, as a forthright leader, as a man of great principle, and as the ardent champion of the cotton industry.

There are numerous monuments to the life of Oscar Johnston. But the greatest of these, I think all will agree, is the National Cotton Council of America—the central organization of the raw cotton industry. It is to dedicate the permanent home of that organization that we are gathered here today.

The real significance of this occasion is that Oscar's idea of a united industry fighting its own battles for increased consumption through hard-hitting programs of research, education, and sales effort has been almost universally accepted as the ultimate true answer to cotton's problems. These are the programs that Oscar envisioned; in their total they have been the program of the council throughout its 16 years of existence.

It was in 1938 that Oscar brought together the leaders of the raw cotton industry to found an organization dedicated to the goal of increasing consumption. May I recall for you the circumstances that prevailed at that time? There was a carryover of approximately 11.5 million bales; we had produced the largest crop in our history the year before, and no one wanted it or had the money to pay for it. Farm mortgages were at a burdensome level; the farmer was receiving not quite 9 cents per pound for his cotton; exports had fallen to less than 3.5 million bales; our domestic market of 6 million bales was being challenged as never before by rayon and other synthetics. We stood to lose a great part of our existing markets. Few dreamed of developing new ones.

Fear of what the future held had the industry in a state of jitters. There was despair in several million homes from Virginia to California, and for good reason—the principal source of income for 1.5 million cotton farmers, for all the business serving them, for all those processing and marketing cotton and cottonseed, was in danger of being permanently reduced or swept away.

It was in such an atmosphere that Oscar Johnston sounded his call for the industry to fight its own battle for survival—not separately as farmers, or ginners, or warehousemen, or merchants, or spinners, or cottonseed crushers—but all together with a united voice. Only with the weight of the entire industry behind a central program, he said, could real success be achieved. Men of vision and courage responded to the logic of Oscar's message and the power of his personality. They rallied around him.

One had to believe in cotton as strongly as Oscar did to take the step he took. One had to know the versatility of cotton as Oscar knew it. One had to have the working heart that Oscar brought to this tremendous job. For the organization had to be strong or it would fail completely. It had to have the support of all branches of the industry, or it could not claim to represent cotton. Its program had to be developed with care, and carried out with effectiveness.

There were many who hoped for success. There were fewer who really believed it would succeed. That it not only survived the early years, but rapidly grew in prestige and effective power was the genius of Oscar Johnston. It was Oscar who supplied the leadership that a discouraged and disorganized industry had to have. He engendered the hope that made the council possible. He found financial support for it from an industry heavily mortgaged. He breathed spirit and life into it—all because he believed, because he had the faculties of leadership and of courage, and because he had a great cause.

It was at a Delta Council meeting in Cleveland, Miss., in June 1938 that Oscar proposed the council. It was in November of that year here in Memphis that industry leaders met with him to organize. And it was in January 1939 that cotton producers, ginners, warehousemen, merchants, and cottonseed crushers formally united to fight cotton's battles for consumption. The sixth interest, the cotton spinners, joined with the original five in 1941 to complete Oscar's dream of all branches of the raw cotton industry working under one banner.

In the beginning, with a staff of 3, and a $9,000 appropriation from the State of Mississippi to be expended, according to Governor White, "as Oscar Johnston saw fit," this infant organization tackled the biggest job that any like group, I dare say, has ever been called upon to do.

Thus, the council was born. That it has succeeded, we all agree. The six segments of the industry have had their differences, to be sure, but Oscar's wisdom provided again the force to hold the council together despite these differences. He caused to be incorporated into the bylaws of the council a provision that requires two-thirds of each segment of the council to approve a position before it becomes council policy. While this provision has kept the organization from taking some positions, it has meant, over the years, that when the council moves, it moves with the support of a substantial proportion of the entire industry behind it. This provision has been the source of our greatest strength.

Oscar's hope for increased consumption lay in a hard-hitting program of research and promotion. He recognized in the beginning that to meet its competition, the cotton industry must reduce costs of producing, processing, marketing, and manufacturing; that it must improve quality; that it must increase sales pressure. Four program divisions, therefore, were established: Production and marketing and utilization research—our research and educational divisions—that work at the job of reducing costs and improving quality; our sales-promotion division, that works at the job of increasing sales effort; and our foreign-trade division that works at the job of increasing consumption of American cotton and cotton products abroad. Four service units support the divisions—the office of public relations, field service, the office of economic information, and accounting service. Overall administrative responsibility is centered in the office of the executive vice president.

This building houses the office of our executive vice president, all of 1 division, major parts of 2 others, and all of our service units. Memphis, in short, is headquarters. Memphis is the home of the council. This is fitting, for Memphis is synonymous with cotton wherever spindles turn. More actual bales of cotton are bought and sold here than in any other city in the world.

It was logical then that Memphis was selected by the industry as the council headquarters, and that the Oscar Johnston Cotton Foundation build this structure here to house the council and its own staff. As I look upon the building and its tree-shaded lawn, and as I think of Oscar Johnston, the reality of his great vision becomes increasingly apparent. And I think, as I'm sure he would of the future—the future of cotton and the future of the council, for the future of one is the future of the other.

W. T. WYNN,
President, National Cotton Council.

OSCAR GOODBAR JOHNSTON

Oscar Johnston was first of all a Mississippian. He loved Mississippi, its soil, and its people, his own delta country and the great river which courses down its western border.

His life was spent working, in many capacities, for the betterment of his State and his people. But it was in the field of agriculture, specifically cotton, that he reached his highest distinction.

It is to his achievements as one of the founders of the Staple Cotton Cooperative Association and as a man of high integrity, brilliant mind, vision, and force of character that we pay tribute.

He was one of the organizing directors of the association and attended the first meeting on May 25, 1921. He was appointed one of a 5-member executive committee to perfect the organization and solicit members.

On June 14, 1921, he was elected to the permanent and regular board of directors, officially set up to function from this date.

From the day of its organization until he retired from all active duties because of ill health, he served as an active member of the board of directors of this association.

His was a loyal and brilliant service and he gave of his wisdom and energies with the full realization that he was doing it for the good of all of the people who depended upon cotton for a livelihood.

He was a member of the policy and procedure committee of the board of directors of the association during the entire time of his activity as a board member. He attended the monthly meetings faithfully and regularly, and though a man of wide interests and great responsibilities, he never lost interest in the administration, work, and welfare of the association.

He was a man of constructive ideas. It was at his suggestion and upon his recommendation that the board of directors voted to take a membership in the New York Cotton Exchange, which was effected in June 1936.

From 1927, when he became president of the Delta & Pine Land Co., until his retirement, he delivered to the association every bale of cotton produced on the 50,000-acre plantation operation, even though Delta & Pine Land Co. is owned by an English mill interest.

In the early part of his presidency of the large cotton producing operation he experienced the disastrous flood of 1927 when the levee gave way on this property; and, in the 1930's the depression which saw cotton drop almost overnight to 4 cents and 5 cents a pound. But he never lost heart. He was a fighter. And through it all he never lost interest in the association. A few years ago, after he became completely inactive in business, he was named director emeritus of the organization he had served so long and well.

On January 8, 1934, he was appointed Director of Finance in the Agricultural Adjustment Administration and went to Washington to direct the program. It was in this office, as manager of the Government Cotton Pool, that he sold the tremendous supply of Government-owned cotton acquired through the Commodity Credit Corporation.

In this crisis his faith in and his allegiance to the association never faltered. As soon as he received authority, he appointed the Staple Cotton Cooperative Association as the agency through which all the better staple cotton was to be sold. The association performed this selling service to his complete satisfaction and with much saving and dollar benefit to the Government.

It was through him as director of finance that the program of acreage control and support funds for cotton was inaugurated.

A native son, Oscar Johnston was born in Jackson, Miss., on January 27, 1880, the son of John Calvin and Emma Goodbar Johnston. He was graduated from Kentucky Military Institute in 1899, and received his bachelor of laws degree from Cumberland University, Lebanon, Tenn., in 1901. In 1905 he was married to the former Miss Martha Anderson, of Lebanon, who survives him.

And here we must mention the tender, faithful ministrations of his wife, Martha, in the late years of his life. When the shadows lengthened and the sands were running low, the loving care of a woman knows no bounds and he was blessed in abundance with the comforting hand and the devotion of a wife who seemed dedicated to his service. This was, and is, a tribute to the man which is greater than all the words penned or all the plaudits of the world, and he must have known it in his heart.

Oscar Johnston first practiced law at Friars Point, Miss., in 1901, and made his home there. He later moved to Clarksdale where he continued to practice until 1920, as a member of the firm of Cutrer and Johnston, the senior member, J. W. Cutrer, being one of Mississippi's great lawyers.

In 1918 he entered the service as a private in the army, was commissioned a second lieutenant in the Tank Corps, and served until January 1919.

He became president of the Planters National Bank of Clarksdale in 1926 and resigned to head the Delta & Pine Land Co. in 1927.

This writer was closely associated with Oscar Johnston through most of his active years and served with him in the State legislature from 1916–18. The first public speech the writer ever made was his nominating speech for Oscar Johnston for speaker of the house of representatives. As a public man Oscar Johnston stood firmly on principle. Back in 1919 when he was a candidate for Governor of Mississippi the matter of maintaining a State tax commission was one fo the principal issues. Oscar Johnston opposed this measure while south Mississippi favored it. He was told if he would support the State tax commission he would get south Mississippi's votes. He refused. They urged him to straddle the issue, to compromise; he said "No"; he could not and would not compromise with principle. He lost south Mississippi's vote and was defeated for governor by 7,000 votes.

This is indicative of the character of the man. He was a wise legislator and business man and often made compromises in order to go forward, but never when a principle was involved.

In the last 20 years of his active life he was a leader in cotton and helped to build the industry in the mid-South, and indeed in the Nation. He organized the National Cotton Council in 1938, when cotton was in a decline, and was president until his retirement. He saw the Council through its formative years and then saw it grow into the great and effective organization it is today.

Oscar Johnston, lawyer, statesman, planter, his was a career of great distinction as a leader. When others faltered, he moved forward with firm resolute and determination. He blazed trails and pointed out the way, always lending a helping hand to those less capable than he.

A wise counsellor and courageous leader, he placed principle above all else, his name is synonymous with character. His contribution to Mississippi, the Delta, to cotton and its industry, is unexcelled, and from his deeds long shall live his name high upon the scroll of famous Mississippi Deltans, a great honor which he so richly deserved.

The people of Mississippi, the Cotton South, and the members, officers and directors of the Staple Cotton Cooperative Association have every reason to be proud of and thankful to Oscar Goodbar Johnston, whose good works will live on so long as a cotton stalk grows in Mississippi soil.

WALTER SILLERS.

[From the Progressive Farmer of November 1955]

OSCAR JOHNSTON DIES

It is with deep regret that we note the passing away on October 3 of Oscar Johnston. He organized the National Cotton Council, was president for 8 years, and honorary chairman of the board at the time of his death.

Mr. Johnston was recognized by the Progressive Farmer as man of the year in service to southern agriculture in 1941. In the early thirties he was in and out of Washington on various appointments helping fight the battles of Dixie cotton farmers. An early philosophy of his, often proclaimed, was: "Parity prices without parity consumption will never bring the cotton farmer parity income." To this end, he headed up the National Cotton Council which brought farmers, ginners, warehousemen, merchants, cottonseed crushers, spinners, and others together into one great campaign to find new uses and markets for cotton. The success of this venture stands as a magnificent tribute to his leadership.

[From the Memphis Commercial Appeal of October 5, 1955]

OSCAR JOHNSTON

Oscar Johnston's contributions to the South's economic progress and to modernization of the cotton industry were of such magnitude as to almost beggar evaluation. His death therefore is an event which touches the whole South and all of its people.

His activities, born of extraordinary vision and energy, made his Mississippi home almost the geopolitical and geoeconomic heart of cotton. He was "Mister Cotton" so far as this vast and rich mid-South was concerned.

He was essentially a builder and he devoted the major part of his life building with and for the commodity on which the South's development is founded. He was one of the great pioneers—probably the foremost—in seeking new cotton usages, for he was among the first to recognize that unless the field of usage was greatly and constantly expanded the industry and the region which nurtured it would stagnate and wither.

It was out of that realization that the National Cotton Council, today's great directing and dynamic force behind the American cotton industry, was conceived. Oscar Johnston was its father. It was his vision and mind which fashioned it, and his the leadership which gave it being.

Betterment of the industry was a driving passion with Oscar Johnston, and when the National Cotton Council decided to erect a living monument to his achievements it very properly created a means for carrying on his great work and named it The Oscar Johnston Cotton Foundation. Its fine Memphis headquarters are to be dedicated in a fortnight.

As Gerald Dearing, the Commercial Appeal's cotton columnist expressed it: "The miracle of the National Cotton Council is that six divisions of the industry, each with its suspicions of all others, each with its individual ambitions, should be able to unite in fostering the betterment of all."

When Oscar Johnston retired from the presidency of that organization in 1948, he expressed the philosophy which had guided him and had made his brainchild, the National Cotton Council, what it is, in this manner:

"There is no reason why any group of men or any group of people cannot get along together by compromising a little bit. All they need to do to get along is for each to make some sacrifices." He made that his own golden rule for living. He was willing to give more than the other fellow. He knew how to bend—how to avoid adamancy when it served no useful purpose.

Whatever Oscar Johnston did was well done. He enlisted as a private for World War I service and earned a commission. He went into banking and became the institution's president. He studied law and became a distinguished member of the Mississippi bar. He was one of cotton's most successful theorists and, equally, one of its greatest practical planters, as his management of the 50,000-acre Delta & Pine Land Co. plantation attested.

Oscar Johnston's life was ever full and rich. His friendships were international in scope. His loyalties were impregnable and his a warm and earthy kindliness. Death intervened in a marital companionship which had endured beyond a half century. Such constancy alone was index to the man.

The good works which he set in motion will live on and redound to the benefit of the homeland into which he had set his roots so deeply, so usefully. When that can be written of a man, he has not died. For such a man there is no death.

[From the Greenville (Miss.) Delta Democrat-Times of October 5, 1955]

OSCAR JOHNSTON

Rare and needed is the man whose energy and intellect are such that he can serve Nation, State, and fellowman in a single capacity. Far more rare is he whose talents and enterprise make him appear not one but many men.

Such a citizen was Oscar Johnston, whose death Monday night removed from personal usefulness a giant among Mississippians and a peer of any American whom we can measure in terms of creative force. But as is the happy case with those who dream nobly and then make the dream a rich reality, the usefulness of Oscar Johnston will last for generations to come. It will endure primarily because of the National Cotton Council, the powerful voice of all the cotton interests, which Oscar Johnston conceived and guided to incredible success.

The council was his greatest triumph. But Oscar Johnston was also adviser and confidant to the National Government in the most difficult peacetime years of our Nation's history. He was a stalwart political figure, making years ago a lonely fight for decency in Mississippi's public life. He was as skilled in law and in finance as he was in agriculture.

And he had an infectious love of life, whose good things he enjoyed and whose laughable aspects delighted him. When Oscar Johnston was amused, the amusement touched all who were near him. When he was serious and purposeful, his determination could likewise affect his associates, as

all who had a part in the Cotton Council's formation know. And for those who take joy in a magnificent intellect, the performance of his incisive, penetrating mind, so scornful of sham and fuzziness, was a wondrous and memorable thing.

His friends share with his widow her pride in such memories and to her goes our admiration for the courage which in these latter years matched his own.

Upper Colorado River Water Storage Project

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD three articles published in the Deseret News, Salt Lake City, Utah, for December 14, 1955, all relating to the upper Colorado River water-storage project.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

NINETY-NINE PERCENT REPAYMENT—WATER USERS WILL PAY THE COST OF THE UPPER COLORADO RIVER WATER STORAGE PROJECT

"Who is going to pay for it?"

That is the question many thinking United States taxpayers are asking about the Colorado River storage project.

Upper basin residents are very anxious that these United States taxpayers get the answer. For the answer is one of the strongest arguments in favor of the project.

WILL PAY FOR SELF

Fact of the matter is the project will pay for itself.

It is not a pork-barrel raid, or a boondoggle. It is a practical businesslike enterprise, which will pay its own way, with interest and dividends to the Government according to George D. Clyde, chairman of Utah's Water and Power Board.

"Actual costs will be fully repaid by the water users and the power users of the project," says Mr. Clyde.

All that is asked is that the Federal Government (the only governmental unit able to finance a program of this scope involving an entire river system) loan the money needed for construction.

DON'T WANT HANDOUTS

That is the way the residents of the upper basin want it. They do not want any handouts. They want to maintain their traditional independence.

Unfortunately, opponents of the project have confused this issue by propagating misleading information about the project's cost. Most-used techniques have been to inflate the total cost by tossing in all past, present or future planned units or by compounding the interest charge. Such estimates vary from 3 to 15-fold above the actual cost.

The actual cost of the project will depend, of course, upon the nature of the bill passed by Congress. The Senate version of the bill, for example, totaled $1,100,000,000. However, House committees deleted three major dams, Echo Park, Curecanti and Cross Mountain (an alternate to Juniper), and pared the cost to $760 million.

CURECANTI RESOLUTION

The recent Denver Governors' Conference of Upper Basin States passed a resolution urging the inclusion of Curecanti unit, or whichever of the proposed dams Colorado preferred. So the House bill may be increased by the addition of this additional unit. Curecanti, for example, would cost about $80 million. This unit also would have to win the formal approval of the Secretary of the Interior before it could be authorized by Congress.

Report No. 1087 on the bill provides for construction of three major storage units and 11 smaller participating projects.

To provide a factual basis for estimating the total cost of the project, a breakdown of the project's cost as provided by the House bill follows:

Projects listed

Storage units:	
Glen Canyon Dam	$379,143,000
Flaming Gorge Dam	74,648,000
Navaho Dam	32,933,000
Total storage units	486,724,000
Participating projects:	
LaBarge, Wyo	1,506,000
Seedskadee, Wyo	20,944,800
Lyman, Wyo	9,507,600
Silt, Colo	3,020,400
Smith Fork, Colo	3,030,300
Paonia, Colo	4,418,100
Florida, Colo	6,247,400
Pine River Extension Colorado-New Mexico	4,524,300
Emery County, Utah	8,879,000
Central Utah	207,939,600
Hammond, New Mexico	2,071,800
Total participating projects	272,089,300
Total all projects	758,813,300

This figure of $758,813,300 set by the House committees includes 10 percent for contingency reserves.

NINETY-NINE PERCENT REPAYMENT

Mr. Clyde, a former dean of engineering at Utah State Agricultural College and Utah's representative on the Upper Colorado River Commission, points out that water and power users will pay back more than 99 percent of the project's cost.

For example, revenues from sale of water to irrigators and municipalities and power producer by power features of the Central Utah project will pay 65 percent of the allocated costs. The balance will be paid from power revenues of the main stem-power units.

"Power revenues will be applied directly to repayment of the costs of building the power facilities. When these are paid for, excess power revenues will assist in repaying construction costs for irrigation features so that all costs will be repaid within the 60-year contract limit," Mr. Clyde said.

"While doing this, power revenues will pay all operation and maintenance costs, and will return standard 2½ percent interest to the Government on money used for power and municipal water features. During the repayment period, the United States Treasury will receive $310,712,000 in interest," Mr. Clyde pointed out.

Present studies not only confirm the feasibility and soundness of the plan but indicate that surplus power revenues will accumulate to over $261,862,000 in 78 years, he added.

Water users—both municipal and farm—will be charged for the water they use, Mr. Clyde said, and these revenues will be applied toward repayment of the cost of the project.

In addition, the Government will continue to net a substantial profit from the project long after it has been paid for, because the power facilities will continue to turn out substantial profits long after all costs have been repaid.

ROAD TO THE RAINBOW LAND—COLORADO RIVER PROJECT WOULD OPEN UP AREAS IN UPPER BASIN COUNTRY—NATURAL BRIDGES, CANYONS AND HISTORIC SITES

The Colorado River storage project would do more than multiply existing facilities for boating, fishing, camping and other outdoor sports.

It would open up whole new areas in the upper basin now largely inaccessible.

Take for example the spectacular rainbow land of southeastern Utah. Its natural bridges, vari-hued canyons, fabulous formations and historic sites now are reached only by a long trek over rough trails or a costly boat trip down the Colorado.

With the construction of the proposed Glen Canyon Dam, a beautiful scenic waterway, stretching 257 miles up the Colorado and the San Juan Rivers, would provide easy access by boat to the most remote areas.

Also, roads would be constructed to the dam site and to recreational developments in the area, making it possible for the average American citizen to enjoy the fabulous scenic attractions of the area—and to take his family along if he desired.

PATTERN AT HOOVER

A pattern for this highly successful recreational development is to be found in the widespread use of the popular Lake Mead recreational area behind Hoover Dam. Even Utahans from as far away as Salt Lake City periodically make the lengthy journey to Nevada to enjoy the fine bass fishing and boating.

The importance of the Glen Canyon recreational area to Salt Lake City is obvious when it is noted that Glen Canyon Reservoir would be only 250 airline miles away, compared with Lake Mead's 400 airline miles distance.

And even closer would be Flaming Gorge Reservoir, at only 125 airline miles.

Complete recreational development plans for the Glen Canyon area have not been drawn.

However the most recent National Parks Service study of the area (interim report on the Colorado River, July 1947) charts the possibilities in enhusiastic language, as follows:

HIGH RECREATION VALUE

"Much of the country bordering the Colorado and Green Rivers through this section of Utah is of high recreational value.

"It is a region of great colorful spaces, mountains, plateaus, canyons, desert, forest, and weird formations, probably the greatest display of erosional effects in the United States other than the Grand Canyon, and equally grand, though different in character."

The United States Bureau of Reclamation, in its planning study of the Colorado River storage project, recommended recreational development of the Glen Canyon area and concluded that "rather striking advantages could result from the creation of an extensive reservoir in this scenic area."

The Bureau's official report on the recreational development of Glen Canyon Dam noted that "the situation would be somewhat similar to that at Hoover Dam and Lake Mead, where actual access to the reservoir for general recreational purposes is not in the gorge at the dam, but at various points above the dam where short areas are suitable for access and related development.

DESIRABLE PLACES

"At this reservoir, the great bay formed where Wahweep and War Creek Valleys enter the Colorado could function in this way. In general, the Wahweep and Warm Creek areas appear to be the logical and desirable places for recreational boating operations and parties wishing to explore this section of Glen Canyon by land or water."

The new reservoirs and waterways of the Colorado River storage project would open up

many new historical and scenic points of interest.

Take, for example, again, Glen Canyon Reservoir. Moving upstream by boat from the huge concrete structure, you would enjoy easy access to the bold, stark, gigantic scenery of the spectacular Glen Canyon stretch of river. Included would be the following:

AREAS LISTED

1. The Crossing of the Fathers, where Escalante made his arduous river crossing in 1776.

2. The Rainbow Bridge National Monument area, with its Navaho Mountain 7,015 feet above the river, its many natural bridges, the weird and unforgettable Music Temple.

3. The historic Hole-in-the-Rock, where Mormon settlers bound for San Juan Valley made their heroic crossing of the 1,400-foot-deep canyon on the Colorado in 1890, a crossing so difficult it was used only once.

This Glen Canyon area is so highly regarded for its scenic assets that it is officially logged as an area of national importance for parks and recreation by the National Parks Service in its most recent survey of the area.

Also sharing this top billing by the NPS is the upper section of the Glen Canyon and adjoining Cataract Canyon leading up to the junction of the Green and Colorado Rivers.

RECOMMENDED AREAS

Both are recommended for major development, and the Glen Canyon Reservoir offers the most feasible way to provide easy access to this fabulous country.

Made accessible by the upper section of Glen Canyon Reservoir, in this Glen Canyon-Cataract Canyon area would be the following:

1. The Hite area, with its nearby historic Dandy Crossing, the White Canyon, Dirty Devil, and Dark Canyon scenic areas.

2. Natural Bridges National Monument, and the nearby memorable Elk Ridge, Fable Valley, Beef Basin, and Gypsum Canyon.

3. Lands End area, with its French Seep, Observation Rock, Cleopatras Chair and beautifully weird "Land of Standing Rocks."

4. Cataract Canyon, sheer walled and 2,000 feet deep, and its neighboring fantastic section of curiously eroded and faulted red, buff, white, pink, green and yellow rock labyrinth of the Needles.

OTHER CONSIDERATIONS

This quick tour along the proposed Glen Canyon Reservoir gives only a glimpse of the scenic wealth which this dam would open up. There are other considerations.

Besides spectacular scenery, facilities for boating, camping, swimming, water-skiing, fishing, hiking, and horseback riding would be provided. In fact, whatever the vacationing public desired.

TO REDRESS OLD WRONG—IN 1864 THE UNITED STATES ARMY DESTROYED NAVAHOS' FARMS—COLORADO PROJECT WOULD HELP INDIANS

Navaho Dam—one of the four major dams included in the Colorado River storage project now before the United States House of Representatives—aims to redress a long-standing wrong.

The story behind this project involves the history of the proud Navaho Tribe and the shameful way they have been treated by their white brothers.

It involves the slowly awakening conscience of the white man, and the opportunity he now has to help right a century-old grievance.

The story goes back 100 years. At that time, the Navaho Tribe was fighting a losing struggle to protect its rapidly shrinking hunting ground from the encroaching white man.

PUT ON RESERVATION

The United States Army finally moved against the Navahos in 1864 and subdued them by destroying their orchards, farms, and primitive irrigation systems. The Indians were taken to Fort Sumter, where they were held until 1868. That year the Government and the tribe entered into treaty placing the Indians on a reservation.

In exchange, the Government made many promises to the Navaho people. It promised them a schoolroom and a teacher for every 30 children. It promised them a chance to farm with a reasonable acreage for each family.

The Government was not able to keep its promises.

As a result, the plight of the Navahos has worsened every year. Now many members of the tribe live in abject poverty. Average cash income is down to $150 a year as the Navahos attempt to scratch a living out of the barren reservation land. Without farming and educational opportunities, the Navaho faces a gloomy future.

ATTEMPTED HELP

Some Government and private agencies have attempted to alleviate the plight of the tribe. Missions and some schools and clinics have been established.

Just this fall, Utah's Gov. J. Bracken Lee and Highway Commissioner Harley J. Corleissen quietly gathered clothing, medical and food supplies from friends and associates to help the Indians through their period of greatest suffering—the winter.

But most of these efforts treated the symptoms, not the cause, if he is to provide his own livelihood in a white man's world, the Navaho must have better educational and farming opportunities.

That is the aim of Navaho Dam and the anticipated Navaho project. They would help the Navaho to help himself.

This is the way Paul Jones, chairman of the Navaho Tribal Council, phrase it:

"We know that the Navaho Dam and the entire Navaho project will cost a great deal of money. But we feel it will be money well spent for all the taxpayers of this country. It will be less than may be spent, if the project is not built, to support and maintain us over the years. And in addition, it will enable us to support ourselves with the dignity and human satisfaction to which every citizen is entitled. It will enable us to take our rightful place in society," Mr. Jones says.

The Navaho project is the product of a unique joint endeavor of two Federal agencies, the Bureau of Indian Affairs and the Bureau of Reclamation.

It is designed to provide needed culinary and irrigation water for the tribe, so that the barren but fertile reservation acres will provide adequate livelihoods for the 80,000 Navahos making their homes there.

First—and basic—unit of the Navaho project is the Navaho Dam. A $32,933,000 structure, it would be built on the San Juan River and would bring into being a $1,450,000-acre-foot reservoir.

After this dam is built, then the way would be clear for the construction of two projects which would actually put the stored water to work—the Navaho project and the San Juan-Chama project.

Funds for these two projects would be sought under the Levitt Act, or similar legislation providing for assistance to the Indians.

The Navaho project (formerly called the Shiprock and South San Juan projects) would provide for the irrigation of about 137,250 acres of arable dry land lying along the south side of the San Juan River, a principal tributary of the Colorado River, near the towns of Bloomfield, Farmington, and Shiprock in northwestern New Mexico.

Of the lands that would be irrigated, 109,000 acres are located in the Navaho Reservation and 28,250 acres are outside the reservation. All the lands within the reservation and 1,660 acres outside the reservation are Indian-owned. Much of the remaining land is publicly owned.

The proposed San Juan-Chama project, which would be considered later when needed, also would use water from the Navaho Dam. This project involves a transmountain diversion of San Juan River headwaters into the nearby parched Rio Grande Basin.

The Saga of Billy Mitchell

EXTENSION OF REMARKS
OF
HON. LEROY JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks and to include extraneous matter, I am including in my statement an article from a new magazine, which appears very interesting, called Saga. The article that I am including concerns Gen. Billy Mitchell and the trial to which he was subjected in the 1920's in his effort to be given an opportunity to prove that planes of that date could make a successful attack on a first-class battleship.

I wish that everyone who obtains the CONGRESSIONAL RECORD would read this article. It shows you the struggle made by General Mitchell, Carl Spaatz, Eddie Rickenbacker, H. H. Arnold, Tom Milling, and other noted fliers of that period to get recognition of the fact that airpower was something to be reckoned with in the future as a weapon of war.

The development from the days of 1915 when Mitchell learned to fly up to the time when he had his controversy and his military court martial trial, should indicate to thoughtful persons who are interested in national defense that airpower had a distinct future. In 1920, two Englishmen by the name of Alcock and Brown flew from Newfoundland to Ireland in an open plane. Later the meteoric flight of Charles Lindbergh who crossed the ocean alone and landed at Orly Airport, still in existence.

I hope that those who read this article will not think that I am presumptuous in mentioning the fact that I also had a very humble part in flying on the front in World War I. General Mitchell was the first man who staged a mass raid of airplanes. It happened that our group did not participate in that raid. The purpose of it was to drop pamphlets behind the enemy lines through the device of a favorable wind, which would find their way behind the enemy's lines. The pamphlets contained the menu of the American doughboy and we felt that that would break their morale, as our troops were much better fed than the German soldiers were, whose spirit was beginning to weaken.

In the article is also mentioned the matter of the St. Mihiel drive. It was my pleasure to participate in this drive, flying a Salmson plane in five missions.

As some people may remember, the battle opened on Pershing's birthday, September 12, 1918. I was flying for the Fifth Army Corps, one of the divisions of which was the Yankee Division, or as we called it, the "Yankee Devils." Then later we switched over to the Meuse-Argonne drive where I flew many missions. The same type of plane in a similar squadron as mine was flown by a young man by the name of SPESSARD L. HOLLAND, now a distinguished Member of the United States Senate. Also, the same type plane in a similar squadron was flown by Gen. George Kenney, who was the head airman in the Pacific where he performed a remarkable job. I have heard that the Salmson was the first plane with a radial motor, as distinguished from a rotary motor. Some of us who had that experience look back now and wonder how we came out alive.

The article follows:

THE SAGA OF BILLY MITCHELL

(By Jack Pearl)

Silhouetted against the slate-blue sky, the 27,000-ton dreadnaught looked in the distance like a rhinoceros; her forward turret jutted up like a huge horn and her superstructure rose humplike out of her massive hull. Layer upon layer of steel armor caused her to wallow low in the water. Then thousand feet overhead, the planes buzzed around her in circles like a swarm of mosquitoes—mosquitoes with TNT in their stingers. One by one, they peeled off.

It sounds like something that happened on a quiet Sunday afternoon in December 1941, but the tragedy of Pearl Harbor was the end of the story. It began on a quiet afternoon 20 years earlier.

It all strated because a headstrong young general by the name of Billy Mitchell had the fantastic notion that an airplane could sink a battleship. His Army superiors laughed at him; it was inconceivable to them that anyone could seriously believe that a flimsy flying crate of wood and fabric held together by wire and glue would ever pose a serious threat to an armor-plated queen of the seas. But Mitchell was not a man to be put off easily. When the Army and the Navy refused to listen to him, he took his case to the people in the magazines and newspapers, flouting one of the service's most inflexible traditions. His speeches and articles caused an uproar. For centuries, the public had regarded the Navy as the backbone of the national defense—the proudest institution of the United States. It was unnerving to be told that the battlewagons had lost their value as our first line of defense, that the Navy was obsolete. Even the most spirited West Point freshman would have bitten off his tongue before he called the Navy obsolete.

The people were worried. With the objectivity of laymen, they clamored: "Let's find out whether Mitchell is right or wrong." So, in 1921, Congress passed a resolution to make a test.

According to the terms of the armistice, the Germans, in 1918, had delivered into United States hands the pride of the Kaiser's Navy, the battleship *Ostfriesland*. International law said that she was to be scuttled within 3 years, and the deadline was almost up. The Navy was all set to do the job when Congress suddenly changed the plans in July of 1921. "Mitchell says his planes can sink a battleship," they told the Navy. "Let's see him sink the *Ostfriesland*."

All around Washington that night naval officers toasted each other gleefully in the service clubs. They felt they couldn't have asked for anything more. In their opinion, the *Ostfriesland* was unsinkable. She had weathered 18 direct hits by the biggest British naval guns in the Battle of Jutland, had struck a mine and had still managed to escape under her own power. She had a triple hull composed of 85 separate watertight compartments. It was the Navy's private opinion that the only way to sink her would be to fix demolition charges at strategic places inside her hull. To the admirals, the idea of Mitchell pitting his puny bombers against this monster was almost ridiculous.

The tests, covering a period of three days, were to be conducted under joint Army and Navy supervision with a team of naval referees calling the plays. When the Navy released its "rules," even the most ardent Mitchell supporters shook their heads. This was the old con game at its worst—or best, depending upon which side you were rooting for. The Navy stipulated that a maximum of six planes could be used in any one raid, specified their types and the weight of the bombs they could carry. They set what seemed like a ridiculously high altitude from which the bombs were to be dropped, and further ruled that the tests would be held off the Spanish Capes in Virginia, 100 miles out to sea. Inasmuch as the land-based Martin bombers that were to be used in the tests had a maximum flying range of two hours, this allowed them only the slimmest margin of time to accomplish their mission. They would have to unload their bombs as quickly as possible and run for home or risk exhausting their fuel and crashing into the sea. To complicate this danger, the Navy added a subtle clause that the referees could halt the demonstration whenever they pleased (and as often as they pleased) to send inspection teams aboard the target ships.

After reading the rules under which the tests were to be conducted, Secretary of the Navy Josephus Daniels boasted to the newspapers that he would willingly stand bareheaded on the bridge of the *Ostfriesland* while she was being bombarded.

In the warm-up event, the planes were to try to sink the light cruiser *Frankfurt*, another captured German vessel, with 600-pound bombs. No sooner had the first bomb landed about 100 yards off her bow than there was a spurt of smoke from the funnels of the small tender which carried the referees, the prearranged signal to halt the tests. While an inspection team motored over to the *Frankfurt* and began a leisurely inspection of the obviously undamaged cruiser, the frustrated pilots circled idly overhead, wasting precious gasoline. Time and time again, they had to abandon the site and return to their base for refueling. If it had not been for the months of exhaustive drilling which Mitchell had put his boys through, the Navy might have walked off with the honors on the first day. But in spite of the obstacles and restrictions that hampered them, the tenacious airmen managed to drop two bombs close to the *Frankfurt's* bows. The terrific concussion split open her seams, and in less than 20 minutes she sank gracefully beneath the waves.

There was a faint swell of excitement among the observers aboard the transport *Henderson*, anchored at a safe distance from the target ship, but it died quickly. The *Frankfurt*, after all, was not a first-line fighting ship. Lightly armored, she was designed to hit and run. The real test—the only test—would be the *Ostfriesland*.

The second day of the tests was a good one for the Navy. Mitchell's bombers mussed up the dreadnaught's decks with a couple of 600 pounders, but they might as well have tried to sink her with pea-shooters. The newspapers heralded the results as a great victory for the Navy. Coming into the final round, the honors were about evenly divided with the big test yet to come.

Thursday, July 24, 1921, dawned bright and clear. The *Ostfriesland* tugged gently at her anchor in a calm sea. Already mottled with rust, her hull had been splotched with red paint to clearly distinguish her as the target ship. She looked particularly ugly and indestructible. Stretching across the horizon to the east of her, the ships of the Atlantic fleet were lined up like grim sentinels at an execution. At a safe distance from the German dreadnaught, the transport *Henderson* rolled gently in the slight swell, her rails crowded with Army and Navy officers, Congressmen, Cabinet members, foreign diplomats, and reporters, all waiting for the big show to get under way. The atmosphere aboard her was that of a picnic boat. The Navy men laughed confidently; the Army men stood about sheepishly, making self-conscious jokes about Mitchell, like an embarrassed mother trying to gloss over the behavior of an impudent child. There was a good deal of interested but not too spirited discussion among the civilian observers. But the truth was that no one was taking the affair too seriously. It was a strictly hypothetical problem, much the same as space travel is today, and the spectators weren't anticipating spectacular results any more than an audience at the rocket proving grounds at White Sands expects to see a test rocket make a round trip to the moon.

At a few minutes after 12, the lookout spotted seven specks on the western horizon. To the observers on the *Henderson*, they looked like a wedge of flying ducks. Gradually they materialized—six Martin bombers dwarfing a sleek little Handley-Page that was flying at the head of the formation. The sight of the Handley-Page with a gaily colored pennant streaming out from its tail evoked mixed comment on the *Henderson* from the Navy men and the civilians.

The Army was moody and silent. Why couldn't Mitchell stay on the sidelines the way a dignified general is expected to? And that pennant. Well, there was no telling what the rebel would do next. They hoped for the best and expected the worst.

Then the little Handley dipped its wings in a salute, and with its pennant curling in the wind, began to climb up and away from the formation at a tangent to the circle the Martins were describing around the target.

The big bombers began to climb slowly with the painful laboriousness of pregnant women ascending a long flight of stairs. Fixed on the belly of each ship was a single, giant, 2,000-pound bomb, to date the biggest bomb in military history. Up and up they circled above the *Ostfriesland* until they had reached the altitude prescribed by the Navy. The squadron leader peeled out of the formation, and when he was directly over the ship, let go with a small 25-pound ranging bomb. It sent up a slim column of water about 100 yards off the dreadnought's stern.

The second Martin went into a sideslip and then suddenly the bomb she had been carrying was suspended in space and the plane, free of her 1-ton burden, seemed to bounce high in the air as an updraft caught her. The slim cylinder of TNT fell slowly and majestically, arching away from the battleship in a graceful trajectory. It knifed the water cleanly like a high diver about 200 yards off the *Ostfriesland's* bow. There was a terrific explosion that sent a geyser of water and smoke over a hundred feet into the air. As the concussion reached the *Henderson*, men skidded about her decks cursing and grabbing for the rails and other handholds. The *Ostfriesland* trembled; she pitched and strained at her anchor as tons of water rained down on her.

She was still obscured by smoke when the second bomb disappeared into the waves, closer than the first but still far from a direct hit. One by one, the bombs fell at regular intervals, churning up the Atlantic with the fury of a hurricane; their thunder

still rang in the ears of the spectators aboard the *Henderson* long after the Martins had regrouped and were circling the area to see whether or not their mission had been successful.

As the smokescreen that cloaked the *Ostfriesland* was drawn away by the stiff easterly winds, a cheer went up from the Navy side. The big dreadnought was fighting her way free of the tons of water that had cascaded down on her decks. At last she shook herself proudly and came to rest on an even keel. She appeared to be unmarked.

"They didn't even come close," an admiral cried gleefully, and like a small boy he thumbed his nose at the bombers circling overhead.

A reporter shouted, "Look again."

The admiral's mouth fell open as the *Ostfriesland* began to list to the port side. A profound silence settled over the *Henderson*. The admiral rubbed his eyes. "But there's not a mark on her," he said wonderingly.

Then her bow lifted out of the sea, revealing the gaping holes in her hull beneath the waterline. Higher and higher went the bow as the big ship rolled over on her side. Not a word was spoken aboard the *Henderson*. The spectacle had the kind of awe-inspiring majesty you associate with the death of giants.

At 12:33 p. m., her stern was completely under. Five minutes later, she settled upright in the water, nose in the air, her funnels submerged. At 12:40, her bow slipped under the waves, and the only evidence that she had ever existed was a series of concentric rings spreading out over the calm sea in a big bull's-eye.

Stunned by what they had seen, the spectators watched in fascination as the silver Handley-Page plummeted out of the sky. Down she came, faster and faster, diving at the spot where the *Ostfriesland* had gone down. At about 1,500 feet, she pulled out of the dive and let go a small bomb. It landed directly in the center of the bull's-eye.

Now the wave of emotion that had washed silently through the ranks of the observers broke like the roar of the surf. Whistles, cheers, screams and applause saluted the little plane.

There were tears, too. A white-haired admiral shook his fist at the Handley-Page as it roared across the *Henderson's* bow, so low that some spectators claimed they could see Mitchell's toothy grin of triumph: "You bastard" the admiral muttered through clenched teeth. As it receded in the distance, the flapping banner seemed to mock him.

William Lendrum Mitchell was not always an outspoken champion of air power as a separate military weapon. At first he visualized the airplane as a valuable adjunct to ground operations, a potential eye for the Army. But when war broke out in Europe in 1914, and he saw what the French, British and Germans were doing with their planes, he developed an entirely new concept of air power that would some day revolutionize all military thinking. In 1916, he took flying lessons, and from that time on he began to think in the air. A new dimension had been added to war. In 1917, Mitchell requested a leave of absence to observe the war in Europe. By the time he got off the boat, America was in it, too. In France, Billy attached himself to another great air pioneer, Maj. Gen. Hugh Trenchard, the chief of the Royal Flying Corps. It was a relationship that conditioned his thinking for years to come.

In the early years of the war, there had been a few dogfights, between English and German pilots taking shots at one another with rifles and pistols, and an occasional haphazard bombing raid. But the primary function of aircraft was observation. Trenchard, however, foresaw squadrons of planes sailing through the air in formation like battleships, carrying great loads of bombs to be dropped on enemy cities and installations; he saw smaller, faster, lighter ships escorting the big bombers and attacking enemy planes.

Even before the first American forces landed in France, Mitchell had made a name for himself. He learned to fly the British and French planes, and accompanied the Allied aviators on missions over German territory. He even got into a couple of dogfights. For his achievements he was awarded the Croix de Guerre by the French and was promoted to the rank of lieutenant colonel.

Later appointed Commander of the Army Air Service in the Zone of the Advance, he worked tirelessly with the young American pilots, teaching them all the tricks he had learned from the French and British.

At first, there was harmony between the Air Service and the Army High Command and the brass left Mitchell alone. General Pershing listened attentively to his plans for coordination between ground troops and air forces, and, in the fall of 1918, gave him his first real chance to show what the Air Service could do.

For 3 years the Allied armies in the field had pounded away at the formidable German salient at St.-Mihiel without appreciable success. In the final year of the war, Billy Mitchell assembled the first air armada in history with the purpose of wiping out this huge thorn in the Allied lines—2 attack brigades of 400 planes and a fleet of bombers. To the old-line officers it seemed like a crazy scheme.

On the morning of September 12, 1918, 1 of the 2 American air brigades hit the left flank of the salient. Every available German airplane in the sector was sent up to fend them off. Then, while the first brigade refueled and rested, Mitchell sent his second attack wave to the right flank of the salient. The poor German pilots scarcely had landed when they had to take off again. Meanwhile, a third wave of planes, bombers, flew unopposed across the mouth of the salient, blasting roads, troops, supply trucks, and communications. Shuttling back and forth from one flank to the other, the German planes were squeezed neatly within the diminishing boundaries of their own lines. Cut off from their rear by the bombers, the German troops within the wedge were disorganized and terrorized. Inside of 2 days, the Americans captured 16,000 prisoners, and the St.-Mihiel salient, a Geramn strongpoint since 1915, was wiped out. It was a bitter lesson to the Germans—one they remembered long after the Americans had forgotten it: An army cut off from its homeland, thwarted in both advance and retreat and covered from above, is an army lost indeed. It was a lesson the Germans were to teach the French 25 years later as the poilus sat foolishly entrenched behind their impregnable Maginot Line. Like the Battle of the Bulge in World War II, the destruction of the St.-Mihiel salient marked the beginning of the death throes of the German armies in the field.

For his brilliant achievement Billy Mitchell was promoted to brigadier general and put in command of the Air Service of the Group of Armies. He had great plans for the Army Air Service, and at this point, with the St.-Mihiel victory still vividly in mind, the brass was with him all the way. General Pershing even approved a fantastic plan for dropping paratroopers behind the German front in a big offensive proposed for the spring of 1919. But, ironically, the war ended too soon, before Mitchell was able to consolidate his position with other decisive shows of air strength. When the common enemy was whipped, the Army and the Navy began to look at each other suspiciously again—petty rivalries were revived—and both fixed a malevolent eye on the Air Service. Here was an upstart that was challenging the supremacy of both.

Gen. Billy Mitchell knew what he was up against when he returned to the States in mid-February of 1919. He was ready to do battle for the future of aviation, and he had a few bitter recriminations about the past that he wanted to get off his chest. At the start of the war, the United States had boasted that it would have 100,000 planes in the air by the end of 1918. As it turned out, there were only 740 American-manufactured ships in France at the time of the armistice, and less than 30 percent of these were actually used. None were combat planes. All of the American ships were De Havilland–4s, designed for observation and photography. The DH–4 was nicknamed "the flying coffin" because it had a bad habit of exploding in flames if it crashlanded, or if a bullet pierced its gas tank. Nine men in Mitchell's squadron had been cremated in DH–4s in 1 week. That such structural and mechanical defects should exist in a machine built by the greatest industrial nation in the world was inconceivable to Mitchell. There could be no excuse for mistakes that cost lives.

It was like building a house. You have an architect draw the plans, you have carpenters do the construction work, an electrician do the wiring, and a plumber install the plumbing—who would think of letting a plumber do the plastering or draw the plans? But this was exactly what was happening in the air service; it was being run by a lot of men who knew absolutely nothing about airplanes.

In 1919, Mitchell outlined his views before a naval investigation board exploring the potentialities of the airplane. "In the future," he told them, "there will be a Ministry of Defense, combining Army, Navy, and Air Force under one command."

"Preposterous!" said the admirals.

He went on to tell them that there would be a separate Air Force which would work independently, but in coordination with the Army and the Navy.

"What possible advantage could there be in a separate Air Force?" he was asked guardedly.

"Why, it could destroy enemy installations hundreds of miles behind the front lines; it could bomb factories, depots, railroads. War is decided by getting at the vitals of an enemy. An independent Air Force can do all these things before an army has a chance to mobilize. Why, some day, there might not even be any need for the Navy."

It is not too hard to picture the expressions that came over the faces of those salty old seadogs when Mitchell said that. When the doors finally closed behind him, there was considerable mopping of brows and shaking of heads. "Somebody's got to stop that young maniac!" one grim-faced admiral said.

Despite the heavy odds lined up against him, Billy Mitchell crusaded confidently and diligently for the cause of airpower. Not only did he work long hours as Assistant Chief of Army Air Service, but he spent his own time plotting out airways over the United States for commercial air lines. He campaigned in Congress for support of his ideas and carried the fight to the public by writing hundreds of magazine and newspaper articles. He was a picturesque figure in his flashy, unauthorized uniforms—pink riding breeches and Sam Browne belt—and, notwithstanding his controversial opinions, he made good copy.

In fact, Billy was becoming much too popular a figure to suit the Army and the Navy. And what was worse, he was "going over the heads of his superiors" to the people. Even the most patient of the old order could no longer deny the threat he posed when, in 1921, after much public agitation, Congress passed the resolution to set up the bombing tests with the captured German ships and the experiment ended so disastrously for the Navy diehards.

Now, more than ever, Mitchell was determined to prove that some of the money spent

on battleships could be spent to better advantage on aircraft. His aim was to build up an air force for coastal defense that would keep any invading enemy navy at bay. In 1923, in another series of Navy-controlled tests, Mitchell's fliers bolstered his claim by sinking the scrapped battleships *New Jersey* and *Virginia*. This clinched the case as far the the public was concerned. "Don't spend our money on obsolete battleships," was the cry. The Navy was outraged. "We can't let him do this to us oldtimers," they appealed to the Army. The Army, loyal to the tried and true traditions of generations, was stampeded. "If this Mitchell has his way," a few generals fretted, "all of us will be polishing his boots before long." So now there was a solid front against Billy Mitchell.

When the war was over, Mitchell normally would have reverted to the rank of colonel, but he had retained the rank of brigadier general because of his appointment as Assistant Chief of Army Air Service in the United States. However, when his term was up, he would be reduced to colonel unless he was reappointed. Here was the perfect answer to the dilemma which faced the Army and the Navy. The pressure was put on Secretary of War Weeks. Mitchell was not reappointed. As an added precaution, he was "exiled" to Texas to take up the duties of air officer, VIII Corps, at Fort Sam Houston. The big brass sighed with relief. If you couldn't lose a man in Texas, where could you lose him? But they were wrong. That may have been an effective way to exile a troublesome officer back in the time of the Indian wars before the days of radio, press, and news services, but it wouldn't work in 1925. Shorn of the star on his shoulder, Colonel Mitchell cheerfully applied himself to his new job and kept up his incessant barrage of criticism against the Navy and the Army with as much vigor (and gaining as much public attention) as he had in Washington.

The crisis came in September 1925. To combat some of the uncomplimentary propaganda that had been flying its way as a result of Mitchell's crusade, the Navy decided to venture into the field of public relations and show the public just how wrong his charges were; that the Navy actually was enthusiastically exploring the potentialities of air power. In September of 1925, it was decided to send 1 of the 2 Navy dirigibles, the *Shenandoah*, on a good-will flight through the Middle West. It was the season for State fairs, and the powers-that-be reasoned that by hovering over the sites of these fairs, they could reach thousands of people with their message. Even President Coolidge smiled on the venture. Not only would the spectacular show boost the Navy's stock, but it would also create a feeling of good will toward the Republican administration. The commander of the *Shenandoah*, Commander Zachary Lansdowne, was given his orders. The flight was set for September 2.

The Navy was also planning another show to take place simultaneously with this one. On August 31, 3 Navy seaplanes—2 PN–9's and a Boeing PB–1—were scheduled to take off from San Francisco on a nonstop flight to Hawaii. It was destined to be a bad week for the Navy.

On September 1, the newspaper and radio announced that the PB–1 had developed engine trouble even before it took off. The following day, they reported that one of the PN–9's had broken down only 300 miles off the coast, and that the other one was missing. On September 4, headlines screamed that the *Shenandoah* had broken into 3 parts during a violent electric storm and that 14 of her crew, including Commander Lansdowne, were dead. By a miracle, a forward section with 28 men had floated down to safety in the mountains.

Making the most of a bad situation, the Navy pulled off one of the neatest dodges in political history. Assuming an attitude of pious self-righteousness, Secretary of the Navy Wilbur wrote off the calamity with this statement: "In view of the failure of the Hawaiian flight and the *Shenandoah* disaster, we have come to the conclusion that the Atlantic and the Pacific are still our best defenses. We have nothing to fear from enemy aircraft that is not on this continent."

Billy Mitchell hit the ceiling. For 2 days he shut himself up in his San Antonio office. On the 5th of September, he came out of seclusion and handed the reporters an 8,000-word statement that began:

"I have been asked from all parts of the country to give my opinion about the reasons for the frightful aeronautical accidents and loss of life, equipment, and treasure that have occurred during the last few days. This statement is therefore given out publicly by me after mature deliberation and after a sufficient time has elapsed since the terrible accidents to our naval aircraft to find out something about what happened.

About what happened, my opinion is as follows: These accidents are the direct result of the incompetency, criminal negligence and almost treasonable administration of the national defense by the Navy and War Departments * * *."

Mitchell backed up this accusation with specific charges regarding the *Shenandoah* disaster and the Hawaiian flights. He leveled charges of incompetent administration of the air services against both the Army and the Navy. He stated: "All aviation schemes and systems are dictated by the non-flying officers of the Army and Navy who know practically nothing about it. The lives of the airmen are being used merely as pawns in their hands. * * * The airmen themselves are blinded and bulldozed so that they dare not tell the truth * * *. The conduct of affairs by these two departments, as far as aviation is concerned, has been so disgusting in the last few years as to make any self-respecting person ashamed of the clothes he wears. Were it not for the patriotism of our air officers and their absolute confidence in the institution of the United States, knowing that sooner or later existing conditions would be changed, I doubt if one of them would remain with the colors * * *."

He went back to the day the Army bought its first plane from the Wright brothers in 1908 and traced the management—or mismanagement—of the Air service by the Army and Navy through World War I up to the present. He concluded with this scathing indictment: "As a patriotic American citizen, I can no longer stand by and see these disgusting performances by the Navy and War Departments at the expense of the lives of our people and the delusion of the American public."

"This is then what I have to say on this subject and I hope that every American will hear it."

Mitchell's San Antonio blast touched off a nationwide storm. The Army and the Navy dismissed it as nonsense, but the President was worried. There was too much public pressure being brought to bear through Congress to ignore the charges. The only way to appease the people would be to launch an investigation. Congress had already backed Mitchell's views in an exhaustive investigation into the air services before the accidents. This time, the President appointed a board composed of civilians. On September 22, Colonel Mitchell was relieved of his duties at Fort Sam Houston and ordered to Washington to testify before the President's Aircraft Board.

In the meantime, the missing PN–9 of the Hawaiian flight had been found. She had run out of gas and had drifted around the Pacific for 9 days until a submarine had spotted her and towed her to port. Commander Rodgers and his crew were all safe, and absolved the Navy of any blame for the accident. The official clamor for Mitchell's "head" grew louder and louder. "* * * entering a wedge for military dictatorship with himself as dictator," the brass said * * * "He's a Communist!" * * * and on the most ridiculous side * * * "It couldn't have happened if he had been a West Pointer."

On September 8, the newspapers of the country carried the headlines, "Court-martial for Colonel Mitchell."

This is the 96th Article of War:

" * * * Though not mentioned in these articles, all disorders and neglects to the prejudice of good order and military discipline, all conduct of a nature to bring discredit upon the military service * * * shall be taken cognizance of by a * * * court-martial and punished at the discretion of such court."

It covers everything from kicking an army mule to spitting in the Commander in Chief's eye.

At a quarter to ten on the cloudy morning of October 28, 1925, Colonel Mitchell pushed through the milling crowd in front of the War Department's old Munition Building. His wife Betty and his sister Harriet were with him. It is still a matter of conjecture why the War Department chose this dilapidated structure for the trial. The roof leaked, the plaster was falling off the walls; it had even been abandoned as a warehouse. It took an army of workmen a full week to mop up the water that lay in stagnant pools on the mildewed floor. There was no central heating. Many thought it was an attempt to degrade the accused, but it seems more logical that the Government wanted to discourage the public from attending the trial. Camp chairs had been set up in the tiny courtroom on the second floor to accommodate a handful of spectators. There was standing room for a few more.

Normally, in court-martial procedure, it is the custom for spectators to file out of the room whenever any point arises which the judges must determine in private conference. But in the Mitchell trial, it was impossible to clear the court because of the limited space in the hall outside the courtroom. Instead, it was decided that the members of the court would retire to a small anteroom to settle such issues.

The atmosphere was colder and gloomier inside the building than it was outside. The judges stood around, smoking and shivering, saying very little to each other or anyone else. In fact, the only person connected with the trial who was smiling was Billy Mitchell himself. At 10 minutes to 10, he marched jauntily into the small courtroom. It was a madhouse. An army of reporters and photographers was ensconced in the center of the floor together with a mountain of equipment. Spectators were shoving and pushing for coveted seats. The air was fetid. It was a bad place for anyone with claustrophobia.

Billy and his wife took seats at a small table at the front of the room with his 3 lawyers: Frank Reid, a Congressman from Wisconsin; Judge Plain of Aurora, Ill.; and Col. Herbert A. White, his military counsel. He talked and joked with his friends in the first row of seats and seemed genuinely cheerful and at ease.

At exactly 10 o'clock, the sergeant at arms stood up at the front of the room and gave the command. "Stand up." Everyone in the room got to his feet with a great scraping of chairs and scuffling of feet. The 13 judges filed solemnly into the room and took their places at a big, curved table at the front of the room. This was the highest court-martial ever convened in the history of the United States.

The president of the court was Maj. Gen. Charles P. Summerall, former Chief of the Hawaiian Command, and at the time Chief of the Army General Staff. The members of the court were Maj Gens. R. L. Howze, F. W.

Sladen, W. S. Graves, B. A. Poore, and Douglas MacArthur; Brig. Gens. A. L. Bowley, E. L. King, F. R. McCoy, E. B. Winans, G. LeRoy Irwin, and E. E. Booth. Col. B. Winship was the law officer who would settle points of procedure and other legal matters. The fact that there was not a single air officer on the court led Congressman Fiorello LaGuardia to observe: "Billy Mitchell isn't being tried by a board of his peers, but by a pack of be-ribboned dog-robbers of the General Staff."

They were an impressive looking tribunal with their campaign ribbons and stars flashing on their khaki uniforms. There was a ripple of laughter at the rear of the courtroom as someone was heard to remark that "Billy has more medals than all of them put together."

When the judges were seated and the spectators had settled down again, Col. Sherman Moreland, the trial judge advocate, took a sheet of paper from his assistant, Lt. Col. Joseph McMullen, and read a statement: "The Government is ready to proceed with the prosecution of the case of the *United States* v. *Col. William Mitchell.*" He asked the judges whether or not they had ever expressed any opinion as to the guilt or innocence of the accused; whether any of them were to appear as witnesses before the court; whether any of them would be promoted if Mitchell were to be dismissed from the service and whether or not they had any prejudices or biases against the defendant. As their names were called, each judge answered with a decisive "No."

Colonel Moreland then turned to Congressman Reid. "Does the defense wish to challenge any member of this court?"

"We do," Reid said. "We challenge the right of Brig. Gen. Albert L. Bowley to sit on this court on the basis of bias and prejudice." He went on to cite excerpts from a speech which General Bowley had made at an American Legion convention in South Carolina, in which he had said that the infantry was the backbone of the United States Army and had expressed uncomplimentary views about the Air Service. The judges filed out into an anteroom to deliberate the charge. A short time later they returned, and General Summerall announced that they had allowed the charge. General Bowley went quietly.

"Are there any more challenges?" Colonel Moreland inquired.

"Yes," Reid replied. "We also challenge Gen. Fred Sladen, on the basis of bias and prejudice." The judges filed out again to formally deliberate the point. It was upheld.

When the court was settled once more, Colonel Moreland issued the final invitation to challenge—only three challenges are allowed in an Army court martial. There was a half smile on Reid's face as he rose to his feet. "We also challenge the propriety of Maj. Gen. Charles P. Summerall to preside over this court-martial board." There was a buzz of excitement among the spectators. All eyes focused on the rapidly reddening face of General Summerall. Reid continued: "In a speech before the Morrow Air Service Investigation Board, General Summerall spoke against the establishment of a separate Air Force, and stated that 'there was nothing to support the extravagant claims of Colonel Mitchell.' General Summerall has also indicated his prejudices in other public utterances since the present air controversy." Reid paused for a second. "He has also expressed a strong personal dislike for Colonel Mitchell ever since Colonel Mitchell had occasion to point out that General Summerall's administration of the Hawaiian Command in 1923 was both ignorant and inefficient, and * * *" he coughed delicately, "that General Summerall's personal controversy with the Admiral of the Navy in Hawaii at that time as to who was superior in rank made Army and Navy cooperation impossible during the Pacific maneuvers." A burst of laughter greeted this statement.

Fuming with indignation, General Summerall upset the dignity and decorum of the court by jumping to his feet and shouting, "Although Colonel Mitchell's report was unfair, untrue, and ignorant, I have never entertained any hostility toward him." Then, emphasizing the absurdity of his claim, he shook his fist at Mitchell and growled, "But we're enemies now, Mitchell and I. Under no circumstances would I continue as president of this court-martial."

The spectators groaned as the judges filed out again to formalize Summerall's withdrawal, for each time the judges rose, they had to stand up, too. When the court returned, it was announced that the challenge had been upheld and that Maj. Gen. R. L. Howze had been installed as the new president. The board was now reduced to 10 members; the law was that the ousted members would not be replaced. A two-thirds vote was required for a conviction.

Defense Counsel Reid was an unimpressive looking figure as he stood up to deliver his opening address, surrounded as he was by all this brass with their crisp uniforms, polished buttons and military bearing. A stooped, rangy man with sandy hair and a thin, bland face, he spoke slowly and with a trace of midwestern drawl. Even the illustrious members of the court permitted themselves a dignified smile as he proceeded to address them as "You people," instead of the time-honored "May it please the Honorable Court."

"With the permission of you people," he said, "I'd like to read something." He picked up a volume from the table beside him, stacked high with books, and flicked through the pages. He began to read slowly:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of sepech or of the press; or the right of the people peaceably to assemble and to petition the Government for redress of grievances."

He looked up at the judges. "You gentlemen recognize that, of course. It is article I of the Bill of Rights, the first amendment to the Constitution of the United States." He glanced sideways at the prosecution table. "Any schoolboy knows that." He ambled slowly over to the table where the judges sat. "Does a man lose the rights and privileges guaranteed to him as a citizen of the United States when he becomes a soldier?" He walked the length of the table, fixing each of the eminent jurists with an inquiring eye. "If any of you fellows say 'yes' to that, I'm afraid you're going to have quite a time filling your enlistment quotas next year.

"As a loyal citizen and servant of the United States, Colonel Mitchell felt it was his duty to tell the people of a situation and to help bring about an adequate and well-balanced national defense. It is the duty of everyone to do as Mitchell is doing, that is to get the facts before the country in a matter vital to our national defense * * *, I'm sure you people believe that. I think even the prosecution must agree * * *." Reid paused dramatically and then he dropped a bombshell. "I know the President of the United States believes it!" He walked back to his table and took a sheet of paper from a pile of assorted documents. "Let me read you an excerpt from President Coolidge's speech, given before the graduating class at the Naval Academy just this past June: 'The officers of the Navy are given the fullest latitude in expressing their views before their fellow citizens, subject, of course, to the requirements of not betraying those confidential affairs which would be detrimental to the service * * *'." He looked up. "I think it's reasonable to infer that that latitude extends to the Army."

There was a spontaneous burst of applause from the onlookers and the cadence of typewriters leaped into high gear in the news section. A battery of photographers blazed away recording the discomfort of the prosecutors and the surprise of the judges. General Howze rapped sharply with his gavel. "Order in the court!"

When quiet had been restored, Reid smiled and continued. "It is not charged, alleged or contended that the statements of the defendant are false, slanderous, libelous, blasphemous or obscene, immoral or any of the other things inimical to public welfare, or that they tend to incite warfare or rebellion. It is not charged that they corrupt the public morals, disturb the peace, create anarchy, impede or hinder the government in its function * * *." He addressed himself to the president of the court-martial. "What jurisdiction do you people have to try him?"

If Congressman Reid had failed to make his point with the court, he had nevertheless, more than convinced the audience. People strained forward anxiously in their seats, their attention glued on the judges' faces. As Reid sat down, Judge Advocate Moreland got to his feet almost reluctantly. "Counsel for the defense has an interesting argument. At this time I am not prepared to rebut it. I make a motion for an adjournment."

The judges filed out into the anteroom to consider the motion and were back almost at once. "This court will adjourn until ten o'clock tomorrow morning," General Howze said. It was hard to say who looked the most relieved, the prosecution or the judges themselves. But it is a safe bet that President Coolidge wasn't the most popular man in the Army and Navy camp that night.

Later, Reid told Mitchell, "Now we've got them right where we want them, Billy. The last thing the Government wanted to do was to make a public issue out of the charges you leveled at the Army and Navy. They figured the very fact that you said these things was enough to railroad you into a conviction for insubordination. Now they've got no case unless they can prove that what you said wasn't and isn't true."

Mitchell's face, lined with strain and weariness, relaxed a little. "Does that mean I'll get a chance to prove that it is true?"

"Exactly," Reid gloated. "They stepped into their own trap. This trial will be a sounding board for every accusation you made in the San Antonio statement, with this big difference. Before, it was only your words. Now the public is going to see and hear the facts for themselves. Yes, sir, we're going to sink the Navy, and the Army, too. * * * There's only one thing that bothers me." He squeezed Billy's elbow affectionately. "You'll probably go down with the ship."

Mitchell smiled wanly. "I knew that when I stuck my neck out down in Texas."

There was a great deal of speculation, private and in the newspapers, about the new twist the Mitchell courtmartial had taken. Even the conservative New York Times, which had branded Mitchell's San Antonio statement "both insubordination and folly—this is not language becoming an officer and a gentleman," went so far as to comment, "Mitchell's defense will get fullest latitude, because of Coolidge's utterance and 'freedom of speech' guaranteed in the Constitution."

As soon as court was officially in session the next day, Prosecutor Moreland answered the argument which the defense had advanced "* * * counsel for the defense maintains that there is no distinction between a citizen in civilian life and a citizen who is a soldier. This is not true. When a man enters the service, his civil status ceases and his military status begins. This is a change of considerable consequence. Sol-

diers must obey the rules laid down by military law. * * * In any case," he walked over to the defense table and stood over Mitchell, "* * * the Constitution does not protect a man who shouts, 'Fire!' in a crowded theater, be he civilian or soldier."

Mitchell flushed and Congressman Reid shot back scornfully. "But suppose the theater is on fire, Colonel? What happens then?"

There was scattered clapping in the courtroom. General Howze rapped with his gavel. "Gentlemen! Gentlemen! Counsel for defense will kindly save his remarks until he has the floor."

From the looks exchanged between the opposing chief counsel, it was evident that the controversy was taking on personal overtones. Regaining his composure, Colonel Moreland continued. "If the argument advanced on behalf of the accused should stand, it would mean that a private could berate his captain and a major could lampoon his colonel, with the result that discipline would vanish and the Army would become a mob. Yesterday, Mr. Reid quoted a paragraph from a speech that President Coolidge made to the graduating class at Annapolis last June and distorted its meaning to provide justification for the insidious accusations Colonel Mitchell made in his San Antonio statement. I think it goes without saying that when the President said that officers are given the fullest latitude in expressing their views before their fellow citizens, he did not mean to imply that an officer could denounce some innocent man as a criminal."

As Colonel Moreland returned to his chair, Congressman Reid popped up from his. "Colonel Moreland seems to be under a misapprehension. The issue in this case is not discipline. Colonel Mitchell never has, and never would, disobey a direct order from a superior. There is no question of insubordination here. Colonel Mitchell's statements were made in good faith, the good faith of a man doing his duty for his country. The judge advocate speaks self-righteously of denouncing an innocent man as a criminal. I suggest that this is exactly what he is doing at this trial. Colonel Mitchell is an innocent man. He did not attack an individual; he merely spoke out against a public policy, and I defy the prosecutor to find a single case on record where a man has ever been tried for making statements about public policies. The crime exists only in the minds of his accusers. Gentlemen, are we going to lynch a truth-teller?"

Reid jammed his hands deep into his pants pockets and walked slowly over to the judges' table. "The judge advocate has intimated that when a man becomes a soldier he sacrifices his civil liberties—the right to think and speak his own mind. I don't believe that. If it is true that a soldier isn't entitled to voice a personal opinion, then you judges are mere automatons." Hands still in his pockets, Reid shuffled back to his chair.

The judges looked anything but happy as they prepared to decide the pleas to jurisdiction by specification. As each of the charges was read, defense counsel challenged as to jurisdiction. After each challenge, Colonel Winship advised the court that in his opinion defense should be overruled. Inasmuch as each plea had to be deliberated in secret session, the judges marched in and out of the room eight times. Each time the judges got up, everyone else in the courtroom rose, too. The proceedings took on the farcical air of a game of musical chairs. Near the end of the session, the crowd was convulsed with laughter, and even some of the judges had trouble restraining a smile. But eight times the members of the court got up to leave the room, and eight times Reid was overruled.

Undismayed, Reid then made a motion to strike out all charges on the grounds that the court-martial procedure had been violated. "The laws of court-martial procedure," he said, "state that before an officer can be charged with a breach of regulations, said charges must first be referred to his commanding officer for investigation. General Hinds is the commanding officer in Texas. He did not investigate nor did he recommend a court-martial for Colonel Mitchell at any time."

There was a flurry of excitement in the courtroom. The judges were looking at one another dumbly.

Colonel Winship addressed the judge advocate, "Who did investigate the charges, Colonel Moreland?"

Moreland squirmed uncomfortably in his chair. "Col. John Nugent of the inspector general's office made the investigation."

"By what authority?" Mr. Reid demanded.

"Yes, Colonel Moreland," the law officer echoed weakly, "by what authority?"

For some minutes, there was a potent silence. The judge advocate went into a huddle with his assistants, the spectators strained forward in their chairs, reporters held their pencils poised expectantly above their pads; this was a question that had been puzzling those close to the case for some time. When Colonel Moreland faced the court again, his face was flushed. "Secretary of War Davis directed the investigation be made."

Reid was on his feet again. "I repeat, by what authority? Secretary Davis is not Colonel Mitchell's commanding officer."

Colonel Moreland cast one final resigned look at his assistant. "Secretary Davis ordered the investigation at the direction of President Coolidge, and the President is the commanding office of every soldier and officer in the United States military and naval services."

Mr. Reid's face lit up triumphantly. "Thank you," he said and sat down.

The press grinned admiringly. There would be moaning aplenty on Capitol Hill this night. The administration had calculated to keep this case localized in the Army's backyard. With Billy Mitchell the popular public figure that he was, the last thing they had wanted was to have the President's hand forced on the very eve of a national election. On this dramatic note, a recess was called.

In an interview with the press later that afternoon, Congressman Reid fanned the hot coals on which he already had the administration dancing, by vowing that he was going to subpena both Secretary of War Davis and President Coolidge as witnesses. "After all," he said grimly, "it's a man's constitutional right to face his accusers."

The next morning, Colonel Mitchell was officially arraigned. Colonel Winship ordered the defendant to stand up as the judge advocate read the 96th article of war. Colonel Winship then proceeded to read the charges. Mitchell was pale and there were deep circles under his eyes, but he was erect and defiant and there was no trace of nervousness in his voice as he pleaded not guilty to each of the eight charges, and once to the specifications charge and to the general issue.

The session that followed was a stormy one, in which many technical points of procedure had to be unknotted; it included numerous bitter exchanges between opposing counsel. On several occasions, the president of the court warned both Reid and Moreland to restrain themselves. Finally, the judge advocate, in a rather dubiously conciliatory gesture, turned to Reid with a nasty grin and said, "If I had a son who was guilty of a crime, I could wish for him no more able or more gracious advocate than the chief counsel for the defense."

"I am glad to return the compliment," said Reid slyly. "If my boy was in trouble, I'd hate to have you prosecute him."

As the session progressed it was becoming more and more apparent that the defendant was becoming the accuser, and that if the defense was allowed to try to substantiate its charges, the trial would become the very thing which the Government had hoped to prevent by bringing Mitchell to trial—a wide-open, public investigation into the aircraft controversy. The Government began its case officially that afternoon with a preliminary move to establish the authorship of the San Antonio statement. The first three witnesses were reporters from Texas newspapers, all of whom verified that Colonel Mitchell had given them the text in question. Lt. Col. George L. Hicks, adjutant general of the Eighth Corps Area in Texas, was the fourth witness.

Congressman Reid waived examination of the first three witnesses but said very offhandedly that he would like to ask Colonel Hicks a few questions. Addressing himself to the colonel in his most disarming manner, Reid inquired "Are you on duty in Texas, Colonel?"

"Yes, sir," Hicks replied. "At headquarters of the Corps Area in San Antonio."

Reid grinned, "Tell the truth, Colonel, has the issuance of the Mitchell statement led to any insubordination or breakdown of discipline in Texas?"

"I object." Colonel Moreland exploded. "That question is completely irrelevant."

"Not at all," Reid said affably. "The prosecution charges that Colonel Mitchell made statements that prejudice good order and military discipline. If the question of discipline is irrelevant, then the charge is ridiculous."

Colonel Winship, the law officer, gazed appealingly at Colonel Moreland. "Objection overruled."

Reid smiled. "Thank you. Now, Colonel Hicks, will you please answer my question? Did Colonel Mitchell's statement lead to any insubordination or breakdown of discipline?"

"No, sir," Hicks said firmly. "In my judgment it did not."

When the witness had stepped down, Reid made a motion to end the proceedings on the grounds that none of the charges had been proved and a reasonable doubt existed as to every allegation made by the prosecution. There was a chorus of "Ahs" and "Ohs' as Colonel Winship advised the court to reject the motion and the judges upheld him. Reid shrugged and sat down.

At this point, Lieutenant Colonel McMullen, assistant trial judge advocate, stood up in a state of consternation, waving a list as long as his arm. "I have here a list of 73 witnesses for the defense just submitted to me by Mr. Reid. Some are stationed in Hawaii, practically all of them in some remote part of the world or the United States. It will be impossible to round them up. Consider the time, the money * * *" he trailed off with a helpless gesture of his hands.

Colonel Winship handed over a copy of the list to the president of the court. As General Howze studied the proposed list of defense witnesses, his eyebrows arched higher and higher. Included were three Cabinet officers, the secretary to the President, and an impressive array of retired and active officers of the Army and Navy, living, as Colonel McMullen had said, all over the globe. General Howze took out a handkerchief and patted his brow. There was one bright note—President Coolidge's name was not on the list. Once again, the weary judges plodded into the wings like a group of tired chorus girls. When they returned a few minutes later, General Howze turned on counsel Reid with a desperate belligerence. "Mr. Reid, if the court allows you to call up all the people, there's no telling how long these proceedings will be prolonged. * * *"

"May it please the court," Reid cut in. "The prosecution charges that Colonel Mitchell's statements were false, slanderous and libelous. Our purpose in calling these witnesses is to corroborate Colonel Mitchell's charges. The court can only decide

whether he told the truth on the evidence it will hear. There can be no middle ground on the admission of any and all evidence."

Reid was putting the pressure on from all sides now, and the judges as well as the prosecution were caught in the squeeze. As the Nation later summed it up: "Holding a bear by the tail is a pleasant pastime compared with trying Col. William Mitchell by court-martial. That energetic officer and his able counsel carried off all the honors in the first week of the trial. How the War Department must be kicking themselves that they did not ask Mr. Coolidge to issue a sharp Presidential reprimand and station the Colonel in the remotest part of Moroland."

As Reid had prophesied, the court had been maneuvered into a delicate predicament. If it allowed the defense to try to substantiate its charges, the War and Navy Departments would be smeared in the public's eyes; but if they refused to hear all the evidence in the face of the unassailable case which Counsel Reid had built up to support this contention, then they would sacrifice personal integrity and honor in a clear admission that the trial was fixed.

Looking anything but happy the judges postponed their decision and adjourned court until the following Monday morning—a 5-day intermission occasioned by the elections.

"Until Monday?" one reporter was heard to remarks, "All that dancing in and out of the room must have tired the old boys out."

Picking up the remark, General Howze growled, "Don't you worry about the physical endurance of the court," and stomped out of the room.

There was cautious optimism among the Mitchell supporters during that week, and some of the newspapers speculated wildly that Mitchell's acquittal was practically a certainty if he could prove his charges. The temperate New York Times, ridiculed such extravagance. In a shrewd analysis of the situation, the Times said: "Regardless of whether or not the charges are true, they will in no way affect the case. An officer may be a scoundrel, but if he is called a scoundrel by an inferior, this is still insubordination."

When court reconvened the following Monday, Defense Counsel Reid and Judge Advocate Moreland spent most of the day hotly debating the legality of the defense's list of witnesses. Fuel was added to the fire when Reid brazenly tacked on 24 more names to bring the total to 97.

Once again, the judges had to get on their merry-go-round, marching in and out of secret sessions the remainder of the afternoon. To the surprise of almost everyone, all the prosecution's objections were overruled 1 by 1. On November 9, the grim tribunal announced that the court was opening its door to all evidence.

Before he called his first witness, Congressman Reid told the court exactly what the defense intended to prove: "* * * We will show that the *Shenandoah* was not a modern dirigible. She was overweight. She was designed for hydrogen, yet helium was substituted without making the necessary changes in her structure. This oversight greatly reduced her safety factor. In addition, her valves were reduced to save helium. Six of her engines were removed and, due to a lack of care, even the gas cells in her skin had deteriorated. The calcium chloride used in her radiator as a nonfreezing agent is well known to have a destructive effect on duraluminum. Shortly before she left on her disastrous voyage, her frame had been weakened by an accident that had occurred in the hangar.

"Her commanding officer, Zachary Lansdowne, knew all these things and expressed his disapproval of the proposed voyage in a report to the Chief of Naval Operations. In addition to the physical defects of the ship, he knew, too, that there were inadequate fueling facilities along the route. The Chief of Naval Operations answered Commander Lansdowne in an insulting manner and refused to cancel the voyage or even postpone it until more favorable conditions existed. The Navy wouldn't even provide parachutes for the men and rejected a Signal Corps offer to set up weather stations along the route because it would mean paying the men employed an extra $1.90 a day.

"We will prove that a Navy officer tried to persuade Mrs. Landsdowne to perjure herself before the *Shenandoah* Investigation Board and to retract her testimony that her husband had made the flight under protest."

He went on to itemize the flagrant mismanagement of the Hawaii flight and the MacMillan Arctic flight. On the subject of our inadequate defenses in the Pacific, he said, "We will prove that the War Department is guilty of almost treasonable administration in that there are in Hawaii or the Philippines no plans for the employment of the Air Service in the protection of the islands * * *. We will prove that the bulk of the Army Air Service equipment is obsolete.

"We will prove that Colonel Mitchell made numerous recommendations looking toward the improvement and full development of aviation, very few of which, if any, were ever acted upon."

In conclusion, he said, "We will prove by evidence that Colonel Mitchell, after exhausting every usual means to safeguard the aerial defense of the United States without result, took the only way possible that would cause a study of the true conditions of the national defense to be made."

For 3 weeks, witness after witness took the stand and hammered home every point that Reid had made.

Maj. Carl Spaatz, one of the outstanding heroes of World War I, was a key witness.

"Major Spaatz," Mr. Reid began, "you are the chief of the Tactical Unit section of the Training Division of the Air Service, is that true?"

"Yes."

"How many airplanes would you say we had in the Air Service?"

"About 1,800."

"How many of these ships would you say are standard machines?"

"Well, about 237 of them are inherited from the war. I'd say about 69 are modern machines."

"And how many of these are in the training service?" Reid asked.

"Sixty," was the quick reply.

"In other words, Major Spaatz, that leaves about nine planes to be used against the enemy in case of an air attack."

"Yes, sir."

Reid shot a triumphant glance at the judges, "Now tell me, Major Spaatz, just what in your opinion is the state of the equipment in the Air Service?"

"The condition of the Air Force is such that it is difficult to figure out how we can continue flying. Our equipment is obsolete or obsolescent and is not adapted for the purposes intended."

"Do you believe the organization of the Air Service is being retarded by the War Department?" Reid snapped.

Instantly, Colonel Moreland was on his feet roaring, "I object!" But before the court could take any action, Major Spaatz shot back, "I do." There was hearty laughter in the courtroom as the fuming judge advocate hurled himself back into his chair.

When the uproar had quieted down, Reid continued, "The War Department tells us that antiaircraft ground fire could successfully repel enemy air attack in a far more efficient manner than airplanes could. Their gunners must practice constantly. Tell us, Major Spaatz, when was the last time the Army held aerial gunnery practice?"

"About 2 years ago," Spaatz said.

At this point, the president of the court leaned forward and said incredulously, "Two years ago! Who is responsible for that?"

Spaatz smiled wryly. "A while back, when the Government was looking for a spot for gunnery practice, they found a good location in Michigan that could have been leased for a dollar—but it seems that the War Department was loath to let the dollar go." General Howze pulled his neck in like a turtle.

Under further examination, Spaatz said that air personnel was 70 percent short of men, and that there were only two officers with any air service on the general staff. When Reid asked him about the recent deaths of Captain Sheel and Lieutenant Pierson in racing airplanes, Spaatz replied that a high-speed racing machine should be junked after 1 year. The planes used by the dead fliers had been over 2 years old.

Captain Olds, another war ace, was also a key witness.

"Captain Olds," Reid asked, "did you know Major Harley Wheeler?"

"I knew him well. He was a squadron commander in Hawaii."

"Were you present when he was killed?"

"Yes," Olds said. "I was there when he crashed on July 13, 1921."

"What do you know about his death?"

Colonel Moreland objected strenuously. "What is counsel seeking to prove by this line of questioning?"

Ignoring Moreland, Reid said to the court, "The night before his death, Wheeler was called into Colonel Chamberlain's office—Colonel Chamberlain was Chief of Staff of the Hawaiian Department—and was told that he would be held personally responsible, and if necessary, the pilots would be held financially responsible, for any damage to planes incurred in forced landings."

Colonel Winship suggested that the objection be overruled, and the court upheld him. Reid continued with his questioning of the witness.

"Captain Olds, did you talk to Wheeler before he was killed?"

"Yes, sir," Olds replied. "About 20 minutes before he took off, Wheeler and I walked to headquarters together. After he picked up his equipment, we proceeded to Luke Field. He said that Chamberlain had put him on the carpet and complained that there were too many forced landings lately. Wheeler asked me to help him locate the trouble we were having with the Liberty motors. They were always stalling."

"Just what caused Major Wheeler's plane to crash?"

Olds took a deep breath before answering. "His motor stalled as he was taking off. In trying to save the plane, he went into a tailspin."

"Who was in command of the Hawaiian Department at that time?" Reid concluded.

"Maj. Gen. George Summerall."

The next witness for the defense was Maj. Hap Arnold, a wartime pilot and an original pupil of Wilbur Wright. Taking up the matter of the Lassiter Aircraft Report, Reid asked Major Arnold about the statistics of aircraft fatalities. Arnold replied that 517 officers and men had been killed from January 1, 1919, to July 30, 1925. Only 12 of these men had been killed in modern, up-to-date airplanes. Reid then brought up the report of the Agamemnon tests, a series of land-based bombing tests, the results of which were believed to be detrimental to Mitchell's case.

"Major Arnold," said Reid, "Admiral Straus reports that 114 flights of planes failed to make a single hit in the Agamemnon tests."

Arnold smiled. "That's a slight exaggeration. In the first place, there were only 11 flights. Then, instead of Martin bombers, the Navy made us use DH–4s, completely unsuited for bombing, and they only let us use miniature bombs."

Another witness, Lieutenant Colonel Schauffler, the commanding officer of the Air Force Reserves in the Third Corps Area, said: "The Reserve Air Force could not be in worse condition. Under existing conditions, I would not go back in if you made me a major general."

Other top Air Service personnel testified that they were operating with equipment that should have been condemned, and that they had begged for appropriations time and time again and had been refused. Lieutenant Colonel Gilmore, Chief of the Supply Division in the Air Service, said that at the present rate of casualties, there would be a complete turnover in the Air Service every 20 years. With each new witness who took the stand, the position of the Navy and War Department was becoming more tenuous.

The judge advocate made one last frantic appeal to the court to stem the tide of damning evidence. Colonel Winship, the law officer, who, no doubt, was feeling the pressure from above, reproached counsel Reid, but without much conviction. "Mr. Reid," he said, "the court is beginning to doubt your position in this testimony now being produced before the court. The court has stated its willingness in extenuation and mitigation to hear the evidence, but now there seems to be some doubt as to whether your purpose is a defensive one or a vindictive one."

For the first time, Congressman Reid lost his temper. "We expect to prove the truth of Colonel Mitchell's statements, and in bringing this testimony before the court, our purpose is one of absolute defense. If the Government doesn't want to pay the carfare of our witnesses, we will do it at our own expense." That ended the matter.

On the morning of November 12, the courtroom was packed to capacity and crowds jammed the entrance of the Emory Building. This was the day that the star witness for the defense, Mrs. Margaret Rose Lansdowne, widow of the deceased commander of the *Shenandoah*, was due to appear.

There was a flurry of excitement as Mrs. Lansdowne, dressed in mourning, took the stand. Breaking all the formal rules of court-martial procedure, the judges rose and stood stiffly at attention. General Howze bowed and said, "Good morning, madam."

As soon as the witness was sworn in, Reid wasted little time in getting to the point. "Mrs. Lansdowne," he began, "did Capt. Paul Foley of the United States Navy, who is judge advocate of the *Shenandoah* Investigation Board, call on you previous to the time that you were called as a witness in that inquiry?"

"He did."

"Was a paper delivered to you before you appeared as a witness before that court?"

"There was," Mrs. Lansdowne stated emphatically. "Captain Foley wanted me to sign it, but I refused."

"Are you able to state in substance what was in that paper?"

Colonel Moreland leaped out of his chair and began pounding the table with his fist. "I object! At the time Colonel Mitchell gave out his San Antonio statement, he couldn't possibly have known about any such paper or of Captain Foley's visit."

Reid pounced right back. "The trial judge advocate does not understand the purpose of the testimony. I will inform him. Colonel Mitchell charged that the Navy would proceed with a "whitewash" board in the *Shenandoah* case and that an effort would be made to get Mrs. Lansdowne to give false testimony."

"That's a prophecy."

Reid laughed. "You seem to forget that we are being tried in part on things that we said would happen." He turned to the law officer, "Isn't that right?"

"That's right," Colonel Winship mumbled weakly. "Objection overruled."

"Tell us what was written on that paper, Mrs. Lansdowne," Reid said.

"Well," the woman began, "the paper was brought to me by a friend, the wife of a prominent Navy officer. There were three paragraphs. The first paragraph had me saying that when I first accepted to appear before the investigation board, it was because I felt my husband needed defense, but that now I had changed my mind and would not appear. The second had me saying that my husband was always ready to use the *Shenandoah* for military purposes regardless of weather or landing conditions. In the third paragraph I was to thank the court and leave the matter up to them."

"Was this your attitude," Reid inquired quietly.

"It was not."

"Who was the writer of that statement?"

"Captain Paul Foley!" Mrs. Lansdowne's voice trembled with emotion now. "It was an insult to my husband's memory that he would take the *Shenandoah* any place, and time, regardless of the weather." She went on to tell how vigorously her husband had protested the trip, but that he had been overruled by the Chief of Naval Operations, who had also disapproved Lansdowne's recommendation to postpone it to a later date when weather would be more favorable 'because the State fairs do not occur at that time.'"

"Did Captain Foley call on you before you testified?"

"Yes, he did," Mrs. Lansdowne replied. "Two days before. I was at the home of my uncle. He wanted to know what I was going to tell the board and tried to impress me with the importance of this investigation. I told him that I was going to show that the voyage of the *Shenandoah* was a political one. Captain Foley said I was wrong, that the taxpayers had a right to see their property. I told him then that I had never heard of a battleship being sent to the Great Lakes."

On that note, Reid concluded his examination as the audience howled. The prosecution then made a determined effort to trip up Mrs. Lansdowne. With fire in his eye, Colonel Moreland commenced a rapid-fire cross-examination. "Did Capt. Walter Gerhardy (Secretary of War Wilbur's personal aide) ever call on you?"

"Yes."

"Didn't you say that statements credited to you by the papers were lies?"

"I did not. I said those who quoted me as saying that I held Secretary Wilbur personally responsible, were not correct."

Moreland smiled patronizingly. "Isn't it true, Mrs. Lansdowne, that you told the papers your husband had a premonition that this would be his last trip?"

"My husband said that if he was lucky enough to get out of this one alive he'd certainly never make another trip."

Red about the ears now, Moreland struck out in another direction. "Did you know Captain Foley before he called on you?"

"No," Mrs. Lansdowne admitted. "That was the first time I had ever met him."

"How did you know this paper came from Captain Foley?"

Mrs. Lansdowne looked flustered. "The woman who gave it to me said so."

"Who was she?" Moreland demanded.

Mrs. Lansdowne hung her head. "I'd rather not say."

Colonel Moreland turned a pained expression toward the judges. "It appears that what we have is a nonexistent paper brought by a mysterious woman." All the judges looked relieved at having some reasonable doubt to cling to.

During the next few days an impressive array of experts took the stand to testify to the ineffectiveness of antiaircraft fire against planes. One gunner admitted it was like "scratching his head with one hand and rubbing his stomach with the other" to keep a gun on an airplane. Lt. H. L. George of the Army Air Service testified to the accuracy of bombs dropped on a target the size and shape of the gun deck of the battleship *California*. "At 3,000," he said, "75 percent of the bombs hit the target; at 8,000 feet 50 percent of the bombs hit the target."

Things were going so badly for the prosecution by the middle of November that Colonel Moreland was relieved as chief judge advocate. Taking his place, was the legal pride of the General Staff, a lanky, thin-faced young major named Allen Gullion who was noted as the shrewdest, most eloquent legal brain in the Army. Reid countered this move by pulling an ace out of his own sleeve in the person of retired Rear Adm. William Sims. The Secretary of the Navy must have groaned to hear an important and distinguished member of the home team rooting for the opposition. Admiral Sims emphasized the value of aircraft carriers to the modern fleet and lamented the fact that the only carrier in the United States Navy was a converted collier. He said that in the naval warfare of the future, control of the air would be an absolute essential, and that in his opinion, any naval vessel would be at the mercy of an enemy who controlled the air. Admiral sims also testified that he knew of cases where officers were afraid to speak their minds before Congressional committees because of the fear that it would put a black mark on their records. When Reid asked him what the United States Navy air policy was, he replied, "It has none. Just bumps along from day to day." Admiral Sims expressed equally uncomplimentary views about the *Shenandoah* disaster.

"From your experience as Commander-in-Chief of American Forces in European waters during the war," Reid asked, "what is your opinion of the efficiency of anti-aircraft fire?"

"I can give you actual figures," the admiral replied promptly. "Anti-aircraft gunners average one hit in 12,000 to one in 65,000."

In regard to Navy administration of the air service, Sims declared, "It's like a man learning how to play golf by reading a book."

In the cross-examination, Major Gullion slashed away at the old admiral viciously. Once he backed Sims into a corner by getting him to say that many naval officers were "too hidebound, unfitted and uneducated" to judge the value of airpower. Twisting the statement in an attempt to rattle the admiral, Gullion read the names of seven high-ranking admirals who took a dim view of airplanes. Many of them were good friends of Sims. Gullion asked slyly if the witness considered them to be "hidebound, unfitted and uneducated." To the consternation of the judge advocate and the court, and to the delight of the spectators, Sims replied promptly, "I most certainly do."

Maj. Eddie Rickenbacker, the outstanding ace of the AEF, scoffed at the idea that antiaircraft was any protection against air attack. He was especially vehement about the Army Air Service Reserve program. "My God," he said. "The very least a pilot should have is 1 hour's flying time a week."

"Is it proper to send them up without parachutes?" Reid asked.

"It's like sending men to sea without lifeboats. Fire is always a great hazard in aircraft and a man without a 'chute is without hope."

"What is your opinion of this program of training our men in World War I planes?"

Rickenbacker growled, "Just take a look at the graveyards around our flying fields."

Before he began his cross-examination, Major Gullion swaggered back and forth in front of the witness, regarding him as a policeman might a criminal. Suddenly he shot a question at Rickenbacker, punching the words home like the staccato of a machinegun. "Did you know that Baron Von Richthofen, the German war ace, was killed

by ground fire?" He laughed. "The whole French, British, and American air force couldn't shoot him down; it took an anti-aircraft gunner to do it."

Rickenbacker said contemptuously, "I understood he was killed in a dogfight during the German drive on Paris."

Gullion shook his head, as if to say, "Oh, those airmen." Then he continued, "Would you be surprised if I told you that one American antiaircraft battery had shot down 9 enemy planes?"

"I wouldn't be surprised at anything you told me," Rickenbacker said. "I'd just be surprised if anyone believed it."

Gullion's jaw dropped as the courtroom went into an uproar. General Howze had to pound for order several times. At this point Major Gullion decided that he had had enough of Major Rickenbacker.

There were violent objections when Reid called to the stand Lt. H. W. Sheridan, who had been an Army observer aboard the carried *Langley* during the Hawaiian maneuvers. "This is outrageous," Colonel Moreland fumed. "Any information this man gathered as a military observer is top secret."

An outspoken young man, Sheridan commented wryly, "There's nothing secret about my testimony unless you want to suppress the condition of the Navy." Major Gullion and Colonel Moreland leaped to their feet shouting simultaneously.

Reid laughed. "I object to tandem objections." Even the judges lost some of their austerity in the howl that went up from the crowd. Concealing a grin behind his hand, Colonel Winship mumbled, "Yes, gentlemen, please, one at a time."

The story Sheridan told had all the farcical aspects of a Keystone comedy, or would have had, if it had not been so tragic. He told how there had been no coordination in command, during the maneuvers; how even the captain of the *Langley* had no idea when his men were to take off, where they were to go, or what they were to do once they got there; how the landing operation was fantastic beyond description. He told how two planes had approached the runway from different directions and tried to land at the same time; swerving to avoid a head-on collision, they had plowed into three other planes that were standing on the deck.

Major Gullion tore into Sheridan angrily. "Do you know the depth of the water in San Francisco Harbor?"

"I am not familiar with the contours of the harbor's bottom," Sheridan answered.

Thrusting his face almost against the witness, Gullion demanded, "Are you a graduate of the War College?"

"I am not."

"Do you think you're qualified to exercise a high command?"

"No, but I could command an airplane squadron at least," Sheridan said dryly.

Gullion sputtered. "Would you be surprised to know that those 'terribly damaged planes' you mentioned were back in action the next day?"

"I wouldn't believe it."

Gullion took another slant. "Do you think you're qualified to criticize the Navy aviators?"

Sheridan said, with dignity, "I have never criticized the Navy aviators. They are as fine a group of pilots as you can find anywhere."

"You realize, of course, Lieutenant Sheridan, that the *Langley* is just an experimental carrier. She wasn't meant to be an efficient ship."

Sheridan grinned. "Well, she sure wasn't."

Gullion exploded. Stamping up and down before the judges' table, he fumed, "I move that all this man's testimony be stricken from the record. He has shown that he is clearly unqualified to testify." From his chair, Congressman Reid commented calmly, "He's a good deal more qualified than the counsel for the prosecution." The audience cheered.

On November 23, the moment arrived that everyone had been waiting for. Billy Mitchell took the stand in his own defense. In the face of constant badgering and objecting by Major Gullion, Counsel Reid reviewed the accused's brilliant Army record and faithful service to his country. All the many recommendations he had made to the War Department for the improvement of the country's air defense were brought forth, and it was pointed out they had all been shelved or tossed into the wastebasket. All the honors and citations he had received from foreign governments were read, including a letter from General Pershing, the tone of which was almost embarrassing in its praise. It was emphasized how the world's leading aeronautical experts concurred almost unanimously with Mitchell's opinions. On the stand, the tense, pale-faced Mitchell repeated every one of his charges. But he made it a point to stipulate that he had always said "in my opinion," and had accused "the system," not a specific man or men.

After this, Mitchell faced a 4-hour cross-examination by Major Gullion which has seldom had its equal in vehemence and vituperation in a courtroom. Its only purpose seemed to be to discredit the witness and defame his character. Typical of Gullion's tactics is the following sequence: "Colonel Mitchell, do you know what the estimated wealth of the United States is?"

"No, sir."

Gullion opened a copy of the World Almanac. "The World Almanac says it is $302,803,862,000. Keep that in mind."

There was a titter from the spectators. Gullion then proceeded to read a statement by Mitchell in which he had warned that in the event of a war in the Pacific, mines and submarines would pose a severe threat to the fleet. "Who did you have in mind when you wrote that?" Gullion demanded.

"Japan," Mitchell replied.

"Japan." Gullion turned and laughed at the court as though this was the biggest joke in the world. He then read another statement by Mitchell that said: "* * * The Pacific could be blocked off in squares of 900 square miles, by the enemy, each square an operating base for a sub * * *." Gullion turned on Mitchell viciously. "Do you know, Colonel Mitchell, that that would mean blocking off 10 million square miles? An enemy would need 12,500 subs to do that. At $5 million a sub, that would come to $624 billion. That's almost twice the wealth of the United States, and you say Japan could do that?"

Attacking a statement that Mitchell had made about the Pacific maneuvers, Gullion asked, "Where did you get the information that the Pacific maneuvers were a big parade?"

"In my opinion, they were," Mitchell replied calmly.

"The San Antonio statement is an opinion?"

"That's what it says."

"Tell me," Gullion snarled, "if all those statements were opinions, could you state the source of your information so we can differentiate between your opinions and your imagination?" Without giving the witness a chance to reply, he continued, "Where did you get the information that the Pacific maneuvers cost $40 to $80 million?"

"From the newspapers."

Gullion flashed the judges a horsey smile. "So, he gets all his information from the newspapers."

"Where the Navy is concerned, that's the only place anyone can get it," Mitchell interjected dryly.

Turning to Mitchell's criticisms of the Navy's Hawaiian flight, Gullion tried to feint him into making a direct accusation against an individual. "You claim that the preparations for the Hawaiian flight were inadequate. Yet these same plans were approved by Commander Rogers, who was in command of the flight. Do you think you are a better judge than he is?"

Mitchell smiled. "If Commander Rogers believed that flying back and forth across the Delaware River was proof that his planes could reach Hawaii, then I can only answer 'Yes.'"

Gullion said that Mitchell's charge of criminal negligence and treasonable conduct in the management of the Air Service was preposterous. Treason is the act of giving aid to an enemy in time of war, he declared.

"That's the obvious definition," Mitchell said quickly, "But there is another one, and that is to betray a trust or a confidence. The people put their trust in the War and Navy Departments to give them adequate defense; this has not been done."

Suddenly, Gullion dashed across the room and began shaking his first under Congressman Reid's nose. "You stop signaling him the right answers," he howled. This outburst greeted with hoots and hisses. Reid leaped to his feet and for a time it seemed that the session was sure to end in a free-for-all between the opposing counsel. Trembling like a leaf, the president of the court called a recess.

For 3 harrowing days, Mitchell remained on the stand, parrying every attempt of the judge advocate to shatter his composure. Gullion's frenzied efforts to malign him knew no limits. He attacked Mitchell's sanity, his morals, his truthfulness, and even his personal life. Through it all, Billy remained aloof, although the strain showed in his haggard face and sunken eyes. Only once did he seem on the point of cracking up, and that was when Gullion accused him of plagiarism in the writing of his book Winged Defense. In a surprise move, the trial judge advocate produced a lecture given before a War College class a few years before. He shook the manuscript in Mitchell's face. "Isn't it true that you cribbed page after page of this report in your rotten book?"

Mitchell gripped the arms of his chair and tensed forward as if he were about to leap at his tormentor, but Congressman Reid intervened soothingly. "The court is not trying the defendant on a copyright charge, I believe." But the spectators were not shy about expressing their opinion of the prosecution's tactics. Someone in the back of the courtroom yelled, "I'd paste that guy in the kisser, Billy."

Sensing that he had made some small chink in Mitchell's armor, Gullion followed up with what he thought would be a vital thrust. Holding up another paper, he said, "Colonel Mitchell, I have here a record of testimony given by you in 1913 before a congressional committee in which you expressed the opinion that there should not be a separate air force." There was a tense silence as the trial judge advocate sneered out over the sea of faces in the courtroom.

Mitchell settled back in the chair with the placid smile of reminiscence with which a mature man regards a folly of his youth. "I said it, all right," he admitted genially, "and I was never more wrong in my life. I said a good many foolish things when I was young, and before the war."

When he stepped down from the stand at the end of his ordeal, the spectators rose in silent tribute.

A light note relieved the tension that had built up during Mitchell's ordeal when Congressman Fiorella H. La Guardia, of New York, took the stand. La Guardia, who had served with the Air Service in Italy during the war, had on numerous occasions risen publicly to Mitchell's defense. Under examination by Reid, La Guardia reported his observations of aerial gunnery at the Fort

Tilden exercises. "It was a regular panic," he said in his squeaky voice. "The planes were flying back and forth towing the targets right under the noses of the artillery, and they couldn't make one single hit. Then the artillery officers got together in a big football huddle and sent a radio message to the planes. 'Please come in closer,' they begged. 'Would you please repeat your course again? Would you wait a few minutes, please?' " La Guardia laughed. "Those guys couldn't hit a sitting duck."

La Guardia testified that he had personally talked to many officers, both Army and Navy, who were afraid to disagree with their superiors. "Why," he said seriously, "I knew a quartermaster officer who had to testify to the value of a self-greasing axle because the guy who invented it was a relative of his captain's."

To discredit the little Congressman before the court, Gullion asked maliciously, "Is it true that you made a statement that Colonel Mitchell was being tried by officers who were prepared to find him guilty."

La Guardia looked up and down the line of cold faces arrayed behind the bar, then he winked at his old friend, Douglas MacArthur, and said, "That was before I knew that General Mac was going to sit on the court."

At this point, the defense rested.

The remaining days of the trial were anticlimactic. The prosecution paraded a troupe of Navy experts in and out of the witness chair. All of them disputed lamely the contentions which the defense had already proved to the satisfaction of most observers. Defense counsel Reid had a gay time picking their testimony apart at will. One of the key witnesses for the prosecution was an ex-airman who had served inauspiciously under Colonel Mitchell in World War I. Reciting an obviously memorized speech, he testified in glowing terms to the bull's-eye accuracy of the German antiaircraft gunners.

"I see," said Mr. Reid blandly. "Did the German antiaircraft often keep you from carrying out your missions?"

"Well, you had to be careful," the witness hedged.

"You were afraid of them?"

"I object." Gullion was indignant.

Colonel Winship, the law officer, coughed delicately. "Is counsel for the defense suggesting that the witness is a coward?"

"His direct testimony makes me think he was very much afraid."

Unable to restrain himself, the witness leaped to his feet, his face flaming, and shouted, "I am not afraid of antiaircraft fire and I never was."

"And it never interfered with any of your missions?" Mr. Reid shot back.

"Never," thundered the witness, as the horrified Gullion buried his face in his hands.

On the morning of December 17, Reid was due to make a final rebuttal summing up the defense. Everyone in the room stirred excitedly as Billy Mitchell unexpectedly got to his feet. "May it please the court," he said, "I desire to make a statement. My trial before this court-martial is the culmination of the efforts of the General Staff of the Army and the General Board of the Navy to depreciate the value of airpower and keep it in an auxiliary position which absolutely compromises our whole system of national defense. These efforts were begun as soon as the sound of the cannon had ceased on the western front in 1919. When we sank the battleships off the Virginia capes in 1921, and again in 1923, and proved to the world that airpower had revolutionized all schemes of national defense, these efforts were redoubled and have continued to this day. The truth of every statement which I have made has been proved by good and sufficient evidence before this court, not by men who gained their knowledge of aviation by staying on the ground and having their statements prepared by numerous staffs to bolster up their predetermined ideas, but by actual fliers who have gained their knowledge first-hand in war and peace. To proceed further with the case would serve no useful purpose. I have therefore directed my counsel to entirely close our part of the proceedings without further argument."

A hush came over the room as Billy sat down. There was much clearing of throats and blowing of noses. Mitchell felt a touch on his shoulder. Turning around, he was surprised to see his old friend Will Rogers sitting in the first row of the courtroom directly behind him. Blinking back his tears, Rogers threw his arm around Mitchell's shoulders, "Keep punching, Billy," he cried, "the people are with you."

In her fine biography of Billy Mitchell, My Brother Bill, his sister Ruth reports: "That almost broke Bill down as no slander or invective could. He said years later, 'It was a moment of tenderness—the one moment of all that nightmare that I shall never forget.' "

It was now Major Gullion's turn to sum up. Eternally fixing himself as the villain in the place, Gullion denounced not only Mitchell but every witness who had appeared for the defense. His language was so intemperate that even the judges and his own associates must have winched with shame. Of the witnesses, he dismissed Admiral Sims as "opinionated, narrow minded, egomaniacal, his eyes fixed in selfish stare upon his own career." He brushed aside Sheridan as "the half-truth type," Capt. Robert Olds as "the memory expert who waited 4 years to tell his story until Chamberlain, as well as Wheeler, was dead." Of LaGuardia, he said, "That congressional expert is beyond my description." But he really warmed up to his subject when he got to Billy Mitchell: "On September 5, the accused broadcast throughout the land charges of incompetence, criminal negligence, and treasonable administration against the War Department. At the same time, he charged fellow officers with gross ignorance and falsehood. Barely 3 days had elapsed after the *Shenandoah* was destroyed, yet this self-appointed prophet presumed to explain her loss. If that is his idea of mature deliberation and sufficient time, what credit can be given to his judgment in other matters? * * *

"Is this man a Moses fitted to lead the people out of a wilderness that is his own creation only? Is he the George Washington type, as counsel would have you believe? Is he not rather the all-too-familiar charlatan and demagog type like Alcibiades, Catiline, and, except for a decided difference in poise and mental power in Burr's favor, like Aaron Burr?

"He is a good flier, a fair writer, a good shot, flamboyant, self-advertising, widely imaginative, destructive, never constructive except in wild, nonfeasible schemes, and never overly careful as to the ethics of his methods.

"This court has had an opportunity to study those methods not only as revealed in his statements of December 5 but also in his former statements which counsel has had the gall to read into the record. * * *"

His eyes wild, his hair hanging over his eyes, Gullion pointed a bony finger at Mitchell and shrieked in an almost hysterical voice, "We ask the dismissal of the accused for the sake of the Army whose discipline he has endangered and whose fair name he has attempted to discredit. We ask his dismissal for the sake of the young officers of the Air Service whose ideals he has shattered and whose loyalty he has corrupted. We ask his dismissal in the name of the truth under whose aegis he has sought protection but whose face he does not know." He hung his head and placed his hand across his heart. After a pause for wind, he drew himself up to full height again. "And finally," he screamed, "we ask it in the name of the American people whose fears he has played upon, whose hysteria he has fermented, whose confidence he has beguiled, and whose faith he has betrayed." Guillion then bowed deeply, like a ham actor, and walked to his chair.

The hush that fell over the court was the kind that usually precedes a lynching. General Howze glanced nervously around the fringes of the room to make sure that all the guards were in place. Then he called a 5-minute recess. After the recess, the president of the court rose and said in a solemn voice, "The court will now be cleared and closed."

At 3:40 p. m. the judges filed solemnly out of the room to consider their verdict. At 6:34, they returned and took their seats. As General Howze stood up to read the verdict, it seemed that all pride and dignity had left these eminent men. They slouched in their chairs like small boys, gazing down in their laps at their folded hands.

"The court is ready to make an announcement and it is desired that there be no demonstration of any kind." Mowze's face was stoic. "The court, upon secret written ballot, two-thirds of the members present at the time the vote was taken, concurring in each finding of guilt, finds the accused guilty of all specifications and of the general charge. * * *"

The sentence was, on the surface, surprisingly lenient: Mitchell was to be suspended from rank, command, and duty, with forfeiture of pay and allowances for 5 years. A closer look revealed that it was a last desperate attempt by the War Department to strike a bargain with the rebel: "'Keep quiet for 5 years and we'll forget the whole thing," was the interpretation most people gave to the sentence. President Coolidge even offered to restore his pay during that period, an obvious gesture that would have been better if it had not been made. As far as Mitchell was concerned, the whole setup was unthinkable. On January 27, he resigned from the Army.

The aftermath of the Mitchell court-martial was explosive and gave the Government some bad moments for months after. Newspaper headlines screamed of "fix" and "crucifixion." The New York Sun ran a mock advertisement: "Wanted—man for colonel in the United States air service. Must be a good listener. Willing to overlook anything. One with no flying experience preferred. Apply court-martial board, Washington, D. C."

The repercussions in Congress were unprecedented. Scores of bills were introduced that ranged from impeaching the President and court-martialing the judges who had convicted Mitchell, to overriding the verdict of the court, making Mitchell a four-star general, and immediately putting in force all of his recommendations. In flowery bursts of oratory, he was compared to Savonarola, Joan of Arc, Galileo, Columbus, and Socrates—"they made him drink poison too." All over the country people were gathering to form "fair deal for Mitchell" committees. But as is so often the case when people talk too loud and too long, nothing actually was done. The sentence stood, and other matters of more immediate concern pushed Billy Mitchell out of the limelight—but not out of the news.

Like the fighting man that he was, Billy Mitchell carried on his crusade for airpower from his home in Virginia. He started a campaign to found an Air Force Academy, on a par with West Point and Annapolis, with public contributions. But just at the point when the goal was in reach, he changed his mind. "It's no good this way," he told his friends. "The Government has to be in back of it or it can never mean anything."

His flow of articles preaching the gospel of airpower continued unabated throughout his retirement—all the court-martial had actually succeeded in doing was to increase his output of words and argument. In 1928, when his article, Will Japan Try To Conquer

the United States, appeared in Liberty magazine—outlining a hypothetical design for Japanese aggression which included a surprise attack in the Pacific, capture of the Philippines, Dutch Harbor, and a drive through Alaska—the forerunners of the "America firsters" charged him with being a warmonger.

Ironically, while the United States was turning a deaf ear to his pleas, the Japs and the Nazis were hanging on every word he said, translating his theories into action, lending ironic truth to Major Gullion's tongue-in-cheek charge that he was a prophet.

Thirty years have passed since the court-martial of Billy Mitchell. Today, even the stodgiest admiral will happily admit that the only crime Billy was guilty of was being born too soon. In 1945, 9 years after he died peacefully in his sleep, Col. William (Billy) Mitchell was promoted, posthumously, to the rank of major general and awarded the Congressional Medal of Honor. In 1947, Congress gave the Air Force its independence—not quite as he had envisioned it, but a big step in the right direction. The 1950's saw his fondest dreams of the United Defense Department realized in the inauguration of the Joint Chiefs of Staff. Just this year, the last of his hopes materialized with the establishment of an Air Force Academy on a par with West Point and Annapolis. There is even a move under way in Congress to make Billy the Air Force's first five-star general.

History is writing a Hollywood ending to the saga of Billy Mitchell. A grateful and enlightened Nation, humble in its remorse, heaps belated praise and glory on the grave of the hero whose cause was recognized too late. But, in the end, the medals and honors and the remorse mean little. The vindication of Billy Mitchell and the Nation's own bloody absolution were accomplished in one fiery day of reckoning at Pearl Harbor on December 7, 1941. But it's a safe bet that Billy wouldn't have wanted to be around to collect his last laugh.

The Late John D. Dingell

SPEECH
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, I would like to add my voice to the beautiful hymn of tribute paid to the late JOHN DINGELL by his colleagues in the Congress.

JOHN DINGELL was an honorable and courageous man who was thoroughly dedicated to the needs and desires of the average American. In his 23 years of distinguished service in the House of Representatives he provided outstanding leadership in the fight for social security, the National Labor Relations Act, national health insurance, and other New and Fair Deal reform measures.

He carried on the fight for liberal legislation despite a lingering illness which caused him untold pain and suffering. But JOHN DINGELL never permitted his own suffering to interfere with his legislative goals. I was always proud to have him as a friend as well as a brother member of the International Typographical Union.

JOHN DINGELL was a true statesman, endowed with the ability of relating complex legislation to the needs of people which he so sympathetically understood. His high ideals and sincerity of purpose were a source of inspiration to his fellow Members who respected and admired him. He will be sorely missed in the crucial days ahead.

We welcome his son, JOHN D. DINGELL, who has been chosen to carry on the work so nobly advanced by his distinguished father. To our late colleague's wife and children I extend my deepest sympathy in their great loss.

Our Military Personnel

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, an excellent article from Iron Age entitled "Are We Unfair to Our Military?" has just been called to my attention. It is filled with truisms and is a strong reminder that those upon whom we depend in war and national emergency often are forgotten in the lethargic and comfortable periods of peace. Under leave to extend and revise my remarks, I reproduce this article by Tom Campbell, editor, in full:

ARE WE UNFAIR TO OUR MILITARY?
(By Tom Campbell)

We as Americans blow hot and cold. Hardly ever do we strike a nice balance. Usually this doesn't hurt us too much. But sometimes it does. Even then we are slow to admit it.

For almost 3 years we have been tough on our military people. The morale of the Armed Forces has been declining steadily.

You can't fight a war—hot or cold—with Univacs alone. You can't expect officers and enlisted men to feel deeply the need for patriotism and service in the midst of a cold, cut-and-dried atmosphere almost completely dominated by civilians. You can't have a spirit of sacrifice with accountants and efficiency experts breathing down your neck—all of the time.

The exodus of trained personnel from the services after costly training is something that should frighten us. We can't stop this trend by adding another Assistant Secretary of Defense.

The longing looks which some top-level officers aim toward their retirement is not healthy. And the speed with which they join industry is not the best testimonial for choosing the services as a career.

Military people who live for their country do not engage in public debate unless the principle and the stakes for freedom are great. Such a disciplined attitude covers up the long steady accumulation of frustrations shouldered by military people.

You can do something about this. As businessmen, through your organizations, friends, and other groups you can call for better morale and a changed attitude toward the military. This is not a passing fancy. It is known that many top-level military people are upset over the treatment accorded the services at various times in the past few years.

Furthermore, we have placed a terrible burden upon President Eisenhower because he is an outstanding military leader. We expect him to settle the disagreements between the civilians in the Pentagon and those whose whole life and training is tied up with the security of our country.

No one expects the military to run our country. But in making sure they don't, it isn't necessary to degrade the services.

The Celebrated Heyer Case

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12, 1956

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the November 1955 issue of the Journal of the Bar Association of the District of Columbia. This article is of interest to all of us who are concerned with the welfare of small business. The article points up in particular some of the difficulties which a smaller company experiences in connection with the effort to obtain a Government contract.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CELEBRATED HEYER CASE

(By Carl L. Shipley, Esq., special assistant to the Attorney General of the United States)

The small businessman[1] who submits the lowest responsible bid on Federal Government military contracts not infrequently finds he has entered a chamber of administrative horrors from which he finally emerges dazed and shaken, and without the contract. The experience of the Heyer Products Co.[2] of Belleville, N. J., is a hair-raising example of what can happen but should not. It is a laboratory specimen of bad procurement practices as it affects a small business, and calls inexorably for legislative correction.

DOLLAR VALUE OF MILITARY PROCUREMENT

The Federal Government awards about $15 billion of military prime contracts each year. Of this vast sum, only 20 percent of the dollar value is placed with small businesses.[3] When a small manufacturer undertakes the expense of preparing a bid, he is entitled to a reasonable expectation that he will obtain the contract if he is the low bidder.

PHILOSOPHY UNDERLYING MILITARY PROCUREMENT

The Members of Congress have always insisted that the Government follow free enterprise principles in its military purchases. Procurement officials must advertise their requirements and award contracts to the lowest responsible bidder who can supply the product. This policy lets the military get what it wants when it wants it, while at the same time protecting the taxpayers' dollars by compelling purchases at

[1] There are 4 million small businesses in America, representing 96 percent of all business. "Nation's Business," April 1954, p. 57. See Second Semi-Annual Report, Small Business Administration, July 31, 1954.

[2] Heyer, manufacturers of automotive test equipment. Transcript of hearings before a subcommittee of the Senate Select Committee on Small Business, March 5–May 15, 1953.

[3] Second Semi-Annual Report, Small Business Administration, July 31, 1954.

the lowest bid.[4] In short, Congress has elected to rely on the time-tested method of competitive bidding. And the courts have confirmed and insisted upon that policy:

"The agents of the Government stand upon a different footing from private individuals in the matter of advertising for the letting of contracts in behalf of the United States. They have no discretion. * * * They must accept the lowest bid * * *."[5]

Moreover, the Supreme Court of the United States has inferentially made it clear that the lowest responsible bidder has a legal right to have the contract awarded to him:

"There must be a point of time at which discretion is exhausted. The procedure for the advertising for bids for supplies * * * to the Government would else be a mockery—a procedure, we may say, that is not permissible, but required. * * * By it the Government is given the benefit of the competition of the market and each bidder is given the chance for a bargain. It is a provision, therefore, in the interest of both the Government and the bidder, necessarily giving rights to both and placing obligations on both. And it is not out of place to say that the Government should be animated by a justice as anxious to consider the rights of the bidder as to insist upon its own."[6]

Apart from the actual requirements of the law, the Comptroller General of the United States has ruled that the public interest requires awarding of contracts to the lowest bidder:

"It would not normally appear to be in the public interest for the military departments to make awards of contracts to firms when it is known at the time that the supplies are obtainable elsewhere at a lower price."[7]

The legislative and judicial policy as to military procurement is restated in the Armed Services Procurement Act of 1947,[8] the statute currently governing military purchases. Section 3 (b) of the act provides as to advertised contracts that "Award shall be made * * * to that responsible bidder whose bid * * * will be most advantageous, price and other factors considered." The legislative history of the act leaves no doubt but that Congress had a clear purpose to require the Pentagon to make its purchases from the lowest bidder.[9] The "other factors" referred to in the section simply comprehends the bidder's experience and financial ability.[10] In short, if a bidder is competent and reputable, the act leaves no choice but award to the lowest bidder.[11]

APPLICATION OF THE ACT

However, as the Heyer case shows, there is sometimes a wide gap between the commandment of the act and the actual procurement policy followed by the Pentagon.

The story begins on November 3, 1950, when Heyer submitted a bid of $134,000 in response to an invitation by the military to bid on a contract to manufacture 3,000 low voltage circuit testers, an uncomplicated electrical device widely used in industry. Heyer had built thousands of similar units for commercial use, and over 52,000 of them for military use during World War II. His company had been a well known manufacturer of such test equipment for over a quarter of a century, supplying such enterprises as Ford, Goodyear, Goodrich, Firestone, Willard, Exide, Atlas, and Autolite.[12] In short, no rational mind could reasonably question his experience, reputation, or competence.[13]

Nonetheless, the contract was awarded to a large business concern which was seventh highest bidder at almost double the Heyer low bid price, at an additional cost to the taxpayer of $116,000. A committee of the Senate investigated the transaction and concluded:

"The representatives of Army Ordnance who appeared before your committee to explain * * * why the Heyer bid had been rejected did not give convincing explanations."[14]

However, by the time the Senate had made its findings it was too late to correct the error, so Heyer was deprived of his legal right to the contract as low bidder, plus the expense of preparing the bid, and the taxpayer was saddled with a $116,000 unnecessary increased cost.

In the course of events the same military procuring agency on March 17, 1952, issued another invitation for bids on a contract to manufacture 5,500 more of the self-same low voltage circuit testers.[15] Heyer, ever hopeful, submitted a bid of $205,000, accompanied by a sample, a letter of explanation, and a schematic diagram with specifications.[16] He left nothing to chance. Despite the fact that Heyer was again the lowest bidder, the contract was again awarded to the seventh high bidder, at an additional cost to the taxpayer of $190,000. Oddly enough, the seventh highest bidder was the same large company which had been the successful but seventh highest bidder on the first contract. In speaking of this matter, the Senate Small Business Committee said:

"Heyer was low bidder on a low-voltage circuit tester contract wihch OTAC awarded in both instances to the Weidenhoff Co., in each case the 7th high bidder. This incredible coincidence would seem to indicate that the officials in charge at OTAC have no wish or will to abide by the spirit and purpose of the Armed Services Procurement Act of 1947."[17]

The Senate scheduled a second hearing to inquire into the matter with the observation that "* * * the experience of the Hyer Co. on the second low-voltage cricuit tester procurement would indicate that the officer in command at OTAC either flagrantly and wilfully or negligently disregarded the findings and recommendations of your committee * * *."[18]

During the course of the Senate hearing Heyer expressed the thought that the action of the procurement officials might be retaliation against him for testifying before the committee in the first hearing. The committee was unable to obtain any factual substantiation of the charge, but was forced to concede:

"Your committee can only conclude that for some reason unknown to it, OTAC wished to favor Weidenhoff, or to eliminate Heyer. The evidence adduced permits no other inference, unless it be attributed to gross incompetence."[19]

The Senate committee did obtain irrefutable proof that a crucial engineering report had been rewritten to mislead certain military officers, and reported:

"This committee is gravely concerned that such a situation can exist at OTAC. Again, the committee cannot guess at motives, but can only recognize it as highly irregular, and as an indication of discrimination against Heyer * * *."[20]

Among other somewhat strange developments, the Senate committee discovered a behind-the-scenes administrative breakdown wherein the Under Secretary of the Army had been overruled in cancelling the improper award of this contract by his subordinate deputy.[21] The committee was unable to learn just why the deputy arrogated to himself such authority, and could only conclude, "It comes close to arbitrary action and leaves much to be desired if the Armed Services Procurement Act of 1947 is to have any meaning and purpose."[22]

The most astonishing development of the Senate hearing was the revelation that the executive vice president of the company, which, despite the fact its bid was seventh highest, was awarded the contract, had engaged in giving expensive gifts to Government procurement officials handling its business.[23]

After taking extensive testimony, the Sen-

[21] S. Rept. 1092, supra, p. 16.

[22] S. Rept. 1092, supra, p. 17.

[23] See pp. 38 and 76, transcript of hearings, Senate Select Committee on Small Business, Mar. 5, 1953. The vice president of the

ate committee concluded that Heyer should have been awarded the contract in the second case, as it should have in the first. If the act had been applied as intended by Congress the taxpayer would have been saved over $300 million. Just as importantly, the Heyer Co. would have obtained the contracts which it was legally entitled to have. Again, however, by the time the Senate investigation was completed, the contract had been completed by the high bidder and no practical remedy was available. The injustice was beyond correction. In the words of the Senate committee, "All in all, this is a shameful story." [24]

CONCLUSION

The Heyer case, as set forth above, is only important because, as the Senate committee pointed out, it is "symptomatic of the general situation existing * * *." [25] As suggested by the Heyer Co., the Armed Services Procurement Act of 1947 should be amended to prohibit the award of military procurement contracts to any but the low bidder unless a hearing is held at which the lowest bidder can appear and protest the award.[26] This would protect the taxpayer's purse by making the low bidder the watchdoy of the public interest. Certainly the Heyer case, as an example of what is happening, is warning enough that competitive bidding is no longer the rule in military procurement.

Weidenhoff Co. gave an Army employee a $50 watch.

New Highway Construction

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, January 9, 1956

Mr. BUSH. Mr. President, in the January 6, 1956, issue of Collier's Weekly, there appeared an article entitled "Where Are Those New Roads?" written by Theodore H. White, an editor of Collier's Weekly, and incidentally the author of the very excellent book entitled "Fire in the Ashes," an analysis of the political situation in Western Europe in the 1940's, as it appeared to him.

The article about the roads makes an excellent case for the pressing need for a national system of interstate highways, and points out some of the difficulties which the President's program encountered in the last session of Congress. Mr. White suggests that another very strong attempt should be made to solve the great problem of our inadequate highway system.

I ask unanimous consent that the article by Mr. White may be printed in the Appendix of the RECORD. I am informed by the Public Printer that the estimated cost of printing this article is $340. I ask that it be printed in the RECORD, notwithstanding the estimate of cost.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHERE ARE THOSE NEW ROADS?

(By Theodore H. White)

One year ago, in January 1955, the American people were invited by the President to embark on an adventure for which nothing in the history of man offered any precedent. It was, in name, a road-building program, but a road program of such stupendous engineering magnitude as to make the works of man in any other age seem almost aimless scratchings of the ground. It was a proposal to build such a system of roads in the United States as would make the Great Wall of China seem no more than a welt on the earth's surface and the pyramids of Egypt no more than warts. Calling for combined State-and-Federal road outlays of $101 billion over 10 years, President Eisenhower's highway program dwarfed any other enterprise ever undertaken or projected by our Government, with the sole exception of World War II.

Whatever became of it?

The great highway program of 1955 expired in the Congress of the United States. It died in an extraordinary convulsion of contending interests which paralyzed congressional action. Hardly a murmur, however, was heard from the ordinary motorist behind the wheel, although his interests are just as intimately, and far more tragically, involved inthe inadequacy of our present road net as the big battalions of open pressure.

In January 1956, the second session of the 84th Congress must again begin grappling with the problem of the Nation's highways, the slaughter and waste forced on us by a road system no longer able to match the needs of a growing country. Who will be heard from in 1956?

The highway battle will almost certainly explode in Congress in the same clash of interests (all, curiously enough, recorded in favor of better roads). Equally certain, it will end again in paralysis, unless the public bestirs itself as it did not during the great roadblock of 1955.

Deep somewhere in the origins of this new national highway program lurk the strains and nightmare fears of the average American motorist. Though historians of the future may someday write that the Americans were a race of killers who slaughtered one another in public places with the casual indifference of a tribe of rubber-wheeled Huns, the everyday carnage does not leave ordinary Americans unmoved. Daily, we mangle one another, ripping limb from limb, hurling two-ton missiles against the frail bodies of unprotected citizens, lacerating our nerves with instantaneous gambles on what may be approaching at the hidden corner or speeding down the other lane beyond the masking truck.

The current Christmas-New Year's holidays, for example, will suddenly terminate the lives of more than 1,000 Americans journeying happily by car. Last year we killed 36,000 citizens on our public roads and wounded or crippled 1,000,000 more. Since 1945, we have killed off as many Ameircans on our streets and highways as did Nazis, Japs and Communists on every field of battle of World War II and Korea combined. All this, moreover, will go on and on until we get highways of modern design. These, say the experts, can reduce our annual death toll by 25 to 35 percent, or save a staggering 10,000 American lives each year by engineering alone.

The great highway program of 1955, however, was proposed not so much out of pity and compassion as out of simple need.

We in America are stranglig on our own prosperity. Our country is approaching an age and level of development where the problems that face us are of a kind no other civilization has ever known before. We confront an entirely new order of anxities—and among the foremost of these is the problem of the automobile on our streets and highways.

For it is the automobile, as much as any other single phenomenon, that sets our way of life apart from the rest of the world. Everywhere else, common people have always been separated from their betters by the simple distinction of whether they walked or rode. In times past, people who rode were "cavaliers," hence aristocrats. In America today, every man is a cavalier.

Seventy million Americans—so says the American Automobile Association—take their annual vacation in the family car. Every year their appetite and their range of travel broadens so that, today, it is difficult to remember or recognize how fresh and novel even in our own country this revolutionary impulse is.

It was only yesterday—in 1911, the year that Dwight D. Eisenhower entered West Point—that a commercial automobile first managed the road trip from coast to coast. The expedition from Denver to Los Angeles alont took 66 days; tomorrow, if Dwight D. Eisenhower's road program becomes fact, that same trip will be little more than a weekend run.

Today, every perspective of our country and times leads us to believe that we are only at the beginning of the automobile age, the era of complete mobility. Today, we have an automobile industry that turns out 8,000,000 new vehicles a year. This industry has already equipped our highways with 61 million cars and trucks; in 10 years there will be some 81 million in use, and in another decade the total will be almost 100 million.

What makes these figures ache is their relationship to our roads. At the outbreak of the Second World War, we had about 3,300,000 miles of road in this country; since then we have added about 1 percent in new road mileage. The present length of our roads is almost permanently frozen. As we add new automobiles, the existing lanes must, therefore, be broadened continuously. Since the war, we have worked energetically but sporadically on bits of superhighway; but in the same period the number of vehicle-miles driven in this country has doubled, and even with the new roads our traffic lanes are totally inadequate. If, at present, every registered automobile in the country took the road at the same time, we would have one car spotted every 700 feet on every street, every country road, every lane of every highway. And in 20 years their numbers may nearly double. Now, to any American who has let his throttle out as he turned off the cloverleaf onto one of our great new superhighways, denunciation of these great lanes must seem like nonsense. We Americans are people who thrill to road building and engineering; each new overpass, each great split-lane seems to have added dimension to our power and imagination as individuals.

Our newest State highways—the majestic Ohio Turnpike, the crowded New Jersey Turnpike, the imperial New York Thruway—are superb thoroughfares, the best of all time. But they are only stumps and pieces of a highway net. They are not a system. They are built only in and through limited areas where the engineers gamble that the toll fees of normal driving will repay in precisely calculated and collectible sums the enormous investment of private bondholders. They are not enough, and they dump the traffic they collect on the outskirts of our big cities in chaos and confusion.

The real problem of road building in America is new, and peculiar to our kind of democracy. In a country where every man is equally privileged and equally mobile, no citizen can be prevented from using the roads when and how he wants—even if everyone wants to use them at the same time. And, just as the arteries of our blood must be prepared to handle the emergencies of physical exertion or let us die, so the arteries of our public communication must be able

to handle the convulsions of seasonal or weekly peaks in traffic or let anarchy prevail.

This is why our engineers figure that every highway must be designed to carry all normally predictable congestion (except for those 30 busiest hours of the year—the summer weekends and Labor Day and Fourth of July hegiras—whose peaks cannot be handled except by astronomic expenditures.) This is why, too, our highways must be designed to handle any legitimate truck load.

Our roads today, fine as they may feel under the tread of normal week-day traffic, no longer meet these standards. Certain sections of our Nation's choking road net are already killer belts—the Boston Post Road between New England and New York, the old Suicide Alley out of Baltimore to Washington which engineers call "Bloody One," the southern leg of the same U. S. 1 as it stretches down Florida from Jacksonville to Miami, the "Grapevine" along U. S. 99 dropping into California's San Joaquin Valley * * * these are already notorious murder lanes.

As fast as we build, we create traffic jams. The New Jersey Turnpike, opened in 1952, is already carrying a traffic load not predicted until the early 1980s. Already, even with its new avenues of access, New York City's approaches are so congested that on a summer Monday morning when returning weekenders mingle with the truck peak, the traffic backs up so fast at the mouth of the Holland Tunnel that an athlete, running as fast as he can, could not keep up with the tail of the jam once it begins to clot backward.

All this is costing incalculable sums of money. It costs us, in addition to the cold valuation of $4.3 billion annually in accidents, another $5 billion in wastage of labor time, gasoline, rubber and equipment. It literally costs less to ship a crate of apples all the way from Oregon to the Hudson River than to get it across the Hudson to New York's East Side.

This road shortage may finally, if war comes, cost us our national life. For none of the great metropolitan areas possesses anywhere near adequate road facilities to evacuate swiftly the more than 70 million people our Civil Defense authorities estimate will have to flee.

The crisis has been swelling for a long time. But up to now our highways and roads have been in the domain of State and local governments, with the Federal Government appropriating a modest annual sum to subsidize them in their work. Last year, finally, we arrived at a stage when it was obvious that the local resources and local programs could no longer meet what is now a national emergency. Which is why, 1 year and 3 months ago, Dwight D. Eisenhower asked a group of 5 distinguished citizens, headed by Gen. Lucius D. Clay, retired, to devise a program for meeting the crisis head on.

The Clay report that issued from their labors was hailed editorially almost unanimously, and in a few weeks, now renamed the President's highway program, was delivered to Congress for action. Whereupon nothing further happened except debate. For suddenly our lawmakers found themselves engaged, at the supreme level of national politics, with those forces and groups which have always, in every statehouse, made highway politics synonymous with bitterest controversy.

The Clay proposals were not, of course, born simply out of the amateur ruminations of a number of civic-minded gentlemen enthusiastically exploring our needs over a period of a few weeks. They were, as a matter of fact, only the polished form of a dream that had slowly been maturing in Washington for 20 years.

For Washington, among other things, is a city of dreamers. Among the boldest of these dreamers have always been the engineers of our Bureau of Public Roads. And the dreams that emerged in finished form in the Clay report were born at the Bureau in the darkness of the depression. At that time, some now unremembered Congressman pushed through Congress a resolution calling on the Bureau to scheme up a major road-building program to soak up depression unemployment. What the Congressman wanted, however, was a geometrical grid across the Nation—3 multilane highways running east to west, 3 more running north to south, all of them darting up hill and down dale, straight as an arrow, with little or no relationship to the needs of the country.

The engineers of the Bureau of Public Roads soon pointed out how phenomenally uneconomic and expensive such a grid would be. But they suggested an alternate plan, called the National System of Interstate Highways, which would be something entirely different. Through the years, the dream system gradually won official recognition. Franklin D. Roosevelt blessed it as a measure to pick up postwar economic slack; Congress, in 1947, formally made its map tracings official as the outline of our future in public communications.

The interstate system will be based on existing roads. In its improved form, as it lies on the planning boards of the engineers, it is still a dream—a spectacular in concrete, asphalt and steel. Forty thousand miles of multiple-lane highway, running between major cities, will stretch across the Nation in a road net distinguished from any previous conception of engineers in capacity, durability grandeur and sweep.

Men will be able to drive from New York to San Francisco, scarcely, if ever, slowing at a traffic light. Truckmen will grind on hour after hour, without shifting gear or slowing to the agony crawl of the upgrade. Passenger cars will sweep by them in other lanes without ever once having to poke their noses out into the perilous stream of opposing traffic. Hills will melt away and distances will evaporate.

Not only that. The interstate recognizes the tragic plight of our strangling big cities. It is the first serious plan to cleave through the tangled approaches of our great metropolitan areas and clear broad avenues of entrance and exit through the choking metropolitan jungle and its sprawling suburban fringes. Where our present new highways stop at city limits, the interstate will slice directly through the urban jungle of streets in spectacular expressways that will take people through the heart of metropolis and out to the open road on the other side. It will be a system.

The Clay program—the President's highway program—made the interstate system the crownpiece of a simple three-point program.

First, it proposed that the Federal Government raise some $25 billion to spend on the great interstate to finish it in 10 years—this sum to represent 90 percent of the total cost, the balance to be raised in the States. Thirteen billion of this would be spent on urban approaches alone. Where modern toll roads were up to the dream standards of the interstate—some 2,500 miles of such roads exist, mainly in the North—the States which had built them would be reimbursed.

Second, it proposed that current routine Federal appropriations for highway aid to secondary and feeder roads of the great Interstate be continued at $600 million a year, or slightly less than their present total.

Third, it proposed a way for paying for the great new Interstate—that the Federal Government would set up a Federal Highway Corporation which would sell $20 billion worth of bonds, the bonds to be paid for out of current gasoline taxes, which would bring in ever more income as the new roads were built. The bonds, it was estimated, would take 30 years to pay off.

It was this third proposal that triggered off the fight. For the politics of American highways has always been dominated by one overwhelming truth: everyone loves roads, but no one wants to pay for them.

Once the great highway program reached Congress last February, all the complications of this truth began to unfold. The 1955 battle of the highways, as fought in Congress, proceeded in three main stages, each illuminating a separate area of uncompromising conflict.

Both of the first two stages of battle unrolled in the Senate—and each had a partisan champion. One was the freshman Senator from Connecticut, PRESCOTT BUSH, an able and distinguished man making his mark for the first time upon the Senate and Nation in an issue of national significance. In the absence of senior Republican leadership, he emerged as the captain of the administration's road program to raise 20 billion Federal dollars immediately by bond issue, as proposed in the Clay program. The other was the freshman Senator from Tennessee, the shrewd and eloquent ALBERT GORE, who questioned not only the wisdom of so huge and inflexible a national commitment to roads, but, even more, the sweeping powers the Federal Government would arrogate under the Clay proposals over a domain that had always hitherto been under the States.

The first of the two Senate struggles raged over the bond-financing provisions of the administration's highway bill.

For 20 years the Senate had listened to Republicans denouncing Democrats as borrowers and spenders, recklessly saddling the Nation with debt and burden down through all the unborn generations of time. And the Democrats had always replied that this was a healthy, growing country whose children could well afford to pay for the benefits we, their fathers, were so wisely preparing for them.

Now the sides switched. The Republican bond corporation proposal, said the Democrats, was trickery, fraudulent evasion of the legal debt limit of the Nation. The bonds would eat up $11 billion of interest in addition to their principal; only bankers would profit.

It was as if, they implied, the huge $280 billion official national debt were about to spin off a satellite corporate debt into space, perhaps followed by others, until we had a whole constellation of satellite debts whirling about the economy, all exerting an irresistible inflationary pull.

"I for one," summed up Senator GORE, "think that the need for highways must be considered along with, and balanced with, the need for other programs, such as schools and hospitals. It doesn't make sense to me to segregate the highway problem by excluding highway expenditures from the budget and from the public debt. It doesn't make it any easier to pay for them. In my opinion, no financial legerdemain can isolate the highway expenditures or eliminate their impact upon our economy and upon the Treasury of the United States."

To all of which arguments, the Republicans replied as if the mantle of Franklin D. Roosevelt and all the ghosts of the New Deal had descended on them. Nothing great or creative is ever done, they said, unless one reasonably finances the present out of the future. This is what a homeowner does when he raises a mortgage or a new home, what a corporation does when it issues debentures for a new plant, what the Nation must do to finance expansion in time of need.

They argued that if money were available immediately, through the bonds, to build the system now, highway use would increase so rapidly that gasoline taxes would rise enough to pay off the entire debt burden within 30 years without a single extra tax. Roads would be built, said the Republicans—and it would be painless.

"The importance of the Interstate Highway System is so great that it has to be provided for now," said Senator BUSH, who led the Republican defense. "It must be completed within 10 years and must be put in effect as a whole, and not piecemeal * * * The plan contained in * * * the Clay bill * * * is a pay-as-you-use plan. Nobody who has been in business would say that it is not good business to borrow money to build productive assets. That is the only purpose of borrowing money in the field of commerce and industry. It should be likewise in Government."

The Senate gravely listened to both sides, then by a resounding 2-to-1 vote rejected the President's bond plan. It then turned to phase two of the fight—the argument over the alterative plan brought in by Senator GORE for the Democrats. The Gore bill was quite different from the President's original proposal. It carefully omitted any financing provision at all, thus dodging that fight; the money for the highways it proposed would be found, said its proponents, by the House—where, constitutionally, all bills taxing American citizens must arise.

Deep and basic to the thinking of the Gore bill were several convictions—that the secondary and country roads would be shortchanged if the Clay proposals for pouring money into the Interstate went through; that the Nation had too many other needs to commit itself irrevocably to so large a program at once; that control of the money it appropriated must rest with Congress, not with any centralized Federal agency.

Instead of biting off a 10-year chunk of the future, therefore, it limited its commitments to $7.7 billion over a 5-year period, after which Congress could take another look at the problem. Another $4.5 billion would go to the lesser local roads that would feed the interstate.

The Gore bill represented the best thinking of Senate Democratic leadership. And the Republicans, led by BUSH again, denounced this thinking as pitifully inadequate. It was a horse-and-buggy bill, they said, as they went on to open up another continuous area of American highway debate—the everlasting struggle between metropolitan and rural Americans about where and how roads should be built.

What the Republicans objected to most was the way the Gore bill shared the enormous funds for the Interstate among the individual States. The Clay proposal had advocated that $25 billion be spent by the highway corporation where needed—largely in the congested population centers of the north and east. But the Gore bill instead insisted that at least half the money be divided among the States by the traditional formula of highway aid.

This Congressional formula, first invented in the Road Act of 1916, still quaintly reflects the era of the model T Ford and the Stanley Steamer. By this old formula, all Federal highway aid is divided in thirds. One third is shared by States according to their population; another third is divided among States according to area; the final third is distributed in proportion to their mileage of rural free delivery routes. This, of course, penalizes the heavily congested States of the Midwest and the Northeast and favors the wide-open range and farming States.

Senator GORE said he did not want money appropriated by Congress to be cut up by anybody except Congress. "I just do not believe," he said later, "it would be consistent with the public interest to place this much authority in the hands of any one person. * * * As Gov. Hugh White, of Mississippi, has said, 'Those people in Washington might wake up with indigestion some morning and decide not to give my State any money.' I am confident that Congress . . . will never agree to make a permanent appropriation of such huge sums, with the money to go into a kitty to be doled out on the basis of what the Secretary of Commerce considers to be the needs of the various States."

The Republicans called the Gore bill a "blunderbuss bill." Said BUSH. "After he has read the analysis of the distribution of the fund, I will leave it to every Senator to say whether he does not agree that that is a good term to apply to the proposed legislation. The fact is that 30 States are given less than they say they need to complete the interstate system and 18 States are given far more than they need and more than they can use. I say [it] * * * scatters dollars and does not build roads where the roads are needed."

Once again, as debate rolled on, the Senate sat in witness of a switch. The Democrats, normally as sensitive as sandpapered skin to big-city votes, voted solidly for the bill. Republicans, normally suspicious of big-city needs, voted solidly against it. But the Democrats had the votes and the Gore bill passed. It passed, to be shelved almost immediately. For while the long hearings and debates had dragged on in the Senate through March, April, and May, the Members of the House had begun to draw up their own plan—the so-called Fallon bill.

Now the Fallon bill—named for Democratic Representative GEORGE H. FALLON, of Baltimore, a long-time road enthusiasm—was offered as a work of courage and forethought. Long before the Senate had finished consideration of the bills before it, House Democrats had decided that their road bill would be one of real statemanship—which is to say that since roads have to be paid for, they would undertake to find the money. The Democrats of the Public Works' Subcommittee drawing up the road bill conferred with SAM RAYBURN, the Speaker, who praised their inclination and then, in a total breach with House tradition, told them to go ahead and write the taxes themselves.

The Fallon bill accepted the dream plan of the Interstate System, and the continuing Federal support of lesser roads as embodied in the President's program, altering them chiefly by spreading out the expenditures over 13 years instead of 10. But it flatly rejected setting up any Federal corporation to borrow the money by bonds. Instead, it bracketed the appropriations it demanded with precise tax measures to meet them.

It insisted that the burden of paying for roads must fall most heavily on those who profit most by them. It called for raising the tax on every gallon of gasoline burned in our automobiles by an additional cent (at a cost to the average motorist of about $5.56 a year). Not only that. The architects of the Fallon bill were convinced that the ponderous, pounding heavy rigs of the trucking industry are the villains that beat our roads to bits. Consequently, they proposed that heavy trucks should pay a sort of supertax—a 50-cents-a-pound tax on every truck tire over 8.5 by 18, a special 4-cent tax on each gallon of fuel for the extremely heavy diesel trucks, a new and heavier excise tax on a new truck when purchased. Such taxes meant that the normal five-axle heavy rig would be hit by what the truckmen claimed would be an additional tax bill of some $1,031 in the first year.

Well before news of these tax provisions had leaked, however, and as soon as the House Democratic leadership had made known that its roads subcommittee was writing a pay-as-you-go tax bill, every economic interest in our country with any direct or remote connection with highways girded its loins for battle in a lobbying fray rarely matched in recent history. All of them wanted highways, but all believed their very survival hung on the way Congress chose to pay for them.

Under our system of government, lobbying is a clearly legitimate and constitutional right of every citizen and group. But it is up to Congress to weigh the legitimate pleas of every group against the common good, balance off their contentions and come up with a judgment. And rarely, if ever, has Congress been under greater pressure in making a judgment between the broad but diffuse needs of a common citizenry and the sharpened needs of men whose livelihood hung on their decisions.

Two giant camps soon developed in the struggle over the bill. One was led by the railways, supported by the American Automobile Association and backed by most of the State highway officials of the country. They supported the Fallon bill. In the other were the truckmen, the tire dealers, the independent oil dealers, the diesel manufacturers—led in the grand strategy of opposition by the truckmen.

It is easiest to begin the story of the fight over the Fallon bill with the story of the railwaymen. Now, the railways have an acute and continuing interest in highways. In modern America, truckmen and railwaymen have been as bitter and unforgiving enemies as sheepmen and cattlemen on the open range of Wyoming, 80 years ago. In the past 30 years the trucking industry has grown to be a giant that grosses over $5 billion a year for freight haulage (against the railways' $8 billion).

If the great interstate system goes through, with its near-level grades, its limited accesses, its numerous and heavy-paved lanes, the truckers—now engaged principally in short-run transport—will have a chance to gnaw away as successfully at the railways' long-haul freight business as the airlines have at the railways' long-haul passenger business, and the commuters' automobiles at their suburban passenger business.

Any kind of legislation on the interstate system thus placed the railways in a delicate position. They could not, in a nation that loves highways, simply come out and flatly denounce better roads. Yet they could scarcely watch with blithe unconcern as the Nation proposed to build this spectacular roadbed for their competitive rivals. They had to present their views skillfully—by supporting the highways the Nation wanted, yet making sure their competitive rivals, the truckers, gained no advantage out of them. Which, in essence, is why the railways threw all the influence they could behind the Fallon bill.

Robert S. Henry, who is a vice president of the Association of American Railroads in Washington and a cherubic old man with a twinkle in his eye, explained the railways' position to me thus:

"Highways? Why, of course we're in favor of good highways. But we want a sound highway program and any sound highway program has to include user charges—people who benefit from it should pay, and that's particularly true of people who use these facilities to carry on commercial business. We railways pay in taxes 11.9 cents of every dollar we take in; we pay 19.7 cents more of every dollar to maintain our roadbeds and tracks. The truckers pay only 7 cents of their dollar for taxes and they get their roadbeds free. That makes 31 cents out of our dollar against their 7 cents. That's just not fair—and that's why we think the Fallon bill is such a good bill."

Exactly how much influence the railways brought to bear in the drafting of the tax features of the Fallon bill no one knows. The American Trucking Associations, of course, holds the railways directly responsible for the taxing of big trucks. According to John Lawrence, ATA managing director, "They have intervened in the highway program, attempting to promote punitive taxes on big trucks which will cripple truck competition with their own freight operations. * * * Congressmen have evidence

of that on their desks in the form of a barrage of letters, wires, and calls inspired by railroad interests, and often indeed sent to their offices in railroad envelopes. No such railroad lobby has descended on Washington in the history of the Republic as that which is now operating in support of the soak-the-truck proposals. It is this wrecking crew which is mainly responsible for throwing the highway situation out of perspective."

This bitter statement must be balanced by other facts, for the truckmen, when they finally mobilized, easly matched the railway men in power and skill of influence. Their open bitterness reflects, mostly, the fact that the railways were informed of the tax measures on trucks weeks before the truckmen realized what was happening in committee. And by the time the truckmen had become aware of what was happening they found themselves trapped as if by political jujitsu.

The railways had already taken up the position of virtue; they were supporting the Fallon bill, the boldest highway program ever proposed. But the truckmen were faced with Hobson's choice. They could accept the Fallon bill, giving them the great interstate system they so desperately wanted—yet if they did so they would have to accept a tax burden on their industry which they claimed added another $375 million a year. Or they could elect to torpedo the Fallon bill and accept the blame for sabotaging the highway program.

The truckmen elected to mobilize against the bill. And their emergency mobilization dramatically outweighed anything the railways had previously been able to muster.

"Yes," says Walter Belson of the American Trucking Associations, "we had considerable influence in killing the Fallon bill. But don't confuse the Fallon bill with the highway program. We're not such stupid idiots as to be opposed to a road program we need as much as anyone else. We were about the first group to support the highway program from the beginning. We supported it before both Senate and House, we agreed to accept increased taxes to pay for it—we'll pay our fair share, the same tax rate on fuel, tires, and equipment everyone else pays. Don't misunderstand what this means in dollars. The same rate of tax will make the big truck pay five times as much as the average passenger car in gas tax every mile it runs, 18 times as much in tire tax and 13 times as much in equipment. This is not per company, but on every individual 5-axle truck owned as against a passenger vehicle. And our State taxes run up to 40 times as much per truck as per the average passenger car."

Desperately and doggedly, all through the months of June and July, the truckmen and their allies fought to pull the tax teeth from the Fallon bill. The committee members compromised with the truckmen by moderating their original bill until the additional diesel tax was lowered by 2 cents a gallon and the tax on large truck tires reduced from 50 cents a pound to 15 cents a pound. But the lawmakers could not be moved from their conviction that it was heavy trucks that profited most from the new roads, that heavy trucks required most of the extra-cost features of the roads—the wider lanes, the sturdier bridges, the pavings of 12 inches rather than the 6 or 8 that might handle normal passenger traffic. A principle was involved, they said—a user charge was being imposed for the first time on a Federal level and special users had to pay special taxes. The truckmen could not accept this principle.

By the time Congress got around to voting on the revised version of the Fallon bill at the end of July, the final push against the bill was operating in high. An array of eloquent interests had all convened on Capitol Hill to protest its tax features.

The diesel manufacturers implied their industry would be so hobbled that it might die, thereby jeopardizing the entire national-defense program, which requires diesel engines.

The big oil companies and big time companies protested, in the orthodox tradition, that they could not see why their products should be made into patricular and peculiar tax-collecting agencies of governments—as Robert H. Scholl, of Esso, speaking for the American Petroleum Institute, pointed out, State and Federal Governments were already collecting in taxes some 35 percent of what filling stations received for each gallon of gasoline.

Independent oil companies and independent tire jobbers protested at the taxes because, they said, it would manacle them in competition with the giants of the industry, whose capital structure could more easily afford to bear the amount of additional capital frozen into the inventory of every tire or oil outlet by the new taxes. Their lobbyists painted a somber picture before the Fallon committee of thousands and thousands of little businessmen squeezed out of business because they could not carry the taxes for their customers.

"I feel," said one of their spokesmen, "like I am representing a plucked chicken with two feathers left in his tail, and there is a hand reaching out for the last feathers."

Each of the trade associations joined in battle against the bill had roots in a thousand small towns and neighborhoods of America. Now these too began to be heard from in a lobbying campaign unmatched, say many Congresmen, since the days of the Taft-Hartley bill. Telegrams began to snow on Congress—an estimated 100,000 in all, 10,000 on Congressman FALLON'S desk alone.

The telegrams were accompanied by letters. They came not only on stiff white paper under the letterheads of great firms or associations but in the grease-stained handwritten letters that worry Congressmen much more—under letterheads of "Art's Filling Station," of "Alf's Friendly Service," of "Lone Star Sales and Service."

In the final days of the fray, the AFL Teamsters Union, perhaps the most powerful influence of all, got to work, as Dave Beck decided that his truckers should back up the truckmen who employed them. Dave Beck made a personal call on SAM RAYBURN to press the truckmen's point of view as that of the Teamsters Union, whose resources are so important to Democrats in doubtful congressional districts.

Some congressmen claim they could even trace a trucker's day at the wheel by following the date lines of telegrams that would arrive. A driver might send his first wire from, say, Philadelphia at eight in the morning, his second from Harrisburg two hours later, his third from Pittsburgh that afternoon, his fourth from Toledo in the early morning.

By the time, on the afternoon of July 27, that the final roll call on the Fallon bill took place, the House and its members were adrift under impulses and pressures they could not fathom. The drive against the bill was sharp, pointed and overwhelming; but the support for the bill, which should have come from the average motorist, was conspicuously absent.

Even though experts say that modern highways would save him $100 a year in car expenses, the average motorist was silent. Though Andrew Sordoni, the president of the American Automobile Association (himself a commercial truckman), told the House that his members supported the bill and would accept it, he could deliver few votes.

Some congressmen were deeply upset by the breach of tradition which had let a new committee write the taxes that had always previously been the sole prerogative of the august Ways and Means Committee. Even more important, many of them dimly sensed (and some were sharply informed) that the new bill, by increasing gasoline and tire taxes, was extending the taxing power of the federal government into the domain which the individual states had always considered as one of the reserved areas of their authority. Old-line State righters bridled.

And, finally, party discipline and control on both sides collapsed. The Fallon bill was a Democratic bill. SAM RAYBURN, the Speaker, convinced of his authority and prestige, felt certain down to the last minute that party discipline would rouse the necessary votes; when, at last, he realized it could not, it was too late to improvise the tactics or counterpressures to whip his errant Democrats into line.

The Republicans erred as badly. The White House, which had always wanted to pay for the roads by bond borrowing, came at the last minute to the conclusion that the Fallon pay-as-you-go measure was better than none. But by the time Sherman Adams had phoned this eleventh-hour decision to Republican Congressman DEWITT HYDE, of Maryland, voting had begun. By the time HYDE got the message to Republican floor leaders, a House colleague later recounted, the Republicans were voting almost solidly against the bill and it was too late to switch. By the resounding margin of 292 (mostly Republican) to 123 (mostly Democratic), the House had rejected the Fallon bill, and with it any hope of a start on the new highways in 1955.

What of the new session of Congress that opens in January? Will it give America any start on a modern highway system?

At this writing, it is certain that every Congressman will vie with his neighbor in his love, devotion and dedication to better highways. After all, 1956 is a Presidential year and neither major party wishes to be stuck, in the voter's mind, as the mossback outfit that was blind to this growing country's needs for better roads.

What kind of legislation we will get is, however, an open question—and one dependent more than anything else on the politicians' assessment of the public temper. It was the conspicuous silence of the average motorist in last year's Donnybrook that left Congress without that directional magnetic fielld by which it normally guides its actions among contending interests.

It would be naive to hold the big lobbies of Washington either solely or chiefly responsible for destroying a program the Nation needs by pursuing their legitimate, if individual, interests. True responsibility rests with Congress. This changing and dynamic country, in this age of vast physical and social transformation, needs an enormous range of expensive facilities without which it cannot thrive and for which everyone will have to pay.

The price tag on our growth will, when it is presented, be as high as anything else in this age of prosperity and somehow Congress must see to it that it is paid properly and justly.

It is this fundamental obligation of congressional judgment that—at present writing—the administration hopes to pinpoint in the coming months. A new highway program stands high on the list of administration priorities for 1956; indeed, in the first business visit permitted Sherman Adams at President Eisenhower's bedside in Denver, the highway program was one of the chief concerns of the ailing Chief Executive. Since then, the Cabinet has passed responsibility for a new approach on to the Department of Commerce. There, administration leaders have been trying to define their attitude toward all the complex problems involved, yet leave it to Congress to come up with a hard bill in terms of specifics.

On phase 1 of last year's battle (financing), the administration has decided to yield to the Democratic point of view in an effort

to get a program passed—it will not accept a pay-as-you-go measure in place of its original bond-financing proposal. But phase 1 was a partisan struggle that could be compromised, as it appears to have been now, by responsible party leaders. On phase 2 (the conflict of urban and rural needs) and phase 3 (the clash of rival transportation lobbies) unbridgeable differences of opinion seem to promise a new highway battle of 1956. In these phases, the differences cut through and across both major parties, for here Congress is struggling to decide on the shape of a new America which neither party sees clearly. In this struggle, the decisive voices will be those who understand the complicated issues best. But 1956 is an election year and the voices Congress aches most to hear are those of the voters. Do they understand? Will they make themselves heard? The kind of highways we get in 1956 and the years to follow depends on the answers.

PRESIDENT'S PROGRAM (DEFEATED)

1. The interstate system to be built within 10 years.

2. Price tag: $27 billion; $20 billion to be raised immediately by bonds of the Federal Highway Corporation. Money to be spent as needed to complete the system, the Federal Government paying 90 percent of the costs, or a total of $25 billion.

3. Routine Federal aid to the States for other lesser roads to be continued at something less than the present level, or approximately $600 million a year.

GORE BILL (PASSED IN SENATE ONLY)

1. The interstate program to begin with only a 5-year authorization; Congress to take another look in 5 years.

2. Price tag over the 5 years: $7.7 billion. Financing of this sum to be left to the decision of the House.

3. Routine Federal aid to other lesser roads to continue, but at a higher figure than at present, or approximately $800 million a year.

4. Half of all the money appropriated for the interstate to be shared by the traditional formula of State distribution, the other half to be distributed according to engineering costs.

FALLON BILL (DEFEATED)

1. The interstate system to be built within 13 years.

2. Price tag: $27 billion to be raised by immediate taxation. All motorists to pay 1 cent more a gallon on gasoline, heavy truckers to pay an additional 2 cents on a gallon of diesel fuel and an additional 10-cent tax per pound of rubber in tires, besides additional Federal excises on new trucks.

3. Routine Federal aid to lesser roads across the country, to start at the present level (approximately $725 million a year) and rise by $25 million each year.

Under Secretary of the Treasury H. Chapman Rose

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. REED of New York. Mr. Speaker, I have learned with great regret that the pressure of personal affairs has led Under Secretary of the Treasury H. Chapman Rose to resign effective January 31, 1956. The administration is losing one of its most able members and the Nation a devoted public servant.

Mr. Rose came to Washington as Asistant Secretary of the Treasury in January 1953 and was appointed Under Secretary last July.

As Assistant Secretary, Mr. Rose supervised the operations of the Bureau of Customs, United States Coast Guard, Bureau of the Mint, United States Secret Service, Bureau of Narcotics, Information Service, and Law Enforcement within the Treasury Department.

As an Under Secretary, Mr. Rose has exercised general supervision over the Internal Revenue Service. In related activities Mr. Rose has represented the Treasury as a member of the Planning Board of the National Security Council and in the proceedings of the Defense Mobilization Board and the Air Coordinating Committee. In addition he has carried out many special assignments for the Treasury Secretary.

As Assistant Secretary of the Treasury and more recently as Under Secretary, Mr. Rose has worked closely with the Committee on Ways and Means on many important legislative matters. Throughout this association, Mr. Rose's great ability, his fine personality, his integrity, and his thorough knowledge of the intricate problems before us, earned for him the friendship and admiration of us all. I know that every Member of the House, irrespective of party, who has known or worked with Mr. Rose, shares these sentiments and joins with me in expressing to him our appreciation and gratitude for his splendid service to the Nation.

Mr. Speaker, I include the following copies of the exchange of letters between Under Secretary Rose and the Secretary of the Treasury and the President, relating to Mr. Rose's decision to return to private life:

THE SECRETARY OF THE TREASURY,
January 10, 1956.

The Honorable H. CHAPMAN ROSE,
Under Secretary of the Treasury.

DEAR CHAPPIE: As you so very well know, I hate to see you leave the Treasury. We are going to feel just lost around here without you. As you also know, I am fully aware of your personal situation and responsibilities, so that I know it is right for you to leave notwithstanding the great void you will leave here.

Your help to me personally right from the first day that I agreed to take this job has meant more to me than I can ever tell you. Nor can I ever adequately express my appreciation for it. You have made a tremendous contribution to the progress this administration has made in the fields of Treasury activity. Your selection of associates and chiefs for bureaus and divisions here in the Treasury leaves us with strength in many places to carry on, for which we will be continually grateful. You are entitled to the gratitude and admiration of the citizens of this country.

I speak for the entire personnel of the Treasury when I tell you: Thanks for all you have done and good luck to you in your return to private life. Come back occasionally to cheer us on our way.

Sincerely,

GEORGE.

THE UNDER SECRETARY OF THE TREASURY,
January 10, 1956.

Hon. GEORGE M. HUMPHREY,
Secretary of the Treasury,
Washington, D. C.

DEAR MR. SECRETARY: This month will see the completion of my third year in the Treasury. When you asked me to come to Washington with you, it was understood between us that my stay could not be for an indefinite period. Both before you asked me to succeed Mr. Folsom when he took Mrs. Hobby's place as Secretary of Health, Education, and Welfare, and again in recent months we have discussed the longer range aspect of my personal situation and responsibilities which have made it increasingly necessary with the passage of time for me to bring my present tour of duty to an end. We have agreed that, with the President's return to Washington and the completion of the Treasury's initial part in preparing programs for presentation to the congressional session now beginning, this was the most convenient time for my resignation. Accordingly, I enclose it herewith, with the request that you transmit it to the President. In line with our discussion, I have asked that it become effective at the end of this month.

I am wholly unable to put into words the very deep regret I feel at leaving an assignment that has been more absorbing than any other I have ever had, or at interrupting my association with you and the group around you, which has been one of the warmest and most satisfying of my experience. I shall always be grateful to you for giving me the chance to help as much as I could in the magnificent work you have done and are doing for the country. You will of course let me know if there is anything further I can do at any time.

With warmest good wishes,

Sincerely yours,

H. CHAPMAN ROSE.

THE WHITE HOUSE,
January 10, 1956.

The Honorable H. CHAPMAN ROSE,
Under Secretary of the Treasury,
Washington, D. C.

DEAR MR. ROSE: I share the great regret of Secretary Humphrey in accepting your resignation as Under Secretary of the Treasury, effective January 31. However, I understand the personal responsibilities that make it necessary that you return to private life.

As you leave the Treasury, you have my personal appreciation of the fine contribution you have made during the past 3 years in furthering the objectives and daily work of this administration. You also have earned the thanks of the Nation for your counsel and assistance in a key role at the Treasury in helping to promote the growth and security of our country.

I appreciate very much your kind offer to serve in the future, in time of need, in such ways as you are able.

With my most earnest wishes for the greatest of success in your endeavors in private life, and with warm regard,

Sincerely,

DWIGHT D. EISENHOWER.

JANUARY 10, 1956.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: For the reasons relating to my personal situation and responsibilities described in my enclosed letter to the Secretary of the Treasury, I must with great regret submit to you my resignation as Under Secretary of the Treasury. Subject to your approval, I should like to make it effective on January 31.

I cannot leave without expressing to you my very deep sense of appreciation of the privilege of serving under your inspiring leadership, and of helping in some small way to forward the great aims that you have formulated and are so effectively advancing. The past 3 years have been the most unforgettable experience of my life. I hope that you will call upon me if any situation arises in which I might be able to be of further service.

With great respect and every good wish, I am,

Sincerely yours,

H. CHAPMAN ROSE.

Atom No Immediate Threat to Coal Industry

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Plain Speaker, Hazelton, Pa., on Friday, January 6, 1956, which states that atomic energy will not threaten the coal industry's hold on the electric power market for at least 20 years:

SEE INCREASED DEMAND FOR COAL WITH ATOM NO IMMEDIATE THREAT

Atomic energy will not threaten the coal industry's grip on the electric power market for at least 20 years, and possibly never will Coal Age, McGraw-Hill publication states in its January issue, out this week.

The coal industry goes into 1956 gearing to meet the rapidly expanding power need of a fast-growing population and a steadily rising standard of living.

If the country's electric power needs are to be met in 1975, the publication states that annual coal use for power alone by that time must climb to 430 million tons. This will be 3 times current use for electric power and 43 percent of a projected billion-ton market for all coal uses in 1975.

Coal's grip on the 1975 power market is based on a prediction that the Nation will have to triple its generating capacity to 395 million kilowatts by that time. Of this amount, hydro plants will supply about 70 million kilowatts, and nuclear plants perhaps 40 million kilowatts. This leaves a big gap of 285 million kilowatts to be filled by fossil fuels, coal, oil and gas. And coal will retain at least its present 69 percent of the total fossil-fuel electric power market.

ATOMIC STARDUST

The following factors cut through the atomic stardust clouding the real impact of atomic power on the coal industry, according to the magazine:

1. The amount of nuclear power likely to enter the commercial market during the next decade is virtually negligible. But present development programs, if and when they solve the knotty problems involved, could provide the springboard to greater quantities of nuclear power later.

2. No true picture of nuclear power costs exist now. Even when such becomes available, perhaps 10 to 15 years hence, the prospect is slim that nuclear power will be cheaper than fossil-fuel power. The best bets for use will be in high-cost fuel or power-short areas.

3. Utilities have joined reactor-development programs to insure ample supplies of fuel to meet the country's long-range power needs. They cannot afford to pass up a supplementary heat source, particularly when talk persists about possible depletion of oil and gas reserves.

4. The critical period for evaluation of nuclear power should come during 1956 to 1970. And what the coal and other fossil-fuel industries do between now and then to fortify their competitive position will be the biggest factor in determining if and how far nuclear power spreads after 1970.

COAL HAS ADVANTAGES

5. In improving its competitive position, coal, compared to gas and oil, has unique advantages in its huge backlog of reserves and in its big potential for reducing mining and delivery costs.

6. Atomic energy may never be competitive with coal and other fossil fuels. An increasing number of analysts see the country's energy demands rising to such magnitude that there will be (a) more energy tasks than fuel supplies, and (b) increasing use; specialization and mutual dependence among all fuels.

Since atomic energy is virtually a freightless fuel, the publication urges the coal industry to put special emphasis on developing new methods or substitutes for transporting coal. Overland pipelines, coal gasification, and the location of industrial plants near mines are cited by the magazine as examples of ways that coal can minimize nuclear power's transport advantage.

Classics of American Democracy

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include an article by Van Allen Bradley, literary editor of the Daily News. The editorial from the Chicago Daily News of January 10, 1956, follows:

CONGRESS URGED TO OFFSET RED LEAD—OPEN NEW DRIVE TO SPREAD DEMOCRATIC IDEAS BY BOOKS—LEADERS OF OPINION BACK O'HARA PROGRAM ABROAD

(By Van Allen Bradley)

Armed with endorsements from leaders of opinion in many fields of American life, Representative BARRATT O'HARA, Democrat, of Chicago's second district, is opening a new congressional drive in Washington this week to spread the basic books of democratic political theory around the world.

His immediate goal is enabling legislation to direct the cast United States Information Agency to publish a small library of the democratic classics in the world's principal languages and to distribute them in inexpensive editions in areas where they are not available.

The aim of such an effort would be to counted the heavily subsidized worldwide book distribution program of Communist Russia.

An attempt to get such a project under way was made by O'HARA last year and reported on last June 6 in an extensive article on this page entitled "United States Losing Battle of Books."

The article, based in part on reports from the worldwide Chicago Daily News Foreign Service, disclosed the extent to which the United States is lagging behind Russia in the battle of the books.

It also told of the studies made by a group of Chicagoans interested in combating the flood of Red literature in the uncommitted countries and of O'HARA's espousement of their cause.

The proponents of the plan include Dr. Harold Fey, editor of the Christian Century; Drs. Richard McKeon and Jerome Kerwin, of the University of Chicago; Emery T. Filbey, vice president emeritus at the university; John McGinnis, president of Pennsylvania Lodge No. 225 of the Brotherhood of Railway Trainmen; Thomas B. Stauffer, instructor in the humanities at Wilson Junior College, and Leland G. Stauber, an undergraduate student at the university.

Between the congressional sessions, O'HARA and the Chicago group mailed to 3,500 representative leaders of American life and thought an outline of their book program and a tentative list of books to be included.

The suggested works included:

Bryce, The American Commonwealth and Modern Democracies; Burke, Reflections on the Revolution in France; Dewey, The Public and Its Problems; Emerson, moral and political essays (which?); Hamilton and Madison, The Federalist; Hand, The Spirit of Liberty.

Also, Von Humboldt, The Sphere and Duties of Government; Jefferson, selected writings; Locke, Letters on Toleration and On Civil Government, Book II; Mazzini, The Duties of Man; Mill, On Liberty and Representative Government; Rousseau, The Social Contract; Thoreau, Walden and Civil Disobedience; De Tocqueville, Democracy in America, and Wilson, The New Freedom.

O'HARA and the Chicago group point out that Russia floods the world's book markets with cheap editions of Marx, Lenin, and other classic Communist philosophers.

The United States book translation program, on the other hand, includes only a little of Jefferson and selections from The Federalist as representative of the basic philosophy on which the American concept of freedom is built.

The enthusiastic response to the program as presented by O'HARA in his mailing has been described by the Congressman as "astonishing."

Among the comments, which will shortly be presented to a congressional committee, are the following, excerpted in most cases from longer messages:

Ralph R. Shaw, Rutgers University, president-elect of the American Library Association: "I think the idea is exceedingly important. There is little question that these would be well received if subsidized to sell at a competitive price in the local bookstores in foreign lands.

"Everyone I know who has looked at bookstands in troubled areas of the Middle East and Far East, in particular, reports finding beautifully produced and inexpensive editions of Russian materials in the local languages in all the bookstores, but substantially none of the classics of our way of life."

Cass Canfield, chairman of the board, Harper & Bros., book publishers: "It seems to me that your objective is an important one, and I would very much like to see your plan carried out."

Erwin D. Canham, editor, Christian Science Monitor: "As you may know, I am thoroughly in favor of a project to translate and publish in the most useful foreign languages a group of our basic documents * * *. I very much hope a practical outcome for this project may be achieved."

G. Bromley Oxnam, bishop of the Methodist church, Washington: "I think your proposal an excellent one. I have believed for a long time that we have been remiss in not making available at a reasonable price the basic statements of democratic philosophy."

Lynn U. Stambaugh, past national commander, American Legion: "I certainly feel that dissemination of the type of works described would be of considerable benefit, assuming that they are not already available in other countries of the world."

Ralph J. Bunche, Under Secretary, United Nations: "Your plan strikes me as very worthy. The suggested list of books is a good selection which, I think, is representative of the best in democratic thought."

J. R. Wiggins, executive editor, Washington Post: "I know nothing about the practical aspects of this problem, but I should think it would be extremely valuable to have available, in many languages, the books you list."

William R. Baker, Jr., chairman of the board, Benton & Bowles, New York advertis-

ing agency: "I am completely in favor of this plan for presenting to the world a truer picture of our fundamental democratic ideals and culture."

Rabbi Herbert A. Friedman, executive vice chairman, United Jewish Appeal: "I think it is a splendid idea. I have traveled abroad enough to know that such a thing as this is terribly important and valuable."

Mrs. Franklin D. Roosevelt, New York: "I think it is a wonderful idea * * * To make it valuable, however, in competing with the Russians we will have to give them some modern statements that apply to contemporary situations."

Gardner Cowles, publisher and editor, Look magazine: "I favor the plan. * * * I think this plan should be tried in a few selected areas at least, and then later expanded if the demand for these books proves to be large."

E. E. Phelps, educational director, Oil, Chemical, and Atomic Workers International Union, CIO: "I think your suggested plan * * * is excellent. * * * Within the last 5 years I have spent nearly 18 months in the various countries of free Europe. In many countries people do considerable reading, and the response to books on political science is always in evidence."

Ben Hibbs, editor, Saturday Evening Post: "The plan strikes me as a good one, and I endorse it most heartily. * * * The list of books which you enclosed seems admirable."

H. W. Prentis, Jr., chairman of the board, Armstrong Cork Co., and chairman of the international relations committee of the National Association of Manufacturers: "Excellent. * * * I am very glad that you have undertaken this project and I sincerely hope that you will be successful in getting the enabling legislation through Congress."

Many of the letter writers offered further book titles for inclusion on the list. Some criticized some of the titles as being on the heavy side. Only a very small percentage expressed any doubt as to the basic soundness of the proposals, O'Hara said.

Industrial Pirating—The Luring of Plants to New Locations

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. RHODES of Pennsylvania. Mr. Speaker, shortly following the adjournment of the last session of Congress an important report was submitted to the executive council of the American Federation of Labor by the subcommittee on migration and subsidization of the AFL's national legislative committee. The documented report deals with the subject of industrial pirating of established industrial plants, which has resulted in serious economic distress in many areas of the country. Since many Members had already left Washington before the report was released, I would like to call attention to this continuing problem by including the statement of the AFL summarizing this report and recommendations.

The statement follows:

The American Federation of Labor has made public a documented report on one of the Nation's growing economic headaches—the pirating of industrial plants from established locations and the resulting spread of blight and unemployment in abandoned areas.

Submitted to the executive council of the AFL, which meets in Chicago, the report recommends a four-point legislative program to cope with the problem, including a sweeping investigation by the Joint Congressional Committee on the Economic Report. The other recommendations are:

1. That Federal income-tax exemption should be lifted from municipal bonds issued to finance industrial construction, and that firms enjoying subsidized rentals be required by legislation to disallow as business expense an amount equal to the reasonable full rental value of the facilities provided.

2. That steps be taken, by increasing the Federal minimum wage to $1.25 an hour, by amending the Walsh-Healey Public Contracts Act and by the enactment of effective State minimum wage laws, to reduce and gradually eliminate wage differentials existing between various sections of the country.

3. That other unwarranted differentials in labor standards among the States be eliminated by enactment of nationwide unemployment compensation standards, by repeal of section 14 (b) of the Taft-Hartley Act, by also repealing State right-to-work laws and by denying Government contracts to firms found in violation of orders of the National Labor Relations Board.

The report concluded that "the ruthless manner in which industrial firms have abandoned their employees in a particular location in order to establish operations at another site has seriously jeopardized the welfare of American workers."

It found that in many instances such moves have resulted not so much from the cost problems of continuing operation in existing plants, but because of special financial inductments offered by a different community together with other lures such as antiunion restrictions, low wages, and inferior working conditions.

"These are not the ingredients of lasting prosperity for any section of the country," the report said. "Certainly elimination or correction of the legislation which fosters regional competition based on such factors would be greatly in the national interest."

The recommendations for legislative action were submitted to the executive council by the subcommittee on migration and subsidization of the AFL's national legislative committee on the basis of a detailed report on industrial migration since the end of World War II prepared by the AFL department of research. The entire document is included in an 85-page pamphlet entitled "Subsidized Industrial Migration—the Luring of Plants to New Locations."

AFL President George Meany, in a foreword to the pamphlet declared:

"This report simply presents the facts. It is not motivated by bias against any particular section of the country.

"It is my hope that this report will serve to focus necessary attention on this disturbing development in our economy, and will help develop effective action to protect American workers against this growing menace."

The report declared industrial migration, largely from New England and Middle Atlantic States to the South, "represents a phenomenon that has developed with increasing intensity during the past 7 years" and that much of the migration "has not been based on traditional economic reasons * * * it has occurred as a result of various types of financial subsidies offered with the specific objective of prying firms loose from their existing plant locations to settle in new communities."

The report includes a listing of communities that have offered financial and other inducements, firms that moved their locations and examples of the letters and advertising material offering special inducements to northern plants.

Of vital importance to labor is another type of lure—substandard wage rates, a submissive work force, antiunion and low-standard State labor legislation and an atmosphere openly hostile to unionism.

"Each of these," the report said, "provides just as much a financial subsidy as outright tax concessions or the free construction of a new plant. To some short-sighted firms lower wages, fewer fringe benefits, and an absence of unionism may prove more attractive than the savings which result from the construction without cost of a new plant."

In four specific manufacturing industries examined in the report—textile, apparel, furniture, and paper—older manufacturing regions have lost ground to the South and the Pacific States. The report declared the shift to the Pacific represents a natural growth but a goodly part of the shift to the South results from special subsidies.

"In no way has this study been prepared with any bias or animosity against the South or against southern industry," the pamphlet said. "It is merely a simple fact that these subsidies have largely been offered in the Southern States."

The raiding of established communities for their industry involves far more than regional and local consideration, the pamphlet said. "It is a problem which has now gone beyond the bounds of a single State or section of the country. It demands national attention and a national solution."

The subcommittee which submitted the legislative recommendations is composed of Chairman Arthur G. McDowell, upholsterers; Francis J. Gorman, textile workers; William A. Leader, hosiery workers; George R. Nelson, machinists; and George D. Riley, AFL National Legislative Committee.

Benjamin Franklin—Godfather of Our Country

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial printed in the East Side News, a publication widely read in my congressional district, entitled "Benjamin Franklin—Godfather of Our Country":

BENJAMIN FRANKLIN—GODFATHER OF OUR COUNTRY

(By Harry H. Schlacht)

Benjamin Franklin—a crown would have lost its splendor upon his brow, for it was adorned with the wreath of freedom. On January 13 America will celebrate his birthday. America clasps his hand in loving memory. He was the godfather of our country.

His name is a sound whose charm was borrowed from his thoughts and deeds that gave it immortality. No high-raised marble marks his birthplace. No pilgrims kneel before his dust or offer incense on his golden shrine. His life is one of the world's treasures.

In whatever light we contemplate his character, it is full of instruction. In whatever attitude we survey him, it is a beautiful picture—noble and majestic. He was the

father of the American commonwealth. He was the incarnation of our democracy. He was the master builder.

Franklin stands second only to George Washington in the list of the heroic personalities of our Nation. He was a member of the Continental Congress. He was a signer of the Declaration of Independence. He was a framer of the United States Constitution. To have been so closely associated with both of these sacred documents is equal in our history to the highest pattern of nobility.

The world was his school. Necessity was his teacher. Franklin rose from nothing. He owed nothing to parentage or orphanage. He enjoyed no early education, but he lived to stand before kings. He died to leave a name bathed in the hale of immortality. He never wasted time and time never wasted him.

He won his place in the front ranks of the world's scientists and diplomats, of the world's statement and men of letters. He knew how to stand humbly and happily alike on the lowliest ground of obscurity and of the loftiest pinnacle of fame. His writings are still widely read after two centuries. His utterances are engraved in our hearts as it is stamped on his soul. They are known around the world. They are the passports to posterity.

We may not be able to achieve his greatness, but we may strive to imitate his goodness. Franklin's great genius may fade away before a more splendid luminary; his philosophy may be lost in the brighter achievements of future discovery, but his labors as a patriot, in the establishment of free institutions, have enrolled his name with that bright galaxy whose sainted memory no time will dim.

What a glorious legacy to the youth of America is the history of his unequaled patriotism, of his faith and firmness and of his self-sacrifice in the service of humanity. Let young and old read his writings. Let us all refresh our minds with the recollections of his wise maxims and of his virtuous deeds.

May his spirit shield us from foreign isms. May his spirit shelter us from oppression. May his spirit preserve inviolate our liberty and the glories of our Americanism.

Highway Deaths

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. ROBERTS. Mr. Speaker, under unanimous consent, I include in the CONGRESSIONAL RECORD the following articles: "The Passing Scene," from the Talladega Daily Home, December 29, 1955, and an editorial which appeared in the Selma Times-Journal, December 29, 1955.

Mr. Speaker, I am shocked and horrified by the number of unnecessary lives the American public is sacrificing upon its highways. This recent Christmas 3-day weekend took its bloodiest toll, a total of 609 lives. The previous record was held by the 4-day Christmas holiday in 1952 which ended 556 lives. I am concerned that a country which considers itself highly civilized would continue to indulge in such mass suicide. I hope that the public seeing these statistics will slow down and live instead of speeding into the arms of death.

The articles follow:

[From the Talladega Daily Home of December 29, 1955]

PASSING SCENE

(By J. L. Wallis)

AMERICA'S DEMON GOD, SPEED

American motorists have used the most sacred season of the year, a time of peace and love for their fellowman ,to comimt wholesale murder on the highways of the Nation. We wonder if these useless deaths would not come under the classification of premeditated murder. The National Safety Council told the public that some 560 citizens would most likely be killed during the Christmas holidays by automobiles.

With this warning, the car drivers of the United States went forth and killed over 600 good citizens, and set new records for holiday slaughter. If some foreign enemy had killed so many innocent Americans, this powerful Nation would most likely have gone to war over the murderous insult. Will anything be done to avenge the holiday dead, or to prevent more innocent people from the same bloody, crashing death? If the future can be judged from the past, we all know that little if anything will be done to correct the disgraceful situation. At least, there is no indication that any real action will be taken to halt the growing highway death lists at this time.

Car manufacturers can not be blamed, for they only build machines which are demanded by the great American public. The highway builders work for the American taxpayers to build the thoroughfares. However, when the death toll grows and grows with no end in sight, it seems that someone is to blame.

We like to think of ourselves as being the highest civilized people in all history, but, are we? We consider the pagan tribes as being savages, when we study their rites, in which they sacrificed human lives to appease their heathen gods. Yet we, to satisfy the urge of the demon god, speed, sacrifice far more thousands of human beings every year, than did any pagan tribe. We seem to worship a most cruel god, one that no amount of human blood can appease. That god, without any question, is speed.

Speed, more and more speed, uncontrolled speed is the killer. Two parked, motionless vehicles have never been known to cause fatal accidents. There are many causes for death-dealing speed. Alcohol often figures prominently as a cause, but pure rank carelessness can create as much deathly speed. Proper law enforcement, heavy court sentences for traffic law violators will aid in cutting down speed, but the deep concern of the entire American public is needed before any real solution can be found.

Car manufacturers are beginning to stress safety features in the new cars. Unless some way is devised to make automobiles safer, the time will come and probably soon, when people who do not want to die will shun the bloody highways and high-powered automobiles. Automobiles can be built safer, if the public will stop demanding power and speed. Unless something is done, it must be expected, that sooner or later, Federal legislation requiring governors and some devices to hold down automobile speeds will be required by Federal law.

All of us who have driven the highways know that many motorists, and trucks as as well, maintain high speeds far above the legal limits. We also know of glaring traffic violations which can and often do cause split-second deaths. If our legal processes cannot bring some sane and sober practices to our highways, then it will become necessary to take the means of creating the death dealing speeds from the hands of those who use it to kill themselves and others who are innocent.

Surely most all Americans regret the terrible slaughter that continues on our highways unabated. The death toll is terrible. Thousands of hospital beds are constantly filled with the crippled, maimed, and injured. The suffering is endless all because of the careless excessive speeds on our highways. The property damage runs into the hundreds of millions.

Most thinking Americans, further know that something can be done to stop the slaughter and devastation. It is beyond explanation why the public is so apathetically calm in face of this growing catastrophe. Of course, an aroused public opinion can bring an end to this mounting highway disaster.

There has already been new record highway death forecasts for the New Year's weekend. It seems it is far past time for Americans to do something to make our highways safe. The blame rests solidly on all of us until firm action is taken by the people in this Nation to stop our sacrifices to the demon god—speed.

[From the Selma Times-Journal of December 29, 1955]

DRASTIC MEASURES

American motorists, who persist in killing themselves at a record rate on almost any or every occasion, may be inviting traffic controls as dictatorial as can be imposed in a free country.

Consider, for instance, Illinois Gov. William G. Stratton's reaction to news that his State led the Nation in Christmas holiday highway deaths.

He said he may use National Guard troops to help patrol highways over the New Year holiday weekend as a means of forcing safety practices.

At Chicago, Mayor Richard Daley said he was studying plans for setting up roadblocks so police could make spot checks for drunk drivers.

These precautions would be drastic, but they are justified by the growing toll of traffic deaths. When free people let loose in powerful motor vehicles are unable to avoid maiming and killing, methods should be devised to control them.

Help Farmers, Not Politicians

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. HARVEY. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial from the Indianapolis News of January 4, 1956. This editorial is a very fine tribute to the senior Senator from Indiana [Mr. CAPEHART] and his program for solving the farm problem.

The editorial follows:

HELP FARMERS, NOT POLITICIANS

With the 2d session of the 84th Congress now started, both Republican and Democratic leaders agree the farm issue is foremost.

It would be fine if the agreement could extend into solutions. This situation needs a better treatment than election-year politics.

Objective consideration breaks down the farm problem into three parts:

1. Produce prices are below what they should be because the very presence of huge surpluses depresses them.

2. Things the farmer buys have gone up in price.

3. The "big company farmer" has been getting Government assistance all out of proportion to that given the little producer.

If Congress could only restrain politics long enough to keep its eye on getting these wrongs righted, everybody would benefit.

Since the government is the big holder of the food surpluses it ought, first, to get rid of what it has. Indiana's Senator CAPEHART rightly says farm income will never rise until the Government gets rid of its $7 billion hoard. He advocates channeling this into consumption by the needy both abroad and at home. That sounds sensible.

Return to high-rigid 90 percent Government price supports would only cause more unwanted production and depress prices further.

The only logical way to cut production is to take acres out of production. To date, the most feasible plan suggested to get that done, without penalizing the farmer, is the soil-bank plan supported by the American Farm Bureau Federation. If that idea catches on in Congress, it should be thoroughly safeguarded to prevent the government from fastening anything like permanent control over farm acreage. That could lead to collectivization after the Soviet pattern.

The disparity between the price the farmer gets and that the consumer has to pay for the same food has a direct bearing on the gap between what the farmer gets and what he has to pay for machinery and clothing. Added costs of services are blamed. Congress should inquire into which of the services are genuine and which are profit featherbedding.

Farm supports, as to price, should be kept flexible. But that does not mean that there should not be a major change in farm policy. That shift should be toward helping the little farmer instead of the big commercial farmer.

Taken together, these measures would tend to solve the farm problem on a national, not a partisan, basis. After all, that is the smartest politics for Congressmen.

Retirement of Tom Spellman

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. O'HARA of Minnesota. Mr. Speaker, the announcement of retirement of a good friend always brings a tinge of sadness to me, and when I read that Tom Spellman was retiring from the position which he has held for 30 years, my reaction was that it could not be true.

Tom has been my good friend for many years, and I know that the veteran has no greater champion than Tom Spellman, for many is the veteran whom Tom has helped over the years.

Always interested in his community, his time and his talents were always available for any community project. Tom has been the friend and adviser of many people prominent in the State of Minnesota and his friendship extends across political lines.

In the Hastings Gazette of January 5, 1956, under the byline of Bob Bradt, is an excellent and factual tribute to Tom Spellman which I am happy to place in the CONGRESSIONAL RECORD.

The article follows:

GENIAL LINOTYPER SAYS "30"—TOM SPELLMAN, ON GAZETTE STAFF 30 YEARS, RETIRES

(The following tribute to a person well-known not only to thousands of persons in this area, but throughout the State and Nation as a devoted promoter of all that is humanitarian and right to be done, is penned by Robert Bradt, former city editor of the Hastings (Minn.) Gazette, who joined the newspaper shortly after 1925. Mr. Bradt, noted in his way for a brilliance in writing, accuracy in observing, and a pungency in statement said in a letter to this newspaper that "writing becomes a little more difficult with the passing of years," but he seems to have still a curve or two left that he can throw, and he has done pretty well. Mr. Bradt holds a responsible position with the State Railroad and Warehouse Commission in Duluth, Minn.)

(By Bob Bradt)

To most newspaper men, "30" means another edition is ready for the press.

To a genial, red-headed linotype operator at the office of the Hastings Gazette it means much more than that this week, December 29, 1955. It means his last edition is ready to roll. It means the end of the line after 30 years of enviable service to his newspaper and his community.

In Tom Spellman's case it can truthfully be said that a lot of water has gone over the dam since he and his bride, the former Vivian Smith of Minneapolis, first came to Hastings in 1925. As a matter of fact, there was no dam here when he walked into the office of the Gazette, then published by the late S. W. Isham, to take up his duties as linotype operator. It was a much smaller news and printing plant in those days than it is now. But, for that matter, Hastings was also a much smaller community.

In his 30 years, Tom has seen the Gazette grow from a 4- or 8-page country weekly with limited equipment to the flourishing 16- to 24-page editions which the present publisher, Frank A. Muirhead, is now presenting to his readers. He has seen the construction of a $3 million dam here; the replacement of the historic Hastings spiral bridge with a modern one, and the arrival of many new industries and an entire new generation of citizens.

But it has not been in the role of an idle bystander that Tom Spellman has watched this transformation. Perhaps no other citizen of Hastings has given so of his time and energy to civic development for so little personal reward.

It was Tom Spellman who played the leading role in the organization of Lyle Russell Post No. 1210 of the Veterans of Foreign Wars in 1927. It was he who helped to secure such civic improvements as the beautiful Memorial Park and Todd Field and to organize a home defense company here during World War II and an active and influential Kiwanis Club in later years. And it was Tom Spellman who conceived the idea of an annual Eminent Citizen award in Hastings and has made this an event of wide and impressive significance.

These are but a few of the civic services this impulsive red-headed friend of yours and mine has given to the city of his adoption. Even greater has been his contribution to the personal welfare of his friends and neighbors.

Wherever there has been sickness or hardship in a family he knew, Tom has been one of the first to volunteer his help and encouragement. Wherever there has been tragedy, he has done his best to comfort those affected. Countless Hastings veterans of both World Wars, and their families, are indebted to him personally for getting prompt hospital attention or recognition of their compensation claims. Countless other Hastings citizens have benefited, to some degree, from his intensely human philosophy and kindness of heart.

In his acquaintance and friendship with eminent Minnesotans, Tom Spellman has few if any rivals in Hastings. He has had access to, and a personal acquaintance with, nearly every governor of Minnesota for the past three decades. On many occasions he has been instrumental in bringing the State's chief executive to Hastings for some outstanding civic event.

He was an intimate friend of the late "Larry Ho" Hodgson, illustrious Minnesota statesman and writer. He has been a lifelong friend of former Gov. Luther Youngdahl, of Minnesota, now a United States Federal judge in Washington, D. C.

JUDGE YOUNGDAHL'S TRIBUTE

"I know of no private citizen who has labored more unselfishly for others than has Tom Spellman. Without fanfare or desire for publicity, he has given of himself to help his fellow man. I am proud to consider him one of my best friends.

"His reward will come from his satisfaction of knowing in retirement that he has been a friend to man. What Edwin Markham has said aptly applies to Tom Spellman:

'"There is a destiny that makes us brothers,
None goes his way alone;
All that we send into the lives of others
Comes back into our own.'

"LUTHER YOUNGDAHL."

Besides these eminent Minnesotans, Tom has had the respect and friendship for many years of such outstanding statesmen and public officials as Senator Hubert Humphrey, Congressmen August H. Andresen and Joseph O'Hara, State railroad and warehouse commissioner Hjalmer Peterson, and many, many others. He is one of those rare individuals among us who can claim long and lasting friendships in both political parties. And this is only because men of both political parties have long realized that it is not for himself that Tom Spellman has played so active a part in politics. It is because, through political avenues, he could best be of service to his fellow veterans and friends who might be in need of assistance. Seldom, if ever, has he asked a purely personal favor of any public official.

It is possible, following his retirement, that Tom may leave Hastings. Whether he does or not, he should have a standing ovation from this community to which he has given so much, and of which he has asked so little, in 30 years.

And sometimes, when a candidate for the title of Hastings' most eminent citizen is being considered, the name of Tom Spellman should be first on the list. For if any man has richly earned this recognition from his fellow townsmen, that man is a hustling and intensely human linotype operator by the name of Thomas L. Spellman.

Address of Hon. Carmine G. De Sapio

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks, I wish to include the address delivered by the secretary of state of New York, the Honorable Carmine G. De Sapio, on the occasion of the National Press Club luncheon in Washington on November 30, 1955.

Mr. De Sapio is one of this country's outstanding Democratic leaders. In addition to his position as secretary of state for the great State of New York, he is also the Democratic national committeeman from New York, as well as Democratic leader of the county of New York.

Those of us who were privileged to attend the luncheon and hear Mr. De Sapio were much impressed by his remarks. I commend them to the Members of this body.

The address follows:

Senator SPARKMAN, Governor Hogg, Congressmen, distinguished guests, ladies and gentlemen, it is a great pleasure for me to visit with the members of the National Press Club and I very much appreciate this opportunity to join you today. I always enjoy my visits to Washington. It is such a beautiful city, so alive with the pulse of history. And the good Lord and the American voters willing, I hope to have occasion to visit here much more frequently in the period commencing January 20, 1957.

Now I know that you ladies and gentlemen of the working press are in the business of gathering news. I don't know what particular contribution I can make in this direction today, but it occurs to me that one question has proven to be quite newsworthy during the past 3 years and particularly in the last 48 hours—the question of security risks. So I would like to talk to you about what I consider to be the greatest security risk in our Nation, the hazard which is posed by governmental hypocrisy.

It is very easy to equate issues with slogans, and with ominous and dire sounding admonitions. It takes very little effort, for example, for Senator BARRY GOLDWATER, of Arizona, to charge the American labor leaders with "using violence and coercion in a conspiracy of national proportions aimed at controlling the 1956 election results."

And I suppose it was just as easy for Frederick C. Crawford, the national chairman of the soon-to-be-held, salute to Eisenhower dinners, to compare these same labor leaders with what he called the minority which installed the Nazi Party in power in Germany. He observed, and I quote him, "the Nazi rise developed at about the same time that labor was becoming a potent political force in this country."

It takes very little energy—and certainly even less thoughtfulness—for the Vice President of the United States to label as "demagogues" those Americans who express concern with the fact that our farmers face an awesome depression.

And I suppose that the words, "peace and prosperity" can be made to roll off the tongue and the printing press with the same alacrity and ease with which Geneva was cited to us just a few short weeks ago by the Secretary of State, who declared: "I can say with confidence that the conference was a good conference. We went there with limited objectives and we achieved them all and perhaps a little more."

It isn't very difficult—in the name of security—to impose a news blackout on the operations of Government. Nor is it at all hard to challenge the patriotism of those citizens who presume to exercise their right to question the actions of public officials.

I think we can all agree that it takes no great genius to give expression to the illusion that the operation of our Government by a clique of industrial giants makes for greater efficiency, and even I will admit that in a free America, anyone is entitled to the opinion that what is good for General Motors, is good for the country.

But to me, my friends, all of this evidences a desperate, but happily, a futile attempt to retain and perpetuate power by deluding and confusing the American people.

This is a real—a very real—security risk.

Our Nation is a strong, a great and a powerful country. There are as many reasons for this as there are opinions and beliefs. We have been blessed with all of the magical wonders which a beneficent Creator can bestow. What we are, is a result of the toil, the vision, the genius and the faith of generations of people from all corners of the earth, of all nationality, racial, and religious antecedencies. Our might is the result of our courage, and our courage stems from the conviction that our heritage as free men and women is probably our most precious possession. We have a national intelligence which is undeniable, and when that national intelligence is insulted, the people rebel. And when this simple lesson is learned, by all of those who have accepted the responsibility and the obligation of public life and public activity, we will have abolished hypocrisy in government * * * and we will have established an ethical standard whereby the American people could devote their toil, vision, genius, and faith exclusively to the task of building our security and our standards—unburdened by the diverting necessity for dispelling myths and piercing smokescreens.

Let us take a few moments—you and I—to examine the news of our times in terms of its historic implications and, more specifically, in terms of how what happens today affects the lives of our children and of future generations of our children.

I would be the last person in the world to take the view that politics should be abandoned. But I insist that unless politics-as-usual is abandoned, the orderly process of government will become a tragic farce, and the search for a better world, a forlorn and hopeless failure.

It is this simple: The American people want to be told the truth. They are equipped to cope with the truth. They are not afraid of the truth. They deserve and demand the truth.

What thinking citizen will accept the fierce and ugly charge that American labor is engaged in a conspiracy of violence and coercion, or that our labor leaders constitute a Nazi-like minority? Is this the Republican answer to its promise to amend Taft-Hartley—one of so many promises which were never intended to be kept? Is this the Republican answer to the spiralling cost of living; to the frightful fact that millions of American workers live in slums, while the national housing program is at a complete standstill?

It is no answer. It is nothing more—nothing less—than political hypocrisy.

Then there is that other claim: The charge that it is demagogic to decry the existence of a farm problem. Demagogic, indeed. We may well paraphrase what children have been chanting for generations "sticks and stones may break some bones, but name-calling will never feed the American farmer."

Is the cry of demagoguery the Republican answer to the fact that farm income has decreased by some four billion dollars in the period of 1 year? Is this the Republican answer to the fact that farm mortgages have increased to a frightening degree at the same time that higher interest rates have autocratically been imposed? Is this the Republican answer to the specter of a new and terrifying depression which today confronts the American farmer who finds his income dwindling, at the same time that the costs of his products to the consumer rises with unyielding consistency?

This is no answer. This, too, my friends, is nothing more—nothing less—than political hypocrisy.

Now the sloganeers are busily at work again, and the medicine men so expert—they think—in the art of public relations, are subjecting the American people to a forced feeding of a new, smooth-sounding salutation—peace and prosperity.

The intention clearly is to gorge the American voter on this charming metaphoric morsel—peace and prosperity. But does it tell us the truth about peace? And does it tell us prosperity for whom?

The Republicans talk of peace as if it were something which they invented and as if it were something which only they could safeguard. They blissfully ignore the fact that such peace as it exists today is the direct result of the bipartisan foreign policy worked out by the previous Democratic administration. Nobody—nobody—has the moral or ethical right to claim individual credit for the collective work of both parties, under the leadership of the Truman administration over a period of many years.

Can the Republicans claim credit for the United Nations? Can the Republicans claim credit for the prevention of a third world war by the decisive and prompt action taken in Korea? Can the Republicans claim credit for the plan, for the mutual security program, and for the strong alliance which was developed with the democracies of the West? Can the Republicans take credit for the establishment of Israel as a bulwark for freedom in the Middle East? Or can they claim that they are responsible for checking the spread of communism in Europe?

The fact is that the Republican Party has scuttled bi-partisan foreign planning, with the resultant dangerous belief that the Geneva picture should be misrepresented to the American people. And now, slowly, and gradually, the truth is being doled out—drop by drop—to prime us for the inevitable evaluation of Geneva's complete failure.

The Republican Party can take credit for a number of things, and I think we should give them the credit which is their due. They can take credit for the fact that India is being wooed into the Communist orbit. They can take credit for the new understanding between Yugoslavia and the Soviet. They can take credit for the Russian final success in penetrating the Middle East by bartering with the Arab States. They can take credit for the delivery of a large portion of Indochina to Red Russia, because they can point to the fact that Vice President NIXON so clearly misled the French into believing that they could depend on us for help when he boldly announced that, if necessary, we would send American troops into Indochina.

Instead of charging, as Harold Stassen had the temerity to suggest, that speeches by Democrats were undermining the prestige of this country abroad, let them appraise, rather, their own talk-tough, do-nothing attitude, and reflect on the penetrating truth that there was no foreign policy whatever until the Democrats took over the Congress in 1954.

And what about this great prosperity—this repetitious chant which is being drummed into the minds of the American people? Is there prosperity for the small businessman who, in greater number every day, is forced into bankruptcy or swallowed up in monopoly mergers? Is there prosperity for the white collar worker whose fixed salary makes it increasingly difficult for him to make ends meet?

My friends, is there prosperity for the American farmer?

You and I know who has the prosperity: the large corporations, the dozen or so industrial empires which control the destinies of 165 million people. They have been given virtually complete freedom from governmental control. Their officers and directors comprise the very Cabinet of the Government. Their representatives constitute the powerful army of dollar-a-year men in Washington who form, mold, and enforce our national economic policy.

Prosperity is a very nice sounding word. But, in terms of security, there is a great deal needed and a great deal wanting. And, if there are 65 million jobs in America as a

result of the economic program fostered in the Roosevelt-Truman administrations, let us, in the tradition of America, strive for 70 million jobs, instead of proudly resting on elusive laurels.

Do the Republicans really think that by proclaiming the word prosperity often enough, they will get the American people to think that the GOP inherited a depression from the Democrats in 1952? Do they really think the American people will ever forget that a Democratic administration took the reins of government from its Republican predecessors in 1932 at a time when our Nation was in the abyss of despair, and that it lifted our country from the depths of the mont dreadful depression in history, to heights of unprecedented economic achievement and progress?

But those advertising specialists, who are versed in the hatchings of slick and catchy phrases, know from their experience that you can't successfully market deodorants and soft soap without employing a variety of sales techniques. And so they offered the American people yet another myth * * * that of the efficient Washington team. Now it is pretty hard to determine by looking at this so-called team, who plays varsity and who plays scrub * * * who is really on the team and who constitutes the cheering section.

Is Senator KNOWLAND on the team? If so, his position isn't very clear although he certainly has proved himself quite adept at blocking.

Is RICHARD NIXON on the team? It is hard to tell, although he is a very talented buck passer.

And how about those members of the team who were benched by this very efficient administration? People like Air Secretary Harold Talbott; Commerce Under Secretary Craig Shaefer, Interstate Commerce Commission Chairman Hugh Cross; Health, Welfare, and Education Secretary Oveta Culp Hobby; Special Adviser Adolph Wenzell; Budget Director Joseph M. Dodge; Army Secretary Robert T. Stevens, and quite a few others.

Do the reasons—depending on the particular case—for their replacement on the team represent particular efficiency, or great integrity, or dedicated zeal? You know the answer as well as I do. And the American people know the answer to this and to most of the other facts of Washington life today. They remember the GOP campaign pitch that leaders of Government are responsible for the conduct of their subordinates. That is why, since 1952—despite high-sounding slogans and low-sounding slanders, the American voters have methodically and meticuously gone about their business * * * the business of voting Republicans out of office.

In Oregon the unbelievable happened. A Democratic candidate for United States Senator defeated the Republican candidate.

In Maine the impossible happened. A Democratic candidate for governor defeated the Republican incumbent.

In New Jersey the improbable happened, and a Democratic governor was elected.

In Pennsylvania the unlikely happened, and a Democrat was elected governor.

In Connecticut the incredible happened, and a Democratic governor turned the Republicans out of office.

And in my own State of New York the inevitable happened, and we defeated the invincible Republican machine, a machine which offered its most popular vote-getter and brought into our State all of the important Republican brass—including the President himself. They campaigned for a mandate of approval for 12 years of Thomas Dewey's administration, as well as for their program in Washington. They talked of cold wars if Democrats were elected, and even had the temerity to tell the people of New York that Averell Harriman couldn't take office even if he were elected, because he wasn't a citizen of the State. But, most of all, they raised the cry of Tammany, that weather beaten, meaningless, old-hat charge which has lost for the Republicans more elections than any other single issue in the history of my State. They just never learn that the people won't be fooled. And apparently, they just don't ever want to learn. The Tammany cry is as crass as would be a suggestion by and ridiculous Democrats that President Eisenhower is responsible for Teapot Dome. The people of my city and State are not concerned with ancient history. They think in terms of issues and candidates and programs, and facts. And they elect Democrats.

And this feat has been duplicated in elections all over the country—the same story, the same results—Republicans defeated and Democrats voted into office.

And not the least of these phenomena, was the election of a Democratic Congress.

Now, these elections were waged on the issue of the administration's program; on the issue of the administration's record. And that program and that record, rejected by the people, in election after election, will finally be repudiated next year, when they will send a Democrat to the White House.

I do not know who that Democrat will be. At this point, I do not think anybody knows. It is nothing less than folly to try to predict today what will be the state of national and world affairs next August, when the nominating conventions will select their candidates. It is foolhardy to try to guess what the people will think or want in the way of a candidate more than 8 months from now. And it is unrealistic to try to pledge or commit delegates who haven't, themselves, even been nominated and elected.

But one thing is certain, and that is that the Democratic Party has a wealth of qualified candidates—anyone of whom could administer the office of President with intelligence, with humanity, with understanding and with integrity, as distinguished from the Republican surrender to the hazardous concept of the indispensability of one man.

My own State again, as it did with Al Smith and Franklin Roosevelt, will offer to the Democratic Party and to the people of America, a candidate of unsurpassed experience, of unmatched ability, and of outstanding character.

Averell Harriman had the courage to warn the world about Soviet treachery when it was not very fashionable to do so, just as he had the courage to warn America about the Geneva debacle when it was not very popular to do so. He understands the needs of the world, and he understands the soul of America. His has been a profound dedication to public service during almost all of his adult life. And his has been a record of accomplishment and achievement unmatched in our generation. He knows business; he respects labor; and is as expert in the various areas of government—both foreign and domestic—as any living American.

New York will present the name of its governor to the nominating convention with the same pride and enthusiasm with which it will support whoever the Democratic candidate is, because we believe that no individual is greater than his party and that the public welfare transcends everything else!

We have no party lines—no totalitarian dogma which precludes open and free discussion of issues or even wholesome and constructive disagreement among ourselves. But we do have a party philosophy, a philosophy which holds that the responsibility of government is to all of the people and that it is the solemn obligation of those who govern to protect, advance and secure the people's well-being.

This we believe! And on this we will once again—next year—assume the mantle of national leadership—and, with the help of God, we will help lead our country and the free world toward a new era of real meaningful and lasting peace and prosperity.

Thank you very much.

Disaster Insurance

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. CRETELLA. Mr. Speaker, I wish to include for the RECORD an editorial from the January 9 Christian Science Monitor dealing with the bills introduced this session for a flood indemnity and reinsurance program. The tragic devestation of millions of dollars worth of personal property in the Northeast and west coast this past year focused national attention on the immediate need for some sort of Government program. President Eisenhower has clearly indicated his intentions to see a workable program enacted, and I am pleased to have introduced legislation this week in accordance with the recommendations of the administration.

The editorial follows:

A TRY AT DISASTER INSURANCE

Insuring communities of people against losses from "natural" disasters and insuring individuals against isolated adversity are two quite different problems. The Red Cross years ago defined a disaster as a catastrophe striking so many people so suddenly that the ordinary resources and institutions of the community cannot cope with it.

Nor have private insurance companies been able to cope completely with the problems raised by any kind of group calmfty. Even with disasters caused by fire or windstorm (which risks insurance companies "write" and against which property owners commonly carry policies), it is found that the people with the smallest resources are ipso facto, the very ones who carry the least insurance or none at all. Relatives and friends are likely hit, too.

Disasters caused by floods present an even tougher problem. And it is to make a substantial start toward finding an answer that the President mentioned it in his state of the Union message and the administration has now sponsored a bill.

Where private insurance companies write this risk at all they feel they must charge high premiums. For they know that the only ones who would seek such protection must be especially vulnerable to deluges—and many to the same potential flood. Insurance, to be sound insurance, must spread the cost among high and low risks both.

Here is a situation which only Government can handle. Yet, it faces politically some of the same difficulties as the insurance companies. No one wishes by way of either his taxes or his premiums to encourage another to remain in a hazardous location or to subsidize, for instance, the farmer who calculatingly takes the risks of farming rich bottom land. Yet, usually what turns a flood into a disaster is inundation of areas never before, or almost never, reached by rising waters.

However, the "climate of opinion" seems to favor a Federal endeavor to cut this Gordian knot. Now that both the Atlantic and Pa-

cific seaboards have suffered major devastations, the sadly experienced Mississippi Valley no longer stands alone. California's Senator KNOWLAND's expressed support gives notice also that some conservatives who usually pull back from extending Federal functions may make an exception here.

This much at this early date can be said about the administration's bill: To the extent it would reinsure private companies on the peculiar and excessive risks of flood it would require the companies to carry some of the load and avoid going into the insurance agency business itself. To the extent it requires States to help pay the premiums it could bring about a more substantial and uniform assumption of local responsibility. To the extent it requires the individual to pay most of the premium and to shoulder some of the risk (through a deductible clause) it would preserve the vital element of self-help.

There is still the problem of those of minimum income whose insurance coverage, if any, will have to be supplemented by straight relief. And one can foresee problems of policy and administration that loom large. But they are not insurmountable. The Government has had considerable experience with war risk and crop insurance. Much of what it has learned surely can be applied to the "natural" disaster field.

Hon. Carter L. Burgess—Part I

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the text of a speech made by the Honorable Carter L. Burgess, Assistant Secretary of Defense, at the occasion of the annual fall Military Day at the A. & M. College of Texas.

Mr. Burgess, as you know, is the Assistant Secretary for Manpower and Reserve Personnel and has done and is doing a splendid job within the Department of Defense. He is a man of much vitality, not content to sit at his desk and review written reports but rather to secure at first hand for himself the answers from the field. I feel the college was very fortunate in having Mr. Burgess as a guest, who went into some detail in setting forth the Department of Defense policies with respect to personnel.

Mr. Burgess' address follows:

I am very happy to be here in College Station, particularly at this auspicious time of the year. It is an honor to address this Texas A and M assemblage.

I want to offer a special word of gratitude to Dr. and Mrs. Morgan for their hospitality, and state that your president has been of immeasurable assistance to many of our important programs in Washington.

I also want to take this occasion to express both thanks and appreciation to 2 of our finest Congressmen, Paul Kilday and Olin Teague, both of these Texans have the National respect and regard when they rise in the House of Representatives to speak and act on great issues. They have been unstinting in their creation and support of a sound and fair defense and veteran's program for this country.

If I were a quite a few years younger, and a member of your student body, I have a good notion of what I would consider the No. 1 great issue of the moment.

It would be tomorrow night's football game with Southern Methodist, when A and M goes out for its sixth victory. You have made a most impressive record this year. You have a great team, and I am looking forward to the game.

OUR WORLD LEADERSHIP

I've been asked to talk to you about the American defense program.

You each have a personal and requisite part to play in it, and every indication is that we shall be forced to maintain such a program for a good many years to come.

The great issue of this age is the survival of a system of human freedom which took centuries of struggle and sacrifice to perfect, in the face of a now advancing, now receding, but always present threat by expansionist-minded forces of an authoritarian ideology.

The American people have become the principal deterrent to that expansion.

The fact is we have been firmly shoved into the center of the world stage, no longer an "extra" or a spectator in the wings. We must play the role which has been assigned us, and do it with all the vigorous self-reliance and spirit of enterprise which built America from a frontier settlement to the most powerful nation in the world. We have no other choice.

CONDITIONS OVERSEAS

Our defense forces today are spread worldwide. We are not, as some have suggested, the Romans of the 20th century, but we are determined to bolster our own security by standing firmly alongside our allies.

I have just returned from an extended inspection tour of our installations in Europe and North Africa, and I can report to you that the spirit and readiness of our forces in those areas are uniformly high.

I was particularly struck by two things in my travels—first, the leveled areas in London and in Germany that continue to speak with grim eloquence of the terrible destructive power of war, and second, the tremendous strides in reconstruction and economic progress which the people of western Europe have made since I last saw them in 1945.

The evidences of reconstruction stand as living proof of what a people can do when they have to. Surely if there was ever a near miracle it has been in devastated Europe where a determined and courageous population have put to use every scrap of help given them—and for the rest have literally pulled themselves up by sheer effort from ruin to recovery. America has helped materially in this forward march.

These are people who have been constantly surrounded by intimidation and danger—but they have never failed to see the opportunity for their future which lies beyond such danger.

Here, it seems to me, there is inspiration and a significant lesson for each individual in all lands, who may sometimes feel that the conflicts and turmoils of this age are becoming unbearable, and that man himself may be losing out.

Danger we shall doubtless continue to find confronting us. But let us never be so blind that we fail to see the rich land of opportunity that lies ahead.

That, in my estimation, is something we need to bear in mind in connection with any and all personal sacrifices that may be required of us.

SOME PRINCIPAL QUESTIONS

The American defense program is our answer to lawlessness and aggression.

I want to discuss a number of pertinent aspects of this program with you tonight, dealing with the following questions:

What do we have in the way of strength-in-being today?

What do we expect to have tomorrow?

How does the new Reserve program fit into our overall requirements? and lastly

What is the significance of the recently approved Code of Conduct for members of the Armed Forces?

LESSON OF THE PAST

Somebody has said that those who will not learn from history are condemned to repeat it.

I think we all are aware of the fact that we were taught a severe lesson after World War II.

In our rush to disarm, we ignored a number of clearly visible warning signals and stripped ourselves of a necessary protective force.

Once the forces of aggression struck in Korea, we rushed to mobilize and rearm. We had everything to do over again, and in a limited amount of time.

Somehow we survived the entire Korean ordeal, but we had written one more chapter in our story of a national military philosophy based on expediency and short-sighted considerations. We had again paid a terrible price.

DEFENSE CONCEPTS TODAY

Today we are following a radically different and far more realistic philosophy. We have to. We recognize that we can no longer gamble with our security by blowing hot and cold on military preparedness and by refusing to maintain a stable and balanced military program.

We are aware of the advances in technological warfare, and the advent of time and space obliterating speeds. We can no longer base our military plans on the comfortable assurance of a "grace period" afforded by geographical location, nor can we think in terms of any particular year of crisis or period of maximum danger.

Instead, we require a long-term defense, and a long-term retaliatory strength as well.

THE ACTIVE FORCES PICTURE

Early in 1953, therefore, the President called for a far-reaching national-defense program adequate for all foreseeable needs. This meant a program that achieved maximum efficiency and protective contribution from our manpower and material resources—without placing an oppressive burden on our economy in the process.

The result has been a shakedown and tightening of the entire defense structure, keeping proven essentials, making increases where strategic considerations dictate necessity, and making reductions where less essential considerations apply.

In terms of ready strength, we have achieved a taut and efficient Military Establishment as a consequence.

Our Active Forces will number around 2,850,000 men by the end of fiscal year 1956—a figure which represents the best military judgment of the Joint Chiefs of Staff, the National Security Council, the Cabinet, and the President.

A great deal of controversy has developed around this figure. Most of the controversy resulted from the reduction from around 3 million men that took place in the past year or so.

We must not put such faith in mere numbers. In evaluating the effectiveness of this force, we must multiply numbers of men times the weapons to be employed. A host of men with bows and arrows is hardly equal to one man with a jet plane or an atomic land weapon.

THE NEW WEAPONS

The entire science of warfare has changed and is changing more each day—giving us weapons of a type which have increased both firepower and mobility tremendously.

The Air Defense Command has now been completely modernized with all-weather jets. The Strategic Air Command has re-

placed its entire medium bomber and reconnaissance force with B–47 jets, as compared with only 2 such wings in 1952. Replacement of the B–36 heavy bomber with the B–52 is now under way—and will be rapidly accelerated. In total, the Air Force with 124 wings at present is continuing its buildup toward a total of 137 wings and around 25,000 planes by 1957.

Add together such factors as the 280-millimeter gun, the guided "corporal" missile and the "Honest John" rocket—and add the increased striking power of supporting armor and aircraft—and you get a keen awareness that any comparison of today's army with that of World War II, and even Korea, is a comparison of different things. We calculate the destructive fire power of today's division to be about 80 percent greater than its World War II counterpart.

The Army chief of research and development, Gen. James M. Gavin, underlined this fact in a recent speech at Fort Benning when he said:

"The United States Army is developing modern techniques to take full advantage of the military innovations introduced by modern technology. * * * The traditional artillery gun may well be on the way to obsolescence, for the new missiles have almost unbelievable possibilities, both for anti-aircraft purposes and for all other kinds of enemy targets.

"The potentialities of such missiles, if or when equipped with nuclear warheads of various sizes, stagger the imagination."

Hon. Carter L. Burgess—Part II

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. TEAGUE of Texas. Mr. Speaker, following is the second portion of Mr. Burgess' address before the student body of the A. & M. College of Texas:

Developments of this nature, in my opinion, place the current military strength adjustments in a proper perspective.

We are certainly not attempting to reduce our Armed Forces fighting strength. We are stabilizing it at planned levels and we are shifting some emphasis from men to machines, but we are gaining new strength in the process.

RESERVE—THE LONG HAUL

This whole subject, of course, ties in with the question of what sort of military-defense program our country will maintain from now on.

Here I wish to give special attention to a factor of tremendous and growing importance, namely, our organized Reserves.

Let me quote what the President said on this overall subject last January. He stated:

"Because scientific progress exerts a constantly increasing influence upon the character and conduct of war, and because America's most precious possession is the lives of her citizens, we should base our security upon military formations which make maximum use of science and technology in order to minimize numbers of men. For the remainder, we may look primarily to our Reserves and our mobilization base, including our stockpile of critical materials."

This statement by the President, it seems to me, clearly suggests the kind of defense program we shall be able to maintain in the future.

The Reserve Forces Act of 1955, which became law last August, has become intensely important in this connection. It has set in motion a program which will permit a more realistic build-up and the combat and front-line status of our Federal Reserve and National Guard.

Where today we have around 800,000 Reservists taking part in drill, by 1959 we aim to have approximately 2,900,000—trained, organized in units, and ready to move out in support of the active forces in the event of attack from D–day on up to D–plus–6 months.

While the new law requires a period of Reserve services of all men who enter the Armed Forces today, it offers a wide range of choices and predictable electives as well as sensible means for critically skilled workers, scientists, engineers, and men highly essential to research to discharge their military obligation.

Of special interest to you gentlemen here at A and M, it provides that all qualified ROTC graduates will receive their commissions, with some taking a regular 2-year tour of duty with the active forces, with subsequent Reserve obligation, and giving the opportunity to others to serve 6 months of active duty for training—in the status of commissioned officers—and the remainder of their longer enforceable obligation in a Reserve unit.

Lastly, this program gives us the means whereby trained units of Reserve manpower could swiftly be thrown into the support of the civil authority in the event of an all-out assault upon us. Here the President has again underlined the essential point when he said at the conclusion of Operation Alert last June:

"We must remember that in the kind of disaster of which I am speaking one trained Reserve battalion in the proper place would be worth five divisions located a thousand miles away. Trained men will be needed on the spot at the time the disaster occurs to respond to the calls of the mayors * * * governors and the Federal Government."

The new law gives the President authority to call up to 1 million of the Ready Reserve in an emergency without prior congressional action.

Not a part of the Reserve Forces Act, but a direct result of efforts spent in its passage, is Public Law 364, which gives the States themselves the authority to form State Defense forces separate from the National Guard, and not subject to Federal call.

The State of Texas, I might say, has taken a commanding lead in the organization of such State forces, and you are rapidly building up an organization of top quality.

SELLING THE RESERVE IDEA

And so, in terms of our defense needs for today and tomorrow, Reserves have come to occupy a commanding position in all of our planning. They unquestionably provide the key for holding down the size and tremendous costs of our Military Establishment. They afford the very maximum of protection to our democratic concepts and liberties. And they are the means whereby today's citizen can help insure his own and his family's future, with minimum disruption of his career and life plans.

The strange paradox in this situation, however, is just this:

Although the Reserve program offers all these things, too few people are showing interest in it. In connection with the volunteer choices which it affords, the response of young men of military age has thus far proved negligible.

The Department of Defense is doing its level best through its own publicity media and throughout the country to get clear and factual information to the public concerning this Reserve program. It is plain, however, that in addition to this effort—and despite the clear existence of need—we shall require far greater assistance from the public itself if the program is to do all that it can. We expect improvements.

Here, it seems to me, there is a job for all of us.

Every student of this great institution will play an important part in the protection of his country, because the ROTC program is our largest source of command leadership.

But you can do more—you and all the other people who want to see this country have a ready protection at all times. You can support and advance the Reserve concept and the Reserve program—at every opportunity which presents itself. Just think what would happen if each ROTC man in America could encourage one young man apiece to enter the new Reserve program by spring—we would be over our 1956 quota. Officers and ministers have the duty of keeping their units and congregations up to strength.

In the end, our Reserve program will be what our citizens make it. No argument, no legislation, no policy can substitute for the understanding on the part of the citizens, young and old, of the basic need for a Reserve and the willingness of each citizen to do unstintingly his full share in its support.

Pass the word along and awaken young men to get about their obligation at the earliest possible age.

CODE OF CONDUCT

With all elements of this defense picture in mind—the nature of the world situation, the responsibilities of civilians and military, and the ordeal which our men faced in Korea, there has been a need for a simple but effective means of defining the action principles on which we proceed.

The code of conduct recently approved by the President fills this need. While primarily for the serviceman, it contains precepts and values for us all.

During the spring of 1953, when the first prisoner exchanges were arranged we received a clear idea of the nature of Communist treatment of captives. During the subsequent "Big Switch" exchange it was learned that 2,730 Americans had died in captivity in North Korea. This death toll—38 percent—spoke with ugly eloquence of conditions along the death marches and in the enemy's camps.

There were 20 prison camps in North Korea. All were substandard, as might be expected in a remote corner of Asia. But some of the camps were inexcusably below par. For instance, a camp called "The Caves" with no latrine facilities or where the food was garbage. In another atrocious camp—Death Valley—POW's were punished by confinment in pits and mudholes.

Winter marches from the front to the North Korean interior became death marches for wounded or exhausted prisoners. On one such march about 500 perished. Brutality was the rule with the North Korean soldiery.

Then came rough interrogation—and a particularly high-pressure brain-washing process.

All of the 4,428 American prisoners who survived were screened by military intelligence. By this process the chaff was separated from the wheat. There was very little chaff.

An insignificant 21 decided to try life in the Communist "people's democracy," and of these 3 have since returned—bearing word that all of the others now regret their decision.

Of the 4,428 American prisoners, only 129 were subsequently held for alleged misconduct. Roughly 1 out of 27. Compared with FBI statistics that 1 in 15 Americans has been arrested for alleged commission of crime, this speaks eloquently for the quality of our Armed Forces.

But many came to the razor's edge of falling. And some of those who died might have made it with better survival training. Returnees reported a lack of discipline, and occasional failure on the part of some officers to assume command responsibility in the camps. Many of our men were unable to answer the Communist line with American arguments. They felt hampered by an ignorance of American history and national traditions.

Reviewing the situation, Secretary of Defense Wilson organized a special Advisory Committee on the POW Problem, and directed it to make appropriate recommendations, including a code of conduct that would be standard in the United States Armed Forces.

By Executive order of the President, the code of conduct went into effect in August 1955. It was drawn up by a distinguished panel of veteran officers and civilian service secretaries after weeks of consultation with educators, churchmen, statesmen, labor leaders, and medical and legal authorities. And with former prisoners of war—the men who know.

The sights of this code are purposely high. Its aim is top-level conduct, but its demands are not unrealistic. Its principles are based on hard experience. The first article states:

"I am an American fighting man. I serve in the forces which guard my country and our way of life. I am prepared to give my life in their defense."

The last article says:

"I will never forget that I am an American fighting man, responsible for my actions, and dedicated to the principles which made my country free. I will trust in my God and in the United States of America."

I recognize, and I know you do as well, that this is nothing more than a courageous creed for each of us in this difficult and dangerous age.

Its purpose is to strengthen and fortify the soldier in whatever adversity he might be called upon to endure.

It could serve equally well for the civilian in the unhappy event that warfare ever came to our own main streets.

Hon. Carter L. Burgess—Part III

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. TEAGUE of Texas. Mr. Speaker, herewith the concluding portion of the remarks by the Honorable Carter L. Burgess:

ANSWERS TO QUESTIONS

The letter which I received from the chairman of your great issues committee suggested that I provide you with answers to three principal questions. These were:

1. What are Americans' attitudes, past and present, toward military service?

2. What about future generations, and their obligations to military service?

3. What is the significance of the recent cases of war prisoners succumbing to Communist brainwashing?

I'd like to answer each of these briefly, in the light of what I have discussed here this evening, and by way of conclusion.

The American attitude toward military service in the past has all too often been to avoid it, and to accept it only in times of direct peril.

Today there are still those who would rather let somebody else shoulder the defense responsibility, while they wait until the clouds roll by. And there are still those, as I mentioned in connection with the Reserve program, who need to be given a greater awareness of what is at stake.

But as a nation we have made some great changes in our attitude toward the role of the military, and this change is apparent in a more complete support by the public for an adequate defense program.

In the last session the Congress acted vigorously in support of our objective of a strong and ready Nation. It approved a defense budget taking about 60 percent of all the money the Government will spend in 1956, continued selective service until 1959, enacted new Reserve legislation, and launched a sound program of career incentives and benefits for members of the Armed Forces.

These actions provide concrete evidence that America has no intention of going back to the days of mothball fleets, wooden training rifles, and token-sized forces. They reflect the serious and realistic determination of the American people to protect their liberties.

What about the military obligation of future generations?

At the risk of sounding facetious, I would say that the question might better be directed at the Kremlin—for the decision actually lies there.

If the concern is whether we are some day going to develop a kind of lockstep military conformity in this country, turning all our people into robots in uniform, I would say—forget it. The constitutional liberties of this Nation will not be impaired through the continuation of an effective Military Establishment, but they could well be lost entirely without it. So long as we retain our system of checks and balances, with proper concern for our productive economy and our social structure, we will have no regimentation.

The strain of a protracted defense effort will be felt, but it can be handled—through the proper recognition of our respective obligations, the wise use of Reserves, through the splendid efforts of volunteers of such as you gentlemen here at A. and M., and through a constant demand for the highest efficiency and contribution from our defense forces.

In these times of change, our defenses cannot be built up today and then laid away in cold storage to save some future generations. We can put money in the bank so our grandsons will not have to work, but we cannot promise that our grandsons will not have to fight.

Our hope is that we can create a lasting and favorable peace, but if we cannot we must educate each succeeding generation to the obligations of a freeman in a dangerous world.

The situation which developed in connection with American captives in Korea was given the most intensive consideration by the Department of Defense. There were some failures, a tiny minority. Only 1 out of 27 suspected of misconduct is not a figure calculated to cause grave alarm.

When one realizes that the Armed Forces comes from a cross-section of the national population, the record seems fine indeed. It seems better than that when one weighs in the balance the tremendous pressures the American POW's were under. Weighed in that balance, they cannot be found wanting.

One way to look at the prisoner of war experience was to assume that something was seriously wrong with our military and social system today.

The other was to put the whole thing in perspective, recognizing what needed to be given emphasis, but rejecting any assumptions of decadence and decline.

The Department of Defense preferred the latter course, and as a consequence formulated the Code of Conduct and a more realistic training program.

The conscience and heart of all America are needed in the support of the code, and the best of training that can be provided in our homes, by our schools and churches and by the Armed Forces will be required for all who undertake to live by this code.

The United States must constantly be aware of her high position of world leadership and the code, therefore, considers the standard of the Ten Commandments and of our Constitution, as well as our pledge to the United Nations.

CONCLUSION

In discussing the American defense program, I have attempted to give you a quick picture of our existing elements of strength, our need for Reserves, and some idea of the general philosophy of readiness which we require for the future.

We are opposed by a system which does not share our concern for the rights of the individual. It is both armed and dangerous. We can either defy this system with all our vigor and all our resources, or we can submit.

But while we recognize this fact, we need not go overboard on the side of gloom. Earlier I cited the example of the people of Europe who not only knew danger, but destruction as well, and who have risen from the ruins of their cities and homes to build a new and vibrant life of opportunity for themselves.

We need to keep this lesson in mind—that although there is danger there is always opportunity. In the heart, in the mind, and in the spirit, we must support our way of life for today and for our children tomorrow, and in so doing we hold out a bright promise to the entire world. This is the Texas way.

Our liberty, as one writer has expressed it, is not something we can purchase in a bargain basement, nor can it be paid for in a lump sum. It must be bought on the installment plan—and each generation must pay a part of the price.

The American defense program is part of the price we are paying. It is our determined answer to those who have a habit of attacking the weak.

Is this in conflict with any of the basic precepts of our democracy?

I submit that it is 100 percent in support of our democracy, and that it will continue to reinforce our vital stand in defense of liberty before the entire world.

Just remember we all live in a time of opportunity and danger and that America's freedom is not free.

Let's Not Give Up a Farm Program That Is Working

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mrs. ST. GEORGE. Mr. Speaker, an article on the farm program by Dr. Herrell F. DeGraff, of Cornell University, appeared in the American Agriculturist of November 5, 1955. Dr. DeGraff speaks with authority and points out once more the utter folly of scrapping a program that is only just getting started and returning to one that has already been proved unworkable and supremely impractical.

Let us remember, politics and vote-getting aside, that Dr. DeGraff is a thousand times right when he says:

The flexible price-support program we now have is no doubt the best we can get. And because I believe it is working, I am not panicked and I do not want to dilute it, compromise it, or retreat from it. American agriculture is not going to the dogs.

The article follows:

LET'S NOT GIVE UP A FARM PROGRAM THAT IS WORKING

(By Herrell F. Degraff)

I am not a politician. I am an economist, but as a citizen I have the right to certain opinions. I do not believe that the 1956 election will be won or lost on the farm vote. I doubt that the farm vote can be bought, and even if it can be bought, I do not believe that it will stay bought.

As an economist, I think I can see certain long-time effects of some of the programs that are being seriously suggested. It seems to me that it would be tragic if, in an attempt to win an election, sound programs should be abandoned and in their place something should be adopted which, in the long run, would lose farmers the freedom to run their own business.

The farm income situation has deteriorated, but has not deteriorated any more than is to be expected from (1) the general economic stability following the Korean war inflation; (2) the high level of Government-owned stocks of farm products accumulated as a result of the too-long-continued wartime levels of price support; and (3) our reduced ability to export (in part because of the high prices at which Government-stored stocks are held).

As a matter of fact, farmers are worried, but they are not panicked as some politicians are. Farmers are rightfully resentful that agriculture is not sharing in the prosperous times which other businesses are enjoying. However, in my opinion, the worst of the farm adjustment is now behind us. My reasons for thinking so are:

1. The assumption that reasonable stability at the present high price level will be maintained in the general economy.

2. That domestic use and exports of agricultural products are more likely to increase moderately than they are to decline.

3. That present production and use of all major farm products are now in close balance.

RENTED ACRES

There is much talk of the proposition that government pay farmers a rental for diverting cultivated acres to grass. Because much will be said in favor of it, I like to raise some questions that seem to me to be fundamental.

1. If the program is put into effect, will it not be difficult to stop it?

2. Can it be extended to the point where it will remove enough acres to significantly reduce production of cultivated crops? Certainly, the poorest acres, farm by farm, will be taken out of production and the balance of each farm will be used still more intensively. As a result, farmers can and will boost acre yields so there will be little or no reduction in total output.

3. Won't livestock growers object seriously over being a further dumping ground for diverted acres?

4. Won't the money cost of diverting these acres be prohibitive if expressed in terms of cost per bushel or bale?

5. If acres are government-rented and taken out of production, and if yields increase within a couple of years, could those acres ever be returned to production?

At least we can say it would be economically difficult and perhaps politically impossible.

6. What would our Northeastern farmers say to this further subsidy of Government-rented acres made to feed producers whom they already consider to be highly subsidized?

This rented acres plan is not even a logical way of trying to reduce wheat, cotton, and corn production because it would cost too much for this purpose; and, even if the cost were not prohibitive, all sorts of pressures would interefere with pulling a lot of acres out of production. If this plan is to be adopted strictly for political purposes, someone should analyze whether the votes it would be supposed to buy will be worth the cost.

COMPENSATORY PAYMENTS

From many quarters I am hearing increased support of direct Government payments to farmers (the so-called compensatory payments) in the form of a Treasury check. These suggestions are coming not only from the Democratic Party, but from staunch supporters of the present administration. In fact, support is coming from quarters usually considered conservative.

Compensatory payments, broadly applied, would result in a frankly socialized agriculture. Payments above the market level obviously could be paid only upon limited quantities of production rather than upon all that farmers would like to produce with such payments.

This means the necessity for annual quotas (probably quantity of product rather than acres) for each commodity covered. National quotas would have to be divided by States, counties, and down to the individual farms. Thus, for the price of a Treasury check, each farmer would surrender to central authority much of his freedom of decision in managing his farm.

I do not know how farm families could more easily, or quickly, become wards of the State—nor do I know how compensatory payments could be put into effect without the provisions that would have these results. I certainly would not want to be a party to establishing this kind of future for agriculture. Once established, such a system would continue more or less indefinitely, simply because of the difficulties—or impossibility—of termination.

FLEXIBLE SUPPORTS

Some influential people are now saying the flexible price-support program has failed and they are saying it before flexible supports have had a chance to prove their worth.

The most serious immediate problem on the agricultural scene is still the accumulated stocks in Government storage. They are burdensome in many ways—not the least of which is their price-depressing influence. But I have long thought they could be lived with and slowly worked off if only the continued flow into the stockpiles could be stopped. This year we will almost see that stoppage become a reality.

The truly hopeful situation under the flexible support program is how nearly in balance we now are, even with wheat, cotton, and the feed grains. The flexibles, under the superb work and accomplishments of Secretary Benson's team, are showing results now. When a considerable measure of success is so clearly visible, this is no time either to dump or to weaken the program.

The poultry situation (12 percent of gross farm income) is looking up. Dairying (15 percent of gross farm income from milk alone) is looking up. Cattle and calves (15 percent) are doing all right. Hogs (12 percent) are headed for lower prices during the rush of marketing this fall, but will average about $16 for the year.

Secretary Benson is entitled to a good deal of righteous wrath over the political pummeling he has been taking—particularly during his recent absence from the country. He inherited the surplus mess that has been so considerably responsible for price softness in farm staples. But real progress has already been made in a return to balance of production and use.

The flexible price-support program we now have is no doubt the best we can get, for the present. And because I believe it is working, I am not panicked and I do not want to dilute it, compromise it, or retreat from it. American agriculture is not going to the dogs.

President Ramon Magsaysay

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. TEAGUE of Texas. Mr. Speaker, during the recent adjournment of the Congress it was my pleasure to attend and participate in the dedication of a new Veterans' Administration hospital in Manila, P. I.

Accepting this hospital for the Philippine Government was President Ramon Magsaysay, one of the best friends the free people of the world have in the far Pacific. President Magsaysay's party recently won a political victory by an overwhelming vote of the Philippine people, thereby voicing confidence in him as a leader, and I might add that I share that confidence with the Philippine people.

Under leave to extend my remarks in the RECORD, I wish to include the speech made by President Magsaysay on this occasion.

The speech follows:

This occasion brings to a close a week-long celebration of a rare relationship between the people of two nations. It has been our custom to devote a day each year to the celebration of more than 50 years of friendship between Filipinos and Americans. This year, Philippine-American Day was extended for an entire week so that this ceremony might serve as a fitting climax.

The gift being turned over to the Philippine government today is a magnificant one. It is probably the finest and most modern hospital of its kind in this part of the world. Just completed at a cost of 18 million pesos, it is a gift of the American people to Filipino veterans, as assurance that their health and rehabilitation will enjoy the best care that medical science can offer.

In this event we have a contrete demonstration of the warm and generous friendship that characterizes the Philippine-American relationship. To each of us, veterans or not, it carries a very special message, a hopeful and encouraging message in terms of the future of humanity. It gives us reason to believe that, in this troubled world, human goodness still outweighs evil.

To me this day has a very special and personal significance. It was my privilege and good fortune to play a part in the very beginnings of this splendid memorial. I recall vividly the feeling of inadequacy and uncertainty with which I undertook a mission, with Congressman Cinco and Father Haggerty, at the behest of President Roxas, to Washington in 1948. I felt very deeply that the mission was a necessary one, that our veterans needed and deserved far more assistance than their own government was able to afford. And I felt that the only place to look for that assistance was in America.

It was clear to me, however, that I had no special qualifications for the task I had un-

dertaken—except a thorough understanding of the problems and needs of the veterans and a strong determination to get something done about it. I realized that the name of Magsaysay was relatively unknown in Washington and that the Government of the United States at the time was faced by the many problems and the heavy burdens of restoring a war-stricken world. But personal experience with Americans sustained me in the conviction that somewhere in Washington I would find sympathetic ears for our story and sympathetic hearts to respond to the needs of the Filipino heroes who had fought so gallantly at the side of their American comrades.

In Washington I found that I had not been wrong in my appraisal of the situation. An entire world wrecked by war was clamoring for America's attention and America's aid. The face of a new enemy, world communism, was already recognized and it was desperately urgent for America to act quickly if millions of freemen were not to slip behind the Iron Curtain. But I found also that my hopes were justified. I found in the American Congress friends of the Philippines who responded quickly and effectively once the need of our veterans became known. Their enthusiasm and their efforts made possible the passage of the Rogers bill which has meant so much to our veterans and their dependents and which is responsible for the splendid hospital we are dedicating here today.

As I have said, the significance of this event has meaning for each of us. What it means to the veteran is clear not only from the point of view of these new medical facilities made available for his care, but also from the fact that American friendship has brought the Filipino veterans since the end of the war more than 1 billion pesos in cash payments, payments which continue to flow into our country quietly and without benefit of publicity. The benefits of this steady flow of income into the economy of our Nation are felt by every Filipino man, woman, and child.

There is another significant aspect of this occasion which must not escape notice. Perhaps better than anything else it emphasizes the wholesome nature of the Philippine American relationship over the past half century. This great scientific institution is being turned over today to the Philippine Government. It will be administered and staffed entirely by Filipinos. Our own doctors and surgeons will utilize these facilities. Our own skilled technicians will maintain all necessary functions. That we as a people are in a position to do this is in sharp contrast with the experience of our Asian neighbors. It is not only a credit to our people and a source of great national pride but a tribute to the farsighted and enlightened stewardship of America during the period of her sovereignty here.

These are only a few of the thoughts which occur to the thoughtful observer on this occasion, but they are sufficient to explain why we feel as we do about Philippine American friendship. Out of the years of our relationship there has come the realization that our people share the same ideals of freedom and justice, that we subscribe in common to the concept of a world in which the individual and his rights are superior to the State, a democratic world in which peace and human dignity rather than lust for power are paramount. It was in defense of these common principles and ideals that Americans and Filipinos fought side by side in the last war. And out of our experience since that war has come the realization that there are even closer bonds, closer in the sense that they go beyond the mere sharing of ideas. Such bonds can exist between casual acquaintances, but it is only between true and loyal friends that we find the bonds of loyalty, the bonds of quick and willing response of each to the other's need.

The Filipino who is today's veteran fought at the side of Americans not because he was ordered to do so but because he deeply believed in the ideals which America was then fighting to preserve, and because he had faith in America as a trustworthy ally. He and his younger brother who might be tomorrow's veteran, feel even more strongly that their cause is just and that their judgment is sound. Since they have known the horrors of war they would spare no effort in seeking peace, but having grown up in a democracy and having known its blessings, they will not hesitate if the need arises once more to defend it with their lives. Whether for peace or war they will continue to look toward America as a friend and ally worthy of their trust.

Let Us End American Colonialism

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following keynote address by Hon. Ernest Gruening to Alaska Constitutional Convention entitled "Let Us End American Colonialism":

We meet to validate the most basic of American principles, the principle of "government by consent of the governed." We take this historic step because the people of Alaska who elected you, have come to see that their long standing and unceasing protests against the restrictions, discriminations, and exclusions to which we are subject have been unheeded by the colonialism that has ruled Alaska for 88 years. The people of Alaska have never ceased to object to these impositions even though they may not have realized that such were part and parcel of their colonial status. Indeed, the full realization that Alaska is a Colony may not yet have come to many Alaskans, nor may it be even faintly appreciated by those in power who perpetuate our colonial servitude.

Half a century ago, a Governor of Alaska, John Green Brady, contemplating the vain efforts of Alaskans for nearly 40 years to secure even a modicum of workable self-government, declared:

"We are graduates of the school of patience."

Since that time Alaskans have continued to take postgraduate courses. Today, in 1955, sorely tried through 88 years of stepchildhood, and matured to step-adulthood, Alaskans have come to the time when patience has ceased to be a virtue. But our faith in American institutions, our reverence for American traditions, are not only undimmed but intensified by our continuing deprivation of them. Our cause is not merely Alaskans; it is the cause of all Americans. So, we are gathered here, following action by our elected representatives who provided this constitutional convention, to do our part to show the world that America practices what it preaches. (In a public address at Denver, September 16, 1950, Gen. Dwight D. Eisenhower declared: "Quick admission of Alaska and Hawaii to statehood will show the world that America practices what it preaches.")

These words are not original with me. But they remain as valued and as valid as when they were uttered 5 years ago. They remain no less valid even if their noble purpose is as yet unfulfilled. We are here to do what lies within our power to hasten their fulfillment.

We meet in a time singularly appropriate. Not that there is ever a greater or lesser timeliness for the application by Americans of American principles. Those principles are as enduring and as eternally timely as the Golden Rule. Indeed democracy is nothing less than the application of the Golden Rule to the great society. I mean, of course, democracy of deeds, not of lip-service; democracy that is faithful to its professions; democracy that matches its pledges with its performance. But there is, nevertheless, a peculiar timeliness to this Alaskans' enterprise to keep our Nation's democracy true to its ideals. For right now that the United States has assumed world leadership, it has shown through the expressions of its leaders its distaste for colonialism. And this antipathy to colonialism—wherever such colonialism may be found—reflects a deep-seated sentiment among Americans.

For our Nation was born of revolt against colonialism. Our charters of liberty—the Declaration of Independence and the Constitution—embody America's opposition to colonialism and to colonialism's inevitable abuses. It is therefore natural and proper that American leadership should set its face against the absenteeism, the discriminations, and the oppressions of colonialism. It is natural and proper that American leadership should lend such aid and comfort as it may to other peoples striving for self-determination and for that universally applicable tenet of American faith—government by consent of the governed. Indeed, as we shall see, we are pledged to do this by recent treaty commitments.

What more ironical, than, what more paradoxical, than that that very same leadership maintains Alaska as a colony?

What could be more destructive of American purpose in the world? And what could be more helpful to that mission of our Nation than to rid America of its last blot of colonialism by admitting our only two incorporated Territories—Alaska and Hawaii—to the equality they seek, the equality provided by the long-establish and only possible formula, namely statehood?

America does not, alas, practice what it preaches, as long as it retains Alaska in colonial vassalage.

Is there any doubt that Alaska is a colony? Is there any question that in its maintenance of Alaska as a Territory against the expressed will of its inhabitants, and subject to the accompanying political and economic disadvantages, the United States has been and is guilty of colonialism?

Lest there be such doubt, lest there be those who would deny this indictment, let the facts be submitted to a candid world.

You will note that this last sentence is borrowed from that immortal document, the Declaration of Independence. It is wholly appropriate to do this. For, in relation to their time, viewed in the light of mankind's progress in the 180 years since the revolt of the 13 original American colonies, the "abuses and usurpations"—to use again the language of the Declaration—against which we protest today, are as great, if not greater, than those our Revolutionary forbears suffered and against which they revolted.

Let us recall the first item of grievance in the Declaration of Independence:

"He has refused assent to laws, the most wholesome and necessary for the public good."

"He," of course, was King George the Third. Put in his place, in place of the "he," his contemporary equivalent, our ruler, the Federal Government.

Has it, or has it not, "refused assent to laws most wholesome and necessary for the public good?"

We Alaskans know that the answer is emphatically, "Yes, it has."

He, or for the purpose of 1955, it, the Federal Government, has "refused assent," although requested to do so for some 40 years, to the following "most wholesome and necessary laws":

First. A law transferring the control and management of Alaska's greatest natural resource, the fisheries, to the Territory of Alaska, as it transferred the corresponding resources to all other Territories in the past.

2. It has refused assent to a law repealing the 35-year-old discrimination in the Maritime Law of 1920, the Jones Act, a discrimination uniquely against Alaska.

3. It has refused assent to a reform of our obsolete and unworkable land laws, which would assist and speed population growth, settlement and development of Alaska. It alone is responsible for over 99 percent of Alaska being still public domain.

4. It has refused assent to a law including Alaska in Federal-aid highway legislation.

5. It has refused assent to a law abolishing the barbarous commitment procedure of Alaska's insane which treats them like criminals and confines them in a distant institution in the States.

6. It has refused assent to placing our Federal lower court judges, the United States commissioners, on salary, and paying them a living wage.

One could cite other examples of such refusal of assent to laws most wholesome and necessary for the public good.

But let us instead pass on to the second item of complaint, which is similar to the first, in the Declaration of Independence:

"He has forbidden his governors to pass laws of immediate and growing importance * * *"

Substitute for the "He' 'then the British royal executive, the present American Federal executive, and substitute for "his governors," his party leaders in Congress, and recall their vote in the House of Representatives last May 10, killing a law "of immediate and growing importance"—the statehood bill.

Let us go still further down the list of our revolutionary forefathers' expressed grievances, again quoting the Declaration of Independence:

"He has obstructed the administration of justice, by refusing his assent to laws establishing judiciary powers."

"He," is today the whole Federal Government. It has for a decade obstructed the administration of justice in Alaska by refusing assent to establishing additional judiciary powers, where they were needed, namely in the Third Judicial Division, while repeatedly increasing the number of judges in the mother country, the 48 States. And although the population of Alaska has more than tripled in the last 46 years, the number of Federal judges established in Alaska in 1909 remains unchanged. And Federal judges are the only judges this colony is permitted to have.

Let us look still further in the Declaration of Independence:

"He has affected to render the military independent and superior to the civil power."

Is there much difference between this and the recent presidential declaration that the defense of Alaska, that is to say the rule of the military here, could be better carried out if Alaska remains a Territory?

One could go on at length drawing the deadly parallels which caused our revolutionary forefathers to raise the standard of freedom, although, clearly, some of the other abuses complained of in that distant day no longer exist.

But Alaska is no less a colony than were those 13 colonies along the Atlantic seaboard in 1775. The colonialism which the United States imposes on us and which we have suffered for 88 years, is no less burdensome, no less unjust, than that against which they poured out their blood and treasure. And while most Alaskans know that full well, we repeat:

"To prove this let the facts be submitted to a candid world."

To begin at the beginning, the Treaty of Cession by which Alaska was annexed, contained a solemn and specific commitment:

"The inhabitants of the ceded territory * * * shall be admitted to all the rights, advantages and immunities of citizens of the United States * * *."

That was the pledge. The United States has not kept that pledge. Yet a treaty is the highest law of the land. And it is made in the clear view of all mankind.

The United States has broken that pledge for 88 years. It has not admitted the inhabitants of Alaska to "all the rights, advantages and immunities of citizens of the United States."

"All the rights, advantages and immunities of citizens of the United States" would entitle us to vote for President and Vice-President, to representation in the Congress by two Senators and a Representative with a vote, and would free us from the restrictions imposed by the Organic Act of 1912, and the act of Congress of July 30, 1886. Obviously we have neither the vote, nor the representation, nor the freedom from restrictions.

We suffer taxation without representation, which is no less "tyranny" in 1955 than it was in 1775. Actually it is much worse in 1955 than in 1775 because the idea that it was "tyranny" was then new. Since the revolutionaries abolished it for the States a century and three-quarters ago, it has become a national synonym for something repulsive and intolerable.

We are subject to military service for the Nation—a privilege and obligation we accept gladly—yet have no voice in the making and ending of the wars into which our young men are drafted.

In this respect we are worse off than our colonial forefathers. King George III did not impose conscription upon them. They were not drafted to fight for the mother country. Therefore there was no revolutionary slogan "no conscription without representation." But it is a valid slogan for Alaskans today.

The treaty obligation of 1867 is an obligation to grant us the full equality of statehood, for which Alaskans did not press in the first 80 years of their subordination, but which now, overdue, they demand as their right.

But that is only a small part of the evidence of our colonialism under the American flag. Let us submit more facts to a candid world.

1. Let us ask, what is a colony? And let us answer that question.

A colony has been defined in a standard college textbook by a Columbia University professor as "a geographic area held for political, strategic, and economic advantage."

That, as the facts will show, is precisely what the Territory of Alaska is—"a geographic area held for political, strategic, and economic advantage."

The maintenance and exploitation of those political, strategic, and economic advantages by the holding power is colonialism.

The United States is that holding power.

Inherent in colonialism is an inferior political status.

Inherent in colonialism is an inferior economic status.

The inferior economic status is a consequence of the inferior political status.

The inferior economic status results from discriminatory laws and practices imposed upon the colonials through the superior political strength of the colonial power in the interest of its own noncolonial citizens.

The economic disadvantages of Alaskans which in consequence of such laws and practices redound to the advantage of others living in the States who prosper at the expense of Alaskans—these are the hallmarks of colonialism.

Let us take a look at these hallmarks of colonialism deeply engraved on the policies of the United States in Alaska in the field of transportation. Transportation is the key to almost all development. None have demonstrated this better than have the Americans within the noncolonial areas of their 48 States where transportation of every kind—railways, highways, airways—have linked, built and developed a dynamic domain of continental dimensions.

First, let us scrutinize seaborne transportation. It was, for 73 years, until 1940, the only form of transportation between Alaska and the States. Alaska suffers a unique discrimination in maritime law.

Thirty-five years ago the Congress passed a merchant marine act which is known officially as the Maritime Act of 1920. In Alaska it is referred to as the Jones Act, after its sponsor, the late Senator Wesley L. Jones of the State of Washington. The act embodied a substantial modification of existing maritime law. It provided that goods shipped across the United States, destined either for the coastal ports of the Atlantic or Pacific or for shipment across those oceans to Europe or to Asia, could use either American or foreign carriers. The foreign carriers principally involved were Canadian.

For example, a shipper from the Atlantic seaboard or from the industrial cities of the Middle West of products destined for points to the West could ship these across the country wholly on American railroads or on Canadian railroads, or partly on either.

And when these goods arrived at their coast destination, he could send them across the Pacific in either American or foreign vessels, or southward in either. But as that point in the legislation, creating this new beneficial arrangement two words had been inserted in article 27 of the act. Those two words were, "excluding Alaska."

Now what did those two words signify? They signified that Alaska, alone among the nations, or possessions of nations, on earth, was denied the advantages afforded all other areas. The same discrimination, obviously, applies to products shipped from Alaska.

What was the purpose of this discrimination? Its purpose was to subject Alaska to steamship service owned in the city of Seattle. Senator Jones no doubt assumed, and correctly, that this would be most helpful to some of his constituents there, as indeed it proved to be, but at the expense, the heavy expense, from that time on, of our voteless citizens of Alaska.

This was in 1920. Under the limited self-government which Congress had granted Alaska through the Organic Act of 1912, more limited than had been granted any other Territory, Alaska was still a youngster. Nevertheless, the fifth Territorial legislature meeting the next year, 1921, protested strenuously against this specific and flagrant discrimination, and ordered the Territorial attorney general to take the matter to court. The Territorial legislators believed, and so expressed themselves, that this new legislation enacted by Congress at the behest of Senator Jones, of Seattle, was in violation of the commerce clause of the Constitution, which forbids discrimination against any port of the United States.

The case came to the Supreme Court of the United States on an appeal from a de-

cree of the United States District Court dismissing the suit brought by the Territory and by an Alaskan shipper, the Juneau Hardware Co., which sought to restrain the Collector of Customs in Alaska from confiscating merchandise ordered by the hardware company and others in Alaska from points in the United States shipped over Canadian railroads, through Canadian ports and thence to Alaska by Canadian vessels, or merchandise to be shipped from Alaska to the United States in like manner.

In pleading the cause of the Territory, Alaska's attorney general John Rustgard argued that both the treaty provisions and the specific extension of the Constitution to Alaska by the Organic Act of 1912 rendered the discriminatory clause unconstitutional. It looked like a clear case.

The government—our government—which was defending this discriminatory maritime act, was represented by the Solicitor General of the United States, the Honorable James M. Beck, of Pennsylvania.

Let the candid world note well the language of his argument:

"The immunity from discrimination is a reserved right on the part of the constituent States. * * * The clear distinction of governmental power between States and Territories must be constantly borne in mind. * * * If the Fathers had anticipated the control of the United States over the far-distant Philippine Islands, would they, who concern was the reserved rights of the States, have considered for a moment a project that any special privilege which the interests of the United States might require for the ports of entry of the several States should by compulsion be extended to the ports of entry of the colonial dependencies * * *?"

Let the candid world note that the case for the United States was presented on the basis that discrimination against a colonial dependency was proper and legitimate and that any special privilege required in the United States would supersede any obligation to a colonial dependency. The colonial dependency involved was and is Alaska.

Mr. Justice McReynolds, in rendering the decision of the Court, declared:

"The act does give preference to the ports of the States over those of the Territories," but, he added, the Court could "find nothing in the Constitution itself or its history which compels the conclusion that it was intended to deprive Congress of the power so to act."

So it was definitively established by the highest Court of the land that Congress had discriminated against Alaska, but that, since Alaska was a colonial dependency, such discrimination was permissible and legal.

Every plea by our Alaska Legislatures over a period of 35 years to rectify this grave and unjust discrimination has been ignored by successive Congresses. They have refused assent to every attempt by Alaska's delegates to secure remedial legislation.

Now the question naturally arises whether this discrimination imposed by the legislative branch of the Federal Government, approved by the executive branch, and sanctified by the judicial branch, was to prove to be more than a mere statement of the legality of such discrimination. Was it more than a mere affirmation of the subordinate and inferior status of Alaska's colonials as compared with the dominating and superior status of the American citizens of the States? Did this discrimination also carry with it economic disadvantages? Indeed it did.

Several private enterprises in Alaska were immediately put out of business by the action of Congress in 1920 even before the Supreme Court upheld the legality of that congressional action.

A resident of Juneau had established a mill to process Sitka spruce. He was paying the required fees to the Forest Service and had developed a market for his product in the Middle West where it was used in airplane manufacture. He was shipping it through Vancouver, where it cost him $5 a thousand to ship by rail to his customers.

The Jones Act automatically compelled him to ship his spruce boards by way of Seattle. Here he was charged $11 a thousand, as against the $5 he had been paying, plus some additional charges, which totaled more than his profit. In consequence his mill was shut down and a promising infant industry, utilizing an abundant but little used Alaskan resource was extinguished. Not only did the Jones Act destroy this and other enterprises, but prevented still others from starting and has prevented them ever since. If anyone doubts that political control of the Territory through remote forces and absentee interests does not cause economic damage to the people of Alaska he need but look at the workings of the maritime legislation directed against Alaska and Alaska only.

Its immediate effects were to more than triple the cost of handling Alaska freight in Seattle on purchases made in Seattle, as compared with Seattle-bought cargoes destined for the Orient. Alaska's delegate, at that time, the late Dan Sutherland, testified that the Seattle terminal charges on shipments to Hawaii or Asia were only 30 cents a ton, and all handling charges were absorbed by the steamship lines, the result of competition between Canadian and American railways and steamship lines. But for Alaska, where congressional legislation had eliminated competition, the Seattle terminal charges on local shipments, that is to say, on goods bought in Seattle destined for Alaska, were 100 percent higher, or 60 cents a ton against 30 cents a ton, plus 50 cents a ton wharfage. So Alaskans paid $1.10 a ton for what cost Hawaiians and Asiatics 30 cents a ton—nearly four times as much.

This was by no means all. On shipments anywhere in the United States through Seattle, and destined for points in the Pacific other than Alaska, the total handling charges were only 30 cents a ton wharfage, and all other costs were absorbed by railroad and steamship lines. But for identical shipments consigned to Alaska, an unloading charge of 65 cents a ton was imposed, plus a wharfage charge of 50 cents a ton, plus a handling charge from wharf to ship of 60 cents a ton. These charges aggregated over 5 times the cost to a shipper to other points in the Pacific, and had to be paid by the Alaska consignee or shipper, and of course ultimately by the Alaska consumer.

These damaging figures were presented by Delegate Sutherland at a public congressional committee hearing and made part of the official printed record. No attempt was made by the representatives of the benefiting stateside interests, either then or later, to explain, to justify, to palliate, to challenge, to refute, or to deny his facts.

If there is a clearer and cruder example of colonialism anywhere let it be produced. Here is a clear case where the Government of the United States—through its legislative branch which enacted the legislation, the executive branch, through the President, who signed it, and the judicial branch, which through its courts, upheld it—imposed a heavy financial burden on Alaskans exclusively, for the advantage of private business interests in the mother country.

Nor is even this by any means all on the subject of railroad and steamship discrimination against Alaska, and Alaska alone. In addition to all the above extortions against Alaska's shippers, suppliers, and consumers—the direct result of discriminatory legislation—all the railroads of the United States charge a higher rate, sometimes as much as 100 percent higher for shipping goods across the continent, if these goods are destined for Alaska.

There is a so-called rail export tariff and a rail import tariff, which apply to a defined geographic area with exceptions made for other areas, which penalizes Alaska and Alaska alone.

Please note that the service rendered by those railroads, for the same articles transported, and for the same distance, is exactly the same, whether the article to be shipped goes ultimately to Alaska or elsewhere in the Pacific or whether it stays on the mainland of the United States. But the charges for Alaska, and Alaska only, on that identical article, for identical mileage, and indentical service, are specifically higher, sometimes up to 100 percent higher.

This abuse, as well as the others dating from the Jones Act have been the subject of unceasing protest from Alaskans. Alaska's legislatures have repeatedly memorialized the Congress and the Federal executive agencies asking for equal treatment. Again and again have Alaska's delegates sought to have the discriminatory clause in the maritime law repealed. But each time the lobbies of the benefitting stateside interests have been successful in preventing any relief action.

How powerful these lobbies are and how successful they have been in maintaining these burdensome manifestations of colonialism may be judged from the unsuccessful efforts of the late Senator Hugh Butler, of Nebraska, to get the discriminatory words "excluding Alaska" stricken from the act. He introduced a bill for that purpose.

In a speech on the Senate floor on December 4, 1947, he denounced "the discrimination against the Territory in the present law", that is the Maritime Act of 1920, and urged that there was "need for the prompt removal of that discrimination if we are to demonstrate that we are in earnest in our determination to promote the development of Alaska."

In a subsequent communication to Senator HOMER CAPEHART, who was then chairman of a subcommittee on Alaska matters of the Committee on Interstate and Foreign Commerce to which Senator Butler's bill was referred, Senator Butler specified the character and extent of the abuse which Alaska was suffering, saying:

"Today, after 27 years of operation under the Jones Act of 1920, the carriers have failed to establish satisfactory service. * * * The Territory is still without adequate transportation to meet its needs. * * * Most Alaskan coastal towns are not connected with the continental United States, or with each other, by highway or rail. Accordingly they have been at the mercy of a steamship monopoly of long duration. There could be no competition from rail or bus lines which would compel better services or lower rates. American steamship lines have not been able or willing to meet Alaska's transportation requirements. The service has been infrequent and the rates exorbitant."

This caustic language was Senator Butler's. And his testimony and vigorous denunciation are highly significant, not merely because he was very conservative, but because for the first 14 years of his senatorial service he was a bitter opponent of statehood for Alaska, a stand which made him the beau ideal of the antistatehood elements within and without the Territory. He professed conversion to statehood for Alaska in 1954 only a few months before his death. He was still an unqualified opponent of Alaskan statehood when he issued this devastating indictment of the maritime transportation in 1947 and 1948.

After going into further detail on the injurious effects on Alaska of the Jones Act, and the fact that most of the "merchandise * * * food products * * * and other commodities" shipped to Alaska were "an exclusive Seattle prerogative," Senator Butler continued:

"The passage of this amendment to the Jones Act could well mean the difference between the slow, continued strangulation of Alaska's economy, and the full develop-

ment of the Territory's vast potentialities."

Senator Butler then spoke of the discriminatory rates in favor of canned salmon, which industry, he pointed out, likewise centered in and around Seattle, saying:

"The people of Alaska have long been subject to higher rates than has the salmon industry, for general cargo. These higher rates are, in fact, a decree penalizing the resident Alaskan for living in Alaska; the lower rates are, in effect, a decree requiring the Alaska resident to make up for whatever deficits accrue from the costs of shipping canned salmon and salmon-cannery needs. * * * The strangling provisions of the present laws would be eliminated by the enactment of S. 1834."

S. 1834 was Senator Butler's bill to remove this manifestation of colonialism.

And Senator Butler concluded:

"The development of Alaska would be accelerated, and justice would be done to those permanent residents of our northwestern frontier, who have, for so many years, struggled valiantly against discouraging circumstances to develop that area."

Despite Senator Butler's powerful position as the chairman of the Committee on Interior and Insular Affairs when his party controlled the Congress, this legislation failed. It did not even come out of committee. Eight more years have passed since that time; the tragic situation as far as Alaska is concerned, in its key transportation, has further deteriorated. Steamship freight rates have continued to go up and up, far above the levels that Senator Butler termed "exorbitant."

Invariably, whenever the operators announced another rate increase, the Alaska Territorial authorities used to request the maritime regulatory agency to secure an audit of the company's books in order to demonstrate that the increases requested were justified. But almost invariably, the increases were granted without such audit and often without question. It may well be asked whether, if Alaska were not a colony, but a State, its two Senators might not be reasonably effective in at least securing a demonstration from the carrier that its financial situation justified the rate increases demanded and promptly acceded to by the Federal Maritime Bureau.

But actually, if Alaska were a State, the whole discrimination in the Jones Act would go out of the porthole. Aalska would then get the same treatment in the transportation of freight that is accorded to every other area under the flag and to foreign countries. But as a colony it gets no consideration in this matter either from the legislative branch, the Congress, or from the executive branch, in this instance the Federal Maritime Board, successor to other agencies similarly subservient to the vested interests within the colonial power.

The net result of those cumulative charges—50 to 100 percent higher railroad freight rates to Seattle, higher unloading and transfer charges in Seattle, higher wharfage and higher longshoring charges, and finally higher maritime freight rates to Alaska ports—all higher than anywhere else for any but Alaskans, has been and is greatly to increase the cost of living in Alaska. This in itself has been and continues to be a great hindrance to settlement and permanent residence in Alaska, a heavy burden on private enterprise in Alaska, a forecloser of new enterprise, and obviously a great obstacle to development.

How absurd in the light of these facts—and others similar to be submitted to our candid world—is the allegation of the small minority of Alaskans and of others "outside" that we are not ready for statehood. How shall be get readier with these handicaps? How can we cope with what conservative Senator Butler described as "the slow, continued strangulation of Alaska's economy," if the throttling grip of colonialism is not loosened?

To complete the maritime picture, beginning last year all passenger travel on American boats has ceased. The Alaska Steamship Line has eliminated it. This is a blow to an infant and potentially great industry in Alaska, the tourist industry, which 4 years ago the Alaska 1951 Legislature sought to develop by establishing the Alaska Visitors' Association, financed jointly by Territorially appropriated and publicly subscribed funds.

One postscript remains on the subject of maritime transportation before we pass on to other of Alaska's colonial disadvantages. Though it is invariably pointed out by congressional opponents of statehood that Alaska is a noncontiguous area, separated from the main body of the 48 States by some 700 miles of foreign territory, or 700 miles of either international or foreign coastal waters, the United States persist in maintaining the coastwise shipping laws against Alaska. Their removal would make a steamship line eligible for the subsidies which American-flag ships in the European, African, or Asiatic trade receive. That might, were Congress sufficiently interested, induce some competition in the Alaska steamship trade from other American carriers. That the imposition of the coastwise shipping laws is not a necessary corallary to being a colony is proved by the fact that the United States has suspended the coastwise shipping laws for the Virgin Islands. But it has declined to do so for Alaska.

Let us now turn to a third form of transportation: highways. These catchwords of colonialism, "excluding Alaska," likewise apply to our highway transportation. For Alaska is denied inclusion in the Federal Aid Highway Act. From this beneficent legislation enacted in 1916, and repeatedly amended and amplified, Alaska, alone among the States and incorporated Territories, is excluded. Even Puerto Rico, which pays no Federal taxes whatever, is included. Yet Alaskans pay all taxes, including the Federal gas tax.

The congressionally wrought substitute—annual appropriation—is a witness to colonialism expressed in cold figures. The results are visible in the lack of an adequate Alaskan highway system. After 88 years of colonialism and 40 years after the enactment by Congress of the joint Federal aid and State highway program, Alaska has only some 3,500 miles of highway. This is a negligible amount for an area one-fifth as large as the 48 States and with only one railroad.

For the first 38 years after the cession of Alaska no roads were built by any Government agency. With Alaska almost totally public domain, highway construction was clearly a Federal responsibility. In the next 36 years beginning with the first Federal construction in 1905 and the outbreak of World War II, in 1941, the Federal Government appropriated about $19½ million, an average of a trifle over half a million dollars a year—a pittance. During that same period Alaska contributed some $9 million. Thus the Federal contribution was 68.4 percent of the total of $28½ million, and Alaska's was 31.6 percent, a far greater proportion than Alaska with its virtual totality of public domain would have had to pay under the Federal Aid Highway Act. It is fair to say, however, that under the highway act, Federal funds go for construction and not for maintenance.

After road construction had been transferred from the War Department to the Department of the Interior in 1930, for the next decade or more throughout the 1930's, when the Federal Government and the States were jointly expanding the national highway network, Alaska was given no new highway construction. Maintenance only was granted. Military requirements brought the Alaska Highway and the Glenn Highway, and in the later 1940's a highway program to satisfy defense needs was begun and carried out for 5 years. But even that has been brought to a virtual halt. For the past 3 years the Federal program has contained no new highway project. This year a token appropriation was included for the desirable Fairbanks-Nenana road, but at the price of halting construction of the important Copper River Highway. In fact the present greatly reduced program spells little more than slow completion and paving of the military highways begun 8 years ago. The Federal Government seems to be heading us back to mere maintenance.

In contrast the Federal-aid program in the mother country is being handsomely increased, reaching the largest sums in its history in the current biennial appropriation enacted in the 2d session of the 83d Congress.

If Alaska were a State it would be automatically included in the expanding highway program. But as a colony it continues to be discriminated against, and that discrimination, instead of lessening is being aggravated.

By the same token Alaska has been excluded from the administration's $101 billion Federal-highway program. One of its principal justifications, perhaps the principal justification, for this lavish, yet important and valuable proposal, is that it is in part a civilian defense measure to aid evacuation and dispersal in the event of a shooting war with atomic weapons. Yet the same administration that excludes Alaska from this defense measure wishes to keep Alaska in colonial bondage because of alleged national-defense reasons.

The enactment of this multibillion-dollar program was deferred in the last session of Congress because of differences of opinion on how to finance it. But in one respect there was no difference of opinion: Alaska would be taxed for the program even if not included in it. The Eisenhower program, presented by Gen. Lucius Clay, called for long-term bonding to be repaid out of general funds. Congressional substitutes, on a more nearly "pay-as-you-go" basis, called for increased taxes on gasoline, tires, and other automobile accessories. Efforts to include Alaska in both programs failed, as did subsequent efforts to exclude Alaska from the tax provisions. So Alaskans will be taxed for benefits accruing solely to the residents of the mother country. What else is this but colonialism, crude, stark, undisguised, and unashamed?

When both the Presidential and congressional drafts failed of passage, President Eisenhower declared he was deeply disappointed" and added:

"The Nation badly needs good roads. The good of our people, of our economy, and of our defense requires that the construction of these highways be undertaken at once."

As colonials we can merely note that Alaskans are, in the consideration of our President, apparently not part of "our people, our economy, and our defense."

There is yet more of humiliating disregard. The Federal administration while patently uninterested in developing Alaska through its highways is strongly in favor of completing the Inter-American Highway.

On March 31, last, President Eisenhower in a letter to Vice President Nixon requested an increase in the current appropriation for the Central American portion from $5 million to $75 million, a more than 13-fold increase. The President gave several reasons for this massive amplification. Three of them emphasized the important economic contribution to the countries through which this highway passes, and a fourth stressed the security aspects of the road.

We may applaud the purpose to complete the inter-American highway, with its economic benefits to Guatemala, Honduras, Salvador, Costa Rica, Nicaragua, and Panama. We may even enjoy our participation in this philanthropy to these good neighbors remembering that it is more blessed to give than to receive, and that every Alaskan is paying his share of that $75 million. Still, some of us may wonder why similar consideration is not vouchsafed to Alaska, whose highway and economic needs are great, whose trade is almost exclusively with the United States, and whose relation to national security is certainly much closer than that of the Central American republics. This wonder on our part would be particularly natural since President Eisenhower seems to exhibit concern about Alaska's defense in connection with statehood.

We have now viewed 3 flagrant examples of colonialism in 3 of the major means of transportation, shipping, railways and highways. Let us now look at the fourth—airways.

It is superfluous to signalize our air-mindedness to any group of Alaskans. But the candid world should know that Alaskans fly 30 to 40 times more than other Americans, and starting with our bush pilots, early developed a fine system of intra-Alaskan aviation. It was almost wholly an Alaskan enterprise—flown and financed by Alaskans—though for a time without airports, aids to navigation and other assistance provided in the mother country. The Air Commerce Act of 1926—a sort of Federal-aid act for air—did not supply any of these aids to Alaska, although Alaska was included in the legislation. Nevertheless Alaska again suffered the penalty of being a colony, this time at the hands of the Federal executive agency entrusted with administration of the act. This time it was the bureaucrats who excluded Alaska. But the Alaskan bush pilots flew anyhow and what we have in the way of airways in Alaska is largely due to their courageous and skillful pioneering.

However, air service between Alaska and the States, which required the approval of Federal bureaus and investment of outside capital, lagged far behind. The first commercial service connecting Alaska with the mother country did not take place till 1940, long after American commercial air carriers had spanned the rest of the hemisphere and had established regular service across the Pacific.

Meanwhile the newly created bureaucracies of the Civil Aeronautics Board and the Civil Aeronautics Administration moved into Alaska. They began restricting local enterprise. In the late 1940's, over the widespread protests of Alaskans, the CAB began cracking down on nonscheduled operations, and finally eliminated the nonscheds completely. It did not do so in the 48 States. Alaska was again the victim of its colonial status. We had no Senators or voting Representatives to fend for us.

The successive certification cases which for over a decade have dealt with transportation between the States and Alaska, have been desperate, and not wholly successful, struggles by Alaskans to overcome the inadequate understanding of the Civil Aeronautics Board that air transportation is relatively much more important in Alaska than in the States with their well-established alternative forms of transportation, by railways and highways. Five years ago interior Alaska was saved from insufficient service only by President Truman's overruling the Board and granting certification to one of the two Alaskan carriers which the Board had denied.

For the last 2 years our 2 Alaskan carriers, in the fact of steadily mounting traffic, have managed by heroic, all-out effort at least to retain what they had. But it is noteworthy that while the 2 international carriers serving Alaska, both mother country enterprises, have been granted permanent certificates, the certificates for our 2 Alaskan carriers are only temporary—a handicap to their financing and to their ability to expand.

Alaska's statehood case could rest here. Yet no account of its 88 years of territorialism would be complete without some notice of the salmon fishery. It comes, this year, pretty close to being an obituary notice.

Here was Alaska's greatest natural resource.

Here was the Nation's greatest fishery resource.

For nearly half a century, the Federal Government has totally ignored, has "refused assent" to the petitions, pleas, prayers, memorials, of legislatures, delegates, governors, and of the whole Alaskan people for measures that would conserve that resource.

The result is written in figures that spell tragedy for Alaska's fishermen and for many others in Alaska's coastal communities whose economy has long depended on the fisheries. The tragedy has deepened year after year. So grave has become the plight that the administration found it necessary to proclaim the fishing villages to be disaster areas. It is a disaster caused by colonialism, and the Federal Government may charge the costs of disaster relief and loss of Federal tax income to its own policies.

From over 8 million cases 20 years ago the salmon pack has fallen year by year until in 1955 it has reached the incredible low of 2,382,131 cases, the lowest in 46 years.

Nowhere, as in the Alaska fisheries fiasco, is the lesson clearer or the superiority, in purely material terms, of self-government to colonialism. In neighboring British Columbia and Washington State, where the fisheries are under home rule, and where the fish traps have been abolished, the identical resource has not only been conserved but augmented.

It is colonialism that has both disregarded the interest of the Alaskan people and caused the failure of the prescribed Federal conservation function. Colonialism has preferred to conserve the power and perquisites of a distant bureaucracy and the control and special privileges—the fish traps—of a politically potent absentee industry. Alaska has been the victim, but the entire Nation has also lost heavily.

Let us by way of a footnote make crystal clear how and why this is colonialism—because some defenders of the status quo may deny it is, and we don't want the candid world to be confused.

The people of Alaska have repeatedly and unchangingly manifested their overwhelming opposition to fish traps. It isn't necessary to rehearse all their reasons—the results have amply justified the Alaskans' position. But fish trap beneficiaries, residents of the mother country, want to retain their Alaska traps. So the traps are retained. And it is the power and authority of the Federal Government which retains them. In a clear-cut issue between the few, profiting, noncolonial Americans and the many, seriously damaged, colonial Alaskans, the stateside interest wins hands down. And it wins because the Government, which is also supposed to be our Government, throws its full weight on their side and against us. That is colonialism.

It would be impossible in any one address, even one that assumed the length of a Senate filibuster, to list all the wrongs, disadvantages, and lack of immunities that Alaska has endured in its 88 years as a Territory. They constitute an incredible story. Even for those who know it, it is hard to believe. It is hard for us as Americans who long ago established our faith in American intelligence, competence, good sense, and above all in American fair play, to contemplate the story of American colonialism in Alaska. It has been part of our faih, an abiding faith, that to right deep-seated wrongs in America, one but had to make them sufficiently widely known. And our best hope, does lie, I am convinced, in making the facts known widely—and especially the overshadowing fact of our colonialism—to our fellow-Americans and to the rest of the candid world. They should know that what progress has been made in Alaska, and it has been substantial and praiseworthy, has been made in spite of these colonial impositions, and largely because of the character and fiber of the colonials themselves. Coming here from the 48 States, following the most cherished American trend, the westward march in search of greater freedom and greater opportunity, they brought to the last frontier and to its friendly native population, the very qualities that have made America. Only distantly man-made problems, the problems created by a remote, often unseen officialdom and its bneficiaries in the mother country, have remained unresolved.

Alaskans have striven consistently to resolve them. Let it be recorded that for 43 years, since the first legislature, and before that by individuals and groups, they have pleaded for relief from the abuses a part of which have been detailed.

Yet after two generations not a single one of these pleas, all of them fair and reasonable has been granted.

How applicable ot Alaska's plight the words of the Declaration of Independence: "In every stage of these oppressions we have petitioned for redress in the most humble terms. Our repeated petitions have been answered by repeated injury."

Lest these frequent citations from the Declaration of Independence lead anyone to the conclusion that there are any among us who now desire our independence, let such a totally erroneous assumption be promptly corrected. We desire and demand an end to our colonialism. But we seek it through a reaffirmation in deeds for Alaska of the principles which launced the American experiment, and reapplication of the practice that has been followed in 35 States.

We Alaskans believe—passionately—that American citizenship is the most precious possession in the world. Hence we want it in full measure; full citizenship instead of half citizenship; first-class instead of second-class citizenship. We demand equality with all other Americans, and the liberties, long denied us, that go with it. To adapt Daniel Webster's famous phrase uttered as a peroration against impending separatism, we Alaskans want "liberty and union, one and inseparable, now and forever."

But the keepers of Alaska's colonial status should be reminded that the 18th century colonials for long years sought merely to obtain relief from abuses, for which they—like us—vainly pleaded, before finally resolving that only independence would secure for them the "life, liberty and pursuit of happiness," which they felt was their natural right.

We trust that the United States will not by similar blindness to our rights and deafness to our pleas drive Alaskans from patient hope to desperation.

We have been challenged in the course of congressional debates to show as a prerequisite that admission of Alaska to statehood would be beneficial to the Nation. That test was never applied to earlier Territories seeking and securing statehood. But we gladly accept that challenge and willingly subscribe to it as a condition.

The development of Alaska, the fulfillment of its great destiny, cannot be achieved under colonialism. The whole Nation will profit by an Alaska that is populous, prosperous, strong, self-reliant—a great northern and western citadel of the American idea. Statehood would automatically bring us far along that high road.

Nothing could more pathetically reveal the lack of understanding regarding Alaska, and the poor advice concerning Alaska that is

given and accepted in the highest places, than the Presidential pronouncement in the last state of the Union message:

"As the complex problems of Alaska are resolved that Territory should expect to achieve statehood."

Bless us. The complex problems of Alaska are inherent in its territorial status; they are derived from its colonial status; they will be largely resolved by statehood and only by statehood.

As was promptly called to President Eisenhower's attention this was like the old story of telling a youngster he must learn to swim before going into the water.

So we return to the proposition that America can scarcely afford to perpetuate its colonialism. Our Nation is attempting to lead the world into the pathway of peace. No goal could be more worthy. But to lead effectively, it must not only practice what it preaches. It must carry out its solemn commitments. It can scarcely be critical of nations that break their pledges and break its own. It must first cast the beam out of its own eye before attempting to pull the motes of its neighbors' eyes.

For the United States has pledged its good name and good faith in treaties and agreements far more recent than the Treaty of Cession of 1867. Not that our Nation's responsibility for not carrying out those original pledges in regard to Alaska is diminished by the passage of time. But there are recent and even contemporary commitments which demand fulfillment.

Article 73 of the United Nations Charter, dealing with non-self-governing territories and that includes Alaska which must make annual reports to the UN, pledges the signatories:

"To the principle that the interests of the inhabitants of these territories is paramount," and further pledges them.

"To insure * * * their political, economic, social, and educational advancement, their just treatment, and their protection against abuses," and, finally, and this is most pertinent, it pledges them.

"To develop self-government, to take due account of the political aspirations of the peoples and to assist them in the progressive development of their free political institutions * * *."

The United States pledged itself to that 10 years ago. If the English language has not lost its meaning and the United States its integrity, it should some time ago have, and should now, in any event, "take due account of the political aspirations" of Alaskans and enable them to develop the self-government which they seek.

There is an even more recent commitment—the Pacific charter—signed a year ago, in which the signatory nations, including the United States, pledged themselves "to uphold the principle of equal rights and self-determination of peoples," and to reenforce that principle the signatories further pledged that they were "prepared to continue taking effective practical measures to insure conditions favorable to orderly achievement of the foregoing purposes," namely self-government.

We are agreed that there is only one form of self-government that is possible for Alaska. And so we are drawing up the constitution for the State that we feverently hope will soon come to be. That hope, it is encouraging to note, is shared by the great majority of Americans. If our 88-year experience inevitably leads to strictures of the colonialism that has ruled us, let us remember that it is a course not sanctioned by American public opinion. The Gallup polls, which last recorded an 82 percent support of Alaskan statehood, the endorsement of virtually every important national organization, demonstrate clearly that the forces in and out of government which would deny Alaska statehood—in fact the Government itself—do not represent prevailing American sentiment.

But while we may derive satisfaction and hope therefrom, let us not delude ourselves that victory is at hand. It ought to be. But too many solemn pledges to Alaska have been honored in the breach to assure that what ought to be will be.

It may be regrettable—or not—but every generation must fight to preserve its freedom. We have twice in a lifetime participated in our Nation's fight to preserve them. In Alaska we still have to win them.

This constitutional convention is an important mobilization. But the battle still lies ahead, and it will require all our fortitude, audacity, resoluteness—and maybe something more—to achieve victory. When the need for that something more comes, if we have the courage—the guts—to do whatever is necessary, we shall not fail. That the victory will be the Nation's as well as Alaska's—and the world's—should deepen our determination to end American colonialism.

Capt. Billy Marler

EXTENSION OF REMARKS
OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. SIKES. Mr. Speaker, under permission to extend by remarks, I include for reprinting in the CONGRESSIONAL RECORD, a highly interesting article by the Honorable William C. Pryor, a distinguished citizen, of Fort Walton Beach, Fla. His article deals with the life and leadership of Capt. Billy Marler, an outstanding figure on Florida's beautiful gulf coast. The article appeared in the Reader's Digest for December 1955:

THE MOST UNFORGETTABLE CHARACTER I'VE MET

(By William Columbia Pryor)

One of the mightiest men I know couldn't weigh more than 110 pounds now with his shoes on—and he seldom wears them. At 90, he usually stays tucked away in his snug old house near East Pass, where the green breakers of the Gulf of Mexico crash into the quieter, bluer waters of Choctawhatchee Bay 40 miles each of Pensacola, Fla.

What few dollars Captain Billy Marler gets, beyond a tiny pension, he squeezes from making fine cast-nets for dude fishermen. But the way he stands, with his bare feet set wide apart as if to balance himself on a pitching prow, the way his blue eyes twinkle from his weather-seamed face, let you know he is still ready to meet the squalls of life head-on.

I was 17 the day in 1890 that I first saw Captain Billy. I had just moved down to the Bay to help my uncle run his sawmill and to begin teaching the one-room school at Brooks Landing (now Fort Walton). There were no roads down through the pine-woods to the gulf, not even a sand trail; the only way to reach the Bay area was by boat; a last few of the Choctaw Indians who named the Bay were still around.

In my skiff I was exploring the lonely, almost uninhabited shoreline when I saw the black silhouette of a long, thick object crawling torturously up the dazzling white beach. I rowed in closer and discovered that the object was a stout tree trunk being shouldered and dragged by a stocky, leather-tanned little man about 10 years older than myself.

"Come aboard, stranger," he cried in a voice as piercing as a sea gull's.

To snake such logs to the sawmill, I had mules. Even half the weight of the timber this barefoot, dungareed fellow was dragging would have crushed me. "Can't you haul things like that mule-back?" I asked.

"Ain't got no mule," he grunted. "I haul things like this my-back."

Hauling things like that "his-back," Billy Marler had just completed for his young bride the eight-room house in which he lives to this day. When I met him he was building a colossus of a pier that would stretch from his front door to the channel half a mile out in the bay. Clambering and swinging among the big 8x8-inch pilings he was wedge-shaping into the sand, he looked like a busy spider.

"Going to build a store here, too," he told me.

I was startled by this frenzied energy on a barren, empty beach. The nearest neighbor was Capt. Leonard Destin, who ran a fish camp more than a mile away on the other side of the peninsula. Marler told me he had worked there as a fishing hand since he had wandered down from Georgia at the age of 13.

That night, after a supper of fried mullet, we were enjoying our pipes and the flapping breeze when Marler said, "You know, they tell there's a treasure buried over there under those stooping oaks." He pointed at a cluster of wind-gnarled trees at the head of a small cove across the bay. "Joe, the old Choctaw trapper who used to live there, told me that the captain of a 2-masted schooner out of New Orleans hid $60,000 at the foot of those trees over 50 years ago; just before his crew killed him in a mutiny."

Stories of buried treasure were about as rampant then as they are now, and just as unreliable. For here among the sugar-white dunes the pirate ghosts of history were said to walk on moonlight nights—the cutlassed figures of Jean Lafitte and Jesse (Billy Bowlegs) Rogers. We joked about such foolishness, and over the unlikelihood that a Choctaw trapper would have neglected to dig up $60,000 if he had known where it was. Then we forgot the treasure of Joe's Bayou, and neither of us thought of it again for 7 years.

In those years I watched Billy Marler wrest his living and his dreams from the bare strip of sand he had chosen for a home. For a salary of $3.50 a week as skipper of Captain Destin's 30-ton fishing schooner, *Jack 'a Don't Care*, he performed near-impossible feats. I would hear his shouts as, on nights black as the inside of a whale's belly, he eased his hulking vessel past Brooks Landing and up through the twisting Narrows.

There were no channel lights or markers then, no auxiliary engines to fall back on when white squalls lashed the sails or dead calms left them hanging limp. Still, somehow Billy needle-eyed his schooner up to Pensacola before his fish cargo could spoil. And when the boat was becalmed he and his crew would shove it along by giant "push poles"—full-grown pine trees carried for the purpose.

In his spare time Captain Billy finished his pier, a large general store, a warehouse, and a boatworks. He built his own schooner, *The Bernice* and in it sailed groceries and supplies down from Pensacola. Gradually other families began to settle near his establishment.

Captain Billy had had just 2 days' schooling, but he was the first to urge a school for Destin Point. Moreover, he built most of it himself. In the one-room structure, which doubled as a church on Sundays, he was the community's lay preacher and Sunday-school teacher.

In 1896 Captain Billy set up a post office in the parlor of his home and became Destin's first postmaster—a job he held for 43 years. Three times a week, sun or squall, he would "sail the mail" to a tiny settlement 10 miles away, often with only 1 or 2 letters. His profit for the entire operation was less than $10 every 3 months.

As if all that activity weren't enough, he built most of the small boats on the bay—everything from skiffs to 50-foot launches. He made most of his own furniture and many pieces for his neighbors. He became the village's self-appointed undertaker and coffin-maker, rendering both services free. Once when I asked him how he could afford to give away so many fine juniper-wood caskets, he looked at me in surprise. "Why, I couldn't take money from anyone in that kind of trouble."

It was clear to me from the start that Captain Billy would never be a successful businessman. If there were 30 people on the dock when he sailed up with the mail, he invited them all to dinner. Credit at his store was to everyone, and he never kept a bill or any other kind of record of a debt to him.

"Let 'em keep up with their own bills," he would growl when I cautioned him. "It's all I can do to keep 'em in groceries."

To relieve the monotonous fish diet of his rapidly growing family, Captain Billy often took me and his small sons out into the gulf on a turtle hunt. Diving into 15 feet of emerald-green water, Billy would bring a shell-turreted, 600-pound monster scrambling to the surface. "Turtles are God's banquet for pore folks," he would say. "There's seven kinds of meat in 'em—beef, pork, mutton, goat, chicken, fish, and—oh, yes, turtle meat."

A fellow fisherman once said of him, "Captain Billy's gonna supply everybody around him till he supplies hisself out."

More and more well-to-do vacationers set up tents on the beach, and many were interested in pirate treasure. Especially they asked about Jesse Rogers. This buccaneer was believed to have scuttled his ship in Choctawhatchee Bay in 1844 with $4 million in gold aboard after British men-of-war chased him through East Pass.

"Did I know Jesse Rogers?" Captain Billy would say when anyone asked him. "Sure I knew him in his old age, right up to the time he died in 1888. What about him? Well, he was bowlegged, mostly—that's why we called him Billy Bowlegs. Did I ask him where he sank that four million?" Billy would frown in mock distaste. "Why, gentlemen, wouldn't that've been an embarrassin' question to've asked a poor old bowlegged, half-Indian pirate?"

Naturally, what happened in 1897 was a shock to both of us. One day in the early spring a schooner sailed into Choctawhatchee Bay and put in at Destin Point for supplies. The stranger was closemouthed about his business, but he had an old map and he sailed straight over and anchored off "Joe's Bayou."

That night Billy got back from fishing just in time to see the schooner weigh anchor and slip swiftly away toward Pensacola. For the first time Billy thought seriously of what the old Indian had told him about the treasure. He hurried over to the bayou. Under the stooping oaks was a hole 6 feet deep and 8 feet square—and in it were rusted iron crumblings and rotten mahogany.

When Billy told me about it, we sat looking at each other for a long time, thinking about how we could have dug that hole ourselves, and all the things we could have done with $60,000.

In 1902 Captain Billy took on still another task: tending the new lighthouses that were set up around treacherous East Pass. This meant he had to walk and row another 3 miles a day to keep the oil lamps burning and polished. After serving the Coast Guard in this capacity for 34 years, he finally worked up to a top salary of $29.50 a month.

Tragedy was an almost expected visitor in our wilderness, and Billy Marler became a frequent host to it. Ten of his 19 children died in infancy. His wife died, and the first son by his second marriage was a 2-year-old infant when he slipped unnoticed over the side of Billy's boat and drowned in the bay. Later, his oldest son, Ernest, was brutally murdered at the Cape San Blas Lighthouse shortly after he became its keeper.

Billy found relief from his sorrows by helping anyone he heard of who was in trouble along the beach. "Willy," he often told me, "if every man had the privilege of throwing all his troubles into one big pile with everybody else's and could pick up any burden he chose, 9 out of 10 would take up their own troubles again. Because they'd know better how to handle 'em."

By the age of 50 Captain Billy had become a patriarchal little giant of a man even among the steel-muscled, barrel-chested fisherfolk of his village. In 1915 he became a legend.

It was about 3 o'clock of a roaring March afternoon when a boatman burst into the boardinghouse I had opened at Fort Walton. "There's a pleasure schooner gone on the bar outside East Pass," he yelled. "She's foundering, and the crew's out there drowning."

By the time I reached the pass, a crowd had gathered on the piers. We were watching the 20-foot breakers thundering through the pass, convinced that the exit of a rescue launch would be impossible, when Captain Billy came running. There was no accusation in his voice, just a question: "Ain't none of you men gonna try it?"

Weathered seamen, younger than Billy, avoided the captain's eyes. Finally one spoke up: "If them city folks out there are bent on making their wives widows, I ain't. I got six children to feed. I say it's suicide."

"And I say we can't sit by and watch men drown," said Billy. As he ran for his launch, a tough, rangy fisherman named George Destin joined him. We watched as the big launch leaped and plunged out through the pass, at times disappearing between the boiling breakers.

Billy anchored his launch 500 yards from the wrecked schooner. Then, to a skiff they had towed out, he and George tied one end of a long line; they tied the other end to the launch. They boarded the skiff and dug their oars into the steep walls of water until they finally came crashing down on top of the wreck. The crew of the wreck had been washed overboard and scooped up in the submerged mainsail. From it Billy and Destin plucked five men and fought their way back with them to the launch. Then they made a second trip and picked up four. They saved every one of the nine men aboard!

At 70, when Billy began to retire from some of his more strenuous activities "because of failing strength," he could still squash a beer can between his thumb and forefinger so quickly and easily that the escaping air made a soft whoosh. At 85 he fell 30 feet from the top of a tree he had climbed to rescue a freightened cat. The fall shook him up a bit.

Billy used to say he wanted to live out his old age in peace and quiet, but I don't think either of us ever believed it. Today he seems quite happy that his old house has turned out to sit smack in the flight pattern of the main take-off strip of the Air Force Proving Ground at Eglin Field across the bay. When jet formations and guided missiles rattle the timbers of his house, Billy grins. "Anybody who can sail ships like that in the sky" he says, "I don't mind if they shake me a little when they pull up anchor."

Billy still presides over the same Sunday-school class he has taught since 1890. In this time he has arrived at his own neatly simplified analysis of all people. "There's just three kinds," he says, "The robbers, who say, 'The world owes me a living, and if you got something I'm agonna take it.' The keepers, who say, 'What I got is mine and I'm agonna keep it.' And the givers, who say, 'What I got is yours, and if you need it you can have it.'"

The treasure hunters have gotten thicker every year. They've dug up the grave of Billy Bowlegs until the land around looks like a bomb crater. There's no telling how many expensive rigs they've lost dragging the bay for Rogers' ship.

These diggers remind me of the empty hole left under the oaks of Joe's Bayou 58 years ago. I think of the $60,000 that might have come out of that hole, and how little difference it would have meant to a life like Billy Marler's. I think of all the good boats he has built, the mail he has carried, the lights he has kept burning along the reefs, the lives he has saved from the sea, the flourishing community he has done more thany any other man to build.

Captain Billy knows what he's talking about when he advises today's treasure hunters. "Why, sure, there's treasure out there," he tells them. "Where? Why, right out there."

He waves in the general direction of the bay—or, perhaps, of the entire world. "All you got to do is find it."

Let's Not Quit While Winning

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. WILLIAMS of New Jersey. On December 5, 1955, there appeared in Life magazine an editorial entitled "Let's Not Quit While Winning." It states persuasively the case for reinvigorating, rather than watering down, our overseas aid and technical assistance programs. Members of Congress realize by now that the spirit of Geneva was a Russian invention, not a genuine fact of life, and in seeking ways to fill the vacuum which now exists in our foreign policy, I believe Members would do well to ponder this editorial:

LET'S NOT QUIT WHILE WINNING

In Washington, among the bureaus most keenly attuned to the ups and downs of the cold peace, the horrible suspicion is dawning that the slippery Russians are turning against us our own strategy of economic aid and technical assistance.

Khrushchev and Bulganin, those traveling salesmen of Communist point 4 and good will, helped the dismal feeling with their baby-kissing tour of India and their lavish-sounding promises of ruble loans and technical scholarships. Even more alarming was Egypt, which the West had assumed was safely anchored. Instead, the Communist bloc, in a series of brilliant maneuvers, has gathered Egypt into its trade orbit, swapping guns, planes, kerosene and locomotives for cotton and lime. Result: Egypt's exports to the Communist bloc, normally only 20 percent of its total trade, this year are running at the rate of 53 percent. Not only that; the Soviets have just made a well-timed offer to provide Colonel Nasser with $200 million and the engineers he needs to start the project closest to his heart—the Aswan Dam to make the world's biggest power and irrigation project on the upper Nile.

Such examples are multiplying. Soviet aid technicians have reared huge new grain elevators on the skyline of Kabul, capital of Afghanistan; others are building flour mills and paving streets. Czech trucks are sold in Jordan and Czech tractors in the Sudan. Ceylon is getting Soviet-made carpenter tools; Red China is swapping rice for Cey-

lon's rubber. The Soviet has offered Turkey long-term loans to finance three cotton-textile mills, and Czechoslovakia is offering to provide the textile equipment; Hungary, a powerplant. East Germany is swapping shoddy pseudo-Volkswagens for Norwegian fish. A startling statistic: the Soviet Union is now turning out 53,000 engineers a year versus 23,000 in the United States. Ours study 5 days a week for 4 years; theirs, 6 days a week for 5 years—the extra studying being devoted to the language and culture of lands marked for Soviet economic penetration.

All such facts are cause for sober concern but hardly for distress. What they show is an implied victory for the strategy the United States has followed since World War II's end, a decade in which we have staked the staggering sum of $35.7 billion in the hope of fending off communism in non-Communist countries by helping them build prosperous free economies. While we were doing this, the Communists were trying unsuccessfully to wreck these same economies through strikes, subversion and sabotage. Their attempts to seize power by insurrection in India, Indonesia, the Philippines, and Burma failed. Their decision to try technicians instead of truncheons is an admission of this failure. As imitation, it is the sincerest form of flattery for the wisdom of our own strategy.

A good poker player, who has staked big bets on strong cards, increases his bets still more when he discovers he has a winning hand. The United States, with its $35.7 billion bet on the ability of the world's greatest productive machine to enlarge the free world's trading area by priming its pumps of production, ought to be increasing its own stakes in this showdown game. Incredibly, it is doing just the opposite. Two weeks ago International Cooperation Administrator John B. Hollister announced a plan to withhold 20 percent of all foreign-aid appropriations, as a sort of kitty for future emergencies.

This is dollar wisdom and million-dollar foolishness. It is a serious flaw in the administration's otherwise sound approach to foreign policy. The flaw is in a tendency to tackle economic problems singly, in a tactic of putting out individual brush fires instead of evolving a coherent, long-range world economic policy. In such a policy economic aid, technical assistance, and increasingly liberalized trade, with a minimum of tariff and other restrictions, would all be meshed into a master strategy of enlarging everyone's trade, production, and consumption.

To attempt this is neither philanthropy, charity, nor sentimentalism, but harsh necessity. It agrees with the expansive dynamic of United States capitalism—the belief in bigger pieces for everybody out of bigger pies. Only the United States, whose 6 percent of the world's people use up 50 percent of the free world's production of raw materials, has the resources and the know-how to do the job. Experts who have studied the Asian-African investment problem believe that $3 billion a year—of which the United States Government would need to put up no more than $2 billion on top of the $1 billion a year it is now spending in that area—could in a 10-year period achieve the desired end. Such an investment could plant the seeds of economic progress in the world's underdeveloped areas (where three-fifths of mankind live) and get them well started toward modern, self-sustaining economic health. As to whether the United States can afford it, our national income in the current year alone is rising by $26.5 billion. As to whether we can afford not to do it, it cost us $22 billion—and nearly 34,000 lives—to keep communism out of just one tiny country—South Korea.

Unless the world's foremost industrial power does meet the need, these people will inevitably turn to the Soviets, now the world's second industrial power. Its income is increasing at the rate of $8 billion a year; if only one-fourth of that should be devoted to Communist point 4, it could cause us severe losses. Many of the Communist promises are undoubtedly phony—e. g., for a fraction of the promised sum to Egypt they could probably gain entry for their technicians. By the same token we should not be blackmailed into taking on any projects which don't make economic sense. But the danger is that Soviet lures will enmesh some of these countries before they discover the emptiness of the promises. And in the case of Red China, at least, they are delivering the real thing—economic aid of $1.6 billion a year and the help of thousands of expert technicians.

The ultimate fate of Asia may depend upon the outcome of the competition between India's democratic economy and Red China's slave system. In this competition Red China already has the immense advantage of this Soviet subsidy. India, on the other hand, has to find an assurance of $1.7 billion in order to carry out its second 5-year plan of industrialization. We will do well to keep this disparity in mind in our own plans.

With nuclear war tacitly outlawed, this problem is probably the greatest that will confront us in our lifetime. On its solution undoubtedly the alternative of peaceful development or bloody and unpredictable world upheaval likely depend. We can nobly save or meanly lose. We shall fail most miserably of all if we seek to meet it only halfway, in pinch-penny and isolated gestures. Let us hope that President Eisenhower in his state of the Union message will unfold a policy to meet the problem with a boldness and imagination which not only will inspire the world but unite all Americans, and all parties, in true bipartisan purpose—to complete a victory already partly won.

Congressman's Chores

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. SCOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from The Times-Picayune, New Orleans, La., of January 5, 1956:

CONGRESSMAN'S CHORES

The second and last session of the 84th Congress began Tuesday.

It probably will be a more turbulent meeting than the first session. Expedients of an election year tend to produce contention, and there are definite points of cleavage between the leadership of the two parties on some domestic and foreign policies.

What the public might properly most wish is that Members of Congress will find more time to devote to important legislation. A Member of the House said recently that the situation was such that about 90 percent of a Member's time was taken up with serving, running errands for, and entertaining constituents individually or by groups, leaving only 10 percent for legislation. Even if that is an exaggeration, a Member cannot properly do his duty as a legislator if most of his time must be devoted to nonlegislative chores.

Maybe Congress needs a committee to look into effects of these growing service demands. Since the legislative branch investigates, up to a point, the conduct of the executive branch, maybe Congress ought to ask the executive department to make an impartial survey.

Anyway it cannot be imagined that the public wants its Representatives' time so taken up with errands, and so forth, that Congress must resort to legislating almost exclusively by committee and pass legislation without reasonable House or Senate deliberation.

We Are Awake, Mr. Dulles

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. DAVIDSON. Mr. Speaker, in this morning's New York Times, I saw the headlines "Dulles Spurs United States in Economic War with Soviet Union." Our Secretary of State is quoted to the effect that in the cold war, he saw new emphasis on economic and social problems as the major turning point in the struggle between communism and freedom. He has asked the country to wake up to this very important new aspect of the foreign-aid program which he said our citizens had not yet sufficiently appreciated.

In a statement issued by the Secretary, he pointed out that the way to counter Soviet's efforts is "not by outbidding communism in sheer amounts of economic aid" but by making the newly independent nations of Asia feel that their needs can best be satisfied if they become and remain part of the free world. The importance of Mr. Dulles' observation is indicated by the statement "defeat in this contest would be as disastrous as a defeat in an armaments race." He characterized certain aspects of the Geneva talks as disappointing. He says, "We could lose this economic contest unless the country as a whole wakes up to all its implications."

Wake up indeed. I am glad that the Secretary has at last awakened to this shift of tactics by the Communists which I warned about in a speech in Congress exactly 6 months ago today. It was on July 12, 1955, that I tried to call attention to the new phase of the cold war, namely, the economic phase which Mr. Dulles now for the first time seems to be concerned with. Fortunately, it is not too late. But Mr. Dulles should know that some segments of our people have been awake for a long time. I take the liberty of inserting at this point in the RECORD my speech of July 12, 1955:

THE BIG FOUR CONFERENCE—NEW SOVIET PRESSURE

(Speech of Hon. IRWIN D. DAVIDSON, of New York, in the House of Representatives, Tuesday, July 12, 1955)

Mr. DAVIDSON. Mr. Speaker, I join with my distinguished colleagues in praying that the imminent conference at the summit which will be participated in by the Big Four may serve to encourage the recent seeming trend toward a reduction in the cold-war tensions. Our goal is peace. To achieve it, we shall and we must strive with all the strength and energy which, in the

past, we have used to build America and to make it great.

The historic worldwide disregard for the Biblical commandment, "Thou shalt not kill," has brought us now to the point where if once again we take up the arms of war, we shall surely kill ourselves. And yet our President must go to Geneva fortified and backed by strength. There can be no relaxation of our preparedness. It has undoubtedly been our relentless struggle to maintain a sound military posture which has finally brought this first glimmer of hope in the cold war. To relent now would be to make those years of sacrifice count for naught. Make no mistake, the cold war has been costly, and we have sacrificed much in the waging of it. Our schools and children have suffered as a result. Economic and technical assistance here at home and abroad have taken second place to military preparedness.

The proof of this is the new Soviet approach. They have failed to frighten us by bluster and calculated military gambits. They were stopped in Korea because President Truman had the courage and foresight to see that failure to respond to the invasion of South Korea would mean the eventual fall of one friendly nation after another into the Soviet orbit. He saw also that it would spell the end of the United Nations. We won a round on points, but the struggle is far from over. This is one of those old-time, no-holds-barred affairs and we are now entering another round.

Among the mail which I received yesterday were appeals from natives of 2 captive countries now dominated by Russia. The Committee for Hungarian Liberation wrote calling attention to a provision of the Hungarian Treaty of Paris which provides for the withdrawal of the Russians from Hungary within 90 days after the evacuation of Soviet troops from Austria. Here it would seem exists a sterling opportunity for Russia to give evidence of its sincerity at the Geneva Conference in the light of the recent Austrian Treaty. I also received a copy of the plea for Polish freedom which was sent to the President.

The liberation of enslaved peoples must continue to be a basic objective of American policy.

In yesterday's mail, we received the next to last report to Congress of the operations under the Mutual Defense Assistance Control Act of 1951. This report emphasized the new sphere of attention in the cold war and reverts to the course which was staked out by General Marshall and President Truman. In this report, we read of the recent developments in Soviet-bloc foreign economic activities, especially in underdeveloped countries. The report graphically describes the Soviet attempts at economic penetration so we see that where the way to military expansion is barred, Communist Russia switches to conquests through economics. The goal is the same. The targets are the same, conquest and enslavement of the world, starting with the most susceptible areas.

The Marshall and Truman plans outlined our defense in this field. We have recently approved a new foreign-aid program. As I said when the bill was before us, its primary emphasis was on defense support, and I felt that the development assistance and economic and technical aid portions were not large enough. These should be increased and our efforts directed toward the new arena in which the world struggle is now patently being waged. Please do not misunderstand. I do not mean that we can in any reduce our military preparedness. The Russians will maneuver to strike in whichever field they think there is the most chance of success. They are shifting to the economic field now and we must move with them. In fact, I urge that we move ahead of them and beat them at their own game.

The underdeveloped areas of the world are ripe for subversion and subtle economic pressure. Japan needs markets for her goods. Britain, France, and Germany likewise. As do Israel and Egypt. The Arab States, Asian countries, and the South American republics need to import and export many goods. The smaller countries need aid in building up their lands. They need technical advisers on modern methods of farming and construction. They need schools, books, and most of the commodities which we have come to regard as necessities. To them these commodities are luxuries, enjoyed only by the very rich. Unless we help them to help themselves, we will lose this next round, and if we do, the loss is just as efficacious as if an army of Soviet troops had marched into these underdeveoped areas of the world.

We may view this in a sense of enlightened self-interest for if these depressed and possibly envious countries cannot support an adequate standard of living, they will be unable to buy the goods we produce and which we must sell for our own well-being. This country is not self-sufficient. We must import many essential supplies. We must export much to sustain our industry and continue a high level of employment. In short, we need friendly free nations throughout the world with which we can trade. If we fail to help these countries now, the Russians well see to it that they drop into the Communist field of influence and become lost to us as friends and economic partners forever.

At Geneva we must be prepared to deal with the Soviets in language they understand. We must be strong militarily and we must be strong economically. We can expect a concerted effort by the Communists to expand their program of conquest by economic subversion. I believe that that will be the base strategy of their participation in the conference at the summit.

We can win this phase of the cold war in a walk if we try. We are world champions in the economic field. We have the know-how, the ability, and the wherewithal, which the Russians cannot acquire in a hundred years regardless of what the Pravda propaganda machine might say. The important thing is that we must understand what the Russians are trying to do. We must at all times keep our attention fixed upon their motivation notwithstanding sweet talk, lessening of tension, or even a few good deeds. We must be willing to be fair, but not fooled. We must be kindly, but not kidded. We are justified in having faith in ourselves, albeit our trust must repose with the Almighty.

We are awake, Mr. Dulles; who do you really believe has been asleep at the switch?

Creative Citizenship

EXTENSION OF REMARKS

OF

HON. STUYVESANT WAINWRIGHT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. WAINWRIGHT. Mr. Speaker, last August 24 Clarence Francis, national chairman of the Citizens Committee for the Hoover Report, delivered a magnificent address entitled "Creative Citizenship." His speech was delivered before the convention of the National Association of Life Underwriters. Not only is the message particularly pertinent to this Congress, but it also allows me to pay a tribute to Mr. Julian S. Myrick. As Mr. Francis pointed out, Mr. Myrick has been one of the energetic fighters for reorganization long before the birth of the Hoover Commission. In many ways this speech is a tribute to him:

CREATIVE CITIZENSHIP

When Julian Myrick conveyed your cordial invitation to meet with you here, I accepted readily. For one thing I feel that the Citizens Committee for the Hoover Report owes special thanks to Julian and to all of you who have taken such a keen interest in Federal reorganization since the days of the first Hoover Commission in 1949.

Further, I find the theme of this, your 66th annual meeting, an exciting and challenging one. "Creative salesmanship" is certainly, as you put it, a "dynamic factor" in business today. Frankly, I don't believe such terms as "creative" or "dynamic" were generally used or understood by businessmen in the days when I started out as a salesman. But in my several decades as a "prune peddler," I have seen some striking changes. We have all learned many new things. We have accepted new views of many old things.

There will be nothing new or strange to you, therefore, in the fact that I have chosen "creative citizenship" as my topic and that I regard it as a definite part of your discussion of creative salesmanship. The two go hand in hand.

Let us go back for a moment to the period, not so very long ago, when salesmanship itself was a fairly new thing. Its real potential as an economic and social force was just beginning to be understood. The faithful drummer, going his rounds, the butt of many jokes and the author of many more, was deemed to be a useful fellow in his way but that was about all.

As a matter of fact, some of my family and friends were pretty dubious about my vocational choice. They considered it a waste of a college education to go into selling, especially in the grocery business. And they had a point. If you've ever seen the typical old-fashioned grocery store, with its barrels of molasses, crackers, and pickles, its flypaper in summer and pot-bellied stove in winter, you will know what I mean. It was no shining symbol of progress.

Since then, of course, in mine as in all businesses, breathtaking gains have been made. A vital factor behind these gains has been the creative power of our sales mechanism—and back of that a new spirit, a new concept of the purposes of salesmanship.

To be perfectly hardheaded about it, let us begin by stating clearly that salesmen work primarily to make a living. Of couse, but is that all? No, every salesman worth his salt is helping to create and satisfy the American urge for better products, better services, and better living.

You, for example, are engaged primarily in the sale of life insurance. But that is only the starting point in the great story of the service you perform. You sell something that no one can eat or wear, or ride in. Few people consciously realize the need for life insurance. So you must first of all be educators. You must awaken others to the need. And you must also be visionaries. You have to open people's eyes to the possibilities and the opportunities which life insurance offers.

The policy you hand over to your client is just a token, a symbol. What you actually sell is security, thrift, health, education, recreation, and peace of mind. Life insurance makes an enormous contribution to the continuity and stability of millions of families and many business enterprises. It aids in the strength and growth of our national economy.

You deal with the individual American. You teach him to save, to plan, to use his resources wisely for the protection of his family, the improvement of his circum-

stances, and the happiness of his old age. You spread before him a constantly widening variety of opportunities to make the most of life in his own way.

What you sell to Americans is something no Russian can buy. The very concept of individually-purchased and individually-planned security is abhorrent to the Communist philosophy. Statism, the Marxist ideal, no more permits the citizen any opinion with respect to his economic destiny than it tolerates his participation in the affairs of government.

This brings us to "the other side of the medal." One of the deep, distinguishing differences between freedom and totalitarianism centers around the relationship of the individual to his Government. In the Marxist state, the citizen has no right to interest himself in the conduct of governmental affairs; in America he has no right to refrain.

Perhaps what I am saying is just too obvious. But is it really? We expound and accept the doctrine of responsible citizenship without question. But has our thinking as to its meaning kept pace with the whirlwind developments of the times? Or are we still largely content with the one-horse attitudes of the past.

In those earlier days, as I recall it, most people were reasonably conscientious about voting. They paid their taxes, such as they were. They followed the doings of William Jennings Bryan, Teddy Roosevelt, and Bob LaFollette in much the same way that they noted the exploits of Tinker, Evers, and Chance. Once in awhile they got fairly excited about an election.

Perhaps that was good enough for those times. Government then, the Federal Govment especially, had relatively little real meaning to the citizen in terms of his everyday life. In 1910 the dollar cost of running the whole Federal establishment, Army, Navy, and all, was $694 million. The budget of New York City is more than twice as big as that today.

Now I don't need to bother you with statistics. You probably know that Federal costs amounted to about $38 per average American family per year in 1910 and that they come to $1,600 per family today, just 42 times as much. The interest on the visible national debt (and I use the word "visible" advisedly) is five and one-half times today what the whole debt was then.

I need not remind you either that, as citizens and businessmen, we have to take the Government into consideration with every move we make. Not only taxes but regulations, ordinances, guaranties, subsidies, and controls pervade our daily lives.

For that matter I don't need to point out to you, of all people, that the whole structure of your great insurance industry is founded on confidence in the future of the United States as a free Nation. Obviously private insurance cannot exist in a collectivist economy. Quite as obviously, there are certain clear dangers in the trends of recent years to which you are peculiarly sensitive.

Huge taxes, debts, and deficits must be met from the profits of industry and the earnings and savings of the citizen. Every cent of extravagance or waste adds to the danger of further inflation and threatens to cut deeper into the value of the dollar which your companies have promised to pay. Every bit of needless Government competition with industry reduces revenues and adds to the tax burden.

No, you realize full well what a great stake you have in the stability of our economy and the prudent management of our Government. You are thinking ahead to 1975 when there will be nearly 21 million persons over 65 years of age in America and you are properly concerned with the safety of their savings.

Finally, you know as well as anyone that the Government has grown so big so fast in recent years that it can literally topple over on us at any time. Thanks to the phenomenal expansion of our industries we have so far kept our balance. But we must face the fact that "Big Government," the product of an astounding succession of wars and emergencies to which there seems no end, will be a constant problem of the future.

We will conquer that problem exactly to the extent that we, as citizens, address ourselves to it. To the exact extent that we neglect it, it will tend eventually to overwhelm us.

Well, once we agree on that point, where do we begin? How do we get hold of this ponderous and complicated problem? We would have no answer to that question were it not for the Hoover Commissions.

Something new, something big, something terribly important happened in America in 1947. That was the year in which Congress, by unanimous vote, created the first bipartisan Commission on Organization of the Executive Branch of the Government. And it seems to me fully as much an act of Providence as it was an act of Congress which brought former President Herbert Hoover to the helm of that venture.

You recall that the first Commission labored for 2 long years, with the aid of 300 devoted specialists called task-force workers, to give us our first clear view of modern government in all its magnitude and complexity. The Commission also filed a series of specific recommendations for cutting out waste and duplication and improving efficiency in the executive branch.

Against all precedent, and despite considerable opposition, some 75 percent of the Commission's recommendations were adopted with savings that today run well into the billions. This was the result of a significant reawakening of citizen interest in governmental affairs. It showed that something can be done when party lines are brushed aside. And it paved the way for the second Hoover Commission.

Also created unanimously by Congress, in 1953, and set up along the same lines under the same leadership, the new Commission likewise labored for 2 years. This time it had a broader assignment. It was authorized to go into matters of policy. It questioned not only whether a governmental function is being properly conducted but whether it should be conducted by Government at all.

You have seen the headlines which accompanied the publication of each of the 19 sections of the new Hoover report in the period from February until June 30 of this year when the Commission's official existence ended. Let me mention just a few of the findings.

The Government's $9 billion-a-year payroll suffers from a turnover of close to 25 percent per year. If we could reduce this turnover to 20 percent, we would save nearly $50 million a year in training and replacement costs. And a true career senior civil service would repay the Nation more than can ever be reckoned in dollars and cents.

The Government creates and handles some 25 billion pieces of paper a year which engages the efforts of 750,000 full-time employees and costs more than the whole Federal budget in the Taft administration. Most of the endless letters and questionnaires which flow back and forth between Washington and industry are too complicated and many of them are utterly needless. The commission found ways of simplifying or eliminating much paperwork which might save as much as $255 million a year.

Waste and duplication abound in the management of the 26 Federal agencies which engage in medical activities. In its efforts to meet the needs of the 30 million citizens for whom it has assumed some degree of responsibility for medical care, the Government wastes money through ill-coordinated hospital construction (new beds here, empty ones there) and, worse still, fails to utilize wisely the scarce skills and talents of medical and technical personnel.

I spoke before of the visible national debt. This refers to the $274 billion of direct obligations which we all know about. The Commission found huge additional moral obligations of more than $240 billion to which the Government is committed through loans, guaranties, or insuring activities carried on by 104 different lending agencies." And this is exclusive of the unfunded liabilities of the retirement program which are estimated at $265 billion. The true total of our Nation's obligations, therefore, is more like $780 billion than $274 billion.

The Commission further found a "tendency to create activities which could be undertaken by private agencies" * * * "concealed subsidies" * * * "inadequate equities" * * * and the always great danger that "where easy money is obtainable from the Government, financial integrity tends to deteriorate and windfalls and corruption frequently flourish." The Commission had no difficulty in uncovering potential savings of $200 million a year in this field. It found, moreover, that nearly $5 billion could be returned to the Treasury by mutualizing certain funds and liquidating others.

As you might well suppose, tremendous opportunities for economy reside in other Hoover Commission reports. Government-owned storage space occupies an acreage twice the size of Manhattan Island. The Government carries personal property inventories of about $115 billion. Stocks on hand of some items sometimes represent the advance supplies of 9, 21, and even 79 years. As a real-estate man, Uncle Sam owns one-fourth of the acreage of the 48 States and 2,500,000,000 square feet of floorspace, the equivalent of 1,250 Empire State Buildings. In the Defense Department alone there are 2,500 business-type establishments at least 1,000 of which, the Commission said, are in needless competition with private enterprise.

And these are just a few samples from the 3,300,000 words of research findings which the Commission left as its legacy. On its way out the Commission concluded a series of 314 recommendations which, if fully applied, would lead to savings of not less than $5 billion a year, possibly more. Additionally there is between $5 billion and $6 billion of returnable capital which could be brought back to the Treasury from agencies and other Government business enterprises.

We thus have a clear-cut opportunity to balance the Federal budget and make a substantial reduction in the national debt. Think of that.

And whose job is it to see the recommendations through? As before, responsibility rests in part with the administration and in part with the Congress. Some 45 percent of the recommendations can be accomplished by administrative action within the executive branch. Most of the remainder will require congressional approval.

Real progress, I am happy to say, is being made in the realm of executive branch action. Presumably Congress, having created the Commission, will in the fullness of time take the initiative with respect to some of the recommendations. But this we know with certainty: Scores of previous reorganization commissions have labored in vain and died forgotten for lack of the one factor which made a success of the first Hoover Commission and without which there can be small hope for substantial achievement by the new one.

That factor is citizen support. That's the American pattern after all. In a bipartisan program of this scope, both the Executive and the Congress need to feel that the public is interested in seeing something done. Heavy pressures, both within and without the Government, are already forming against certain sections of the Hoover Report. To offset these, there must be a means by which disinterested citizens can applaud, encourage, and, if need be, prod official Washington.

This is a task for the citizen who recognizes the importance of the problem with respect to all his other concerns and is willing to give time, thought, and good hard work to its solution. This is, in fact, a wonderful opportunity and a great challenge to the citizen who sees his responsibilities in modern, jet-age terms, not in the one-horse terms that were perhaps good enough when the Government was less than a tenth of its present size.

When events bring a great Nation like ours to the crossroads, the decision to turn in either direction isn't made overnight. The one way in which we can insure the preservation of that great, basic difference between our society and the totalitarian state is to assert the difference by our own deeds. Creative citizenship is active citizenship, not just once a year or once every 6 months, but day by day the year round. And any citizen can vote for better government every day of his life, if he has a 3-cent stamp, by getting back of the Hoover Commission.

In you and the 60,00 articulate, active, intelligent creative salesmen whom you represent, I see a potential army of creative citizens. I hope you will seize the opportunity contained in the Hoover report and act upon it in your own way. I grant that the report requires study but I don't think an alert citizen can afford to be ignorant of its contents.

I grant, too, that there will be opposition, strong opposition, to some of the Commission's recommendations. Let me warn you now, in fact, that well-directed efforts are being made by powerful groups to discredit the Commission and attack its facts. Many of these attacks will prove, on examination, to be based on misinterpretations of the Commission's actual recommendations or outright distortions. One national organization of veterans issued an 11-point series of allegations against the report, 5 of which turned out to have no basis in anything the Commission said, 2 of which lacked any factual explanation, 3 of which were matters of opinion, and 1 of which was redundant.

One of the Nation's great newspapers went off half-cocked before the report was even issued and condemned the Commission and all its work on the basis of a recommendation which it never did make and had no intention of making. I mention these things merely to illustrate the fact that the citizen who supports the Hoover Commission must prepare to join in a good, lively, healthy national Town Meeting.

At the same time, I want to make it plain that the controversial aspects of the report can easily be exaggerated. We have just completed an analysis of the Commission's 314 recommendations. There is very general support for, and no known opposition to, 194.5 of them. There is general support for, and mild opposition to, another 71.5. The remaining 48 have drawn strong opposition but they are also warmly supported in other quarters.

At all events, let us not lose sight of the big goals in pursuit of small quarrels. There is too much at stake for all of us.

To sum up, I make these points: If only for good, sound dollars-and-cents reasons, creative citizenship is a definite part of the creative salesman's job. It is the way in which he contributes to the preservation of te environment in which he earns his daily bread. But remember, "create" means "make" and the truly creative man, in any walk of life, is the man who wants to bring new things into being or improve existing things, who is never satisfied with simple self-preservation as a goal in itself. There is more, far more, than dollars-and-cents satisfaction, great as that may be, for the citizen who works in support of the Hoover Commission.

In closing I can do no better than remind you of the Hoover Commission's own view of its objectives. This was set forth in the Commission's final report to the Congress and was signed by every member including, of course, those who dissented from sections of the report itself.

"The problems before the Commission have by no means been purely financial," the Commission said. "In our recommendations we have sought six objectives:

"First. To preserve the full security of the Nation in a disturbed world.

"Second. To maintain the functioning of all necessary agencies which make for the common welfare.

"Third. To stimulate the fundamental research upon which national security and progress are based.

"Fourth. To improve efficiency and eliminate waste in the executive agencies.

"Fifth. To eliminate or reduce Government competition with private enterprise.

"Sixth, and perhaps most important of all—to strengthen the economic, social, and governmental structure which has brought us, now for 166 years, constant blessings and progress."

And I ask you: Is that not worth working and, if need be, fighting for?

Statement by William G. Zetzmann, Chairman, Board of Public Works, State of Louisiana, and Member of the Executive Committee of the Mississippi Valley Association

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by William G. Zetzmann:

Last week, I attended a meeting of the Mississippi Valley Association, in Omaha, Nebr. And, accompanying United States Army engineers, I flew 500 miles up the valley of the Missouri River to Pierre, S. Dak., where I got firsthand information about the Oahe Dam and Reservoir. This is one of a series of dams and reservoirs being constructed in connection with a $900 million flood-control and public- and private-power projects that ultimately will control 75 percent of the water which comes down the Missouri River, and, therefore, is of vital importance to the city of New Orleans, not only from the viewpoint of flood control, but also navigation, commerce, industry, and even our drinking-water supply.

The valley of the Missouri River, one of the Nation's great rivers, comprises 529,000 square miles, one-sixth of the total area of the United States. In this vast inland empire, included in the Louisiana Purchase that Thomas Jefferson bought from France for a few cents per acre, I saw a working demonstration of unified public action, which in a decade has literally changed the face of the earth. I saw a system of great Missouri River dams which rival the greatest engineering works the world has ever seen.

Water in that region is being impounded in huge, man-made reservoirs, on a gargantuan scale, through a basin-wide, multiple-purpose water program which is nearly 50 percent completed. I saw two of these great dams and reservoirs from the air; and, inspected a third on the ground. Two other massive structures on the upper river, which are also now in operation, were beyond the scope of our tour.

All told, today, the Corps of Engineers, working with the 10 Missouri Basin States and 6 cooperating Federal agencies, has 4 main-stem dams and reservoirs completed, or sufficiently near completion so that all are in operation. They are functioning to prevent destructive floods, to facilitate Missouri River and Mississippi River navigation, to assure adequate water supply for 2 million people who take their water from the river; for power development, and expansion of irrigation.

They have stopped major floods on the upper and middle Missouri River for some 1,000 river miles. They have now in storage nearly 15 million acre-feet of water, the equivalent of about two-thirds the average annual flow of the Missouri River at Sioux City, Iowa. For three successive drought years, this new reservoir system has been able to maintain a steady, adequate flow of water in the river to meet the peak summer demands of cities, industries, and a growing navigation business of the Missouri below Omaha. In addition, they are producing over 1 billion kilowatt hours of electrical energy and will double that production in another year.

What does this mean to New Orleans and the lower Mississippi? It means water in the "bank" which will help us to meet our demands of the future. Actually, that system of controls far up the Missouri Valley has already made, and will continue to make, important contributions to our welfare.

I learned from Brig. Gen. W. E. Potter, the corps' Missouri River division engineer, that, during the drought months of the past fall and summer, fully 75 percent of the flow of the Missouri River, all the way from Sioux City to St. Louis, was provided by water from these reservoirs—water which had been saved from floods of previous years and skimmed off during high spring flows. This bonus water accounted for 40 percent of the flow in our own Mississippi River for several critical months last summer and fall. It helped us with our local salt-wedge problem, and it assured sufficient channel depths at St. Louis and below to maintain 9-foot depth loading of our river barges, at a time when the Mississippi was too low to do this job alone.

This service to us on the Mississippi was incidental to the major purposes of the comprehensive Missouri Basin water control program, which was authorized by Congress in 1944 and is now in its tenth construction year. But, we did benefit and will continue to benefit year after year, because of the vision and foresight of our neighbors to the north and west. I was assured by the Governors of Nebraska and South Dakota, and other citizens of the Missouri Valley, that the Mississippi Valley Association and Members of Congress from our own region had contributed very helpfully to the success of this project.

I saw another refreshing thing up there in the Missouri Basin, which generates a lot of the water on which we live. I flew over a snow-blanketed countryside for more than 500 miles. The snow ranged in depth up to 12 inches at Pierre, the capital of South Dakota. This early winter snow augers well for next summer's water supply and holds some promise of relief from the dry cycle of the past several years.

The hopeful part of this picture is that we have the solid assurance now that these Corps of Engineers dams and reservoirs will store every gallon of the snow-melt and the spring and summer rains, so that it can be released—as man needs it—all the way down the Missouri, and hence into our own Mississippi.

I had the privilege of inspecting the great Oahe Dam, which is now in the major construction stage. I walked hundreds of feet into a concrete tunnel 20 feet in diameter, 1 of 6 which, in the future, will carry the Missouri under the 240-foot high dam that extends 2 miles across the Missouri Valley.

I cannot begin to describe the size of this project—the world's largest rolled-fill dam. You would have to see it to believe it. The dam will require 75-million cubic yards of earth fill; and, the concrete outlet structures, powerhouse and spillway, over a million and a half cubic yards of concrete. In 1958 this structure will be completed and another mighty control added to the Missouri system.

But equally interesting and inspiring to me was the meeting we attended with Governor Joe Foss, of South Dakota; members of the greater South Dakota Development Association, and other directors of the Mississippi Valley Association. There, I caught the spirit of drive and unity of purpose which has enabled these people of the Missouri Basin to set a river development record in a decade—a record which is a challenge to the entire country.

In Omaha, Nebr., and Pierre, S. Dak., the work of International Trade Mart and International House are well known. Our port—New Orleans—is their port. The splendid cooperation of delegates from those States, in matters pertaining to the Tidewater Channel at New Orleans, the control of Old River, and the prevention of the capture of the Mississippi River by the Atchafalaya—all evidence their feeling that what is good for New Orleans is also good for Omaha and Pierre. Likewise, we should always keep in mind that what is good for the Mississippi Valley, as a whole, is good for New Orleans.

After the Spree Comes the Hangover

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an article written by James Reston, of the New York Times, appearing in its issue of January 1, 1956. The year 1955 might well go down in history as a year of wishful thinking by the administration, and creating such thinking in the minds of too large a percentage of our people.

The article follows:

AFTER THE SPREE COMES THE HANGOVER

(By James Reston)

WASHINGTON, December 31.—The administration has made its New Year's resolutions, like all the rest of us, and now all it has to do is carry them out.

This will not be easy, for the state of the Nation at the beginning of 1956 is a little like the state of many of its citizens this weekend. It has been on a lovely spree and is now facing the inevitable hangover.

Nineteen fifty-five was fun: A year of wishful thinking about the Russians, the Chinese, the boom, the schools, the roads, Quemoy and Matsu, the Middle East, the Germans, the French, disarmament, and the President's health.

Nineteen fifty-six will be more difficult, for the bills are coming in, and they are coming in during a presidential election year, when they will be hard to pay.

PLEASE REMIT

In 1955 a large part of the foreign military and economic aid program was taken out of reserves; in 1956, almost $5 billion will have to be appropriated just to keep the program going at the same rate.

In 1955, the administration offered the country a do-it-yourself school building program which required the appropriation of very little money and got hopelessly involved in the old controversies over segregation and aid to parochial schools.

In 1956, a new and imaginative effort will be made to persuade the Congress to authorize Federal grants of over $1 billion in the next 5 years.

In 1955, the disarmament problem was met with a gimmick—the President's limited aerial inspection proposal—but in 1956 the United States will have to come forward with a serious plan.

In 1955, the administration has asked the Nation to believe that the vast and critical battle for the world depends for its success on the continued service of one wounded soldier; in 1956, this proposition will have to be put to a decision.

In the foreign field, the assumptions of 1955—that the Arab States would look only to the West for military and political aid; that the Chinese Communists would make no moves toward the conquest of Quemoy and Matsu; that the Russians would stay out of the Middle East, and agree to the unification of Germany—are no longer valid.

The cold war is now changing. It is as if two football teams, slogging it out between the tackles in straight power plunges, suddenly shifted into spread formation, requiring new offenses and new defenses, and opening up vast new opportunities for attack.

The administration is resolved to do something about these things. It knows that the time for temporizing with the school and road problems, for dreaming about the end of foreign aid, and for hoping that the Communists would be reasonable in Europe and Asia is over, and it has made some bold New Year's resolutions to deal with the new situation.

THE NEW PROGRAMS

This is what all the Cabinet and National Security Council meetings here and at Camp David have been about. They have resolved to put foreign aid on a more or less permanent basis; to dig into the Treasury for the schools and roads; to grapple with the immensely complex problem of modernizing the obsolescent defenses of Western Europe; to compensate the farmers for their losses; to shift strategy in the Middle East and south Asia; to hold the line on taxes, and to deal more urgently with the soaring volume of consumer credit.

As every citizen knows, however, it is easier to say what you want to do in the new year than to do it, and this is particulary true of this time and this administration.

The time calls for radical changes when everything on the surface looks pretty good and there is no widespread demand for changes. The administration has said publicly—what it knows privately is not true—that "everything's booming but the guns," and the people who do not live on farms have tended to believe it.

No conservative party really wants to make changes in a program it likes when it is enjoying a general immunity from criticism and the electorate is reasonably content. This administration likes its farm program and its foreign policy, its school program and its road program about as they are.

Indeed, one of the critical aspects of the situation in the days before the opening of Congress is that the new programs it will introduce in the coming weeks already outrun the convictions of many of the leaders of the administration.

They will suport these programs because the political and economic facts at home and abroad require them to do so, and the President, who is more enthusiastic about changes than some members of the Cabinet, has decided for change.

But if the administration's New Year's resolutions are to be written into law in an election year, somebody is going to have to fight for them every day with great enthusiasm, and this fight must be carried to a large extent by some men who are not eager for the battle.

Consumer Gas Bills

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. VANIK. Mr. Speaker, in yesterday's newspapers I was dismayed to learn of the introduction of legislation by Senators MONRONEY, FULBRIGHT, ANDERSON, and DANIEL which would require the Washington Gas Light Co. to print on its monthly consumer bills a breakdown statement to show how much of the bill goes to the distributing company, the pipeline and the producer. This legislation is propounded in part to point up the smaller portion of the bill representing production.

The obvious purpose of this legislation is more sinister than sincere and purports to take punitive action against this company for joining the Council of Local Gas Companies in a legitimate protest against the Harris-Fulbright gas steal bill.

The technique is completely in keeping with the resolution to investigate the distributors of natural gas because of their opposition to the Harris bill in the House last summer.

The Congress of the United States is no place for vindication and recriminations—it is a place for sober and conscientious deliberation.

I am proud of the forthright courage of the gas distribution industries to resist the efforts of the oil and gas industry to run roughshod over the interests of the gas-consuming public.

The records and cost figures of the distribution of natural gas in the Washington area as well as the other gas consuming areas are public records—open for public scrutiny. The gas-consuming public in any given area has the right to inquire, investigate and dispute a gas rate before its utility commission and in the courts. It is that very right which the Harris-Fulbright bill seeks to take away from the public with respect to gas production. The measure is no giveaway—it is the "takeaway" of 1956.

It is my earnest hope that the Senate will exercise more wisdom than the House on this measure and defeat it for all time.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. The money derived from such sales shall be paid into the Treasury and accounted for in his annual report to Congress, and no sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Investment Opportunities in Latin America

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Investment Opportunities in Latin America," delivered at the finance conference of the American Management Association by Dr. Luis Machado, Executive Director of the International Bank for Reconstruction and Development, New York, December 2, 1955:

If I had to describe in one single phrase the opportunities for investment in Latin America, I would say that, in her economic development, Latin America is today where the United States of America was a hundred years ago.

You probably would understand much better what I have to say if, by a twist of our imagination, we would turn back the hands of the clock and the leaves of the calendar a full century; something—I am sure—many in the audience would not object to, if it could be done. Let us imagine that a century ago the American Management Association, at its finance conference, had asked someone to talk briefly on the opportunities for investment in that part of the United States that lies west of the Mississippi River.

By 1855 the United States had already become an important nation. It had reached a population of 25 million people. It had just finished assimilating the large area of land bought at 4 cents an acre from France under the Louisiana Purchase in 1803. It had pushed its frontiers west of the Mississippi to the Pacific Ocean by annexing California and what is now Oregon and Washington. Texas had just joined the Union. Gold had recently been discovered in California.

It is true that most of the newly acquired area was still unexplored; that there were no roads to reach the new lands; that there was not much law and order prevailing at the time; that men had to fight the Indians, the bandits and the forces of nature to survive; that a gun had to be carried on the hip, ready to be used; that sanitation and comfort did not exist; that living conditions were hard and difficult; that political conditions were unstable; and that the question of the abolition of slavery was boiling and heading the country toward a cruel and bloody civil war.

All that was true. But no one—not even the most conservative banker—would have questioned the opportunities for investment that existed a hundred years ago in that area. In fact, the most enthusiastic orator at a finance conference like this, speaking a century ago on the opportunities for investment west of the Mississippi River—even resorting to the wildest dreams—could not have possibly foreseen the fantastic development of the teeming cities, the bumper crops, the herds of cattle, the oil production, the prosperous mining enterprises, including all ores, from iron, copper and zinc to precious metals and uranium; the booming industries, the gigantic aviation factories, the vacation lands, the movie colonies, the hydroelectric generating plants, the growth in population, and the many other factors that have contributed to make this country the most advanced and richest Nation in the history of the world. How could anyone predict that the population of the United States in a century was going to jump from 25 million to 160 million?

I repeat that in 1855 no one could have doubted the wisdom of investing west of the Mississippi River, because the necessary ingredients for a good investment were all present there at the time.

Let us see if we all agree on what is a good investment. An investment is the application of capital to a new venture for a productive purpose. The object of an investment is to produce; and the success of an investment is determined by its production. If an investment grows, that is, if it produces, it is a good investment. If it fails to grow, it is a poor investment. Growth is the measure of success of an investment.

In 1855 the United States was a growing Nation; growing in area, in physical resources, in population, in commerce, in domestic production. The opportunity for investment was there, and the seed could not fail to ripen in such favorable soil. Growth is the ideal climate for investments.

Now, let's get back to our conference and to our year of grace 1955. Let us take a long look from this great city of New York, the financial center of the world, to that large and distant area, a thousand miles away, little known and less understood, that is called Latin America.

Let me first remind you that Latin America is not a country, but a continent; a continent where 20 independent Republics and a few territories still under European colonial domination live peacefully side by side. I do not know how many of you have visited Latin America, or how many of you have business there. But for the benefit of those of you that have never visited our shores, let me explain that Latin America occupies an area two-and-a-half times the size of the United States. In this very large area, you will find the longest and the second highest mountain range in the world, the Andes; the largest river in the world, the Amazon; the highest navigable lake, the Titicaca; one of the largest waterfalls bounding on three countries, the Iguazu; and the highest watefalls in the world, Angel's Falls in Venezuela.

This large continent to the south of you is the largest producer in the world of beef, coffee, sugar, cocoa, tropical fruits, silver, copper, and manganese. It is also one of the largest producers of wheat, corn, cotton, wool, fibers, timber, iron, aluminum, sulfur, zinc, lead, chromium, nickel, mica, and petroleum. It is the largest customer of the United States, from whom we purchased and paid for goods in 1954 in the amount of $3,286,300,000; and its total international trade last year exceeded $14,500,000,000.

And yet, despite these impressive figures, one-third of our continent is still virgin and unexplored; and less than one-half of our land is in actual production. What the natural resources of Latin America might amount to when fully developed, simply escapes the wildest imagination.

But the most important thing about Latin America is that it is a growing continent. Latin America is growing at a rate not equaled by another area in the world. For the first time in history, in 1950 our population exceeded the population of the United States, and today it has reached 180 million inhabitants; that is, more than the United States and Canada combined. Population is growing at the unprecedented net rate of 2.5 percent per year. At this rate, we should have 300 million people in Latin America by 1975, and 500 million by the turn of the century; doubling, by then, the estimated population of the United States and Canada.

Our production has been increasing at the rate of 5 percent per year. Thus, despite the rapid growth of population, an overall increase of 2.5 percent in per capita output has been achieved. This compares with an average annual per capita growth of 2.1 percent in the United States during the period of 1869–1952. A long-sustained production increase at the present rate will simply accomplish wonders in Latin America.

The economic development taking place in Latin America is really spectacular. It should be so, because we have in 1955 at our disposal means and facilities that did not exist in 1855, when the Americans started to develop the West. We can today use for development steam, electricity, automobiles and trucks, agricultural machinery, radio, telegraph, and telephone. Our technological progress permits us to apply to production, conservation, and distribution scientific techniques and processes unknown a century ago. And we can count, in addition, on the financial resources and facilities of institutions like the World Bank, the Export-Import Bank, and the new International Finance Corporation now in process of organization, whose purpose is to assist precisely in the economic development of the world. The development of Latin America is going so fast, that we are shortcircuiting the traditional process. We are jumping directly from the burro to the airplane.

Cities like Buenos Aires, Rio, Mexico City, Habana, Montevideo, Santiago, Sao Paulo, and Lima, with millions of inhabitants, would hardly be recognized by anyone who has been away from them a few years. Two hundred new houses are being built every day in Sao Paulo alone, in an effort to meet the acute housing shortage. How Caracas has miraculously emerged from the jungle as a modern city with skyscrapers, office buildings, apartment houses, magnificent hotels, golf clubs, wide boulevards, and superspeedways like New York, Chicago, and Detroit, is a story that amazes architects and engineers all over the world.

Sanitation, preventive medicine and better nourishment have eradicated yellow fever, malaria and tropical diseases from our lands. An intensive educational system, coupled with our excellent colleges and our universities, some of them older than Harvard, is preparing the new generations to take their place and do their duty in the common task of developing our natural resources and maintaining our democratic institutions.

It is impossible to describe in a short talk like this what an enormous market Latin America will become within the next few years. Not only our population is increasing in numbers at a very high rate; but the remarkable improvement in the economic level of the people tends to further increase consumption of all kinds of goods and service, and to enlarge the Latin American market of the future.

Within the next few years, the beautiful isolated cities of Latin America will be interconnected by modern highways, roads, and railroads. These new means of communication will open up for production new virgin territories. Hotels, motels, restaurants, playgrounds and vacation resorts will sprinkle along their routes. The growing population will require millions of new homes. More people with more money in their pockets will need more food, more clothes, more shoes and more of all the necessities of life. More children will demand more new schools, more colleges and more universities. With the standard of living constantly improving housewives in Latin America, as elsewhere, will insist on having all of the modern labor-saving household appliances and conveniences. Everyone who can afford it, will want an automobile, and quite a few, a private airplane. Air conditioning will become a common building requirement. These needs will give rise to new industries, to new trades, to new employments, to new developments. Cities will need more water, more sewage disposal systems, more power, more telephones, more recreational facilities. It has been estimated that Brazil alone would need in the next 20 years a billion dollars expansion in electric generation.

Why—someone may ask—with so many attractive opportunities, investments have been rather slow in going to Latin America? I am inclined to believe that, aside from the fact that there have been many opportunities for good investments at home, the slowness of investments in Latin America is largely due to ignorance about our countries and lack of information on our real investment possibilities.

I often run into people who are scared to deal with Latin America. Latin America, they say, is a land of physical and political instability, of revolutions, of recurring crisis, where no one can be sure that a loan will be ever paid back.

Latin America is no exception to the rules of nature. Anyone afraid of hurricanes, earthquakes, floods, droughts, lightning, and volcanoes, better say out of Latin America, because we have, like all other areas of the world, our fair share of these natural phenomena.

And revolutions are part of the climate of Latin America. Not that I advocate them; but they are the growing pains of the democratic process, one of the several ways we have to change an unpopular government; just like the French change their Cabinets whenever they get tired of them.

But neither acts of God nor revolutions seriously affect private investments. People, after an earthquake, a flood, a hurricane, or a military coup, keep on eating and dressing and going to the movies. Life goes on just the same. Cattle keep on breeding. Crops keep on growing and must be consumed or exported. The economic cycle goes on, regardless of who signs the decrees in any government. And foreign debts are paid, whether they were contracted by the party in power or by their deposed predecessors. In this respect Latin America is unique in the world.

This point is important enough for me to stop for a minute and cite a few figures, even at the risk of taxing your tired attention. Let me tell you what our experience in the World Bank has been. During its 10 years of operation, the World Bank has made 55 loans to 12 Latin American countries for development purposes, aggregating a total of $642,405,000. I am pleased to report that there has not been a single default on any of these loans, either as to principal or interest. The Expert-Import Bank, since its creation in 1934 has made loans to practically every one of the Latin American Republics for an aggregate of $2,500,000,000; and they can report a similar experience.

According to the statistics compiled by the economic staff of the World Bank, the total outstanding public foreign debt of Latin America in dollars and other currencies, at the beginning of the Second World War in 1939, amounted in round figures to $3 billion. From 1939 to date Latin America received, in the form of public loans from the Export-Import Bank and from the World Bank, nearly $2,750,000,000 additional. Of that great total indebtedness of $5,750,000,000 a very large part has been repaid; and, as of today, only one country, out of twenty republics, is in default on its old prewar debt for a total of less than $59 million. Consequently, the public debt risk of Latin America, according to the records, is 1 percent. In fact, our debt record, as a whole, is so good that there are countries in Latin America, like the Dominican Republic, Honduras and Venezuela, that can boast of not having at the present time any public foreign debt. What other geographical area in the world—may I ask you—can show today a similar performance record?

There are among the 20 Latin American Republics, like in any large family, natural differences in size, in population, in degree of economic development, and in commercial and trade practices. Some countries maintain certain monetary controls, while others, like Mexico, Cuba, the Dominican Republic, Panama, Perú, Guatemala, Honduras, Venezuela, El Salvador, and Haiti, have no foreign exchange controls. But everywhere in Latin America, the process of growth is present. Everywhere, economic development is progressing at an accelerated pace. And consequently, everywhere there are excellent opportunities for sound and profitable investment.

Some day the enterprising American, who has been pouring billions of dollars into other areas, will take a serious look at the great family backyard lying to the south, just like a century ago he took a look at the great expanse of virgin territory west of the Mississippi River. When he does, I am sure that we will not have to wait a hundred years to show results; and any other future speaker before the American Management Association will be able to recite and praise what an excellent opportunity for investment this generation had in Latin America.

A century ago, the American's motto to the new generation was: Go west, young man, go west. I suggest that our motto today should be: Look south, investor, look south.

Mrs. Nell Bohannon Vaughan

EXTENSION OF REMARKS
OF
HON. FRANK CHELF
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. CHELF. Mr. Speaker, on November 24, 1955, Glasgow, Barren County, and Kentucky lost one of the sweetest little ladies that ever lived. She was Mrs. Nell Bohannon Vaughan, the mother of William (Bill) Vaughan, who for years served as acting superintendent of the House Radio Gallery.

"Miss Nellie" as she was affectionately known by all of her friends, first began in politics when she was only 14 years old. Her father, the late Judge G. M. Bohannon, had announced for reelection and his little girl, Nellie, got busy in order to help him. From that day on until her death, "Miss Nellie" was the Democratic wheelhorse of all Kentucky. This good woman was loved and respected by all people. She was so considerate of her fellowman that even in a heated political campaign, the opposition admired her methods. I was proud to call "Miss Nellie" as my personal friend.

Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD the following article that appeared on November 25, 1955, in the Evening Star, of Washington, D. C.:

MRS. NELL BOHANNON VAUGHAN, LONG IN KENTUCKY POLITICS

Mrs. Nell Bohannon Vaughan, mother of William W. Vaughan, of Arlington, who was an aid to former Vice President BARKLEY, and Robert M. Vaughan, a Washington attorney, died Wednesday night in Glasgow, Ky., after a political career that began when she was only 14.

Mrs. Vaughan's first statewide campaign job was Democratic woman's chairman in Senator BARKLEY's first race for the Senate in 1928. Her son William, who served Mr. BARKLEY when he was Vice President, is now custodian of records in the office of the secretary of the Senate, and lives at Arlington Village, 2700 13th Road, Arlington. Her other son, Robert M. Vaughan, 5713 Overlea Road, Sumner, Md., is an attorney with King, Noble & Sonosky here.

The late G. M. Bohannon, Mrs. Vaughan's father, was elected county judge in the campaign she managed when she was 14, and retained that office for 40 years. Mrs. Vaughan held public office herself only once. She served as State parks director during Gov. Keen Johnson's administration from 1939 to 1943.

Mrs. Vaughan had been a delegate to all Democratic National Conventions since 1940. Also surviving, besides her sons, is her husband, R. H. Vaughan.

The funeral service will be held tomorrow morning, according to the AP.

The Fallacy in Soaking the Rich

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. DAGUE. Mr. Speaker, in the upcoming "hassle" over tax cuts there will be a welter of demagogry from those who bleed for the so-called little people, and there will be few of us who will be inclined to ignore the interests of that vast group which embraces the most voters.

The fact remains, however, that if we literally confiscated the total income of all those whose annual income starts with $10,000, we would not get enough to run this Government for three months. It is also approximately correct to say that this upper 10 percent already pay nearly half our total take in taxes on income.

Another fallacy is the idea that so-called surtax provides a large share of the income levy. As a matter of fact, while this surtax, when added to the regular 20 percent, reaches the outlandish total of 91 percent, it still only sup-

plies 16 percent of all the moneys received from the income levy.

An excellent case has been made against this punitive and unrealistic system of taxation and for a 35 percent limitation on income taxes. The article by Graham Patterson, the able publisher of Town Journal, entitled "Strangling the Golden Goose" is extended with these remarks and ably supports the case of the big taxpayer—and the middle income group as well:

STRANGLING THE GOLDEN GOOSE

A serious threat to the continuance of our Nation's growth and prosperity lies in our present outmoded and destructive system of taxation. Our so-called progressive system of taxation says in effect to the ambitious individual, "You're free to work hard to advance yourself, but if you succeed, you will have to pay most of it in taxes," and to the businessman trying to build his business, it says, "Try to make your business grow and thus create jobs for more people, but if you do, you will be penalized severely."

This is an amazing and incomprehensible attitude, for it is directly contrary to the very things upon which our Nation's growth has been built—industry, self-reliance, thrift, the willingness to risk one's savings. It discourages and represses those very virtues that made millions of people from other lands flock to our shores.

Under our present tax laws, there is a basic tax rate of 20 percent paid by all those who pay taxes. In addition, there is a "surtax" paid by everybody with more than $2,000 of taxable income. This surtax starts at 2 percent but progresses rapidly until it finally reaches 71 percent. This is on top of the 20 percent basic tax—a total of 91 percent.

Some will say that such high rates are necessary because it takes a lot of money to operate our Government. But they are usually amazed when they learn that of the entire $29.4 billion derived from the individual income tax, only 16 percent comes from the surtax, which involves everyone with more than $2,000 taxable income. The remaining $24.7 billion—84 percent—comes from the basic 20 percent tax rate. In other words, millions of taxpayers are unfairly overtaxed for the sake of a relatively small part of the total tax revenue. So the high rates are actually more destructive of income than productive of revenue.

The increasing rates fall with especial severity on the middle income groups—small-business men, lawyers, accountants, many farmers, salesmen, technicians, and skilled craftsmen.

Economists know that lower taxes actually produce more revenue for the Government. Let us say the individual and corporate surtax were reduced gradually each year for 5 years, until both were down to a 35-percent maximum. These reductions would not only mean lower taxes for all income groups, even as low as $2,000—but should also prove an effective stimulus to our whole economy, because of the greater amount of money available for spending by individuals and industry. And this greater prosperity would in turn produce greater tax revenues for the Government.

It is interesting to note that a recent Gallup poll showed that 53 percent of the public favors this 35 percent limitation on income taxation. And it is certain that even more people would favor it if they realized the small amount of revenue that today's excessive rates produce and the bad effect they have on investment and job-making. Truly, the power to tax is the power to destroy.

GRAHAM PATTERSON.

America Is Truly a Fabulous Land

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to call the attention of my colleagues to an excellent article by a fellow West Virginian, Mr. John Hamric, 100 Park Avenue, Charleston, W. Va., on the greatness of America—"land that I love."

Mr. Hamric is quite generous in his praise of Americans in general and his tribute to them and the American way of life is unique and interesting:

This country, this people, America is truly a fabulous land. A wonderful country. Realm of opportunities unlimited. Degree of limitation on success and accomplishment being in direct proportion to desire to grow and attain. A domain wherein failure hardly need occur. This system, our American economy, probably better known as the "American way of life," based largely on a "free market" is blessed with abundance of material resources. Great creative power, imagination and "know how" translate the American way into the most effective economy yet devised for the common good of mankind.

It was not built entirely on all this, however, because the character of this people was and is, founded upon great faith and trust. Faith in God and the trust, honesty, decency and freedom of its citizens. It endures in great measure in fulfilling the obligation to pass on to each new generation the heritage of liberty and freedom established by its founders.

Americans are a hopeful and optimistic people, accustomed to bringing their dreams to quick reality—tackling a job and getting on to the next one. Therein lies the velocity of their progress and achievement. The American way is dedicated to the premise of doing more—better—quicker as the national goal for its people and because of the overall benefits afforded stands to be upheld and defended by all Americans with their lives, their fortunes and their sacred honors.

Americans hold and believe that their way of life is in harmony with the will of God whom they recognize in the Declaration of Independence as the Giver of their basic rights, liberties and freedoms. Liberty and freedom are precious and their cost and anchorage is high—yet Americans have never failed to pay the price to sustain them at home and abroad. They are a hospitable people generally who appear at their best when entertaining company, friend or stranger. Good neighbors, too. Neighbor to neighbor and nation to nation.

A land of great beauty, of ribbon-like highways, heavenly skies, majestic mountains, rolling plains, waving grain, placid lakes, rivers, flowers, birds and beautiful sunsets. Farms, factories, forests, villages, towns and cities cover the land. Homes, shops, stores, schools and great institutions of learning are fruits of the economy.

A land of babies, adventurous and vigorous youth, grownups, grandmas and grandpas, and the revered aged. A land filled with automobiles, trains, ships and commerce, industry and agriculture—bulwarks of the economy. A land of sports and festivity, of Thanksgiving and Christmas, of baseball and football. A land of culture and arts and sciences, of music and painting and medicine, of research and discovery. A land of love of joy and romance and adventure—endowed with food, raiment and shelter in abundance, yet America surmounts the hazards of storm and loss and sorrow with much mercy and succor to the injured and unfortunate.

Lowly and magnificent places of worship attest to faith and trust in Almighty God. The leading nation of earth. Not by choice or force but by the stature of a way of life which places first value on human life and is looked upon by millions as the ultimate hope of mankind. A way of life worthy of emulation, assuring every citizen the God-given right to full expression and development of personality as such relates to the mental, physical, social and spiritual without limitation. Freedom of speech, assembly and worship are established in the Constitution of this people and gains toward freedom from want and fear point to continued growth and betterment.

Such is this land—and more. America is truly a fabulous land.

Desperate Outlook of a Farm Family

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mrs. KNUTSON. Mr. Speaker, I have just received access to information that shows distinct contradiction to implied feelings of sympathy for the poor farmer in the President's farm message. The years of this administration have shown lack of sympathy under the present program. In fact, this carries over to the recent boost in rediscount rates under the Federal Reserve System which has already increased loan interest rates for farmers. Under leave to extend my remarks, I wish to submit this letter as evidence of the clear-cut and desperate outlook of one farm family:

ARRIBA, COLO., *January 4, 1956.*

Mr. JAMES PATTON,
President of National Farmers Union,
Denver, Colo.

DEAR SIR: We read the National Farmers Union paper and you seem to get things done. We are writing to you for help or something.

We have 2,080 acres half grass and half cultivated, in Lincoln County, Colo., 8 miles south of Arriba and 2 miles west. We secured a loan on it for $14,000 of which $4,000 has been paid. (Benton & Wingfield, Norton, Kans.) We have the land leased for oil for $1 per acre on 1,760 acres and $1 per acre on two-fifths of the other 320 acres. We have 72 head registered and purebred Angus cows and heifers on which the First National Bank of Limon has a mortgage of $10,616 plus interest. Also the machinery to farm with.

Beginning in the spring of 1954 we borrowed operating money from the FHA. We owe FHA $3,607. Mr. John Tiffany, of Limon, was the administrator we started with. Mr. Tiffany is very courteous and would sit down and discuss plans pro and con. He understands what the farmer is up against in this territory as he lives here and has a farm also. He was so bothered by changing rules and everything in an upset state most of the time, he resigned in December.

Now we have a Mr. Watrous from Denver or nearby, doing the work and breaking in a man. Mr. Watrous tells us over and over again that he is going to show us we are poor people. We know we are poor or we wouldn't have to ask for FHA funds but I didn't know we'd have to be ground in the dirt too.

We have no money at all now and in a short time we will need feed (forage) for the cattle, especially if it storms. Mr. Watrous says that's our hard luck which it is, I guess. Mr Watrous thinks we got into this by mismanagement but the main reason is drought and falling prices and attractive wheat prices which caused so many acres of grass to be broken up and put to wheat which wasn't needed and left such wide areas to be blown. We should be in emergency feed area but they cut that off because feed was raised near Karval. For 3 solid years we haven't raised anything. The calf crop had been taking care of expenses but now they won't. The papers keep printing that the United States Government has loosened credit to the farmers but our experience doesn't show it. If we can get credit to weather this drought, we are sure we can come out OK. We did in the thirties, but of course prices and expenses were more in line. We need some unbiased advice in a hurry, and help. Is there anything you could do to help? Mr. Tiffany told us we had one of the best units to work on if the weather breaks. We think we have too much in it to just sit down and let it go. There is no market for land right now.

I probably haven't written this so you can understand it but we need help desperately at once, not next summer. There are more near here in the same boat.

Sincerely,

Mr. and Mrs. MARTIN CLAUSSEN.

The Vision of Faith

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. McCORMACK. Mr. Speaker, I am pleased to include in my extension the text of the Reparation Day sermon entitled "The Vision of Faith," the logic, strength, and force of which is undeniable and which should be as widely read as possible; delivered on Sunday, January 1, 1956, by his excellency, most Rev. Patrick A. O'Boyle, archbishop of Washington, at St. Matthews Cathedral in Washington, D. C.

In my extension I also include an editorial, Vision of Faith, appearing in the Catholic Standard of January 6, 1956.

The sermon and editorial follows:

"Be on the watch, stand fast in the faith, be full of courage." (1 Corinthians, xvi: 13–16.)

Last week you may have seen in the newspapers the pictures of two medical missionaries released from Communist China. I can still see the emaciated features, the dull, staring eyes telling of agonies that are beyond our power to imagine. These kindly souls had left America on a mission of Christian mercy. They went thousands of miles overseas to a country that was strange in language, customs, and outlook on life. They took this journey as a gesture of faith, bringing religious truth as they saw it to those who knew not Christ.

Now they are coming home, broken in body and wounded in spirit. They gave kindness; in return they were imprisoned. They sought to win the souls of men; they were accused of being agents of a foreign political power. Their mission was one of mercy and healing; their reward was a charge of treason. Surely we see in this story a capsule picture of the challenge that our age faces. When mercy is considered treason, truth is classed as a lie, and good is called evil, we are indeed faced with a monstrous perversion of human nature, a denial of every ideal that civilized man has cherished.

On this Sunday, dedicated as a day of reparation for the evils caused by godless communism, it is fitting that we examine once again the bitter realities of our time. What happened to the two kindly souls released last week is not an isolated incident. Over a billion human beings, our brothers and sisters under God, are in danger of a similar fate.

ROLL OF HEROES

We must never forget the names of Cardinals Mindszenty, Stepinac, and Wyszynski, of Archibishop Beran, and of our own Bishop Byrne of Washington and Bishop Ford of New York, and of thousands of other bishops and priests, religious and lay people, too numerous to list here. We should never overlook the millions of silent martyrs, some slain, others imprisoned or sent to slave-labor camps—all because they believed in God and stood steadfast for their religion. When we think of these sufferings, we should be shocked by the prancing and posturing of Communist leaders at they tour the world, receiving heroes' welcomes. What has happened to the world today when such monstrous evils are so easily forgotten and so readily overlooked?

The leaders of the Communist world are not trying to deceive us in regard to their attitude toward religion. They state openly that the conflict with religious faith is a war to death. They are cynical enough to practice some toleration at certain times, to cultivate some church leaders while persecuting others, and even to seek to use religion as a tool for imperialist gains. But they do not hide their long-range plans. Those who are deceived about the essential conflict between communism and religion are self-deceived.

I think that most of my fellow Americans will agree with this analysis of the true nature of communism. Yet it is possible that some may think that this is no concern of ours. They may express their views in this way: We grant that it is deplorable that hundreds of millions have been deprived of their basic human rights under this evil system. It is indeed tragic that churches have been closed, the clergy exiled or imprisoned, the teaching of religion prohibited, and even private practice of religion made dangerous and akin to treason. We do not condone these evils, but at the same time it is not our mission to right all the wrongs in the world. We may reject the racism of the Union of South Africa, but as a nation we must admit that it is the internal problem of another sovereign power. We know that economic injustice prevails in many areas of the world. Yet we dare not tell other countries how to manage their own economies. So likewise we must consider the civil liberties of Communist subjects as an internal problem of these regimes.

WRONG TERMS

Now such persons would not contend that communism is not a problem for Americans. But they visualize the problem in terms of economic, military, and political factors. Our proper concern, they say, is only with matters of our own national security. We trespass beyond this field at our peril. Meddling nations, no matter what their good intentions, are greeted with resentment and often with contempt by fellow sovereign powers. Indeed, one analyst, formerly high in the councils of our Nation, considers the "moralizing trend" one of the great weaknesses of American diplomacy.

It is not my intention to comment from the pulpit on matters of diplomacy or to seek to define the proper scope of political action. Rather than discuss these issues here, we might accept for the moment the idea that national security is our only proper concern in dealing with other nations. Even with this concession, it is still not true that we must consider only the economic, military, and political menace of communism. To look at the struggle in these narrow terms is to miss the real conflict of our day. The real war today has well been described as a war for the minds of men. It is a clash of beliefs, of allegiances, and, in a certain sense, of ideals. The use of the term "ideal" in reference to communism may seem strange. Yet such a keen observer as the late Pope Pius XI did not hesitate to say that "the Communist ideal wins over many of the better minded members of the community" (On Atheistic Communism, March 19, 1937, No. 15).

We have noted before how timely is the analysis of communism written by this great Pontiff. Although the document is nearly 20 years old, it can still be read with immense profit today. And one of its finest features is the study of the appeal of communism in terms of idealism. The Pope noted some of the arguments of the Communists in regard to social reforms. He then stated: "And as every error contains its element of truth, the partial truths to which we have referred are astutely presented according to the needs of time and place, to conceal, when convenient, the repulsive crudity and inhumanity of Communist principles and tactics. * * * The preachers of communism are also proficient in exploiting racial antagonisms and political divisions and oppositions. They take advantage of the lack of orientation characteristics of modern agnostic science in order to burrow into the universities where they bolster up the principles of their doctrine with pseudo-scientific arguments." (Same citation.)

Although these words were written nearly 20 years ago, they could be a description of Communist tactics today in great nations of Asia, Europe, Africa, and Latin America. We must remember that the appeal of communism is not only to the disgruntled, the bitter, and the neurotic members of a community. It has been able to convince men of sensitive natures and of high ideals. The world was shocked when spy rings were uncovered in our own country, in Canada, in Great Britain, and in Australia—not only because of the gravity of the secrets betrayed, but also because of the respectable nature of those who preferred communism to their own country. These men were scientists, university professors, and others of real standing in their communities.

The process of winning over misguided idealists still continues. And it is far more dangerous to the security of the world than most of us realize. Our country is inclined to underestimate the power of the intellectual. We call such persons eggheads, or ivory tower professors. But in the brains of such scientists was born the fearful weapons of modern war—the ultimate weapons of fission and fusion. In wide areas of the world, men of learning are the real leaders of their nations. This is particularly true in nations newly freed from colonial status. It is in these very areas that the power of communism is growing with sobering speed.

By concentrating almost exclusively on the economic, military, and political menace of communism, we have been able to counter its threats of this type. We have reached a stalemate, with the result that our fears of

war have lessened. Yet at the same time we feel that somehow we are losing in the struggle with the Communist world. While we patch a leak here and a trickle there, a flood wave of sympathy for communism is sweeping many parts of Asia and Africa. We are baffled and bewildered as our best efforts seem to fail.

Could it be that we are failing because we have conceived the struggle too narrowly? Are we fighting with nineteenth-century weapons of diplomacy a twentieth-century battle of ideology? Do we talk in terms of material wealth and military power, while our opponents monopolize the powerful slogans of justice, of peace, and of equality? Are we addicted to showing power, letting the Communists speak of ideals? The answer to all these questions, I fear, is yes. And therein lies the secret of our frustration today. We are outmaneuvered and outgunned in the very area where our strength should be the greatest. By default, we have permitted the enemy to use our choicest weapons.

NEED REAPPRAISAL

If the real war today is the struggle for men's minds, we need badly an agonizing reappraisal of our policy and tactics. We face a total conflict between two ways of life. In such a conflict, the old distinctions between the internal policy of a nation and its foreign conduct are completely unreal. The leaders of communism are offering a total package. It is true that their advertising is deceptive. The contents of the package are quite different from the promises of of the label. But, in this case, by the time that the purchaser knows the truth, it is usually too late. He can no longer return the package and regain his freedom.

What must be our policy in this struggle? It seems simple enough—to tell the whole truth again and again about communism and compare it with the whole truth again and again about the free world. Yet it is not so simple as it seems. Why? Because we have not yet dared, as a people, to speak frankly and openly the truth about communism. We do not hesitate to build a powerful Army, Navy, and Air Force. We have ringed the world with alliances, formed for the sole purpose of containing the Communist orbit. We spend millions for propaganda. Yet, at the same time, we are strangely quiet about the purpose of all these activities. We engage in a form of pretense, as if it were not proper to mention the subject of communism in polite company.

Pussyfooting on such issues plays directly into the hands of the enemy. They utter their lies bluntly and fearlessly, while we leave the truth muted and gagged. Let me return to the story I told you at the beginning of this discourse. The peoples of the world are deeply religious. They respect the mercy and humanity of the medical profession. Most of them acknowledge and respect the basic rights of man. Yet all these ideals are trampled into the dust by communism, and we treat it as a private affair.

Have we lost our sense of indignation? Are we so self-satisfied, so complacent, so preoccupied with enjoying our ever-mounting standards of living that we blind ourselves to cruelty and bitter slavery visited upon our fellowman? Is this the America that fought for the ideals of freedom and independence in 1776, the Nation that endured the War Between the States, the people who generously responded in the recent World War when millions died to overthrow the tyranny of a Hitler? Have we been hypnotized into a moral slumber? Let us all examine our consciences and face our duty honestly and openly.

NOT POLITICAL

Please do not misunderstand me. I am not pleading that we use religion, or medicine, or law as propaganda weapons in a political struggle. We do not ask governments to speak for the church or the medical or legal professions. But I do believe that the American people should speak out, through their proper organizations and representatives, on the real nature of communism. We should realize that the struggle is total, and not merely a matter for governmental action only. And our political authorities in turn can report, in a proper way, the sentiments of the American people.

Permit me to give an example of the leader of a great organization facing up to the challenge of the day and speaking his mind on Communist activities. George Meany, president of the AFL–CIO, addressing the National Religion and Labor Foundation in New York, on December 13, did not hesitate to picture vividly the heartless inhumanity of the slave labor camps and the depths of degradation to which Communist brutalities have brought the opponents of the Soviet system. We need more Americans to speak openly, fearlessly, and honestly the truth, the whole truth, without any apology.

But there is another side to the picture. If we ask the uncommitted peoples of the world to choose between our way of life and life under communism, we must be sure that we can stand the comparison. It is easy to say that the Communists are out and out materialists and that we honor God and respect our fellowman. But are we prepared to prove our point? Suppose that the charge is made that our films show that we are a degraded and sensual people. What if we are portrayed as money mad, seeking only material comforts and wealth, and blind to the riches of the spirit? Have we an answer if a visitor who differs from us in race is subject to insults because of the color of his skin? Can we say for sure that others regard us as more idealistic than the Communists? Unfortunately, the answer is that many peoples think that there is little choice between the two systems.

OUR DEDICATION

Today, then, as in our Christian charity we pray for the victims of communism, let us dedicate ourselves to a total struggle to help our bruised and wounded fellowmen, lying by the roadside. First, let us storm the gates of heaven with prayer and with penance, asking that God give them strength to endure their persecution, and that the day of deliverance be not too far off.

In the spirit of our Saviour, let us also pray for the persecutors. Today their hearts are blackened with hate. May God give them the light to see the truth, and the grace to love their fellow man. Let us make this prayer a definite and regular part of our lives, so that we will not forget our brethren in need. We should not overlook the other powerful spiritual weapon: penance. Let us gladly embrace the sacrifice involved in living blameless lives. In addition, we might at some set time, perhaps once a week, offer to the Almighty some real act of penance and reparation—giving up something that pleases us, or offering our help to some unfortunate person. Here is something that each of us can do, no matter what may be our positions in life.

At the same time, let us not neglect the human means that God has put at our disposal. Above all, we should speak out fearlessly and portray the struggle for men's minds in its true terms. It is more than the political or the military or the economic. It is a struggle between those who acknowledge God and reverence His name, and as a consequence respect the rights of their fellow man—and those who deny God and despise man. But if we presume to fight under the banners of the Almighty, let us be worthy of this honor. May our lives and conduct shine from the vision of faith. Truth is great, and it shall prevail. May this truth be in us and in our actions, so that we may be instruments in the hands of God, shaped to bring peace and justice in the world once again. Stand fast in the faith, be full of courage, and let everything you do, be done in a spirit of charity.

[From the Catholic Standard of January 6, 1956]

VISION OF FAITH

Man is born to look upward. He is dominated by his free spirit endowed with a mind and will. His perfection or his perversion is determined by his free spirit which therefore is the prime target of communism. Karl Marx, in teaching communism, did not just propose a new theory of economics; he proposed a new theory of the nature of man. The archbishop's eloquent sermon last Sunday was a sharp and timely reminder of this elementary fact about the nature of man and the nature of communism.

A society that constantly downgrades the spiritual side of man is constantly inclined to miss, or underrate, the real nature of the appeal of communism as a perverted religion. They conceive it as a longing for bread or for power—as if it comes only from hungry mouths or frustrated colonials. They try to fight it by an abundance of wheat and an abundance of weapons. The real battleground is the soul of man and the religious beliefs of man.

Fortunately, there is a growing cognizance of the nature of communism in Government circles. A Senate subcommittee recently discounted the theory, on the basis of a study of individual Communists, that "misery" and "inequalities under our social system" make Communists.

Of course, the Communists take advantage of misery and inequalities to sow their doctrine, but the presence of so many rich professional people, university graduates, movie actors among the Communists shows that its primary appeal is to a starved soul and not a starved mouth.

The projected trip of the Secretary of State to the East is another heartening evidence of his continued appreciation of the real nature and threat of communism, as well as his continued herculean efforts to combat it.

But as the archbishop pointed out in his sermon, there must be plain, blunt talk about the threat of Communism from all groups (not simply the Government) in our country and from all who have a public voice. We need such plain, blunt talk and we need it contantly, as long as the menace persists. The solid proof that such talk is badly needed—even where one would not expect such need—is the very cool reception given to the recent talk by Mr. George Meany, president of the AFL–CIO, on the threat of communism to the country before the National Religion and Labor Foundation.

The threat of communism extends to every citizen who treasures his rights and those of our country. It is the concern of every soul in this country with a consequent obligation, proportionate to his responsibility, of everyone in a position of influence. It is time for all those with such influence, wherever they may be, to meet their responsibilities.

Highway Legislation

EXTENSION OF REMARKS

OF

HON. BRADY GENTRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. GENTRY. Mr. Speaker, under leave to extend my remarks, I include the following address made by me to the annual convention of the American

Automobile Association in the city of Washington on September 21, 1955:

President Sordoni, members of the American Automobile Association, ladies and gentlemen, it is unfortunate that the highways needed by today's traffic will cost so much money. It can hardly be denied that most of our main highways are grossly inadequate and are causing our motorists great losses in time, deaths, injuries, and destruction to property. While we are told by eminent authorities that it will cost motorists more in actual dollars and cents to continue using our present roads than to pay the taxes necessary to modernize and then enjoy good thoroughfares, recent happenings in the Congress are proof that modern highways are no early certainty.

Several points of difference on this problem seem to divide us. A few say that our 40,000 miles of most important highways comprising the interstate system do not need the major treatment outlined in the Highway Advisory Committee plan. Others contend that the interstate system deserves no better treatment than the remaining 700,000 miles of the Federal-aid system. While these group helped defeat highway legislation, they constituted a minority of the opposition.

There is little question that the problem of financing caused the major opposition to this legislation or served as an excuse for such opposition. Since that problem must be resolved if we are to secure favorable results, let us proceed to its discussion.

The President, speaking through Vice President NIXON at a Governors' Conference in July 1954, called public notice to the need of a modernized system of highways. Subsequently the President appointed an advisory committee and named General Clay as chairman.

The advisory committee forthwith appointed a staff, comprised of highway and financial experts. Characteristic of the committee approach to this problem was the instruction to the staff that it evolve a plan that would spend 25 billion on highways without increasing taxes or debt.

Just think for a moment! Spend 25 billion without increasing taxes or debt! Your reaction must be that that simply could not be done. It would seem to be an utter impossibility. That a solution was even claimed is a credit to man's ingenuity.

Generally, what would the Advisory plan, as formulated by the staff and committee, and recommended by the President, have done? It established a Federal Highway Corporation with a board of 5 members, 2 of whom were the Secretaries of Commerce and Treasury, or their representatives, the other 3 being public members. In the event of dispute this board, instead of the Bureau of Public Roads, would have final authority in road location, kind of roads, etc.

The board would issue $20½ billion in bonds, with interest of $11½ billion or 55 percent of the principal. Each bond would disclaim Government responsibility for its payment. The bonds finally would be retired in 1987 from a 32-year dedication and so-called capitalization of the Federal gas, diesel and lubricating oil taxes, taxes now levied as general revenue.

No revenues from these taxes would be available for construction between 1965 and 1987, all revenues in that lengthy period being pledged for payment of the $20½ billion in bonds and their $11½ billion interest.

The money derived from these bonds, plus $4½ billion, would pay the Federal Government's $25 billion share of construction in 1955 to 1965 of the interstate system.

In addition, regular Federal-aid, now $700 million, would be set at $600 million, and frozen at that yearly figure for the next 32 years.

Up to the present, every dollar expended by the Government on roads has been subject to authorizing legislation by Congress, full budgetary control, complete appropriation procedure, has been paid out of general revenue, and accounted for within the statutory debt limit. Such is the pattern of present Federal financing.

The advisory plan would discard each and every one of these safeguards of responsible financing. It would effectuate a complete and revolutionary departure from fiscal fundamentals and long recognized principles in government practices.

If we dedicate to highway purposes taxes heretofore levied as general revenue, it could be adopted for a host of other purposes and finally result in the complete destruction of congressional authority over the appropriation of public funds. Actually the revenues from these particular taxes, in effect, have already been capitalized. They were capitalized, along with all other revenues from present Federal taxes, by the issuance of $280 billion in obligations by the Government with such tax revenues as security. What is being attempted here could result in stripping these $280 billion in obligations held by our people of every bit of security by reason of which they purchased them.

This Highway Advisory Committee or Clay plan would create a dummy corporation—one without assets but with authority to issue $20½ billion in bonds. And, although an entirely Government-owned corporation, it would recite in each bond that it was not a Government debt. Regardless of the facts, including contrary language in the bill incorporating the plan, it was claimed that this recital in the bonds eliminated their having to be shown as a part of the public debt, necessitating debt increase legislation by Congress. Yet, Government witnesses appearing before our committee, while disclaiming the bonds as Government debts, immediately hastened to add that the Government would have to pay them. But why, since we must pay them, should we say in the bonds that they are not debts of the Government when it causes our taxpayers to have to pay hundreds of millions of dollars in needless interest? Mr. Humphrey testified that this recital alone would increase their interest from one-eighth to one-half percent, or by $475 million to $1,900,000,000.

Just what does the legislation incorporating the advisory plan provide regarding the debt character of the bonds? It first stated that each bond must contain a recitation that it was not guaranteed by the United States and that it was not a debt or obligation of the United States. This recital of itself would restrict the bondholders to the revenues dedicated to bond poyment.

In the very next section of the bill, however, it recited that the Corporation could call on the Treasury for $5 billion when tax revenues were insufficient for debt service. That positively and irrevocably guaranteed $5 billion of the bonds and made them a debt of our taxpayers, regardless of the prior provision. But that is not all.

In the following section, it made the entire bond issue a lawful investment for fiduciary trust and public funds of any officer of the United States, including the Secretary of the Treasury. That meant that any Government funds, including social security and unemployment insurance funds, could buy these bonds. There was no restriction as to when they could buy them. Seemingly, it could be when offered by the Highway Corporation or when offered by some bond house originally purchasing them.

Even though it is contradictory, if not questionable, for bonds reciting that they are not Government obligations to be made eligible for investment in all Government funds, was not this an assurance to bond buyers that these bonds were recognized as Government obligations and would be paid by the Government? Was not this meaning made clear by Mr. Humphrey's public assurance that the Government would pay them if the tax revenues were insufficient? Under this provision, the Treasury's purchase of these bonds would, in effect, constitute a payment of them by the Government.

What was the testimony of Government witnesses concerning this? In effect, here is what they said:

"These bonds are not debts or obligations of the Government, but they are moral obligations, and the Government will, of course, have to pay them. It will have to do that to protect its credit."

Doesn't it seem unusual that anyone would question classifying as debt something which they say the Government must pay?

Just why would the Government have to pay them to protect its credit? Both because they are issued by a solely Government-owned corporation and because it obligated itself not only in the $5 billion provision of the bill but in the succeeding provision making them eligible for investment in all Government funds.

What was the result of all this mumbo-jumbo of the committee plan? Everybody got what they wanted. The Treasury could rely on the recital in the bonds that they were not Government debts and thus say that neither the debt nor debt limit would be increased. The bond buyers, regardless of the bond recital, could rely not only on the further provisions of the legislation which did obligate the Government but also on the assurances of the Secretary of the Treasury that the Government would pay them. Who was losing by all this financial word-juggling? You taxpayers were losing and so was responsible fiscal policy.

If the Government is to do further major deficit spending, there should be no question of its true character and it should mean the same thing to all people. Mr. Humphrey, as Secretary of the Treasury, can issue these bonds in the same number, of the same denomination, of the same maturities, at the same time, just as he can as the guiding member of the Highway Corporation Board. He can pay each bond of the same number, same denomination, same maturity, with the same funds from the same bank, and on the same date, just as he can as a Board member. Whether done by him as Corporation Board Member or as Secretary of the Treasury, it is deficit financing, pure and simple.

The great difference would be that our taxpayers would pay a penalty up to $1,900,000,000 in additional interest if it is done through the Highway Corporation. But the greatest loss would not be this large sum in unnecessary interest, great as it is, but the deadly precedent it sets in fiscal policy. In passing, it seems worth noting that before announcement to the public was made of the advisory plan, a convocation of investment bankers from New York and Chicago was held in Washington to consider the unusual language of its bond provisions.

The idea of the Federal Highway Corporation is represented as the easy way. It is the painless solution. It would have us believe we are getting something for nothing—billions in highways, without debt and without taxes. What could be more vicious in its evil potentiality for a government's fiscal soundness? It could be the beginning of a chain of Federal corporations, each nibbling away a portion of the Government's general revenues which, even during the boom time of the last few years, still have been insufficient for us to live within our income. The danger is illustrated by the fact that a newspaper of the integrity of the Christian Science Monitor suggested in a front-page article a few days after the ad-

visory financing plan was publicized that the billions needed to correct the schoolroom shortage might also be solved through the organization of a Federal School Corporation and assigning to it part of the present general revenue of the Treasury for dedication and capitalization. No specific taxes were suggested to be taken from the Treasury for this purpose. It could be the cigarette tax, or 5 percent of the income tax, or 10 percent of the corporation tax, or all or part of any tax now levied for general-revenue purposes. Just what will happen to the present manifold obligations of the Government if a great portion of its revenues are assigned to newly organized Federal corporations in order to secure new or greatly enlarged services? If this precedent is established, there is no earthly reason to doubt that other Congresses might utilize it to effect possible demoralization in Government financing.

Has the Congress ever passed legislation disclaiming the obligations of its corporations, while Government officials insisted the Government would pay them? In a recent release Senator BYRD, Senate Finance Committee chairman and long experienced in Government finance, said:

"I have searched the records and never before has such a proposal as this been seriously considered by the Congress."

The Senator aptly characterized the advisory plan when he said:

"We must remember that we cannot avoid financial responsibility by legerdemain nor can we evade debt by definition."

Comptroller General Campbell was appointed by President Eisenhower only last year. It is a duty of the Comptroller to prevent irregular action by Congress and the executive department. Testifying before the Senate committee considering highway legislation, Comptroller Campbell, with understandable restraint, said:

"We feel that the proposed method of financing is objectionable because the result would be that the borrowings would not be included in the public debt obligations of the United States.

"The total amount of borrowings by the corporation would amount to the very substantial sum of $20½ billion and, in our opinion, would be borrowings of the United States Government, irrespective of the terminology applied.

"It is our opinion that the Government should not enter into financing arrangements which have the effect of obscuring the financial facts of the Government's debt position."

The President appointed a Commission on Intergovermental Relations in 1953. Composed of many of America's ablest minds, it was directed to examine the roll of the National Government in relation to the States. Making its report last June, after long and careful study of the advisory committee plan, it said:

"The Commission recommends that the expanded highway program be financed substantially on a pay-as-you-go basis and that Congress provide additional revenues for this purpose, primarily from increased motor-fuel taxes.

"The effect of our recommendation on highway aids will be to increase Federal expenditures. An increase in taxes is preferable to deficit financing as a means of supporting major highway outlays by the National Government. The latter method would result in high interest charges and would shift the burden to citizens of future generations, who will have continuing highway and other governmental responsibilities of their own to finance."

You are told to accept the advisory plan, pay as you use, and your days of worry are over. It is presented as solving the problems of the interstate system and regular Federal aid, with no additional taxes and no additional debt.

I should now like to try to show you that in addition to all its dangers to sound fiscal policy, it is fatally defective for a second reason, the basic one that it does not solve the problems of the interstate system and Federal aid for 32 years but actually will involve us in an even more difficult position than we are in today.

Regular Federal aid for the current year is $700 million. Considering the great traffic problem and the Government's responsibility as prescribed by our Constitution, I doubt if this sum is reasonably sufficient for the Government's contribution to the 700,000 miles of the regular Federal-aid system. But, granting that it is reasonable today, what would be reasonable Federal aid in 1987, one-third of a century hence, a year in which the advisory committee tells us that traffic on the highways will be more than twice as great as that today. Based on these figures, would not $1,500,000,000 be modest Federal aid in that faraway year. Starting with $700 million in 1955 and increasing Federal aid $25 million yearly would attain the figure of $1,500,000,000 in 1987, which was a provision of the Fallon bill.

What does the advisory plan do on regular Federal aid? It sets Federal aid at $600 million for 1955 and freezes it at that figure through 1987, decades after it would be a mere pittance. Why does it do that? It had to because its plan for capitalization of the gas, diesel, and lubricating taxes would not permit more after meeting bond and almost $12 billion interest payments. How much deficiency, then, is created in construction on the regular Federal-aid system by reason of insufficient aid from 1955 to 1987 under the facts here outlined? The answer is $16,700,000,000.

Now, let's revert to the interstate system, also supposedly solved for 32 years. Not one cent would be available from the capitalized revenues with which to do additional construction on the interstate system during the period 1965 to 1987, almost a quarter of a century. Remember that some of these roads because four lanes are not now rebefore, and that all of them would be constructed by 1965.

On the interstate system 7,000 of the 40,000 miles will be constructed as two-lane roads because four-lanes are not now required. What does the advisory plan do for that portion of these 7,000 miles on which the impact of more than doubled traffic will necessitate four-lane highways before 1987? Much of these 7,000 miles will need to be four-laned before that time.

What about the four-lane roads on which mounting traffic before 1987 necessitates six-lane highways? Thousands of miles will fall into this category.

What about those interstate routes where tremendous traffic increases necessitate additional parallel highways before 1987? There will be many of these. The advisory plan would leave traffic in a complete state of strangulation on four-lane highways falling in this category.

What would the advisory plan provide for interstate roads constructed between 1955 and 1965 which will have to be newly constructed long before 1987? Actually, how many miles of interstate highways constructed in the year 1955 would have to be reconstructed before 1987? Certainly many of them. What about those that would be constructed in 1956? In 1957? In 1958? The advisory plan does not meet this serious problem. If not met by the Congress, much of the traffic on the interstate system in 1987 will be traveling on jagged, broken concrete.

Do I exaggerate the insufficiency of the advisory plan as to the interstate system? I have here House Document 120 entitled "Needs of the Highway Systems, 1965–84," a report from the Bureau of Public Roads.

On page 14 it shows that if the interstate system is constructed between 1955 and 1965, additional construction, not maintenance, will be needed thereon between 1965 and 1984—not 1987—of $9,700,000,000. The advisory plan makes no provision whatever for that. Its revenues in that period are paying bonds and interest.

Let's estimate that construction deficits on the interstate system up to 1987 are $11 billion, probably an underestimate. The two deficiencies, therefore, that on the interstate of $11 billion and that of $16,700,000,000 on the Federal-aid system, total $27,700,000,000. But that is what it would have cost had it been done as the need materialized. Based on experience, what would it cost in 1987 to then build the roads which could and should have been constructed for almost $28 billion during the previous 32 years? It would be quite a sum, probably not less than $35 billion.

But, that is not all. What about the losses suffered by motorists in time, deaths, injuries, and property destruction solely because $28 billion in needed highway construction is left undone over a 32-year period? That would be many, many additional billions.

So, how do we stand in 1987 under the advisory plan? Will we not have woefully failed to meet the problem that was so obvious back in 1955?

What do these facts mean? They mean that we have never had enough available tax revenue to build the highways we needed; that we don't have enough available tax revenue today; and, that we delude ourselves if we think we will solve this problem by deficit spending through bond issues. If we do this, we simply compound our problem by using a part of insufficient and greatly needed revenue in paying interest.

In seeking an answer to our problem, let's consider recent statements by two men distinguished in the automotive field.

James J. Nance, president, Automobile Manufacturer's Association, appeared before the House Public Works Committee. He showed that the losses of motorists occasioned by inadequate roads amount to $5,300,000,000 yearly. $2,600,000,000 of this loss is on the interstate system. The Fallon bill, the last highway measure to be voted on recently, would have imposed taxes of three-quarters of $1 billion annually, only one-quarter of the yearly loss being suffered on the system which it would have modernized, a modernization that would have eliminated all labor, gas, brake, and tire losses due to inadequacies, and a major portion of the thousands of deaths and hundreds of thousands of injuries occurring each year on that system.

In a New York City address last February 14 before the Switzerland Road Commission, Karl M. Richards, head of the motor truck division of the Automobile Manufacturer's Association and secretary of its highway policy committee, said that the commercial trucking industry would save $1,450,000,000 yearly in labor, gasoline, tire and brake economy by the construction of the interstate system. This yearly saving would have been twice the amount of yearly taxes imposed in the Fallon bill, not on just the commercial trucking industry but on the entire 60 million automobile, small truck, and commercial truck owners. The Fallon bill not only would have modernized the interstate system in less than 16 years, it would also have provided reasonable Federal aid for the regular Federal aid system.

It seems material in this connection not only that Mr. Richards and Mr. Nance both stated that motor transport income is now over $50 billion annually, but that the commercial trucking industry can pass on increased tax charges, a privilege not available to a majority of other motorists.

If we do not build these roads, our motorists must continue suffering losses each year of several times what it would cost to construct ,within a relatively short time, a modern Interstate System that would, if reconstruction and expansion is provided for, eliminate further inadequacy losses forever.

Nothing would seem more unjust to the automobile and small truck owner than to have road construction financed almost solely by a gas tax, now that the Government for the first time contemplates major highway expenditures. The fact that a heavy vehicle derives more than four times as many ton-miles from a gallon of gas than does an automobile makes a gas tax a very highly inadequate measure of road use for the former. This disparity is further emphasized by the fact that the heavy truck carries an axle load of approximately 10 times that of the automobile and its weight is 18 times as great. This disparity is multiplied many times in related damage to highways.

Wouldn't it therefore, seem that the course which we should follow was charted in the Fallon bill which was rejected? Surely we will not at this late date take the easy road by yielding to fear and political expediency. That will never get us the highways our motorists need and should have. Certainly we ought to do that which will neither involve us in deadly precedent nor lead us into fiscal irresponsibility. Neither should we accept a plan that is wholly insufficient and can only result in growing highway inadequacies and greater financial losses. We need legislation that is not only fiscally responsible, but also equitable as between various road-user groups. It should not be sufficient for a season only, but that which will give us the highway system required today and permit expansion as it is needed on tomorrow. Then and only then can we say that we are on the high road to solving our highway problem.

Friday 13th Lucky Day for Dr. Townsend, 89, More Active Than Most at 50

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. McDONOUGH. Mr. Speaker, on Friday, January 13, one of my highly respected constituents will celebrate the 89th anniversary of his birth and enter upon the 90th year of his life with a vigor and energy a great many men half his age could hardly help but envy. He is Dr. Francis E. Townsend.

Dr. Townsend is known throughout the Nation for his leadership in fighting for a better social security system for the benefit of the elderly citizens as well as those who are incapacitated under the age of 60. The tireless efforts of Dr. Townsend have charted a course of action toward solving the social security problem. No one has come forward with a better solution than that which the good doctor offered over 20 years ago. Today he is able to see many of the principles offered in his program being accepted.

Dr. Townsend has devoted his life in unselfish service to his fellowman dating back to his horse and buggy country doctor days in the Dakotas, through the First World War, through the depression of the thirties when the Townsend plan was born. He has stayed at the helm fighting tirelessly for better living conditions and a better way of life for our elderly citizens and to end poverty in these United States.

I am proud to be included among the large number of my fellow colleagues who have worked with this great American, and to take this occasion to wish him many more years of vigorous health.

Following is an article by Dr. Townsend published by the Modesto Journal of Modesto, Calif., on the Townsend plan and social security:

WHY ALL AMERICANS SHOULD NOW ACTIVELY SUPPORT THE TOWNSEND PLAN

From the time of the adoption of the Social Security Act in 1935, no basic changes have been made in the act.

In the 1956 session of Congress, further revision of the Social Security Act will be considered. The present minimum benefit of $30 per month is so inadequate. To pay this low minimum benefit, the employee and the employer each are required to pay 2 percent on wages up to a total annual wage of $4,200. In the future, the rate will be much higher.

This tax is spent by the Government for other current expenses. In the future, as the money in the reserve fund is needed to pay the benefits, the Government will have to tax the people to repay the reserve fund. This procedure amounts to a plan for increasing borrowing and expanding the national debt.

During the last session Congress, the Department of Health, Education, and Welfare was ordered to prepare an estimate of the cost of increasing the minimum benefit to as much as $75 per month. This report recently released shows that to pay $75 per month, as a minimum social-security benefit, the rate of contribution to be made by each the employee and the employer would have to reach approximately 7 percent. This report clearly shows how inadequate the contributory plan of financing would be to meet even a low benefit of $75 per month.

It is so clear that a much wider tax base will be required to have a social security program that is to cover all who qualify; that is adequate to maintain a decent standard of living and to keep our economy functioning successfully without "booms" and "busts," surpluses, unemployment and dire poverty for many of our people.

H. R. 4471 and H. R. 4472, represent the fundamentals of the Townsend plan. These bills are cosponsored by 60 Members of Congress on a nonpartisan basis. During the last session of Congress, 196 Members signed a discharge petition to the House Ways and Means Committee, asking that these bills be brought out for a hearing and a vote.

These bills, offered as amendments to the Social Security Act, contain the solution to these problems for all Americans and will provide security that is adequate, on a pay-as-we-go basis geared to the fluctuating price levels and financed by a simple and equitable tax system. Under these bills, a 2-percent gross income tax will be levied on all goods and services sold, except that wages would be exempt from tax on the first $250 per month of earnings. That would be similar to our present gasoline tax. As we use the travel highways, we pay accordingly. In addition, we would be on a pay-as-we-go basis and thereby would eliminate the dangers of the reserve fund running our national debt higher and higher.

A 2 percent gross income tax is estimated to produce approximately $135 per month to each aged, blind or disabled person, and to each widow with dependent children, as proposed by H. R. 4471 and 4472. This benefit, tied to price levels, certainly would be more realistic than the average social security benefit now paid which approximates $59 per month.

We invite all Americans to carefully study this proposal and join in an effort to help make these important bills amendments to our Social Security Act, to give the American people what they all need, want, and should have.

Dr. F. E. TOWNSEND.

Iowa Businessmen Demand Economic Justice for Farmers

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. GROSS. Mr. Speaker, more and more businessmen in Iowa cities and towns are feeling the affects of the serious and unwarranted economic punishment that has been visited upon Iowa farmers. The merchant on Main Street realizes that the success or failure of his business depends to an important degree on the financial well-being of agriculture.

Mr. Speaker, there is a job to be done, and immediately. The time is long overdue for emergency, remedial action to assist the farmers of this Nation. Early last fall I urged the Secretary of Agriculture to use his authority to put an emergency floor under livestock prices. His only response has been a too-little and too-late pork buying scheme which has been a dismal failure. To that, thousands of hard-pressed Iowa farmers can attest.

If the Secretary of Agriculture persists in his steadfast refusal to take effective action on his own, this Congress must act. Without regard to politics, immediate passage of legislation may be necessary to put an emergency floor of $18 under top hogs and $25 under choice cattle at Chicago. We simply cannot permit another crop of hogs to go to market this spring at the bankrupt prices paid in the fall.

This must be followed with long range legislation to provide the farmer cost of production prices for his products in the market place. In this regard, I have introduced a cost of production farm bill (H. R. 8128) which I commend to the attention of all Members interested in the economic welfare of agriculture and our Nation as a whole.

Mr. Speaker, as part of my remarks, I want to include an excellent resolution approved by the board of directors of the Clear Lake (Iowa) Chamber of Commerce. Clear Lake is a progressive community in the heart of an important agricultural section of my district. The resolution, which clearly recognizes the seriousness of the present situation on Iowa farms, is as follows:

Whereas the board of directors of the Clear Lake Chamber of Commerce fully realizes the great importance of the farmers in the Clear Lake trade area to Clear Lake merchants, and

Whereas the directors note with concern the continued downward trend of farm prices which is taking place while the prices of the articles the farmer has to purchase is rising; and

Whereas recent predictions by some leading economists indicate a further drop in farm income in 1956, but a continuing increase in other business; and

Whereas no evidence is noted that anything concrete has been done in Washington to alleviate and correct the above discrepancies; be it therefore

Resolved, That we, the said board of directors of the Clear Lake Chamber of Commerce, in meeting assembled in Clear Lake this third day of January 1956, do hereby urge the administration and Congress to immediately put into effect such temporary measures as may be necessary to assure farmers of fair hog and cattle prices during the present emergency; and be it further

Resolved, That we urge the administration and Congress to prepare, pass, and put into effect with as much celerity as circumstances will permit, legislation that will assure farmers of equitable prices for their products in times of maladjustment without instituting any permanent controls that would limit their freedom of operations and opportunity; and be it further

Resolved, That copies of this resolution be forwarded to President Eisenhower, Secretary of Agriculture Benson, Senators Hickenlooper and Martin, to Congressman Gross, to Governor Leo Hoegh, to Cerro Gordo County Farm Bureau officials and to Clear Lake and Mason City newspapers.

In witness whereof, the following officers of the said organization hereto attach their signatures.

S. T. THOMPSON,
President.
G. W. WILCOX,
Vice President.
JAMES R. SMITH,
Managing Secretary.

In addition, Mr. Speaker, I want to include as part of my remarks an explanation of the cost of production farm bill which I have introduced:

PROVISIONS OF COST OF PRODUCTION FARM BILL INTRODUCED IN HOUSE OF REPRESENTATIVES ON JANUARY 5, 1956, BY CONGRESSMAN H. R. GROSS

1. Cost of production plus a reasonable profit to farmers on that portion of crops consumed domestically. Cost of production prices, to be established for each farm product by the Secretary of Agriculture following public hearings by farm organizations and other interested parties, will account for all production expenses, including hired and family labor, interest, taxes, depreciation, soil depletion, 4 percent on investments, and compensation to average farm operator equivalent to average weekly earnings of the industrial worker as found and determined by Secretary of Labor.

2. Cost of Production prices to be paid at and by the market place, not by the Federal Government.

3. No acreage allotments. Each farmer shall determine his own acreage and what he wants to plant, and shall have a chance to sell his surplus, if any, on world market at world price, but cost of production prices to farmers will be high enough to insure a good income without having to produce back-breaking surpluses.

4. Cost of production prices and amounts of each crop needed for total domestic consumption, a reasonable reserve, and export, to be announced by the Secretary of Agriculture once a year in advance of planting season, and will apply farm-by-farm. For example, if the Secretary announced that five-sixths of the nation's corn crop will be needed for domestic consumption, each farmer will be allowed the cost of production price for five-sixths of his corn crop.

5. Competing foreign farm products can be imported into the United States only if importer pays 5 percent above prevailing United States cost of production prices. (Department of Agriculture figures show that for the first nine months of 1955 only, foreigners shipped into this country 90,700,000 pounds of beef and 124,148,000 pounds of pork products or a total of 214,848,000 pounds of meat. To this must be added 240,135 head of live cattle, mostly from Mexico. A substantial share of foreign canned ham came from Communist Poland. Aside from the live animals, every pound of these imported meat products displaced a market for United States feed grains. This is a fantastic situation and must be stopped).

6. Commercial buyers of farm products to be licensed and must pay, under penalty of law, cost of production prices on products needed for domestic consumption.

7. This bill covers any and all kinds of poultry, livestock, and any product of the soil, and any product or byproduct thereof, produced in the United States, in an unmanufactured or unprocessed state, which have a farm value in excess of $30 million during the preceding marketing year.

It is difficult to believe that farmers, assured cost of production for the major portion of their crops, would wear out machinery, themselves and their families to produce unmanageable surpluses which they would be compelled to market at world prices. It is the conviction of many that this cost of production bill, translated into income to the farmer, would go far towards stabilizing the economy of the Nation because it would assure farmers buying power for products of industry, creating more income for industry and more jobs for those who in turn could buy more of the products of agriculture. A dollar of farm income generates approximately $7 in national income. Agriculture is the Nation's basic economy. Every depression or period of prosperity has begun on the farm.

The cost of production bill I have introduced (H. R. 8128), is a long-range program. It in no way obviates the absolute necessity for immediate emergency action on the part of President Eisenhower and Secretary Benson, who have always had administrative authority and ample money available to stabilize livestock prices at levels which would have prevented a farm depression pending the establishment of machinery that would provide economic justice to agriculture.

Freedom of Travel Isn't for Red Agents

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of January 14, 1956:

FREEDOM OF TRAVEL ISN'T FOR RED AGENTS

Perhaps the most important objective in the Communist effort to break down the United States security system is the passport office of the State Department. Our regulations deny passports to persons, who are members of the Communist Party, or who engage in activities to support the Communist movement, or of whom there is reason to believe that they are going abroad to engage in activities which will advance the Communist movement.

This is naturally an inconvenience to the Communist conspirators, who, true to form, are spewing forth a dense propaganda smoke screen designed to persuade the American people that the State Department is under the domination of reactionaries and McCarthyites whose purpose is to prevent liberal scientists, economists and sweet singers from going abroad.

Actually, the number of would-be travelers who have been refused passports is very small. In the first 10 months of 1955, a total of 478,059 applications had been received and 473,703 passports issued. Thus there were 4,356 persons who did not get passports. Of these, about 3,900 failed to complete application forms, which were returned for further information. This leaves 456 actual rejections. Some of the unsuccessful applicants were insane, others had a record of discreditable conduct, such as passing bad checks abroad or making it necessary for Uncle Sam to bail them out. Still others were habitual criminals.

The number turned down under the regulation denying passports to Communists or fellow travelers during this period of almost a year was 13. So far as numbers go, it does not appear that the State Department is carrying on a vendetta against liberals or intellectuals. In any event, the actions of the Department in this regard are not a caprice of John Foster Dulles or his minions, but are stipulated in an Executive order issued in 1951 during the incumbency of former Secretary of State Dean Acheson.

The right of the State Department to regulate the issuance of passports in general has not been seriously challenged. But Judge Luther Youngdahl, of the Federal District Court for the District of Columbia, has asserted that, to comply with "due process," the State Department must support its denial of a passport with "all evidence upon which the Office may rely for its decision." His Honor mentioned the harm done by "the secret informer and the faceless talebearer whose indentity and testimony remain locked in confidential files." This is about how any American would react to use of informers if he knew nothing of how the Communist apparatus operates.

But if the identity of those who expose Red applicants for passports must be revealed, the best way to get a passport would be to become a Communist secret agent. For the State Department insists that it cannot disclose the source of its information regarding the activities of Communist conspirators without smashing whatever defense we have against the Red conspiracy. The phrase "secret informer and faceless talebearer" in Judge Youngdahl's decision suggests busybodies who write poison-pen letters. Usually these "informers" are carefully trained FBI agents who have infiltrated the Communist apparatus and enable the Government to keep a check on what the Communist Party is up to. When the identity of these men is disclosed, their usefulness is at an end.

The destruction of this security apparatus is the real objective of many Communists who apply for passports. They have no intention of going abroad, but they hope to force disclosure by the State Department of the names of our secret counteragents. In recent months a considerable increase in passport applications by the Red brethren has been noted. Even if the passport authorities cannot be blackmailed into exposing our undercover men, the Reds hope to embarrass the Government by constant hue and cry over new "outrages."

Undoubtedly there is a problem—for security officers, judges, and ordinary citizens in their thinking—how to square our traditional American jealousy of infringements on human freedom and our distrust of "in-

formers" with the necessity to protect this country from an active conspiracy to destroy every freedom. But surely "freedom to travel" is not compromised by regulations necessary for national safety—any more than freedom to drive a car down Main Street is violated by regulations which attempt to keep automobiles out of the hands of morons and homicidal maniacs.

Anyway, it is time to think of the subject in terms of what is going on, and not be misled by the Communist effort to call the whole Nation to arms whenever a Communist or a dupe thereof is denied a passport.

White House Conference

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter which was addressed to the editor of the St. Louis Globe Democrat—and which appeared in the St. Louis Globe-Democrat on January 10, 1956—regarding the White House Conference:

WHITE HOUSE CONFERENCE

To the EDITOR:

"Was the White House Conference as bad as some of the papers and commentators said it was?" We, the undersigned delegates to the conference from the St. Louis area, upon our return find this question confronting us repeatedly. Our answer to the question is that we believe the conference was well conducted and useful.

We suppose the answer depends largely upon one's expectations. Our expectations were high in regard to the value of exchange of ideas between laymen and professionals, all with a real concern for education. We were not disappointed. The discussions at our tables were serious, thoughtful, animated, uninhibited, and, we believe, useful.

Educators did not dominate the discussions. The ideas agreed upon at our tables, where they had substantial support at other tables, found their ways into the final reports. Moreover, the exchange of ideas did not begin nor end with this single, nationwide conference. It involved over 400,000 persons, lay and professional, who participated in preliminary discussions all over the country and in the Territories. Now the 1,800 delegates, representatives of the 48 States, the Territories, and 300 national organizations, have returned to their communities. The exchange of ideas continues and it is reasonable to expect action.

Though we did not believe that a conference of 1,800 could come to specific conclusions on detail, we did anticipate general areas of agreement. There was a definite conclusion favoring Federal aid for school buildings. This we believe to be important. Other conclusions of real interest to Missouri, well worth consideration, were forthcoming.

For example, the placing at the top of the list of school goals of the teaching of "fundamental skills of communication—reading, writing, spelling, the arithmetical and mathematical skills, including problem solving," together with the statement that in teaching these skills "continuous improvement is desirable and necessary" should furnish material for serious consideration. In which direction does improvement lie?

Missouri's assessment practices might be open to improvement in view of the conference recommendation that, "each State should base its taxing power on property through an equalized assessed evaluation and on the basis of statewide, uniform standards. * * * Better trained people, better administrative processes, and more scientific methods are needed to insure fairness in assessment procedures and practices."

There will be a printed report of the State meetings, national meeting, and national committee decisions. It can be used as a springboard for those who want to utilize the weight of decisions arrived at now on a nationwide basis where it applies to improvement in our own schools in Missouri. We delegates stand ready to help and we believe that all the publicity which has come out of this conference has generated enough concern to give further impetus to the survival and development of general education in a free society.

Mr. Milton Bierbaum, Senator Hartwell G. Crain, Mrs. C. W. Detjen, Mr. L. J. Dierker, Mr. Oscar Ehrhardt, Mrs. Aaron Fischer, Dr. Philip Hickey, Senator Michael Kinney, Mr. F. W. Mitchell, The Very Reverend Paul C. Reinert, Mr. John I. Rollings, Dean Benjamin E. Youngdahl.

Resolution No. 243, Adopted by the American Legion at Its 1955 National Convention in Miami, Fla., October 10-13, 1955, Commending Congressional Committees Investigating Subversive Activities

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Whereas for over 25 years the American Legion has supported congressional committees investigating un-American activities, insisting upon active ones with adequate appropriations; and

Whereas the information collected by congressional investigating committees has been of immeasurable value in providing the citizens of this Nation with information as to how subversion constantly infiltrates our social, political, and religious activities; and

Whereas this information has provided the incentive on which a number of our laws are based, and provides knowledge which influences our domestic and foreign policies; and

Whereas those members of Congress serving on such committees are rendering invaluable service to their country: Now, therefore, be it

Resolved by the American Legion in national convention assembled in Miami, Fla., October 10–13, 1955, That we commend the Un-American Activities Investigating Committee of the House of Representatives, the Permanent Investigating Subcommittee of the Senate Government Operations Committee, the Subcommittee To Investigate the Administration of the Internal Security Act of the Senate Committee on the Judiciary, and the Special House Committee To Investigate Tax-Exempt Foundations, 83d Congress for their praiseworthy, efficient, and patriotic service in the defense and security of America, and we urge that these committees be firmly supported by the Congress of the United States through appropriations of ample funds.

European Observations Report of Hon. Leon H. Gavin, of Pennsylvania

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. GAVIN. Mr. Speaker, pursuant to authority granted me by the chairman of the House Armed Services Committee and invitational orders issued by the Department of the Army, I visited Germany, Austria, Italy, Spain, and France during the period September 18 through October 16, 1955. As you know, I have followed carefully since the end of World War II the industrial, economic, military and political development of the various peoples of Europe who are allied with us in the so-called Western bloc. My visit was brief; however, I met and conferred with a variety of United States officials who represent us in this important area and I was given detailed briefings covering events which occured subsequent to my last visit. More important, it was my privilege to visit our military installations and with the soldiers and officers of several of our combat units. Of the youth of America and their leaders now in Europe we can be justly proud. Accordingly, I trust that the comments which follow may be of assistance to the members of this committee who have been unable to observe our far-flung activities in Europe.

I. BERLIN

On September 19 at Berlin I conferred with Ambassador Conant. I was gratified by the calm confidence displayed by the Ambassador concerning the overall situation in Western Berlin and the Federal Government. Also I conferred with Maj. Gen. Charles H. Dasher, the United States commander, Berlin, and Brig. Gen. Francis T. Pachler, commanding general, Berlin Command. My observations concerning West Berlin are:

(a) Economic: West Berlin has continued to make strides toward full recovery. In June production reached 100 on the basis of the 1936 index. There is an air of prosperity throughout the free city. Construction of housing and business facilities is booming. Consumer goods are abundant and are being purchased. As evidence of private enterprise's confidence in the future one may observe the site cleared for construction of a Hilton Hotel in Berlin. Prior to the war Berlin was primarily a capital city and a finance and transportation center. The loss of these functions has forced Berlin to revise the basis of its economy and postwar Berlin has developed its economy along industrial lines of endeavor. Unemployment is pres-

ent, principally because many "white collared" workers have not been absorbed into the industrial atmosphere now present. It is reported that the unemployed in Berlin currently numbers approximately 118,000, or approximately 12 percent of the work force. In 1950, 20 percent of the work force was unemployed. At the present time Berlin is experiencing little or no difficulty in moving manufactured orders to the West and to the free world. Even in the face of a potential blockade, orders for goods maintain a satisfactory level. Regardless, Berlin will continue to rely on the strength of the market in the West and on a high level of direct assistance from the Federal Government. I remarked previously concerning the housing construction program in Berlin. Observers estimate that 18,000 dwelling units will be completed during the year 1955, and that 20,000 units are planned for the year 1956. Further expansion of new housing is in the program for 1957. The people of West Berlin look good. They are on the move. They appear well-dressed, well-fed, and confident. This appearance of well-being is reflected everywhere—by store windows, by parks, and by the municipal facilities. In contrast the Eastern Zone of Berlin seems to be covered by a thick, murky cloud of doom. Its people move in an air of purposelessness. Building lags, streets are in need of repair, municipal transportation facilities are run down and shabby. People queue for basic necessities. No greater contrast exists which displays free enterprise at its best than that shown between Free and East Berlin.

(b) Political: Refugees from the East are still streaming into Berlin. During each of the months of June and July 1955 some 13,000 sought the haven of the West. During August 1955, 17,000 sought and found similar refuge. I could find little optimism regarding the reunification of Germany. I am told that governmental officials and the free German press continually counsel the public toward patience. Whether their patience and conditioning can withstand the onslaughts of propaganda blasts and diplomatic maneuvering emanating from the East remains to be seen.

(c) Military: There has been little change in status of the United States forces in Berlin since 1954. No evidence is in sight that Russia and its satellite have decreased their forces in the Berlin area. If the pattern in the past means anything the Reds are improving upon their military potential in all respects in this area. The 6th Infantry Regiment is the major combat-ready unit stationed in the Berlin area. This organization has a splendid and glorious combat record. A continuous combat training program is in operation for various elements which travel to the Grafenwohr-Hohenfels-Vilsek area northeast of Nuremberg for maneuvers and weapons firing. The 6th Regiment is ready; it is not an occupation-type organization.

II. GERMANY

During the period September 21 through October 2, 1955 I consulted with United States military and diplomatic officials and inspected troop units in the Federal Republic of Germany. At Heidelberg I conferred with General McAuliffe who commands the United States Army element in Europe. At Wiesbaden I had lengthy discussions with Lieutenant General Tunner and staff who lead the United States Air Forces in Europe. Included in my itinerary were visits with Lieutenant General Hodes, Commanding General, 7th United States Army; Lieutenant General Hart, Commanding General, 5th United States Corps; Lieutenant General Decker, Commanding General, 7th United States Corps, Major General Ruffner, Commanding General, 2d Armored Division; Major General Van Brunt, Commanding General 4th Infantry Division; Major General Sexton, Commanding General, 5th Infantry Division; Major General Reber, Commanding General, Western Area Command; Major General Watson, Commanding General, Southern Area Command; and Major General Bradley, Chief of European Command's Planning Group at Bonn. Apart from the 6th Infantry Regiment in Berlin I inspected training activities and facilities of the following: Headquarters, 4th Infantry Division; the 12th Infantry Regiment; the 40th Tank Battalion, the 29th Field Artillery Battalion; Headquarters 2d Armored Division, Combat Command A, 2d Armored Division; the 2d Infantry Regiment; 47th AAA Battalion, 7th Engineer Battalion, 5th Medical Battalion and 759th Tank Battalion.

(a) Economic: It is my belief that the Federal Republic of Germany has attained a satisfactory level of economic recovery. The agricultural industry has experienced a full-measure of recovery and crop and foodstuff production is well above pre-war levels. Prices and wages present a formidable problem to the Federal Government, and, as in any rapidly expanding economy, the threat of inflation exists. In Germany there are shortages of skilled and semi-skilled laborers, particularly in the accelerated building trades. Effort has been made to import laborers, from Italy in this regard. The Germans apparently have confidence in the stability of their currency as savings continue at a relatively high level from the previous year. I feel that the German economy can sustain itself at current levels provided the existing markets, domestic and foreign, can be maintained. Insofar as any further United States monetary aid to Germany is concerned I feel that we should consider only military assistance and aid in the support of the Berlin situation.

(B) Political: Since 1945 the free German has been preoccupied largely with finding enough food for bare sustenance, providing himself with shelter and clothing, and finding a means of livelihood. Now that he has attained these basic wants he may devote a part of his time to the politics of the world in which he lives. After having visited Western Germany frequently since the end of World War II, I am convinced that there is little danger of a rebirth of national socialism or a trend toward communism in the foreseeable future. At this time I believe the average German's interest in politics is not intense. It may be stated that the German can be stimulated politically when national issues become clear and contain an element of symbolism with which he may identify himself. In the younger adult generation in Western Germany there may be a certain amount of pessimism toward the political future. Unless the political leadership of the nation can create and sustain the political interest of the youth, a form of nihilism may arise. I am confident, however, that the leadership of Germany will do everything within its power to prevent the growth of such a political attitude and climate. The creation of a military force within the Federal German Government is so closely keyed to the political situation that I deem it appropriate to discuss German national defense at this point. The German parliament has not yet scratched the surface toward the enactment of basic national defense legislation. As an example, when I was in Bonn there had been committee-type discussion and debate concerning the pay structure for future members of the German armed services. At that time the matter had not been resolved, even to the point of bringing it to a vote. External pressure from the Russians may play the larger role in delaying the development of a new Germany military force. The issue of reunification of the country is certainly a factor to be considered in the matter of developing the military and Russian diplomacy may be expected to play upon this factor in the Russian effort to block, delay, and stall the rearmament of Western Germany. Once the defense legislation is enacted fully, however, I am sure that Western Germany will proceed with great skill, energy, and intelligence to develop its military force. Concerning this, I believe that it is incumbent upon the leadership of the United States to convince the Germans that the arms they raise will be so raised to prevent world war III. Should we allow them to entertain the slightest belief that their military forces are destined for retrograde action in the event of a communistic attack, I fear that things will be slow in building. An additional political issue involves governmental expenditures toward national defense. I am told that budget estimates for rearmament of Western Germany have been geared to the gross national product. Expenditures will, of course, depend upon the sums the parliament will ultimately approve. At any rate, I estimate that Western Germany's defense expenditures, when approved, will comprise as large a percentage of its gross national product as that allocated defensewise by many other members of NATO. I am in favor of a generous contribution to the development of a Western German defense force which can take its place in the community of free nations and become a deterrent to aggression from the East.

(c) Military: Everywhere in Germany I found a keen awareness of the situation on the part of our own military leaders and their subordinates. All echelons are on the alert, ready to move,

and understand completely their missions. I repeat that I was most impressed with the appearance of our troops. They are truly representative of our great Nation. The condition of our military equipment evidences good care and economy of supply. Housing and recreational facilities for our troops and their dependents are excellent. Training of troops in Germany poses a real problem. Maneuver areas are limited. Land is so precious that there are few unproductive areas where troops may train without regard to damage to crops or timber. Large unit training is conducted in the Grafenwohr-Hohenfels-Vilsek area. Small unit training is conducted on a limited scale in home-station areas. Our heavy vehicles, particularly tracked vehicles, inflict considerable damage on roadways, rights-of-way shoulders and bridges. Regardless of painstaking care, damage ensues when field training is conducted. Military officials in Germany are confronted with a considerable problem in providing realistic training while being mindful of damage claims which may arise as well as being aware of the limitations of funds to settle legitimate claims for damages. It is my belief that we should not quibble over moneys requested by the military where appropriations for maneuver damage payments are concerned. Many Members of Congress have expressed a concern over the Status of Forces Agreement, the Forces Convention, and other matters involving civil and criminal jurisdiction of our troops in the NATO countries and Germany. During my discussions relating to these conventions, as they apply to Germany, I found no apprehension on the part of responsible officials. I gained the impressions that the Germans will be overly fair in the application of the conventions and that should military personnel become civil offenders the Germans will remand them to military custody for such remedial action necessary. Under the terms of current agreements, the Germans do not have jurisdiction where criminal violations are involved. It remains to be seen whether the Germans will insist upon claiming jurisdiction in the field of criminal violations of law in the future. Of further concern to United States Army authorities in Germany is the reduction of deutschemark financial support for operations as a result of the return of sovereignty to West Germany. In the past dollars were used in Germany only for expenses toward which deutschemarks could not be applied; for example, the pay of our own civilian employees and the procurement of subsistence. Transportation, rents and utilities, solid fuels, repair and maintenance, communications, and construction costs were paid out of deutschemark funds. Following the ratification of the Paris Accords, a reduction in deutschemark support commenced. In effect, any further loss of deutschemark support in West Germany will result in a retrenchment program and the release of German employees, a lowering of standards of maintenance, and modifying standards of living. Collaterally it may be expected that the costs of maintaining our forces in Europe will increase in the future because of the expanding German economy and the resultant spiral increases in wages and prices.

III. AUSTRIA

On October 1, 1955, I conferred with Lt. Gen. William H. Arnold at Salzburg, Austria. For all intents and purposes the mission of United States forces in Austria was complete and the last of our troops had been withdrawn. I was gratified to learn that we leave Austria with a clean bill of health. As the result of careful negotiations, General Arnold and his staff were able to conclude a series of agreements which preclude the accrual of any further claims against our Government arising from the tenancy of our forces in Austria. It was reported to me that an excellent return was realized on the disposal of surplus and salvage military equipment remaining after the termination of our activities in Austria. My visit to Austria out of necessity was brief. Therefore, I did not inquire into its economic and political situation. It appears, however, that the political climate in Austria remains favorable to the West and that the Austrians, as a whole, are oriented toward the West at this time.

IV. ITALY

During the period of October 3 through October 7, 1955, I conferred with United States military and diplomatic officials in Italy. Included were discussions with Ambassador Luce, Maj. Gen. Frank A. Allen, Jr., Chief of our military advisory group and his staff in Italy; Brig. Gen. John H. Michaelis, Commanding General, Southern Europe Task Force; and Col. Charles L. Williams, commander of support activities in Leghorn.

(a) Economic: On the surface, Italy appears to be maintaining expansion of her economy. On the whole we have granted her some $4.5 billion since the end of World War II. If this staggering sum has failed to revitalize and stabilize the economy of Italy for a long time to come, then any future grants, I feel, would prove absolutely futile. Italy's heavy and other diversified industries are busy. New construction is gradually erasing evidences of wartime damage. Fields, once war-torn, have been completely returned to productive uses. Approximately 1.5 million acres, once part of large landed estates and, in some cases, unproductive for hundreds of years, have been purchased by the Government in connection with the land reformation program. The current land reformation program is scheduled for expansion. Legislation is now being prepared for this purpose. Foreign aid type funds provided by the United States will assist in the support of further reformation programs. Today Italy is almost self-sustaining on wheat. She has exportable quantities of fruits and vegetables. She still has a deficit in cotton, however.

(b) Political: The Christian Democratic Party continues to hold the larger number of seats in the Chamber. Insofar as internal reforms are concerned, I refer you to my remarks in the RECORD of January 22, 1951. The Italian tax system has yet to receive the overhaul I feel is due it. In 1949, a tax reform bill was placed high on the government's legislative program. In 1951 I was informed that surely during that year the overhaul was imminent. Last year—1954—I was again told that tax reform legislation was in the offing. Some progress has been made in minor areas of the Italian tax structure, yet the sweeping reforms needed remain a vision. Tax proposals made in 1954 providing for penalties for failure to comply with the tax laws are making little headway. We in America have been generous toward Italy. Our taxpayers have tolerated deficit spending on the part of our Government by way of providing foreign aid. The Italian Government, in my opinion, fails to collect a satisfactory percentage of its potential revenues. Since this report was compiled tax reformation laws, I understand, have been enacted.

(c) Military: Our forces in Italy are commanded by General Michaelis, whose record needs no review here. These forces were recently a part of our garrison in Austria and they are readying themselves for a NATO role. I am satisfied that good progress is being made in this area and that the Italian Government will render excellent cooperation in the many problems involved. As a result of the rollup in Austria, a considerable amount of military supplies have been shipped to Leghorn for storage and/or further disposition. There are problems arising in connection with segregation and classifying various items of supply and there are labor and storage problems to be found; however, our officials are proceeding to resolve these problems as best and as rapidly as possible. It was gratifying to observe the port and depot area at Leghorn. At the time of my visit the area reflected good management and careful storage procedures, both covered and outdoor.

Italy, with our aid, is on its way toward developing an effective defense establishment. It is my opinion that the roles, missions, and objectives assigned to Italy within the NATO framework are realistic and can be met. This also applies to the amount of United States assistance programed for Italy. Progress is slow in some areas of the defense assistance program; but earnest effort is being made by United States and Italian authorities to achieve the aims of the program. The Italian Air Force is receiving modern United States aircraft. Our Air Force representatives are striving to insure that maximum benefits can be derived by the Italians in utilization of aircraft and in training. Difficulty may be found from time to time because of the peculiar structure of the Italian Air Force High Command. The line of authority in the Italian Air Force seems to be split between the Secretary General and the Chief of Staff. As an example, I was informed that the air force chief of staff's authority is limited to matters of operations and training and that he is kept apart from matters such as fiscal management, logistics, and personnel. This arrangement is apparently traditional within the Italian Defense Ministry, and I am not prepared to advise whether we should press upon the sovereignty of

Italy for a reform in this regard. Endeavors to develop, modernize, and integrate the Italian Navy within the NATO sphere are progressing satisfactorily. The major problems lie in providing technicians to operate and maintain complex equipment to be found in a modern navy. The Italian Army at the present is comprised of some 15½ divisions of various stages in strength. Prior to World War II the Italians were able to field some 30 divisions. When comparing prewar divisions with those currently active one must consider strength, firepower, and operating costs. United States military officials in Italy report that the prewar divisions had only 60 percent strengthwise of the present divisions, and had about 15 percent of the firepower potential of the present divisions. Italy now allocates 5 percent of its gross national produce to defense. The army receives approximately 48 percent of the total moneys allocated for defense. It could not be determined what percent of the prewar gross national product was devoted to Italy's military machine. Conscription in Italy is universal. The army draftee serves 18 months. I was encouraged to hear reports on the status of training and combat potential of the Italian Army. An observer, whose military judgment is that in which I have the utmost confidence, told me that the Alpine troops in the Italian Army are as capable as any troops anywhere.

V. SPAIN

In Spain it was my pleasure to confer with Ambassador Lodge; Mr. Richard Rubottom, Chief of the United States Operations Mission and staff; Maj. Gen. August Kissner, USAF, Chief of the Joint United States Military Group and staff; and Maj. Gen. Verdie B. Barnes, United States Army, and the Military Assistance Advisory Group staff. It was indeed encouraging to visit Spain and our authorities there. For in Spain, United States officials and their counterparts meet in an atmosphere of cooperation and on a clear quid pro quo basis. In the past Spain asked nothing from us and received nothing. Basic negotiations relating to the base construction program and the military defense assistance program in Spain are probably the best and most sound ever entered into by our Government and a foreign sovereign power. The use of counterpart of grant-defense support assistance for Spain per a 1953 agreement is as follows: 30 percent of the local currency counterpart funds generated by defense support dollar grants are for Spanish projects involving revitalization and expansion of strategic roads and railways and munitions programs; 60 percent of the local counterpart funds are being used by the United States for administrative and operating costs.

(a) Economic: United States economic experts in Spain report that Spain's situation during 1955 has been characterized by mixed trends. Developments thus far in 1955 have been reported relatively encouraging. Spain's general economic weakness, however, is reflected in her foreign trade and payments situation. Spain's foreign trade is the smallest per capita in Europe. Oil, cotton, wheat, and coal, so highly essential to her economy, for the most part, must be imported. On the other hand Spain has little to offer to foreign exchange excepting olive oil, olives, nuts, wines, and tomatoes. Production in various areas of the economy is up in comparison with levels achieved in recent years. Steel output is on the increase. The outlook for the citrus crop and citrus export in 1955–56 is that production will rise. The tourist industry has encouraging prospects. In 1954 tourism earnings amounted to the equivalent of $100 million in all currencies of which $30 million were in dollar exchange. It is difficult for me, and I rather suggest difficult for the experts, to predict any sort of a high degree of prosperity for Spain in the near future. Her per capita gross national income is roughly one-half of the average for western Europe. The climate is the driest in Europe; the soil is poor and eroded. Basically an agricultural country, 60 percent of her people are employed in agriculture. Spain is most receptive to our technical-exchange program. Our experts are assisting her in many phases of her economy. Reforestation is underway. Some 200,000 acres of a potential 100 million acres have already been reforested. Soil and resources conservation programs have been instituted. Land reform and reclamation projects have been programed. Water-distribution problems are under scrutiny. All of these programs are long overdue and must be resolved with imagination and vigor. I feel that the motivation exists within Spain to proceed on these vitally needed projects.

(b) Military: Spain's defense establishment is currently receiving support through the means of the mutual defense assistance program. The cost of the program will be cumulative to the amount of $351.8 million as scheduled through fiscal years 1956–57. I have long advocated recognition of Spain's military potential and strategic position. My recent visit to Spain left me with an even firmer conviction that it is in Spain where we may make wise and increasing investments in mutual defense. Currently programed support of Spain's army appears to be on a sound basis. Our authorities and their Spanish counterparts have agreed to concentrate the assistance toward equipping a fewer number of units to the maximum rather than spreading the assistance thinly over a greater number. End items of equipment are arriving in Spain on a good schedule. The Spaniard's grasp of the technicalities of operation and maintenance of our equipment is excellent. They are appreciative of the support and take superior care of the equipment furnished. On October 11, 1955, I inspected the activities of the 61st Armored Regiment of the Acorazada Division. United States Army technicians were present and assisting in maintenance instructions. I was informed that of the 68 tanks furnished this unit, only two were deadlined at the time for mechanical repairs. To me this is an amazing demonstration of equipment care in view of the fact that these tanks are in constant use for training purposes and that our tank is a relatively new item in the Spanish family of military vehicles. I also witnessed a tactical training problem involving a company of tanks in support of an infantry attack. The problem was well planned, realistically conceived and smartly executed. Col. Warren H. Hoover, United States Army, accompanied me during my visit to the 61st Regiment. Colonel Hoover was enthusiastic in his praise of this organization, and other units of the Spanish Army. Colonel Hoover is a mature and experienced officer and I have confidence in his judgment. I regret that time limitations prevented me from visiting more activities of the Spanish Army. Spanish military personnel are proud of the United States equipment furnished them and welcome the opportunity to demonstrate their ability to use it.

(c) Base construction program: The United States has embarked upon a construction program in Spain of a magnitude which is difficult for the ordinary layman to appreciate. To me the $327 million allocated for 1954 through 1957 for this construction are being wisely invested. The basic policies adopted for the construction program are: First, no crash; second, coordination and cooperation with Spain; third, utilize American prime contractors; fourth, utilize Spanish subcontractors; fifth, utilize Spanish materials and industry; sixth, utilize United States surplus equipment. The entire program has been characterized by fine working relationships between our representatives and the Spanish Government. The target date for completion of phase 1 is the fall of 1956 when construction is hoped to be far enough along to permit emergency operation of aircraft from the bases. It has been reported that there is an impatience on the part of the construction forces to get on with the work ahead. This is encouraging. At the time of my visit at Torrejon and Zaragoza it was extremely difficult to gage the degree of progress being made. Within the next 6 months, however, progress from a visual standpoint should be dramatic. In this connection it should be pointed out that one of the major tasks in the base program is the construction of concrete parking aprons. Construction of the aprons is time-consuming and presents a formidable task. At Torrejon, for example, the parking apron will measure some 7,500 feet in length and 1,100 feet in width when finally completed. The importance of the construction of port facilities at Rota should not be overlooked. Most of the emphasis on the program, however, has been given the air base phase. The port at Rota will probably be the key to the entire Spanish base complex and will become the largest construction project in the overall Spanish program. I believe that adequate progress is being made toward achieving our construction objectives in Spain. Many obstacles have been overcome through mutual understanding and an intense desire to cooperate on the part of our officials and their Spanish coworkers. No other country in Europe has offered the kind

of cooperation rendered by the Spanish Government. Spain must be kept strong economically and militarily if it is to be maintained as a bastion of defense in the free world. A large measure of credit for the achievements thus far obtained must be given General Kissner and his very able Air Force and Navy associates. Credit must also be given the American construction firms who have joined together in advancing this venture.

VI. FRANCE

During my visit to France I had a most cordial and informative visit with Gen. Orval Cook, of the United States European Command, and Maj. Gen. George Honnen, Chief of Staff of the United States European Command. General Gruenther, at the time, was ill in quarters and I trust at this writing that he has recovered from his illness without complication. Also during my stay in France I visited the headquarters of our communications zone in Orleans and conferred with Maj. Gen. Phillip Gallagher, the commander of the zone activities. In addition I conferred at the United States Embassy regarding France's economic outlook. This section of my report will deal with the current French economic picture and with a few of the problems confronting United States military personnel stationed in France.

(a) Economic: France today is more prosperous than at any other time since the end of World War II. France has benefited along with the general economic progress in Europe. She has enjoyed a high level of dollar receipts this year and has experienced good crop weather. In June 1955 the industrial production index—excluding building—reached an alltime high of 175—on the index basis of 100 for the year 1938. This represented an 11-percent increase over the reading taken in June 1954 and 19 percent above that of June 1953. Construction of dwellings is expanding. The year 1955 will be another record year in crop production. There has been a certain stability in prices for the last 3½ years. Observers report this to be the longest period of price stability in France since 1914. It is reported to me further that French saving habits are returning, the capital market is reviving, and there is hope that private investment will replace public investment as the prime factor in the French economy. In consideration of France's improved position in foreign exchange it must be remembered that she received payments of a military nature amounting to $515 million in 1953 and $933 million in 1954. When our support of France's military budget is terminated a reduction in her external surplus will ensue. However, France can count on sizable dollar earnings from our troops stationed in France. The picture of France's economic situation in the future is not clear to me. The stark possibility of runaway inflation is always present. Her budget represents a weak spot. The stability of the French Cabinet is recognized as a factor influencing France's economic life. Her troubles in North Africa represent a serious drain on her economy. We have poured in some $9 billion in aid to France since 1945 and I ask the question as to how long will we continue to support her economic position in the Western World.

(b) Military: The United States has invested heavily in establishing a supply line from the ports of France to the German borders. This supply line supplants the old one which ran from Bremerhaven to our forces in Western Germany. The old line ran parallel and almost touched upon the western perimeter of the Iron Curtain. No one will disagree that it was a sound proposition in establishing United States Army Europe's communication zone as it now exists. In this regard much work lies ahead, particularly in the construction of various supply complexes. Current concepts hold that there must be a duplication of supply depots, dispersed in order to reduce the vast destructive powers of modern weapons of warfare. Our authorities in France are proceeding to develop the planned facilities as rapidly as time and the availability of funds permit. I gained the impression that many of the frustrating delays being encountered are occasioned by the necessity of coordinating nearly every phase of construction activity with French officials. I did not gain the impression that the French were uncooperative, rather that there is an extraordinary amount of red-tape—French variety—to slice in proceeding with virtually everything we do in France. It is not my desire that we infringe upon the sovereignty of France, however, I do feel that we are entitled to a greater degree of freedom in our operations there than we now have.

I am somewhat disturbed over the lack of a realistic housing program for our Army personnel in France with particular emphasis on housing suitable for personnel who have dependents. If we have any intention of maintaining an active communication zone in France for an extended period, then I feel a review of the dependent housing situation is clearly indicated. Currently programed dependent housing construction will provide for only 40 percent of that actually required. More than 60 percent of our personnel with dependents in France are living in substandard accommodations.

VII. GENERAL CONCLUSIONS

My conclusions, based on my observations, are as follows:

First. The economic recovery of Germany, Italy, and France is complete insofar as the need for further United States aid is concerned.

Second. The level of the economy in Spain must be raised to the extent that our economic aid and construction programs will provide.

Third. The rearmament of the Federal Republic of Germany will require patience and understanding by all interested nations and a speedy rearmament should not be anticipated with optimism.

Fourth. The integration of Spain into the NATO family of nations should be the subject of early representations on the part of the United States.

Fifth. The dependent housing program for Army personnel in France should be made the subject of a thorough review.

The Voice of Virginia

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. SMITH of Virgina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal:

THE VOICE OF VIRGINIA

The other day the people of Virginia by a two-thirds majority, voted to change their State constitution rather than be compelled to comply with the United States Supreme Court's segregation decision. This, it seems to us, is a voice of protest that the rest of the country should not ignore.

The Virginia protest is noteworthy in a number of respects, not the least of which is the form that it took and the manner in which it was taken.

What the Virginia people said, in effect, is that they will consider abolishing their public school system for all practical purposes rather than submit to compulsory integration. The immediate question was whether to change their constitution so as to permit State funds to be allocated to private schools; the vote authorized the calling of a State constitutional convention for that purpose. This would not abolish the State school system. But it would permit it to be abolished in the extremity.

As a political act this may not seem as extreme as some of the other courses of action urged in the South since the Supreme Court's decision. Even in Virginia there has been a strong movement for the "defiance direct" to the Supreme Court's order, a declaration by the Virginia government that the court was without power to do what it did and that therefore its action was nullified. The constitutional crisis that would raise in the Nation can be imagined.

But there is nothing trivial about this protest. A community does not contemplate the abolition of its public school system except under great provocation. And it does not translate the protest of words into the protest of action unless it feels the provocation intolerable.

Nor is this Virginia protest simply the voice of some rabble-rousing demagogs hoisted to power upon one suspender. Neither the governor nor the legislature, as has happened in some places, presumed to speak for the citizens; they put the question to a referendum. There was a political campaign, but there was no passionate campaign with the red shirts flying. The preelection days were so quiet they were hardly noticed in the press of other areas.

To people in other parts of the country this overwhelming vote may seem extraordinary. The educational and cultural progress of the Negro people in the past century has been so great that elsewhere many find it inexplicable that anywhere others should see an educational or cultural gulf remaining.

But however difficult for others to understand, here is impressive testimony that the people who live closest to this ancient problem do not believe it can be resolved by a Supreme Court decree which overnight threw down a long line of Supreme Court decisions under which the separate schools were built.

These people do not say never; the South has narrowed the gulf in every generation. What they protest is the insistence that in every place, and without regard to circumstances, the whole burden of solving the most difficult of social and political prob-

lems should be thrust upon a single generation of schoolchildren.

And unless you are to say that the entire Commonwealth of Virginia is peopled in its majority by men of less character, integrity, and wisdom than the rest of us, then it is not a protest to go unheeded. It's a perilous business for a nation to thrust by force great social changes upon a part of it determined to resist.

Red China Pounding the Door for Admission to the United Nations

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article that appeared in the Wall Street Journal for Tuesday, January 10, written by Mr. William Henry Chamberlin, in which he points out that Red China is now seriously engaged in a campaign to secure admission to the United Nations. The so-called package deal, where certain Red nations were admitted, has provided the incentive for Red China to engage in its current campaign.

All House Members who are interested in opposing the admission of Red China to the U. N. should make their views known to the Department of State.

The article follows:

POUNDING THE DOOR—NOW THAT THE U. N. HAS ADMITTED MORE COMMUNIST STATES, THE CLAMOR FOR RED CHINA'S ENTRY GROWS NOISIER

(By William Henry Chamberlin)

The knocking at the United Nations door on behalf of the admission of Red China as a member is becoming louder and more insistent. There is a strong probability that this will become a major foreign policy issue before the end of 1956.

The question of Red Chinese membership was in the background of the complicated negotiations which finally led to the admission of 16 additional nations as members of the U. N., with a Soviet veto of Japan as an offset and reprisal for Nationalist China's veto of Outer Mongolia. Soviet diplomacy seems to be pursuing two aims in keeping Japan for the time being out of the U. N. There is, first, the chance of putting this bit of extra pressure on Japan to sign a peace treaty on terms desired by Moscow.

There is also the possibility that at some future U. N. session the Soviet representatives will place the United States before the disagreeable alternative of acquiescing in the seating of Red China or letting Japan cool its heels in the U. N. waiting room indefinitely. This would not be the first time that the Soviet government showed itself expert in the uses of diplomatic blackmail.

Psychologically the package deal method which brought about the enlargement of U. N. membership may have favored Red China's ultimate prospect of admission. Morality was frankly sacrificed to expediency. The goal of making U. N. membership more nearly universal was placed ahead of the ideal of examining closely the credentials for membership of such distinctly nonsovereign states as Rumania, Hungary, Bulgaria, and Albania, to say nothing of Outer Mongolia. This most shadowy of Soviet satellites, which actually took part in the war against U. N. forces in Korea, would have been admitted had it not been for Chiang Kai-shek's decision to use the veto right which his government enjoys as the still-recognized Chinese representative on the Security Council.

TERROR AND PROPAGANDA

It is easy to foresee the line of argument that will be heard in the coming months, on both sides of the Atlantic, in favor of admitting Mao Tse-tung's regime to the U. N. This government is in de facto possession and control of the mainland area of China. Its method of rule by a mixture of unlimited terrorism and pervasive propaganda has worked effectively in other countries; there is no reason to assume that it will not continue to work indefinitely in China.

Recognition or nonrecognition of Red China has been the biggest issue dividing the United States and Great Britain and it may be that Prime Minister Eden will touch on the desirability of removing this issue when he visits Washington later this month. The Soviet Union, for its part, never misses an opportunity to give an assist to its allied Communist dictatorship in Peiping by placing itself on record as convinced of Red China's right to U. N. membership; the Soviets did so again just recently in joint declarations with the heads of the governments of India, Burma, and Afghanistan.

So it would be unwise to underestimate the amount of pressure that is likely to be built up for the substitution of Red China for Nationalist China in the U. N. The enlargement of U. N. membership may intensify this pressure. To be sure, four Western powers, Italy, Eire, Spain, and Portugal, offset the four new Communist members. But the new Asian members may go along with the demand for Red China's admission. And now that the U. N. is bigger, the United States plus the 21 Latin American states no longer constitute a voting group capable of blocking a decision of the U. N. Assembly which would require a two-thirds majority.

Despite the mounting tide of pressure from outside, there are strong reasons, both moral and practical, why the United States should adhere to its policy of refusing to grant diplomatic recognition to Red China and of opposing the admission of the regime to the U. N.

While Red China may have temporarily desisted from acts of overt aggression and of barbarous maltreatment of foreigners in its territory, there are no signs of repentance for past acts of this kind, no assurance that present milder policies will not be put aside at the earliest convenient moment. Red Chinese troops are still in military occupation of North Korea and represent the principal obstacle to unification of Korea on the basis of free elections. The Chinese Communists would, therefore, have some reason to feel that they had succeeded in shooting their way into the U. N. if they obtained admission under present conditions.

BARBAROUS TREATMENT

There have been no apologies or indemnities for the outrageous manhandling, including several cases of actual murder, of American citizens in Red Chinese jails. The shocking physical and psychological condition of an elderly missionary couple recently released from these jails—a couple that brought to the Chinese people only good through their spiritual message and their medical knowledge—is only one of many proofs of the essentially barbarous character of the Red Chinese regime, of its unwillingness or inability to accord civilized treatment to foreigners in its power.

Finally, and this is certainly not the least of the considerations that should determine American policy in this important matter, there is the question of the Chinese Nationalis government on Formosa. We are linked to this government by a treaty of alliance. And this alliance is based on the sound principle of mutual advantage.

If Chiang Kai-shek's government could scarcely survive without American help, Formosa in friendly hands is of very great importance for our defensive strategy in the Pacific. And the significance of a free, anti-Communist Chinese government in Formosa is much more than strategic. It is a beacon of hope to millions of oppressed, pillaged and exploited Chinese on the mainland who hate the new Communist tyranny but are at present unable to act openly against it. Formosa could be a very painful thorn in the side of Red China if its rulers should launch aggression again.

POTENTIAL FIFTH COLUMNISTS

The existence of the Nationalist government in Formosa is also a main bulwark against the acceptance of the Peiping regime by the large and influential overseas Chinese communities in Thailand, the Philippines, Indonesia and Malaya. These overseas Chinese communities, if Chiang Kai-shek's government were brushed aside by the United States, might well became ready-made fifth columns for Red Chinese expansion.

Is it either generous or safe, from the standpoint of American interests, to disavow an ally and favor an enemy by voting for Red Chinese admission to the United Nations or by opening up diplomatic relations? There is reason to believe that the answer of the great majority of the American people to this question would be an emphatic No, regardless of how loud the clamor for Red China's admission to the United Nations becomes this year.

Address by Hon. Thaddeus M. Machrowicz, of Michigan, at Butler County Democratic Committee Annual Dinner, Butler, Pa.

EXTENSION OF REMARKS
OF
HON. THADDEUS M. MACHROWICZ
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MACHROWICZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

Mr. Toastmaster, distinguished and invited guests, my fellow Americans, and fellow Democrats, I am highly honored in your invitation to be with you tonight, and to participate in and address this gathering of fine Americans and Democrats.

I am happy to be in the district represented so ably in the Congress by my friend and colleague, Congressman FRANK CLARK. The people of the 25th Pennsylvania Congressional District are justified in being proud of Congressman CLARK. His ability, sincerity, and devotion to duty have already made him an outstanding Member of the national House of Representatives. He enjoys the respect and confidence of his colleagues and of the Democratic leadership; Speaker RAYBURN and myself.

It is in the best interest of a district to keep a public official like Congressman CLARK in office, giving him seniority and prestige, and enabling him to broaden his service for district, State, and Nation.

I am pleased to be again in Pennsylvania where I campaigned in 1952 for Governor Leader, the State ticket, and congressional candidates. In Governor Leader Pennsylvania has a chief executive of whom you can be proud. His leadership is outstanding.

He has already made a national name for himself, and it is growing rapidly. His ability, coupled with his humbleness and simplicity, is most noticeable.

I am so glad to see again and to pay proper tribute to one who, with her distinguished brother, has given a lifetime of service to the Democratic Party—your fighting national committeewoman, Mrs. Emma Guffey Miller. No tribute from anyone is too great for her.

All of us feel very sorry for the President and Mrs. Eisenhower in the President's illness, and we sincerely hope and pray for his rapid improvement and recovery to good health.

The President's illness is most unfortunate at this time in the world's history, because no one, under our constitutional setup, can decide and act as can the President. It is difficult to substitute anyone else, or a council, or a committee, or whatever a group might be termed, for the President. The battle for position—the conflict of interests—the ambition of individuals—human emotions—and efforts of groups within the administration and the Republican Party to gain control of the party machinery, and control the next convention, particularly if the President is not a candidate for reelection, comes into forceable operation with dividing results.

During the President's illness the Democratic Party will do everything possible to stabilize conditions, and particularly in the field of foreign affairs, to give strength to our policies and our position. We can and we will render, if consulted, outstanding service for our country, because particularly in the field of foreign affairs the Democratic Party is united, while the Republican Party, unfortunately, is sharply divided.

I look in the next several months for the GOP old guard and the Republican isolationists to come out of their political underground where they were driven by President Eisenhower.

The Democratic Party in Congress will continue its constructive attitude. However, the responsibility for policy and action will rest upon the Republican administration, which controls the machinery of our Government. While we will be a cooperative and stabilizing influence; that does not mean that we will not comment or constructively criticize the domestic and foreign policies of the present administration. Under our constitutional form of government it is our duty to do so, and we shall not fail in our duty to the people.

In 1952, the Republican candidates ran against the Democratic Party. They played upon every gripe and dissatisfaction possible, and some of their candidates for high office, and I refer particularly to Vice President NIXON, resorted to statements that were not only undignified and unfair, but false. If some person stated that some of his charges were comtemptible, I would not challenge such an assertion.

In 1956, the situation will be different. The Republican candidate for President, and other Republican candidates, will not be able to run against the Democrats—they will have to run on the record of their own administration. They will not be on the delivering end in 1956.

And the Republican record is one of broken promises.

Let me refresh your memory on some of their broken promises.

1. A balanced budget. They are now frantically, for campaign purposes, after 3 years, trying to balance the budget in this fiscal year, and it can only be done at the expense of our national defense and our national security.

2. To reduce the national debt. Instead, it has been increased.

3. To be fair to labor. We find instead the stacking of the National Labor Relations Board. A majority of which members have administratively made decisions adverse to labor. What about the promise made to labor to amend and remove the harsh provisions of the Taft-Hartley Act? The promise was made—amendments were drafted which labor would not oppose, and before the President sent his message to Congress, someone "leaked," and big interests immediately opposed. The message was never sent to Congress. You will remember that former Secretary of Labor, Martin Durkin, a great man, and the only Democrat in the Cabinet, resigned over this broken promise.

4. The promise to the farmers of our country. Everyone knows what has happened to our farming communities under the present Republican administration. It will be remembered that the Republicans promised to reduce farm surpluses and also to reduce losses to the farmer. Instead, under the Republicans, there is reduced farm income, and in the last fiscal year—the largest loss in the history of the farm program, in the sum of $799 million. And after nearly 3 years of Republican control, the only excuse they can offer is to still blame the Democrats.

5. The promise to give fair and equitable treatment to small and independent businesses. Instead, we find Government contracts sharply reduced; bankruptcy among this group sharply increasing; mergers; and the frantic desire for "bigness" running rampant, resulting in a "squeeze play" upon this important segment of our society. When the Republicans terminated the Reconstruction Finance Corporation, which was very helpful to this type of business, they established the Small Business Administration; but, by law, curtailed its ability to act effectively. I can say with pride that in the last session, the Democratic Congress, despite Republican opposition, extended this law, and in a manner where this important segment of American business can receive fair and effective consideration. One illustration is that we increased the maximum loan capacity from $150,000, under the Republican law, to $250,000, under the Democratic measure. We also struck out other restrictive provisions of the Republican law.

6. The promise made to help, through contracts, labor-distressed areas. Under the Democrats we allowed a certain differential in bid price to firms located in such areas; as well as to small and independent businesses. Under the Republicans, this was wiped away.

7. The new military look. Our Army and Navy and Marine Corps have been sharply reduced, particularly our Army. And the Communist leaders in the Kremlin smile and slap some of our officials on their backs and boast openly that they are still intent on world revolution and world domination—with the determination and hope of taking over by internal subversion nation after nation in an effort to try and have America alone in the world.

8. Massive retaliation. Do you remember that promise? There has been a constant retreat from that to "peaceful co-existence"; then, "peace through trade," later, "cooperative peace"; and now, we have reached the policy of "no force"—whatever that means. To other free countries that is construed as weakness, uncertainty, and even appeasement.

9. To unleash Chiang Kai-shek. Do you also remember that promise? Everyone was led to believe that this meant that forces of Nationalist China would invade Red China in an effort to defeat the Red Chinese and regain continental China. The present administration has retreated from that dynamic policy, widely proclaimed, and widely acclaimed. And now Chiang and his forces are tied to Formosa and the Pescadore Islands, and in fear of further restrictions.

I could talk of other policies such as agonizing reappraisal directed at the time it was uttered toward France. And as we view the evidence since the meeting at the summit, it is apparent that we should undergo an agonizing reappraisal of our present situation.

While the Democratic Party has shown great statesmanship in its bipartisan cooperation, it is the right and the duty of the Democrats—in fact, members of both parties—to speak out and to alert and warn the people.

It was only the other day that Admiral Radford, Chairman of the Joint Chiefs of Staff, called for the maintenance of great "military and moral strength" and that "for the time being"—and that may be for a very long time—"our job is to stay strong and help our allies to stay strong." And Admiral Radford said further, "Never has the need for unity among nations been so great. Now is not the time to relax our vigilance."

Both President Eisenhower and Secretary Dulles have repeatedly said that the intent of the Communists for world revolution and world dominatoin has not changed.

Only a few days ago, Senator KNOWLAND, Republican leader in the United States Senate, in lashing out against the Soviet Union, said, "There is no reason to believe there is any change in the basic premise of the Kremlin. There has been no demonstration of a change by deeds. They lie, cheat, and violate agreements and other things."

And what better evidence can we get than from what recently came from the lips of Khruschev, the present No. 1 Communist leader in the Soviet Union, while speaking on September 17, 1955, only a few days ago, to the East German delegates to Moscow, in observing that since the Geneva Conference people in the West have talked about how the Soviet leaders now smile, said, "That smile is genuine, it is not artificial. We wish to live in peace, tranquilly." Then he warned, "If anyone believes that our smiles involve abandonment of the teachings of Marx, Engels, and Lenin, he deceives himself poorly. Those who wait for that must wait until the shrimp learns to whistle."

And yet, in the light of this fact, there are some persons in America who believe that the Communist leaders in the Kremlin are sincere in their desire for peace.

Yes, the Communist peace of submission to communism, of enslavement, persecution, imprisonment, and death—but that is not our peace, the peace of men and women who desire and are determined to be free under God and under law.

We read of the spirit of Geneva. What should concern us is not words, but deeds and results that flow from Geneva. And if we are frank with ourselves we can only view thte results to date with great concern. We should be greatly concerned about what is selfevident to anyone who is honest with himself:

1. The free world is being lulled into blissfulness, which is what the Communists want, and

2. The Communist leaders in the Kremlin are showing and convincing captive peoples—and even Russians who oppose communism—that they are forgotten by their western friends, and that they had better accept as final their fate under communism.

The policy of peace through strength, which the Democratic Party stands for, with a consistent policy of military strength and power, and firm diplomatic policies, is the best course for America and the free world—not frequent changes and shifts, or signs of weakness, such as "massive retaliation" of about 3 years ago, to "no force" of today.

The Democratic Party stands for constant vigilance—recognizing that the price we pay for military strength and power that will create fear through respect, and deter aggressive action or a sneak attack by Communist Russia, is the premium we pay for liberty and preservation.

The fact is the only thing the Communists respect is what they fear, and that is military strength and power greater than they possess—and that is just as true today as it was before "the summit" conference. And we should not forget that the effective instruments by and through which our national objectives are attained in the field of foreign affairs is our military strength and power. We must be realistic. There is too much involved if we are not.

It is all right to negotiate, but not to compromise ideals and principle and truth which we believe in. And successful negotiations with Communist Russia, as long as the Communist leaders adhere to the Lenin-Stalin intent of world revolution and domination, can only be on the basis of strength.

The Democratic Party has oposed the military cuts that have been made.

Under Roosevelt and Truman we stood for peace through strength. We kept our allies united with us through friendship.

We view with concern the weakening of NATO, the spread of neutralism, the situation at Cyprus, the sale of Communist arms to Egypt, the suspicions growing against us in South Korea and in Formosa—all of which have taken place since "the summit" conference, as well as the situation in South Vietnam and southeast Asia.

It seems to me that immediate consideration should be given by the administration to get back to the foreign policies of Roosevelt and Truman, which the present administration followed until the summit meeting—the sound policy of peace through strength.

This gathering is representative of the political life and history of America. How fortunate we are to be citizens of our beloved country in which free and untrammeled elections are held, the voters with complete freedom to exercise their judgment and conscience, and to vote for such candidates or party as they desire. It is our duty and obligation to preserve our institutions of government for ourselves and for future generations.

We are fortunate in having the two-party political system—bringing political stability and enabling responsibility to be placed on the party in power. We want this effective party system to continue, rather than a multiple party system of other democratic countries, which usually results in instability. Neither do we want the one party controlled system of dictatorial or totalitarian regimes.

While we oppose and criticize the political mistakes of our political opponents, we respect them. For over and above all, we are Americans, and our country comes "first, last, and always."

While we respect our political opponents, we feel that the Demorcratic Party in control of our Government is for the best interests of our people. Our policies and leadership have so impressed our people that, today, the Democratic Party is the stronger of our two great political organizations. During the past 25 years, in particular, our party has gained rapidly in strength throughout the Nation. And despite the temporary setback of 1952, the Democratic Party is steadily increasing in strength.

For the backbone of America—the workers, the farmers, the housewives, the small independent businessmen, the average American, are realizing more and more that the Democratic Party is their true friend, that the policies and leadership of our party are dedicated to the service and the best interests of all the people, and not of a select few. They realize that the Democratic Party is not dominated by a combination of certain big finance and big business interests, who are nonelected, and who meet in secrecy, and in the main, determine the politices of the Republican Party.

For there is one thought that is rapidly growing in the minds of average Americans, and that is that certain big finance and big business interests are in control of the present Republican administration and the evidence of the past 3 years justifies that thought.

The giveaways of the Republican 83d Congress, with the Dixon-Yates contract of ill repute, tax benefits for the few, the attempt to permit big business to exploit the great natural resources of our public domain, which, fortunately, the Democrats in Congress stopped; permitting the wave of mergers, many of them in violatiaon of our antitrust laws, and designed to eliminate competition and increase prices; the disregard of small and independent businesses; the tremendous influence exercised by representatives of the financial and business barons of our country as advisers on policy of this administration, and occupying positions of conflict, for no man can serve two masters; the bypassing of Congress through the stretched interpretation of some provisions of law, so that they will not have to go to Congress for necessary authorization, which would mean penetrating inquiry and public information; the Republican policy of private utility exploitation of our great natural resources, as evidenced by Hells Canyon and other administrative acts; the breaking of their promises to the workers and the farmers, and to the Government employees, are some illustrations of the extent to which big business thinking dominates and controls our Government.

But, fortunately, as a result of the election of a Democratic Congress in 1954, the Republicans cannot put through any more giveaways in the Congress. The big interests now look to administrative action by the executive branch, controlled by the Republicans, to accomplish their purposes.

As the 80th Republican Congres is remembered as the do-nothing Congress, so is the 83d Republican Congress remembered as the giveaway Congress.

It is due to the courageous fight made by the Democrats in Congress that some of the proposed giveaways of the Republican 83d Congress were defeated. One thing is certain, in the present 84th Democratic-controlled Congress giveaways by legislative action have been stopped.

The Democratic Party as the minority party in the 83d Congress, and as the majority party in the present 84th Congress, has been a constructive influence. Instead of being a party of "blind opposition," which the Republican Party was during the administrations of the late beloved Franklin D. Roosevelt and the fighting Harry S. Truman, our party has supported good measures and, when in disagreement with the President, we constructively criticized, constructively opposed, and constructively proposed. As an example, let me refer to the road bill. The plan of the administration would have meant an abdication on the part of Congress of its constitutional powers for a period of from 10 to 30 years. The road plan of the present administration in a period of 30 years would have cost the taxpayers $11,500,000,000 more than the Democratic plan. This bill was well termed "The Banker's Dream."

Our party has lived up to the highest ideals of a political party. There is every reason for every Democrat, or any person who voted Democratic, to be proud of the action of the Democratic Party. There is every reason for progressive-minded Republicans and Independents to vote for Democratic candidates in the future.

The $1 minimum wage bill is a great Democratic victory for the workers. You will remember that President Eisenhower recommended an increase only from 75 cents to 90 cents per hour. It was over the opposition of the great majority of the Republicans, who voted for a lesser amount—in the Commitee of the Whole—that we put this meritorious bill through.

The passage by the House, which the Senate will pass next year, of the expanded social security bill is further evidence of the constructive leadership of the Democratic Party.

The Democratic Party has always been dedicated to the passage of legislation that will preserve and strengthen the family life of America. For the family life of a nation is the very basis of its strength or weakness. A strong family life means a strong America; a weak family life means a weak America. And the modern history of the Democratic Party under the immortal Franklin D. Roosevelt, and courageous Harry S. Truman, has been one of fighting for legislation that will preserve and strengthen the family life of our country. And what more noble motive and purpose can any political party have than this?

There are so many bills to which I could refer in support of this statement—among which would be included unemployment compensation, earned annuities, old-age assistance, aid to the sick and the blind, appropriations for medical research, minimum-wage legislation, developing the great natural resources of our country for the benefit of our people, the right of labor to organize and bargain collectively, proper consideration for the farmers, just consideration for small and independent businessmen, protection of bank deposits, housing legislation, proper consideration of our Federal employees, and many other progressive measures, most of which were enacted into law over the bitter opposition of the great majority of Republican Members.

The Democratic Party of today is living up to the traditions and noble ideals of Jefferson, Jackson, Cleveland, Wilson, Roosevelt, and Truman. And I might also say that the few progressive measures recommended by President Eisenhower which have become law were passed only because of Democratic support.

During the past 3 years we have repeatedly read statements by economists and Republican leaders that we will never have another depression, due to "the cushions that exist in the law." Yes; but who put those cushions into the law? It was under the leadership of Franklin D. Roosevelt and Harry S. Truman that the Democratic Party, usually over the bitter opposition of the Republicans, put those cushions into the law.

Whether as a majority or a minority party in Congress—whether under a Democratic President or a Republican President—the Democratic Party in Congress has acted affirmatively and constructively.

So, with the record of broken promises of the present Republican administration, of its domination by certain big business interests, and with the other issues that we have, we can look forward to the 1956 elections with confidence of victory for the Democratic candidate for President, and an increased Democratic House and Senate in Congress, and of further Democratic gains on the State and local level.

The Late Vera Buchanan

SPEECH

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1956

Mr. SIMPSON of Pennsylvania. Mr. Speaker, all of us who knew and worked

with Mrs. VERA BUCHANAN were deeply shocked at the news of her tragic and untimely passing. We counted her as both a friend and as an untiring worker for the principles in which she believed. Our hearts go out to her two lovely daughters, Joan and Jane, in their hour of bereavement.

Though we may have disagreed from time to time on various issues before this House, we respected VERA for her honesty of purpose and close attention to each detail of the complex job involved in representing the people of her district. Her conscientious and thorough-going approach to all matters was an example which each one of us would be well advised to emulate.

Those of us who represent the great Commonwealth of Pennsylvania in this House feel Mrs. BUCHANAN'S loss especially, inasmuch as she was one of our number. I was honored to be one of those selected by the Speaker to attend the memorial services for this gracious lady. It was a beautiful tribute to one who so richly earned and deserved the undying respect and admiration of her many friends and acquaintances.

National Printing Week Observance

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD an editorial concerning National Printing Week. As you know, National Printing Week is being observed at the present time. The influence the American press has made in establishing and fostering of our freedoms cannot be measured. The impact on the people by the press is so strong that if every newspaper in this country were to shut down operations tomorrow, it would be difficult to describe the disastrous results that most certainly would follow.

Too often we minimize the value of something we take for granted, and observance of National Printing Week rightfully calls attention to the major role newspapers have played in upholding what we are proud to refer to as the American way of life. Still the presses of America, and you stop the heartbeat of the Nation. Today the American press represents one of the strongest institutions continually carrying on the struggle to protect the rights of the individual.

This applies to the smallest as well as the largest of newspapers, and is illustrated by the thoughtful comment of Mrs. Sid Davison, who assists her husband in publication of the weekly newspaper, the Miner County Pioneer, at Howard, S. Dak., Mrs. Davison's comment follows:

This newspaper is a personal diary of the life of our community. Throughout the columns of this paper are printed the interesting and important doings of our residents from year to year. This paper is free to express our opinions or your point of view on any issue or question of public interest, subject only to the reservations imposed by libel laws. This country's smaller newspapers are a tremendous asset on the side of freedom.

Excise Tax on Nonhighway Gasoline to Farmers Should Be Repealed

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. JENKINS. Mr. Speaker, a few days ago I introduced a bill, which I think will be of great interest to the farmers of the country, and which I think will tend to relieve the complaints made by the farmers with reference to legislation heretofore passed that has been to their disadvantage. My bill, H. R. 8259, is a bill to amend the Internal Revenue Code of 1954 to relieve farmers from the payment of excise tax on gasoline and lubricating oils used exclusively in farm tractors or farm machinery or for other agricultural purposes. A copy of this bill is as follows:

Be it enacted, etc., That section 6416 (b) (2) of the Internal Revenue Code of 1954 (relating to special cases in which taxpayments are considered overpayments) is hereby amended by striking out the period at the end of subparagraph (H) and inserting in lieu thereof "; and", and by adding after subparagraph (H) the following new subparagraph:

"(I) in the case of gasoline and lubricating oils, used or resold for use exclusively in farm tractors or farm machinery or for other agricultural purposes."

SEC. 2. The amendments made by the first section of this act shall apply only with respect to gasoline and lubricating oils sold by the manufacturer, producer, or importer thereof on or after the first day of the first quarter which begins more than 10 days after the date of the enactment of this act.

Immediately following the introduction of this bill I made a public statement, which is as follows:

I have just introduced a bill to carry out the recommendation of President Eisenhower that the Nation's farmers be relieved of the payment of Federal excise taxes on purchases of gasoline and lubricating oils used exclusively for agricultural purposes. This recommendation was contained in the President's farm message delivered to the Congress.

Many States already exempt farmers from their own gasoline tax. I believe that the time has come for the Federal Government to grant a similar exemption. The present Federal taxes on gasoline and lubricating oils simply go to increase the farmer's cost of production. As a result, these taxes contribute to the price-cost squeeze from which our farmers are suffering today.

I shall press for prompt and favorable consideration of my bill.

This legislation which I have proposed has met with the approval of practically all of the farm organizations and farmers of the country who know about it.

The American Farm Bureau was anxious to have this information sent out to its members all over the country and to accomplish this their representative, Mr. John F. Lewis, arranged for radio time, and, as a result, I made a statement for the radio which I hope was heard by farmers all over the country, because they are very much interested in this matter:

This is what I said over the radio:

For some years the farmers of this Nation have had to pay Federal taxes on the gasoline used on their farms.

Since the inception of this levy, it has been pointed out that this is unfair taxation since the revenues derived are usually utilized to finance the construction of highways and in no sense provide any direct benefit to the man who is running a tractor or other farm equipment on his farm.

I have been impressed lately by the efforts of the membership of the Farm Bureau in my State of Ohio and other farm organizations across the Nation in having taxes on non-highway-used gasoline repealed.

It was heartening to me to hear the President endorse the repeal of these unfair taxes in his farm message to the Congress.

In connection with this I have introduced, and will push to enactment, a bill, H. R. 8259, to carry out this recommendation of President Eisenhower.

Farmers use an estimated three billion gallons of gasoline on their farms and ranches in the United States each year.

If my bill becomes law, it will save the farmers of this Nation some $60 million annually in relief from the present 2-cent Federal gas tax. If, under pending proposals for financing an expanded Federal highway building program, the tax is increased to 3 cents, my bill will save farmers $90 million a year.

I am happy to have sponsored this bill which embodies recommendations strongly advocated by the farmers in Farm Bureau and other farm organizations in the country. This is something in legislation that they have long sought, long deserved, and should have.

Mr. Speaker, I hope the Congress will give immediate consideration to this very appropriate and very necessary legislation.

Southern California's Water Supply—A Struggle for Survival

SPEECH
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. McDONOUGH. Mr. Speaker, I doubt that the Members of Congress, most of the people of the Nation, and in fact, many of the people in southern California, fully realize the great importance of an adequate water supply to the 8 million people now living in southern California, and with the population increasing more rapidly than in any other section of the United States, the problems of protecting our water supply become more difficult daily. In the city of Los Angeles alone last year new water users increased at the rate of 3,730 every month.

Because water is now available when you turn on your hose to sprinkle your lawn, to take a shower, to wash your car,

or for any other purpose is no assurance that it will continue.

Our vital water supply is seriously threatened. We are fighting a two-front battle to protect and preserve our legal rights to Colorado River water. There is no issue of more immediate importance to the people of Los Angeles and the entire southern part of the State. It is a fight for survival.

On one front we are fighting in the United States Supreme Court in the case of Arizona against California. On the other front we are fighting in the House of Representatives against legislation to build the upper Colorado project and the Fryingpan-Arkansas project, both of which would seriously damage our legitimate supplies of Colorado River water and power.

The outcome of these battles will affect every resident of Los Angeles and southern California. With our swiftly rising population we cannot afford to lose 1 gallon of Colorado River water or 1 kilowatt of power. In fact, we can already look ahead to the place where we must have more water and power to meet our demands. We cannot get it from the Colorado River, and we are not asking for more from that stream. What we are struggling to do is to protect and preserve what we already have under our legal contracts and our appropriative rights.

In the Supreme Court suit Arizona is seeking to limit our use of Colorado River water to an amount far below our present rights. The quantity of Colorado River water which Arizona seeks to limit California to would be less than our firm vested rights before Hoover Dam was built. If Arizona wins, California would be stripped of all the increase in water supply made possible by that dam, which California underwrote and Arizona opposed.

As I have done before, I shall vigorously oppose the proposed upper Colorado River project and the Fryingpan-Arkansas project, both of which would be disastrous to California, and which would cost ultimately at least $4.5 billion.

These upper Colorado River Basin developments have been planned in almost total disregard of the interests of California. Both projects would materially decrease our vital Colorado River water and power. For instance, Hoover Dam power output would be cut at least 25 percent. We cannot stand such a reduction.

The truth of the matter is that the upper basin States are endeavoring to engineer a huge grab of Colorado River water in excess of their rightful share. At the same time, an attempt is being made to raid the Federal Treasury to the expense of the Nation's taxpayers in order to obtain the immense subsidies required to build these unsound irrigation projects.

It is a money grab to support a water grab.

The sponsors of these bills so detrimental to California were unable to get them through Congress last year. I am proud to say that I was among the Congressmen who voiced a firm "No" when the effort was made to call the bills before the House.

Our opposition prevailed, but once against we are faced with the same fight.

The upper Colorado River project is mainly a hydroelectric project. Power revenues are needed to pay for the irrigation units of the gigantic plan. These irrigation units the Bureau of Reclamation admits cannot pay for themselves.

The upper Colorado River project would:

Saddle an enormous new burden of more than $4 billion on all taxpayers.

Provide water for only a favored few who would pay only a minute fraction of the cost.

Furnish water to grow the kind of crops which are already in great surplus in this country, and which are already heavily subsidized by the taxpayers.

Cost the American taxpayers $5,000 an acre to subsidize the proposed irrigation units.

Cost the taxpayers $750,000 for each 150-acre farm in the project.

Require the State which benefit—Colorado, Utah, Wyoming, and New Mexico—to pay less than two percent of the great new tax burden. Taxpayers of the other 44 States, including California, second largest taxpaying State of the Union, to pay 98 percent.

Thus, California would be in the position of paying to have its own water stolen, should this project be approved.

The Fryingpan-Arkansas project would:

Take enormous amounts of the purest Colorado River water out of the river and transport it over the Rocky Mountains. Therefore, the quality of the water coming down to California would be seriously impaired. We would get water containing heavy concentrations of salts and minerals.

Inflict a concealed subsidy on the taxpayers of $500 million, or about $1,400 an acre to be irrigated on the eastern slopes of the Rocky Mountains.

We must and we will continue to oppose these two projects. Every legitimate means will be used to defeat them.

Victory in this fight is vital to our present and future economy, and I pledge myself to make every effort to win it.

I am determined to be able to say to my constituents when this Congress is adjourned next summer: "The water and power upon which you depend for your homes and industries has been protected and preserved."

Mothballing Farms

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hutchinson (Kans.) News Herald of September 23, 1955:

MOTHBALLING FARMS

Secretary Benson in a speech this week charged that the present administration inherited the farm problem from the Democratice one which preceded it. Of course it did. In fairness to Truman, however, it must be stated that he didn't create the problem.

Truman inherited the farm problem from Roosevelt. The line of inheritance traces back from that through Hoover, Coolidge, and Harding to Woodrow Wilson, who unwittingly started the whole thing by getting this country into World War I.

The real villain in the piece, however, is the automotive industry which, by mechanizing the farm, made surplus acreage of all the land which once was required to maintain horse power.

So the farm problem is now going on 40 years old and it can't be solved by replacing the tractors with teams. After 4 decades of experimentation, it isn't close to solution in a political way, either. That probably comes from failure to consider the problem as exactly what it is.

The problem is that of maintaining reserve productive facilities to meet emergency conditions. Between wars the Government mothballs battleships, factories, planes, and atomic weapons. It has an equal need to mothball farms, and that in some fashion it must do, if it ever is to eliminate the surpluses of certain agricultural products and still have the facilities for expanded food production which the stresses of hot or cold wars periodically produce.

If the Government does mothball farms to stockpile soil fertility, however, it equitably must provide their owner-custodians with income comparable to what other groups today enjoy.

Soil Banks Encourage Inefficiency

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. SCHERER. Mr. Speaker, yesterday's city Cincinnati Enquirer carried Louis Bromfield's column dealing with some of the farm problems. To me it seemed to make sense. I am asking that it be reprinted in the Appendix of the RECORD so that my colleagues from the farm areas will have an opportunity to comment thereon for enlightenment of those of us who represent chiefly industrial areas.

The article follows:

SOIL BANKS ENCOURAGE INEFFICIENCY

(By Louis Bromfield)

This column contains things which probably no politician will ever say and which might well throw the fear of God into a good many of them. What is written here needs to be said. I hope that it will secure a circulation wide enough to help clear the air. A good deal of it will be unpalatable in many quarters, but I think all of it is true and needs saying.

The column concerns the so-called farm problem, which has largely been aggravated and even created by compromising political efforts of politicians to buy votes. All the efforts at a solution made up to now have failed and in many cases have served only to aggravate the general muddle.

The proposed soil-bank plan by which farmers are to be paid for not farming millions of acres of land is one of the silliest proposals yet evolved. Any practical, suc-

cessful modern farmer knows that. In his heart he knows that he can take a third of his land out of circulation, rest it, cut his costs, be paid by the taxpayer for not farming this land, and still raise just as much or more than he raised before. As the yield an acre goes up his costs decline, his potential profits increase. This is a fact known to any good farmer.

It is probable that at least 80 percent of American farmers could raise twice as much an acre on half as much land by better and more intensive farming.

There is only one real solution to the farm problem and that is to pull the carpet from under the whole of our agriculture, shake it down, and let it find its level. (I can already hear the politicians screaming in pain.)

Throughout our economy, the principle of business and of our enduring prosperity is competition and competition means efficiency. If you have a retail business of your own or are an automobile dealer or operate a small factory and are inefficient, you are in time eliminated by economics and go to work for somebody else or find a new business at which you do a more capable job.

That is the rule, and a very good one it is for everybody concerned—even the fellow who goes under may come up again somewhere else. He will be better off and so will the national economy, which means not only himself but all the rest of us.

But no such shakedown occurs in our agriculture or has occurred for almost two generations. The farmer, good and efficient or lazy and ignorant, has been coddled—and coddled into producing surpluses which we do not need and which cost the taxpayer over the years billions of dollars.

Two reasons are evident in this situation which no nation can afford in the long run. One is political—the myth of the "farm vote," which does not exist outside certain limited one-crop areas any more than the "labor vote" exists. And it exists less and less every day.

The other reason was the Government policy of attempting to increase production during the war years while at the same time attempting to force price control on the farmer—an idiotic Socialist idea which has cost you and me, whether we are farmers or nonfarmers, some billions of dollars.

Once war conditions vanished, and despite the fact that we no longer needed to feed half the world, price controls were abandoned but price guaranties and subsidies were not. So we are stuck—particularly in the single crop wheat, cotton, and corn areas—with a situation which can only be described in terms of sensible economy as "idiotic."

At the same time, the whole parity, price support, soil bank dodges merely tend to maintain in operation inefficient, unintelligent speculators and particularly "suitcase" wheat farmers, and marginal operators who would not be tolerated in any other field of American economy activity.

In open competition they would be squeezed out. Under present conditions, or those proposed by the politicians, we maintain in operation hundreds of thousands, perhaps millions of farmers, who should for the good of everyone concerned, including themselves, be economically liquidated.

Because of wheat support prices, some millions of good grazing land have been destroyed and dust storm conditions created by so-called "farmers" who are not farmers, but merely speculators who can make money at 15 bushels an acre production. Without support prices they would be economically liquidated overnight and wheat production left in the hands of honest, intelligent, efficient farmers who produce 3 or 4 times that yield per acre. Surpluses would vanish and the Al Capone "suitcase" wheat farmer-speculators would be eliminated.

Pull it out—this thick-piled carpet of protection—and the costly wheat surpluses and storage would vanish overnight to the benefit of the good farmer as well as the general taxpayer. The same is true largely of the cotton and corn support prices and surpluses which become increasingly a terrible burden to all of us, including the good farmer himself.

South Dakota Opinions on the Farm Problem

EXTENSION OF REMARKS
OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. LOVRE. Mr. Speaker, I wish to place in the RECORD three articles from South Dakota weekly newspapers. During my fall visits in South Dakota, the farm problem was discussed more often than any other legislation facing Congress. The attitude of the people whom I represent can be summed up quite capably in the following articles. All three of the individuals responsible for the articles are highly respected in their communities, and have given a great deal of thought to the farm situation.

The first article is from the Clear Lake Courier and quotes Mr. A. G. Berger, president of the Deuel County National Bank of Clear Lake, from a talk he gave at the annual meeting of this bank.

The second article is an editorial by Ed Hofer, editor and publisher of the Lennox Independent.

The third article is an editorial by B. L. Farus, publisher of the Scotland Journal.

The articles follow:

[From the Clear Lake (S. Dak.) Courier]

In connection with the annual meeting, A. G. Berger, president, pointed out that Deuel County was favored with plentiful moisture in 1955 which produced an excellent crop with a few exceptions in the southwest section.

In connection with the agricultural outlook for the future Mr. Berger said: "The Department of Agriculture has come in for a lot of criticism for the instability of the price structure on pork and other products not under support. In this connection we should be aware of the fact that Congress enacts the legislation in this matter and unless and until they do, there is no alternative for the Department of Agriculture except to comply with the laws on the books. Our Congressmen in Washington of both parties are working on this important matter but as yet have not come up with a satisfactory solution—they are men of average intelligence and will come up with a solution if that is possible by legislation."

[From the Lennox (S. Dak.) Independent]

THE SMALL FARM

In a recent editorial we described the small farmer as unwilling to give up the fight to hold on to his land; as the land being something more than a means to make a living. And it is surely true as another writer has put it recently: "If farming wasn't a way of life several million would quit it now."

There appears to be important people in high places whose theory it is that the small farm must go. That would be like saying that there should be no small businesses in America, only big corporations. True, the farmer is a businessman, but like all small businesses and small towns, this is a way of life. When prices are low and costs of production are high, there are just about 3,500,000 American farmers who probably would abandon their farms for jobs in industry, that is, if farming wasn't the life they know and love and want to live. And lucky for the rest of us * * * if these farmers quit their farms because farming isn't paying what it should, the result would be chaos for the rest of the country. Small towns depend on the family-type farm economy. These are the industry of a small town.

But, of course, some of the big boys in agriculture, who maintain that farming is only a matter of business, with the dollar and the high standard of living as the only goals, don't want the change to come overnight, and they don't want all farmers to quit * * * just the small farmer. More farmers are buying more land these days. There is always land for sale because of retirement, death, and ill health. But no one man can farm 500, 1,000, or 4,000 acres alone. He has to hire help. And how many of the million or two who are forced out in this great agricultural revolution would be willing to work as hired men, living on their own farms as tenants, not owners. Can industry, cities, and towns absorb the influx? Powerful labor unions, no doubt, would become even more powerful.

Farm programs, subsidies, parities are expensive. But it would be even more expensive for the whole American economy to let agriculture go bankrupt. Farmers, not 3 million of them anyway, aren't going to quit because going gets rough. Wise legislators won't give up trying to find a way to solve the present agriculture problem.

[From the Scotland (S. Dak.) Journal]

As 1956 enters into the picture most of us are a little hesitant about predicting the future. How many of us will have our shingle out at the end of 1956, under the same management, may be uncertain. Sometimes the grass looks greener on the other side; but most often it is not.

The day for amassing a fortune in a short time appears to be a thing of the past, especially is it true in the agricultural section of this great country. One of our big concerns in this part of the northwest is whether we receive moisture to raise crops. I would say that farm prices are secondary when it comes to a choice of the two. If we raise corps, no matter how low they may go, most of our population and resources can be kept intact. Crop failures and low prices would mean a fatal blow to many and we could adjust ourselves to low prices much easier than crop failures.

In 1956 we will experience a presidential election, and the farmer, business, and labor will undoubtedly be painted a "rosy" picture, by both major political parties. Everyone has their own individual thinking power, but I for one take those promises with a grain of salt; I've heard too many of them, and they haven't materialized. Politics used to excite me but now it has the opposite effect. I've always had to battle for a living no matter which party was in power, and expect to continue doing so.

Business and financial statistics predict 1956 as one of the best years ever, and I hope they have some proof, rather than just assumption. With everything else on the boom and the farmer still in a daze over farm prices at its lowest ebb in years something looks out of line to us. When a record year is predicted for business, those making the predictions seem to have forgotten to include the prospect for the rural population of the Nation.

In Rome's Footsteps?

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. SADLAK. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following article by Mr. George Peck, chairman of the board of the National Labor-Management Foundation and executive editor of its official publication, Partners:

IN ROME'S FOOTSTEPS?

It is 165 years since Edward Gibbon, English historian, published the fifth volume of his celebrated work, The History of the Decline and Fall of the Roman Empire. Gibbon listed five chief reasons as to why the Roman Empire, the greatest civilization of its era and up to that time in history, came to an ignominious and catastrophic end. It might be well for America, without doubt the greatest civilization of this era or any other, to ponder over those five reasons.

1. The rapid increase in divorce which undermined the sanctity and dignity of the home which is the basis of human society.

Let's take a look at the divorce statistics of the United States of America—they are certainly cause for alarm. In 1890, there was a divorce for every 17 marriages; in 1900, 1 marriage in every 14 ended in divorce; by 1910, 1 marriage in every 11 went on the rocks; in 1920, 1 in every 8; in 1930, 1 in every 6; and in 1952, the last year for which complete statistics are available, 1 marriage in every 4 foundered on the divorce shoals.

As Gibbon so truly stated, the home is the basis of human society. With 1 marriage out of every 4 now culminating in divorce, in many cases causing broken homes, the basis of our American society is being dangerously undermined. With so many disrupted homes, it is small wonder that juvenile delinquency is running rampant. On the divorce issue America follows the dangerous course pursued by Rome prior to its fall.

2. Higher and higher taxes—the spending of money for free bread and circuses.

It is hardly necessary for me to state that in this category, the United States is emulating the tax situation that existed in Rome's halcyon days before he bubble burst. Our Federal, State, and local governments have been on a spending binge that inevitably must end in a severe financial headache.

The Great White Father at Washington for the past 25 years has made the Roman emperors look like pikers, when it comes to free handouts. Paternalism, Roman style, is the order of the day along the banks of the Potomac. Initiative, self-reliance, and thrift are rapidly being replaced by sloth, dependence on government and waste. On the tax and wasteful spending issues, we are outdoing the worst efforts of the Romans.

3. The mad craze for pleasure; sports becoming every year more exciting and more brutal.

On this issue it can be said we follow the sad example of Rome only in part. As a nation we are fanatically pursuing pleasure. The shorter work week has given most of us an opportunity to indulge ourselves in that respect. However, we are not engaging in more brutal sports— the reverse is actually the case.

4. The building of gigantic armaments when the real enemy is within—the decadence of the people.

Well, America is building gigantic armaments to protect us from enemies abroad, the while we permit the enemies within—the Commies, the Fellow-Travelrs, the Socialists and the so-called "liberals" to undermine the American way which has been the chief source of our naitonal strength and well-being. Here again we follow closely the pattern set by Rome.

5. The decay of religion; fading into a mere form, losing touch with life and becoming impotent to guide the people.

Here, America seems not to be traveling the primrose pathway trod by Rome. During the past few years, there has been a reawakening to the spiritual values on which America was founded. Increased church membership and attendance are two evidences that our motto In God We Trust has been reinstated in the minds and hearts of the American people.

To sum up, America dangerously parallels the sad example of Rome on four of the five counts listed by Gibbon as having caused the decline and downfall of that once great Republic. This columnist hopes and prays that America, having started to reverse its course on the fifth count, this now great Republic will awaken to the grave danger inherent in the other four.

Bipartisan Approval

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cotton Trade Journal of Memphis, Tenn., of December 9, 1955:

BIPARTISAN APPROACH

For many years this country has followed a bipartisan foreign policy. This was based on the recognition by leaders of both political parties that our foreign policy was so vital to our safety that only united support could make it an effective instrument—especially in times of emergency. This practice was sound politics. More, it constituted statesmanship.

We need to apply the same caliber of statesmanship to our farm problems. The press is full of reports highlighting the controversial nature of the problem and emphasizing its prime importance as a campaign issue in 1956. Already the opening shots of the political cannonade have been fired, with everyone who orates on the subject—be he Republican or Democrat—striving to make a bigger noise than his predecessor.

Because of the fact that the farm problem has become a political football, candidates for office, potential candidates, and official spokesmen for the two parties are outpromising each other as to what they will do for the farmer if elected to or retained in office.

After all, we're dealing with a problem fundamental to the welfare not only of the Nation's farmers and farm families, but of the entire national economy. It is impossible that the farm situation should continue to deteriorate indefinitely while the rest of the economy remains at a high level. Wise and considered action is just as vital in this area as it is in foreign policy. Why not, then, apply the same bipartisan approach?

We suggest a national farm conference which would be attended by an equal number of Republican and Democratic legislators familiar with farm problems and representatives of farm organizations on a regional basis. To this gathering the administration would outline its proposed farm policy and invite discussion, criticism, and amendments. In this way a program might be hammered out which would be truly constructive.

With this approach, there certainly would be a far better chance for wise counsel to prevail. The objective of such a conference would be not to boost the prestige of either political party in the eyes of voting farmers, but rather to boost the farmers' income to where ti is more in line with the incomes of other segments of our national economy. Why not give this approach a try?

What's Right With America

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SMITH of Mississippi. Mr. Speaker, many Members of Congress who attended the national transportation outlook conference dinner of the United States Chamber of Commerce on Thursday, January 12, told me that the address delivered by Boyd Campbell was one of the finest expressions of faith in the American system that they had ever heard. Mr. Campbell is making an outstanding record as president of the United States Chamber. I am pleased to include his speech in the RECORD, in order that all Members may have an opportunity to read this very vital message:

You have all had a long, hard day—pulling and hauling the issues that affect the transportation industry into the proper perspective, and I know that you are tired. So I want to set your minds at rest right now.

You are not going to hear any profound observations on transportation from me—personally or ghost-written.

I wonder why people ever do that? I mean to say, I wonder why public speakers who are recruited from the outside for gatherings like yours persist in telling an expert audience what the expert audience already knows? It seems to happen so often. So I just decided that I am going to stay away from transportation tonight—except for one little thing. I would like to ask you one little question.

I will tell you why I want to ask that question. Here's why. It is flattering to me to be surrounded by so many experts in one particular field. I said to myself, "Now, there's a bunch of experts who could swamp the $64,000 program in 5 minutes flat if the subject happened to be transportation. They know how many miles it is between Shualak, Miss., and Canistota, S. Dak. They know what it costs to ship a boxer dog from Vinegar Bend, Ala., to Meeteetse, Wyo.—but I also said to myself, "I wonder how many of them know where the Southern crosses the Dog?" I have a small prize in waiting for the man who can give me that answer. Who has the answer? Come now, you must know it. Going, going, going, gone.

No response? No answer?

Well, now gentlemen, that alters things. After all, the Southern is a railroad. So is the Dog. I said I wasn't going to talk about transportation, but it just so happens that Where the Southern Crosses the Dog is the title of an old southern folksong which is part of the lore of the Mississippi Delta

country. The name of the town where the Southern Crosses the Dog is Moorhead, Miss.

The point I want to make is that you in the transportation industry are engaged in one of the most romantic industries in the world, and I wonder if you are too close to it to appreciate it.

Our book publishers and critics are saying that they would like to see more novels and fiction stories based on business. And you remember that Executive Suite and the Man in the Gray Fannel Suit were both best sellers. But our publishers say that this is only scratching the surface, and not getting down into the basic metabolism of business.

Why don't you tell them how wrong they are? The transportation industry has been the setting for songs, poems, short stories, plays, and novels for years and years and years.

Where the Southern Crosses the Dog is just one of heaven only knows how many songs that have come from the hearts of those who are inspired by the drama—the ever-changing drama of transportation.

How about Waitin' for the Robert E. Lee, Show Boat, Steamboat Bill, and Sailing Down the River?

How about Casey Jones and Chattanooga Choo-Choo, the Atchison, Topeka and the Santa Fe, and I've Been Working on the Railroad, and 27 other railroad songs that I forget right now.

The oceangoing vessel—merchant ship or man-of-war—has been a setting for countless novels and stories. The airline is a current favorite for fiction—and at least three of our most popular comic strips are based on aviation—maybe more.

The trucking industry has been glorified in story—and the buslines—well, have you forgotten the movie in which Clark Gable starred, It Happened One Night, and it was all about a bus trip?

John Steinbeck has painted the truck driver as the 20th century counterpart of the errant knight of the middle ages—and the barge line—and even the old Erie Canal—are always right up in there as background material for romantic episodes. And what about Tug Boat Annie, that perennial character in the Saturday Evening Post?

All right—so I have taken care of everything except the pipe lines—and perhaps you think I can't do that. I admit that it would be difficult to wrap a fiction story or a song around a pipeline—but we don't have to.

The word "pipeline" has become part of the American language. People say today that "So and so has a pipeline into that meeting," and what do they mean? Why, all they mean is that he has a private source of information into a confidential gathering, and your industry has provided that word for the rest of us to use.

You know—it took me 2 days and 2 librarians to figure out this stuff—but I hope you like it. My research contributed nothing to the solution of problems with which you will always be confronted. My efforts, however, did reconfirm these convictions: Transportation is the most imaginative and inspiring of all our great industries and in America it is the greatest, the most diverse, and the most versatile in the world—and that is one of the things which is so right about our country.

We hear so much—I think, too much—about what is wrong with America.

So I have chosen to speak on what is right with this country.

These are paradoxical times. We have never known such lush prosperity—so much abundance—such high employment—so much general well-being—so many opportunities—so lofty a scale of living.

There probably never was a time when people looked to private enterprise with more trust and confidence.

But so many men of business dwell on negativism—as if we were possessed by the gloomy gremlins of disaster—so much so that we have earned the reputation of being always and inevitably against—instead of for.

We voice our worries about agricultural surpluses—and the echo of our voices translates our language as meaning that abundance is bad—and scarcities good. We know that there must be—there will have to be a solution to the plight of our farmers—but how strangely our voices must ring in the ears of the world. With half the globe on the brink of starvation, we fret because we have more food and fiber than we can store.

Some of us read the stock-market report as though it were a fever chart—and unpleasant memories of black Friday in Wall Street blot out the reasoning power that tells us that this is not 1929. At the very least, we should be able to worry in terms of 1956.

Some of us are concerned with the rise in private debt; others concentrate their fears on the guaranteed annual wage. The increasing wealth and power of our labor unions is dscribed in nightmare language, and there are those who wring their hands about demands for increased social-security benefits as if we tottered on the edge of chaos.

These are only samples of problems and situations that disturb us. A longer list could be developed. I would not for a moment minimize the difficulties inherent in any one or all of them—nor suggest that we sweep them under the rug—and yet it is difficult to be downcast about them as long as we are free to use the resources of mind and spirit that brought us to the summit of power and responsibility.

Our present prosperity is the almost perfect tribute to the workings of our democratic capitalism. This ought to be our shining opportunity to entrench an understanding, a loyalty, a devotion, an individual dedication to the free-enterprise system and to our freedoms which made that system possible.

That is why I believe with all my heart that this is the hour to talk about what's right with America. People want to know. People need to know.

We have a story to tell about America—and it should be told in a positive manner. America is not Utopia. But, as a way of life, it comes closer to being Utopia than any other living pattern ever before devised by man, and we can always strive to make it better.

But we must quit defining it and describing it solely in terms of gross national product—of automobiles, bathtubs, telephones, and butter.

When we do that, we then make the same terrible mistake as the followers of Karl Marx. We are playing their game and overlooking the intangible but much more powerful spiritual values which comprise the bedrock and the real strength of the American system.

On the deep-laid foundation of individual integrity, freedom of choice, and religious liberty our fabulous productivity has been built. Our material well-being is an end product of our freedoms—and let us never confuse the foundation with the superstructure.

We have a great construction boom going on today. It surpasses anything in history. We are building homes, office buildings, factories, auto barns, motels and hotels. And, as we read the construction reports, we discover that we are also building churches, synagogues and other religious structures on an unprecedented scale.

And we are continuing to build more and better schools. We are giving more education to more people than any other nation in history. In short, they are better citizens. We know that—here in America.

In the year 1955 there were over 1,200,000 home-building starts in America. This represents something more than man-hours, mortar, brick, lumber, and steel. It reflects a deep-seated attachment to the spiritual values that center around the fireside.

And look at the book market. One of our best-selling books for many, many months is the life story of a young minister. Another best seller is authored by a minister. One of the most popular of all television speakers is a Catholic clergyman. A Protestant evangelist draws capacity crowds all over the world.

There is a wholesome interest in history and biography—and whether Davy Crockett belongs to Tennessee, North Carolina, or Texas is of little consequence.

There is something very much right, however, with America when an uncounted number of small boys have as their ideal an honest, bold-hearted, self-reliant personality in buckskin leggings.

We are properly distressed about juvenile delinquency, but is there any reason to forget the mighty legion of Boy Scouts, Campfire Girls, Cub Scouts, and Brownies, the 4-H Club members, and the Future Farmers of America—who outnumber the delinquents in the ratio of thousands to one?

A long list could be made of the things that are right with America, but one I like to think about is that our free-market economy—which means free labor and free management alike—has contributed in a large measure to the list.

We are developing a more enlightened perspective toward the age-old controversy as to poverty and wealth. Countless generations have been reared on the formula that poverty is a virtue and that wealth is a sin. With notable exceptions, such was the burden of thought among the ancient philosophers.

We know better today. While other nations may have rejected that half of the old formula which deals with poverty, it has remained for us to question both halves of it, to the infinite betterment of all mankind.

We are creating our own philosophy, that poverty is not of necessity a blessing, and that wealth is a public trust.

We say, in effect, that it is the use of men's means, material or otherwise, by which their value is measured.

The sin is the unused talent, personal or minted. We reject both the dollar and the man who refuses to rise to the opportunity for service to society.

A few weeks ago I had a letter from a little town in Texas, population 250. I should like to read it to you:

"DEAR MR. CAMPBELL: Perhaps this will seem like a strange request, but I am going to ask in the hope that you will see fit to fulfill it.

"I am a farm housewife, the mother of a 7-year-old daughter, Peggy.

"Since, in all probability, I will be unable to leave her anything much of this world's goods upon my death, I am making her a scrapbook of Americana.

"Mr. Campbell, would it be possible for you to send Peggy a letter about what you think of America, so that I can place it in her book

"If you can't do this, could you send your autograph and one of your busiess cards, as I do want you, as a representatives of American business, to be in my little girl's book.

"Thank you for your kindness, and may the Lord bless you.

"Sincerely."

I hope that letter challenges you as it does me. Do you want to help me write to Peggy? What would you say to her? How would you tell her about our country and its ideals and traditions—so that she would never forget?

There must be something terrifically right with this country when the mother of a 7-year-old daughter feels that the finest legacy

she can leave her little girl is a scrapbook of Americana.

It has been truly said and should be said repeatedly, that the American Revolution is one without end.

Here in America—not to the exclusion of other nations, but perhaps more than anywhere else—is the desire of the people to do justice, to love mercy and to walk humbly with God.

I am convinced that there is a reason for this. I firmly believe it is because we have enjoyed more liberty than other nations, more respect for the worth of the individual, less interference with private lives, less inclination to standardize the citizen.

Having all these things, it is a question of eternal vigilance to preserve them—not alone for ourselves, but—let us hope—for the sake of all who look to us to point the way to a better tomorrow.

The Wasteland

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from the Wall Street Journal of January 1, 1956.

THE WASTELAND—HOOVER GROUP SURVEYS VAST EXPANSE OF NEEDLESS EXPENSE

(By John Chamberlain)

Whenever a Hoover Commission task force was preparing to make a test tunneling into an operation of big government, it set itself five questions.

They were: Is this activity being conducted within the framework of the separation of the powers? Is it impairing congressional control of the purse? Is it transgressing on civilian control? Is it competitive in an unjustified way with private enterprise? Is it wasteful?

In Herbert Hoover's own mind, there was no particular reason to subordinate one criterion to another; all are manifestly important to the maintenance of the Republic. But when a government has grown from 572,000 civilian employees to 2,345,000 (annual payroll; $9 billion) within a 20-year span; when its annual budget has leaped from $4 billion to more than $63 billion; when it has 3 million men in uniform; when it owns $115 billion worth of personal property; when it possesses land equal to 25 percent of the acreage in 48 States; when its debt is over $280 billion—when, in short, it is the most gigantic colossus ever built in recorded history, it is only natural that the fifth criterion, that of waste—should bulk somewhat larger in the popular mind than the rest.

The waste is obviously present in the operations of big government no matter how or where you cut into the 19 Commission reports. Take the details of Government transportation, for example. Federal expenditures for transporting persons and property run to approximately $3 billion a year.

TRAFFIC JAM

The Army, the Navy and the Air Force maintain their own transport systems. On the other hand, the Government subsidizes private sea and air carriers, and spends a certain amount of money regulating the railroads. But in spite of the fact that private shipping is available, the Military Sea Transport Service of the Department of Defense grew from 160 vessels in 1950 to 221 in 1954.

This comes under the heading of competition with private industry, which might or might not be wasteful on balance, depending on who could deliver the most for the least. The anomalies turned up by task force investigators, however, would seem to indicate extremely poor traffic management on the part of Government agencies.

Item: Air shipments of dog food to Okinawa, ping-pong balls to Berlin, and 25,000 pounds of cement to Bermuda. Item: Carloads of canned tomatoes shipped by the Army from west coast to east while the Navy was sending almost as many carloads of the same commodity from east to west. Item: Flying an Air Force band from Westover, Mass., to Bermuda every month by military aircraft when it could have gone more cheaply by commercial carrier. Item: Buying antifreeze in Philadelphia and sending it to Oakland, Calif., where it could have been purchased for just a little more in the first place. Item: The 10 separate traffic manuals used by civilian agencies of the Government.

Or cut into the reports on Government retentionof surplus property, for a second example. At Mechanicsburg, Pa., the Navy Ships Parts Control Center had a 128-year supply of gear drives. The Army Signal Corps had on hand an authorized stock level of 1.5 million dry-cell flash batteries, which amounts to an 8- or 9-year supply of an item that has a very short shelf-life.

SOCIALIZED MEDICINE

Another prime example of wasteful duplication is to be found in the Government medical services. Twenty-six Federal departments and agencies engage in health activities, spending some $4 billion a year. Altogether the Government looks after the health of some 30 million people, either in whole or in part. Four million active Government employees, mostly in Army, Navy, and Air Force, get complete coverage. Twenty-one million veterans are entitled to some service, with 3.4 million who have service-connected disabilities receiving complete care. Three million dependents of active and retired military personnel are eligible for governmental hospitalization and 2.5 million Federal employees get on-the-job service.

Even with this fantastically elaborate commitment to what is in effect socialized medicine for almost one-fifth of the population, there is a startling state of overbuilding in the Federal hospitals. The cost of unused beds alone probably exceeds $1 billion. As for the used beds, 60 percent of the occupied bed space in Veterans' Administration hospitals is used for non-service-connected cases at an annual cost of $500 million a year.

No effort is being made to check on the finanical means of an applicant for any part of the 60 percent of bed space; indeed, questioning of sworn declarations of inability to pay is prohibited by law. An independent sampling of 336 non-service-connected patients in 1952 found that "1 had an income of $50,000; 25 had assets of $20,000 or more; 4 had assets of between $100,000 and $500,000." The proliferation of used and unused Government hospital bed space not only wastes money but ties up the time and energy of precious medical and technical manpower.

Much of the waste of bed space could be eliminated if some of the veterans' hospitals were turned over to civilian uses or leased to other Government agencies. (The civilian population, incidentally, needs at least 800,000 more hospital beds, according to the Commission's report.) And by applying a means test for non-service-connected veterans' hospital cases the Government might save some fairly prodigious sums.

STOCKING UP

Government purchases of food and clothing is also conducted in a wasteful way by the services and other agencies that neither cross check nor synchronize. The armed services provide some 10 million meals every day, and they buy at least 7 million complete sets of clothing each year while holding further amounts in reserve.

The 719 months' supply of canned hamburger in 14 Navy depots, the 79 months' supply of canned beef and gravy, and the 75 months' supply of canned ham chunks were some of the most heavily publicized items in the Commission task force's report on subsistence. Not so well known is the fact that the Army in 1954 had a 10.6-year supply of women's uniforms and a 9.9 year's supply of women's shirts.

The Commission task force estimated that the total $2.7 billion clothing inventory of the Department of Defense could be cut by more than $1.3 billion. The cut would save $3 million in annual warehousing charges. Central agency purchasing under business-like civilian control would obviously do much to eliminate the waste in handling the procurement of food and common-use articles by the military.

The Government spends $3.5 billion a year merely to store its own property, which is a sum almost equivalent to the entire Federal budget for 1930. The Army, Navy, and Air Force run their own independent storage systems, often in close proximity. Excess space is not reported in any orderly way, and cross-servicing is hampered by legalistic considerations. Some savings could be achieved by coordinating both the military and civilian agency storage systems, but as long as the Department of Agriculture has to buy and store price-controlled crops the annual storage bill will remain high.

Lending is another Government activity which has its wasteful aspects quite aside from the matter of competition with private banks and finance companies. For example, the Rural Electrification Administration lends money at 2 percent, whereas the Treasury pays 3 percent on long-term issues to provide the funds.

HIGH COST OF GOBBLEDYGOOK

The field of Government paperwork and bookkeeping is riddled with useless expenditures. The same information is often collected many times over. Government letters drip with "long words, long sentences * * * abstract nouns, passive verbs and dangling clauses." Government agencies use 55 style manuals where they might use 1. The task force investigating paperwork estimated that more than $22 million a year could be saved by removing a single line from a Government report filled out by employees. The line in question merely duplicated information which the Government was already receiving through other channels.

No doubt a certain amount of waste and duplication is inevitable in a Government as large as that of the United States. Good business management, however, could cut that waste to a minimum, and the Hoover Commission recommendations are eloquent with suggestions to accomplish this end. In the final analysis "big government" is in itself a waste when it attempts to do things which private citizens are perfectly capable of doing for themselves with less expenditure of total energy. But that is still another story.

Using Our Surpluses

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. BERRY. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following editorial from the New York Times of December 18, 1955:

USING OUR SURPLUSES

Secretary Benson's announcement that there will be a substantial expansion of shipments of American food surpluses to relieve hunger in needy countries is most welcome at this season. Wheat and corn are to be added to the list of commodities that have already come under this program. Eighteen private agencies will comprise the distributing machinery and the amounts to be given will be determined largely by their ability to get the products to those who need them.

There has always been an economic case against piling up surpluses through purchase in the effort to sustain a price level. But there can be no moral case in favor of hoarding food, anywhere in the world, when so many of the world's people go hungry.

At some time in the past food surpluses have actually been destroyed to sustain an artificial program. In the eyes of anyone who has not enough to eat such a course must seem wickedly hard-hearted. It should weigh on the conscience of any well-fed person.

The difficulty has been that of providing the right and adequate machinery for distribution. The agencies now in the field cannot hope to bring food to every person who needs it. But they are doing an inspired job. The fact that they will have more materials at their disposal should help them to work even harder, if that is possible. If they can help us to share our abundance we should be grateful, not for assistance in solving the surplus problem, but for the chance to make life a bit easier for those who are in want.

A New Approach

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hutchinson (Kans.) News-Herald of September 12, 1955:

A NEW APPROACH

After 40 years of wrestling with the farm problem, the Government doesn't seem to be any closer to an effective solution than when it first began, but it is entitled to a T for still trying. And the most recent tentative solution takes such a different approach from all past efforts that at the least it is worth an exhaustive study.

Heretofore the Government's attempts to keep agriculture financially healthy have been largely in the form of purchase of the surplus production and disposition of it at a great loss. Hereafter, if the present thinking of the Department of Agriculture is acted upon, the Government may pay agriculture for not raising the surplus, by leasing the excess acres and keeping them out of production.

The first reaction to this new approach is favorable. It should cost the Government much less to insure agriculture its equitable income and the Nation an adequate food supply.

The fertility of the soil is as much of a natural resource as is the country's oil supply. It is wanton to drain this resource for the production of unusable crops. Retiring the rented acres from cultivation until such time as some disaster again required their use, would permit a certain part of the original fertility to be restored.

It might seem economic nonsense for the Government to pay a landowner for not farming his fields, but is it any more nonsense than paying a 65-year-old for not working?

Seton Hall University Centennial

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Morning Call of Paterson, N. J., December 8, 1955:

A hundred years ago in a frame farmhouse outside the village of Madison a new school opened its doors to six pupils. Today that school, now grown to a 10-school university with more than 8,000 pupils, launches the celebration of its centennial year.

Seton Hall University with its spacious South Orange campus and branches in Paterson, Newark, and Jersey City is a monument to the faith of its founder, the Most Reverend James R. Bayley, first bishop of Newark, who cherished a dream of service to humanity and envisioned a college to educate the laity and provide priests for the newly formed diocese of Newark.

THIRTEEN THOUSAND ALUMNI

Named in memory of Bishop Bayley's aunt, Mother Elizabeth Ann Seton, founder of the Sisters of Charity in the United States, Seton Hall numbers among her 13,000 alumni distinguished citizens in every field of endeavor.

It is no small source of pride to the university that four of her distinguished sons preside over the Catholic community in the year of her centennial. Archbishop Thomas A. Boland, of the archdiocese of Newark, and his auxiliary bishop, the Most Reverend Juston J. McCarthy, are both graduates of Seton Hall, as are the Most Reverend James A. McNulty, bishop of the see of Paterson, and the Most Reverend George W. Ahr, bishop of Trenton.

Famous Seton Hall alumni in the world of sports include Andrew Stanfield, Olympics champion, and Walter Dukes, all-American basketball champion.

In the entertainment world the university claimed as a son, John Barrymore.

The first Catholic college in New Jersey, Seton Hall added another to its list of firsts with the establishment on July 5, 1954, of a coeducational college at 151 Ellison Street in Paterson, the only coeducational Catholic college in New Jersey or the entire metropolitan area.

ENROLLMENT TRIPLED

In September of 1955, at the beginning of its second year, Paterson College enrolled 800 students, almost tripling the initial enrollment of 273.

Msgr. John L. McNulty, president of the university, predicts that within a period of 5 years the university in Paterson will approach in numbers the enrollment on the campus at South Orange. The remarkable increase in enrollment within the period of 1 year marks the need for the university in the city of Paterson," he added.

Offering day and night classes to men and women, the Paterson unit has proved a boon to teachers and other professional people within the area, making it possible for them to improve their professional status while remaining at their regular employment.

The Reverend Thomas J. Gillhooly, dean of Paterson College and secretary of the university, attributes the phenomenal growth of the local school in no small part to the reception given it by the people of Paterson. "We have been received by citizens most remarkably," he declared. "Everybody has pitched in to help, and the hospitality leaves nothing to be desired."

RECALLS FIRST CLASSES

Father Gillhooley recalls that the first classes of Paterson College met in September of 1954 in two temporary locations, where they held classes during the renovation of the Ellison Street building, formerly the Elks Club. Day sessions were held at the Paterson Community Center at 311 Main Street and afternoon and evening classes at St. John's Cathedral High School on Oliver Street.

Last January 3 classes were resumed at the newly renovated building on Ellison Street with facilities including 15 classrooms, the library, cafeteria, and student lounge.

The local unit is one of three urban units branching out from the mother school on the campus at South Orange, where the school was moved in 1860 after having outgrown the facilities of the Morris County location. The university has two large buildings in Newark housing University College in addition to its law school, opened in 1951. It leases facilities at the Jersey City Medical Center in addition to the facilities of University College in Jersey City.

The 10 schools of the university cover the field of higher education in the arts and sciences, education, business administration, divinity, nursing, law, medicine and dentistry.

RESEARCH CENTER

In keeping with its aims of service to humanity, Seton Hall has made its facilities available to scientific and medical groups. The school has become a research center for the study of cancer-causing compounds and alcoholism in relation to mental disorder. Since 1948 it has held more than 300 postgraduate courses attended by more than 3,000 doctors and dentists.

Seton Hall has met the growing demands of business and industry by enlarging the department of business administration and offering new courses as the need arises. It is the only college in the State with courses leading to recognition as a certified insurance underwriter.

Such a record of growth and service might indicate to the casual observer that Seton Hall's path to success had been unshadowed by obstacles. A look at the history of the young school, however, will reveal a story of struggle and endurance.

FIRE LEVELED BUILDINGS

Three times within its first 50 years fire levelled or damaged the main campus buildings. The college weathered the turbulent years of the Civil War to find itself with a debt of more than $180,000 by 1885, with the enrollment at the same time showing an alarming shrinkage. In 1887 only 4 bachelors and 6 masters degrees were awarded.

Under the administration of the Reverend William F. Marshall, who succeeded the Reverend James Corrigan as president in 1888, the debt dropped to less than $5,000 by 1895, and Seton Hall entered the 20th century with an enrollment varying between 50 and 100 students.

Under the leadership of the late Most Reverend Thomas J. Walsh, who became president of the board of trustees in 1928, the college entered upon a new era of growth. In 1932 it was accredited by the Middle States Association and later gained membership in

the Association of American Colleges and the American Council on Education.

With the surge of postwar enrollment, taxing facilities to the limit, Seton Hall in 1947 initiated a $14 million program of expansion, to be climaxed next September with the formal opening of the College of Medicine and Dentistry at the New Jersey Medical Center in Jersey City.

Seton Hall became a university in June 1950, under the guidance of its 12th and present president, Monsignor McNulty, who took the reins in 1949.

With a century of solid achievement behind her, Seton Hall University faces the challenge of the future with renewed energy—truly a monument to faith and to a dream.

If It's Too Much Production

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Oklahoma City Times of November 15, 1955:

IF IT'S TOO MUCH PRODUCTION

One of the President's economic advisers addresses the farm problem in a vein that's familiar but without much bearing in the circumstances.

Gabriel Hauge says the farmer, "in return for the prodigious and successful effort he is making in turning out food and fiber, is not getting a return for his work that is in line with what other people are getting for their efforts in America today."

This is a political rather than an economic approach, of course, and it appears with regularity in most of the discussions of the farmer's mounting woes. Its obvious flaw is that it contains the inference that production solely for production's sake is good and ought to be maintained.

More relevant is the fact that the farmer's present difficulties are attributable precisely to the "prodigious and successful" efforts that Hauge applauds.

The farmers themselves appear to be under no illusions concerning the root of their difficulties. Members of the touring Senate Agriculture Committee are finding midwestern farmers almost unanimous in blaming their price problems on overproduction and surpluses.

If the problem is one of overproduction an obvious snare and delusion would occur in any proposed solution entailing incentives for even greater production. Not only would such proposals perpetuate the present scandalous waste of the taxpayers' money but they would react to the eventual disadvantage of the farmers themselves by perpetuating the surpluses.

Exactly that effect could be anticipated from restoration of the high and inflexible price supports which were introduced in wartime for the specific purpose of stimulating production.

Concerning the none too promising alternatives the outlook is by no means clear. But the President suggested the other day that the problem isn't a static one, and farm policy must be adapted constantly to changing conditions.

Of these changing conditions the most conspicuous is the mechanical revolution that's occurring in agriculture. With the spread of mechanized farming there has been an increase in the size of individual farms and a corresponding reduction in the working population that each farm will support.

These revolutionary changes are occurring outside the realm of politics and it's reasonable to suppose that the eventual adjustment will occur also without regard for politics.

As a matter of fact the adjustment is occurring already and has been going on for the better part of a generation. The growth of the cities and the continuing decline in farm population is a direct reflection of the contraction of job opportunities in agriculture.

The States that will prosper in the future will be those which take heed of these basic economic trends.

God's Hand in Our History

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. GATHINGS. Mr. Speaker, a most dynamic sermon was delivered on board the U. S. S. *Upshur* on its return voyage to the United States in September 1955 by Chaplain Richmond Alfred Hancock. Since the address was most significant in title and composition, I felt that the membership of this House would enjoy reading it. God's Hand in Our History is presented concisely and chronologically by Chaplain Hancock. The full text follows:

GOD'S HAND IN OUR HISTORY

INTRODUCTION

Our God whom we know and serve today is a God of purpose. If ever a nation could point to the hand of God in its history, our United States is that nation. God's hand is seen in our history as clearly as in the story of the Hebrew nation many years ago. In the march of mankind God's hand is always in the guidance of human affairs. Notice the history of some nations. God raised up the Hebrew nation to give to the world true religion. God raised up the Greek nation to give to the world literature and language to express the religion. God raised up the Roman nation to give to the world law, order, and highways that religion might be carried to the ends of the earth. God surely raised up America for a high and glorious mission.

I. Discovery of America

We can find God's hand even in the very discovery of America. Out on the sea the prow of Columbus' ship was headed straight for Delaware Bay. Then flocks of birds were observed flying southwest. Pinzon persuaded Columbus to change the course of the ship and follow the birds. Hence, Columbus landed on the little island of San Salvador of the West Indies rather than Delaware Bay. Columbus took possession of San Salvador in the name of Ferdinand and Isabella for Spain.

According to many scholars of history, the Mohammedans in the early days came near the American coast. They would have landed had their boats not been destroyed. This country was not destined to have the Mohammedan religion, but Christianity.

The Chinese make special claims to have discovered America. Their claim is that New Mexico was visited in A. D. 499, nearly a thousand years before Columbus. But no permanent settlement was effected. Why? Not to the Chinese as followers of Confucius, but to the followers of Christ was this country to be given. Surely His hand can be seen in our country's discovery.

II. Divine deliverance of America

His hand can unmistakably be seen in our Nation's divine deliverances. Three years after the Pilgrims landed at Plymouth a severe drought burned the grass brown and threatened to destroy the crops. The stock of food was destroyed and none could be depended on from England. In that dark hour, when all expected to die of hunger, the Pilgrim Fathers took refuge in God. For almost 9 hours they sought God on a day of humiliation and prayer. They pleaded to the Almighty until He heard them. Before evening rain began to fall; the refreshing showers continued until the parched vegetation was revived and the harvest was spared. The Plymouth company was saved by God's intervention.

Similarly, a century later, in 1746 when the French in Nova Scotia equipped 40 warships to destroy New England, the churches in the territory sat aside a day of prayer. Even while they prayed, a wind arose and became almost a hurricane and wrecked the enemy ships.

Again, in the devastating winter of 1777 prayer prevailed. The American struggle for independence seemed lost, when, at Valley Forge, the ragged Continentals hungry, ill clothed, disorganized, stained the Pennsylvania snow with their lifeblood, while not far away in Philadelphia and New York the Tories enjoyed a smart social season and the atheist Tom Paine wrote vicious attacks on George Washington's character. In these gloomy hours Washington, according to an eyewitness, knelt down, as thousands of Christians knelt in their churches during that crisis, and pleaded with God to sustain the dying American cause. Then the light did begin to dawn and the prospects for victory became brighter from then on. Divine delivery had come.

Who can deny that divine deliverance saved our country early in 1863. In that day it seemed that the Union would be destroyed. In the time of testing Abraham Lincoln proclaimed a day of prayer and penance, requesting the Nation to ask of God, "pardon for our national sins and the restoration of our now divided and suffering country to its former condition of unity and peace." The plea was answered.

III. Development

God's hand is seen not only in our discovery and deliverance but also in our development. In our earliest development our Nation has been led by great men. Recall the Constitutional Convention which met at Philadelphia. No such convention has ever been held since in the annals of time. It was composed of 55 men—and what men they were. Giants in intellect and moral character. Twenty-nine of these men were college or university graduates. Those that were not were men of imperial intellect. There was Franklin, the great philosopher; Washington, the great patriot; Madison and Hamilton, two of the greatest minds of their day.

Each of our Thirteen Original Colonies had a religious foundation. Their leaders had very few books but they all had the Bible and they read it.

The Charter of Virginia assured its colonists the right to live together in Christian peace.

The Plymouth Charter specifies that the colony is established to "advance the enlargement of the Christian religion to the glory of God Almighty."

The Delaware Charter defines one purpose of settlement as the "further propagation of the Holy Gospel."

Maryland's Charter explains that its first settlers were moved by a "pious zeal for extending the Christian religion."

The Masachusetts Bay Charter emphasizes that Boston was founded by men who wanted to bring the new world "to the knowledge and obedience of the only true God and the Saviour of mankind."

The early settlers of Pennsylvania came to America, according to their own declaration, for the spread of the Christian religion.

The Rhode Island Charter commits its people to the "true Christian faith and worship of God."

The Connecticut Constitution in its preamble pledges the settlers to help "preserve the liberty and purity of the gospel of the Lord Jesus Christ."

IV. Our destiny

Here is the question of supreme importance for us today. What of God's hand in our destiny? "Blessed is the nation whose God is the Lord." (Psalm 33: 12) "Righteousness exalteth a nation but sin is a reproach to any people." (Proverbs 14: 34). If America expects to survive without God, she is expecting what has never happened in the past and will never happen in the future. Many nations in past history have come and gone, but none have prospered without God on their side. Benjamin Franklin once said, "If it be true that a sparrow cannot fall to the ground without His notice surely a nation cannot rise without His aid." America has had God's help yesterday and we need God's grace and guidance today. How may we have it? We may have it by using the recipe which God has given in His word. The Scripture reference is II Chronicles 7: 14 when God replied to Solomon by night. "If My people which are called by My name shall humble themselves and pray and seek by face and turn from their wicked ways, then I will hear from Heaven, will forgive their sin and heal their land."

The highway to the presence of God is one thing that does not change.

The presence of God is determined by the attitude and activity of His people.

When we meet the conditions the promises of God become ours.

1. We need God in government.
2. We need God in business.
3. We need God in military circles.
4. We need God in our homes.

God is calling America today.

"And the Lord God whispered and said to me,
These things shall be, these things shall be;
Nor help shall come from the scarlet skies
Till the people rise.

"Till the people rise, My arm is weak,
I cannot speak till the people speak;
When men's voices are dumb, My voice is dumb;
I cannot come till My people come."

—*Angela Morgan.*

Alexander Hamilton's Birthday

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1956

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Passaic Herald-News of January 11, 1956:

ALEXANDER HAMILTON'S BIRTHDAY

One of the great minds with which the United States was providentially blessed at its birth was born on this date 199 years ago. Alexander Hamilton overcame tremendous odds to become one of our Nation's greatest statesmen. He was born out of wedlock in the West Indies and had to go to work at 12 when his father went bankrupt. At 14 he was managing a counting house in St. Croix. Friends who recognized his genius sent him to the mainland to complete his education. He was an aide to Washington in the Revolution and his services afterward as financier and statesman were invaluable to the new nation. Hamilton is summed up thusly in the Encyclopedia Americana:

"He was not popular, nor did he strive after popularity, but his memory and achievements are imperishable. He lived for the public good. Eloquent and refined, able and brilliant, the embodiment of devotion, integrity, and courage, he has left as deep a mark upon our political institutions as any other statesman America has produced."

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include my newspaper column, Keenotes, on the subject of the French elections and the resurgence of Western Germany. The column follows:

KEENOTES

(By Representative ELIZABETH KEE)

World history took a strange turn in the first week of the New Year. Just a few days ago the first uniformed German soldiers since World War II entered the United States to take training in modern arms and destructive weapons. The French elections have resolved themselves into a victory for no one. The chance of a stable government in that unhappy nation now seems more remote than before. These two events are very closely related, although one did not depend upon the other.

The facts are that, for better or worse, the hopes of the free world on the European Continent ride with the West German Republic. It is not a state of affairs that many people like, but the truth is, there is nothing anyone can do about it. While we must admire the great spirit of democracy that enables every Frenchman to vote for the party which reflects his own particular frame of mind, the tendency of the House of Deputies to be divided six ways from Sunday in all directions makes every French Government a temporary instrumentality that must depend upon the personalities of individuals rather than the will of the people. This is not to be construed as criticism of the Republic of France. It's their country and they can run it as they see fit. We wouldn't want them coming over here and trying to tell us what to do. We have no right to give them advice. However, when they step out into the arena of international relations, their position is considerably weakened by the inability of any government to stay in office long enough to effect a long range program. Cooperation of other nations with France is necessarily limited by this knowledge.

In Western Germany, there is no such problem. Chancellor Konrad Adenauer has built a mighty bulwark against the tide of communism. The continued growth of the German free enterprise system must be a source of great discomfort to the Soviet Union and their cronies in East Germany. I have heard some talk of the Germans as being unreliable in the face of a Russian offer to trade the eastern parts of Germany in exchange for the Bonn Government giving up its ties to the free nations. There is no sign that any such offer would be acceptable in any way to Mr. Adenauer or his political opponents, the Social Democrats. The talk in the Social Democratic Party a few months ago about neutralism and a co-existence policy with the Soviets has given ground to the realization that Russia's only interest in West Germany is to take it over. Of course, the German people still have a lot to answer for. The world has not forgotten the cruelties of World War II so soon, but the Germans are making a great effort to overcome this heritage from the years of the Nazis and it is to be hoped that, in time, they wil be able to sit down at the council table with all nations of the free world as a complete equal, made equal by their own effort. But this is a moral issue only and international politics is the great arena for the realist. The west Germans do not have to take a back seat to anyone in the fields of economics and politics. I can find only admiration for the splendid job they have done of rebuilding their nation. We can hope for them that soon their country will be united and free.

But even a divided Germany presents a more united front today than France. She has been weakened by her own sense of democracy, and democracy like all good things must be carefully administered and properly done, so that the voices of the erratic few do not drown out the wishes of the more sensible majority. And in France, I am afraid that is exactly what has happened.

The Milky Way

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post and Times Herald of January 9, 1956:

THE MILKY WAY

Amid the general agricultural gloom, the dairy industry has come forth with a report of progress in 1955 and buoyant hopes for the future. The industry is not wailing over the reduction of the Government's support price for butter. On the contrary, the American Dairy Association shows that, under the lower support price, butter is regaining some of its lost market. Nor is the improved situation of dairy farmers due to larger Government purchases at lower prices. Federal buying of butter, cheese and nonfat dry milk solids in 1955 will amount to only about half what it was in 1954. Yet the prices of dairy products improved slightly during the year and were above the Government support level most of the time.

The dairy industry did not cut production to achieve these results. Its output this year increased by about one billion pounds of milk. The improvement seems to be due largely to the expansion of markets through an intense promotional campaign carried on by the American Dairy Association and the National Dairy Council in cooperation with the Department of Agriculture. In short, dairymen have adopted business methods of expanding their markets. They represent themselves as being determined

that their milk "will go into stomachs instead of warehouses." They are fully in accord with Secretary Benson's comment: "There is no substitute for a market."

It does not follow that what the dairymen have done can be applied to every other branch of agriculture. But their cooperation, self-reliance and progressive attitude ought to be contagious. Certainly the only long-range hope for agricultural prosperity lies in the development of markets, adjustment of supply to demand, and increased efficiency in farm production.

Record Supports Vice President

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Diego Union of January 7, 1956:

WHAT MR. NIXON REALLY SAID—RECORD SUPPORTS VICE PRESIDENT

Ex-President Harry S. Truman recently made one of the most curious political comments in recent years.

In Seattle, Mr. Truman was asked a question regarding Vice President NIXON. His reply was:

"I don't like him, and I don't want to discuss him. He called me a traitor and if I was a traitor, then the country is in a fix." With some variations Mr. Truman repeated this in Los Angeles.

The statement was strange because the record shows no such comment by Mr. NIXON. It would appear that such an accusation would have been too big to go unreported. The former President deliberately twisted the facts perhaps to gain public sympathy or perhaps for his own political reasons.

Thorough search of the record shows the Vice President carefully stating on numerous occasions that he did not question Mr. Truman's loyalty, only his judgment.

Mr. NIXON'S typical analysis is found in a speech published in the CONGRESSIONAL RECORD of January 26, 1950:

"Why was it that (Democratic) administration officials persisted in their refusal to act through the years, even when substantial evidence of espionage activities were brought to their attention? A number of reasons have been suggested for this failure. On the other extreme, there are some who claim that administration officials failed to act because they were Communist or pro-Communist. I do not accept this charge as a fair one * * *."

Early last year Democratic leaders claimed the Vice President had accused their party of 20 years of treason and of being a party of treason.

In an address in St. Louis in September 1954 Mr. NIXON stated his own opinion on the subject by saying:

"The great majority of Americans, the great majority of Democrats, independents, and Republicans, all, in America, are against communism."

This was enlarged upon a few weeks later in Los Angeles when the Vice President said the Reds opposed Republican candidates "not because there is any difference in the loyalty of Democrats or Republicans" but because of the administration campaign against Communists in Government.

The smears against Mr. NIXON cannot be charged to mistakes or misunderstanding. It is inconceivable that Mr. Truman and other Democratic Party leaders are not well aware of Mr. NIXON'S carefully stated position on loyalty.

The only conclusion possible is that this is part of a well-organized attempt to undermine the Vice President's hard-hitting campaigning in advance of the 1956 races. This appears to be an attempt to deceive the independent voters by twisting words and facts to make it appear that Mr. NIXON is reckless in his comments.

We doubt if Americans are as gullible as Mr. Truman and his cohorts seem to believe.

The Farm Message

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York World-Telegram and Sun of January 10, 1956:

THE FARM MESSAGE

Our farms have been producing too much and, if the Government's agricultural policy is not changed, they will go on producing too much—which is bad for the farmers themselves as well as for the taxpayers and the national economy.

So the problem is (1) to get rid of the existing surpluses and (2) to prevent the accumulation of more surpluses without making the farmers' economic position any worse.

President Eisenhower in his farm message to Congress has offered a program designed to solve both aspects of the problem, at least partially.

He would permit present surpluses to be sold abroad, in barter or for cash, and to any country—Communist or friendly. Within the United States they could be sold for the support price plus carrying charges and, through the temporary acreage-reduction program, be certified to farmers themselves in return for taking an appropriate acreage out of production.

Through the soil bank approach the President would seek to take a portion of the present cropland out of production, to avoid the likelihood that acreage restrictions which reduce surpluses of one kind of crop simply would lead to surpluses of other crops. The farmer would be reimbursed, for putting poor land into timber, forage, or water storage and for permitting good land to lie idle.

The conservation involved in this is important, for as our population increases, our farms will be called on to produce more and presumably we will need more acres in cultivation.

There is no assurance that the program the President recommends will solve the farm problem. No one knows how much of the surpluses can be disposed of, here or abroad, under any kind of program beyond giving them away. Nor can we be certain, in the face of technological improvements, that surpluses will not recur even if crop acreage is reduced again and again.

But we do know what will happen if Congress should adopt the alternative some Members are advocating—a return to 90-percent price supports—because maintaining them after World War II is what got us into this mess in the first place.

The President's program offers some hope of progress toward adjusting farm production to the demands of the market. Hence it is worth trying.

Diversification

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Boston Sunday Herald, Boston, Mass., Sunday, November 20, 1955, which I find to be a most cogent column on a subject of vital interest in New England:

STABILIZING JOBS

The greatest single blow to the New England economy in recent years has been the decline of the textile industry.

In Massachusetts this backbone industry supported a payroll of 235,000 in 1923 and 96,000 in the recession year of 1938. It is now down to 70,000 with little prospect of recovering its former standing. Naturally the whole economy has felt the impact.

But to the extent that lost textile jobs have been replaced by higher paying, more stable ones in other industries, the net effect has not been too bad. In fact diversification of industry and employment here has had some distinct advantages.

This is pointed up by an article in the current quarterly statistical bulletin of the State division of employment security. For the past 8 years, the bulletin states, the textile industry has been drawing upon the State unemployment fund for anywhere from $1.3 million to $20.5 million a year more than it has contributed. No other industry has created such a drain. Except for it, the unemployment-tax rate would not have had to go up in 1950 or the law be revised in 1951.

But all this has happened. It is passed. And no such shakedown is apt to afflict us again.

"Much of the decline in recent years," explains the Bulletin, "has resulted from the transfer of operations to other States and/or the liquidation of Massachusetts mills. Over the last few years, most of the mills which operated under the job-rotation system have closed permanently, and most of their displaced employees have exhausted all benefit rights. It seems unlikely, therefore, that this industry at its present level could, even under the most adverse circumstances, represent so heavy a net charge to the fund in the years to come as it did in the 8-year period ending with 1954."

The loss of the textile jobs is still a tragedy. But the jobs which have replaced them are good jobs—in electronics, in the durable-goods industries, in services. And the new job pattern is undoubtedly more healthy.

Diversification means steadier overall employment. It means a stronger unemployment reserve fund. It means that the liberalization in unemployment benefits which Governor Herter has advocated can be enacted next year without danger to the fund. It may permit still further liberalization.

A human problem remains. Many of the individuals displaced by the decline in textiles have not found new jobs elsewhere. The Bulletin rightly points out that these people are everybody's problem. An effort must be made to absorb them again in the work stream or, failing that, to provide for their needs outside it.

But the overall picture is not unhopeful. At lease one of our toughest problems is beginning to solve itself.

The Farm Program

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Baltimore Sun of January 10, 1956:

THE FARM PROGRAM

Before the political skirmishing over the President's farm proposals get any heavier, both Republicans and Democrats would do well to pause and see if they cannot agree on two points. First, that any farm bill passed by Congress should give promise of reducing the huge, price-depressing surpluses of corn, cotton, and wheat now held by the Government. And, second, any such bill should seek to reduce the amount of land in production. Proposals which do not accomplish both these ends will be pure temporizing.

The great virtue of President Eisenhower's recommendations yesterday is that they are aimed at this dual goal. Under the short-term, voluntary acreage reduction proposal the Government would seek primarily to reduce the surpluses. Wheat farmers, for example, who voluntarily cut their planting even below the price-support quotas would be entitled to buy a comparable amount of Government-held wheat at prices attractive enough to insure them a reasonable profit. Or they could choose simply to take cash and the Government would market a corresponding amount of surplus wheat and thus reduce the Government holdings.

Under the long-term conservation reserve program the primary objective would be to reduce the total acreage now in price-depressing competitive production. Not only farmers with price-supported crops but all farmers would be entitled to cash payments for taking land out of cultivation and putting it into soil-preserving use. Here the double goal is to reduce the acreage now used for producing crops which are not needed and to enhance the value of the land so that it can produce more in the future when the growing population will need such farm products.

Whether the precise details of these proposals are the most desirable we do not presume to say. But it ought to be clear to both Republicans and Democrats that no votes will be lost and farmers will be helped—not just in an election year but in the long run—by application of the principles on which this program is based. Insistence upon rigid, 90 percent price supports would surely make the achievement of both goals more difficult. If the agriculture of this country is to be managed in broad outline by the Federal Government, and that seems an accepted fact now, those responsible for managing must have a reasonable degree of flexibility. If they are going to insist that farmers make certain voluntary choices then they must have the means of encouraging or discouraging the proper choices by a judicious control of the price-support level.

Resolution Favoring Proposed Amendments to the National Banking Act Adopted by City Council, Springfield, Ill.

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed a resolution adopted on December 27, 1955, by the city council of Springfield, Ill., favoring proposed amendments to the National Banking Act permitting commercial banks to deal and trade in municipal and other public revenue bonds.

The resolution follows:

A RESOLUTION FAVORING PROPOSED AMENDMENTS TO NATIONAL BANK ACT PERMITTING COMMERCIAL BANKS TO DEAL AND TRADE IN MUNICIPAL AND OTHER PUBLIC REVENUE BONDS

Whereas municipal governments and other public bodies now have the assistance of commercial banks in the underwriting and trading in general obligation bonds, but the National Banking Act now prohibits commercial banks from so participating in the trading and underwriting of municipal revenue bonds; and

Whereas authorization of commercial banks also to engage in the sale of and underwriting of municipal revenue bonds would broaden the market for such bonds and increase competition in their sale, and thus tend to lower the interest rate of such securities, all to the advantage of local governments and their citizens; and

Whereas it appears that proposed legislation will be introduced in the 84th Congress convening in January 1956 amending the National Banking Act so as to authorize commercial banks to underwrite and deal in municipal revenue bonds: Now, therefore, be it

Resolved by the City Council of the City of Springfield, Ill., That it recommends passage of said proposed amendments to the National Banking Act so as to permit commercial banks to deal and trade in municipal revenue bonds; be it further

Resolved, That the city clerk be authorized and directed to forward a copy of this resolution to the Honorable EVERETT M. DIRKSEN and the Honorable PAUL H. DOUGLAS, Members of the United States Senate from the State of Illinois, and to the Honorable PETER MACK, Member of the House of Representatives from the 21st Congressional District of the State of Illinois, and to every other Member of the House of Representatives from the State of Illinois.

Presented to the council this 27th day of December A. D. 1955.

Passed, December 27, 1955.
Signed, December 27, 1955.
Recorded, December 27, 1955.

NELSON O. HOWARTH,
Mayor.

Attest:

O. MACK WAGNER,
City Clerk.

Censorship—Washington Style

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address I delivered over station WMEX, Boston, Mass., Saturday, September 17, 1955:

It is a strange state of affairs when the American Government is so fearful that its own people should know certain truths, that foreign governments often know more about our own national business than the American people do.

This might be described as "political censorship," to cover up shortcomings and blunders that would have an adverse effect on public opinion.

In any case, its puts the spotlight on the problem as to what should be withheld for the sake of national security, and what should be revealed under the fundamental right of Americans to know what their Government is doing, whether it is good or bad.

The most recent instance was the Dixon-Yates arrangement, where private power interests were trying to scuttle public power. When the news leaked about the cozy huddle between private banking interests and Government officials, that put the brakes on a sly maneuver. Dixon-Yates was quickly abandoned. A smokescreen was thrown up to cover the retreat.

Article 1 of the Bill of Rights guarantees freedom of the press, * * * among other freedoms.

This does not merely mean that the press shall be free to publish the facts that it gathers without censorship on the part of Government.

It implies as well, that the press shall have access to information concerning the operations of Government, within the limits of security.

That word "security" is sometimes used as an excuse for denying to the people, those facts that they have very right to know.

We have been led to expect, by constant reassurances from the Department of Defense, that our Air Force was substantially ahead of the Russians, not only in the performance of planes actually in use, but in research, development, and production time.

On May Day, however, the Soviets staged an air parade that revealed advanced models every bit as good as ours, and proved that they were able to develop them, from the blueprint stage, to actual flight, in much faster time than we have been doing.

Again, it was through private news sources, rather than the Government, that we learned of this success on the part of the Soviets. Perhaps this knowledge, now public, will prod the Department of Defense into getting better results for the vast sums we are appropriating in order to have an Air Force superior at all times to that of the Russian Communists.

We have not seen the end of this, for the cat is out of the bag.

There is a never-ending contest going on between the press and the presidency, no matter what administration is in power.

Newsmen have to dig up stories, as well as report routine events.

Oftentime, and with some justification, they believe that Government agencies hide the facts.

Government officials, on the other hand, would rather have the newsmen accept their

press releases, without embarrassing them with probing questions. They are very sensitive to criticism, and sometimes conduct themselves as if they were running a private business, instead of a public agency that should be accountable at all times to the people.

Insiders knew for a long time that Russian pilots and Russian tankmen were fighting against our forces in Korea, but this information, for reasons that no one could comprehend, was classified as secret, and was withheld from the American people.

In the meantime, Russian propaganda was blasting us around the world for intervening in Korea, while we had a comeback that we decided not to use.

A prime example of "dead-end" censorship.

The Washington Post and Times Herald said editorially on June 21 of this year, concerning the news policies of the Federal Government, and I quote: "But their philosophy, even in a period of cold war, is a dangerous one for a country in which the successful operation of government depends on public enlightenment. For the idea that information is something that belongs to the Government to use as it sees fit comes perilously close to the concept of government for government's sake."

When government wraps itself in a mantle of secrecy, there is no way of discovering incompetence, neglect, and corruption, of exposing such deterioration and correcting it.

Some people think that the strict censorship of a dictatorship gives it an advantage. This is not so. The bureaucrats in Soviet Russia have made many serious and continuing blunders that were covered up by censorship for too long. The breakdown in their agricultural program at last came to light because they had to admit it before disaster overtook them. Now, instead of criticizing everything in the United States as a failure, they want to send people over here to find out why our agricultural methods work to produce abundance, while theirs only produce scarcity. The Iron Curtain of secrecy they erected around their own empire, and its operations, has produced an economic crisis. If communism had given away to a free form of government, with an independent press, legislative body, and an informed public, the people of Russia would not be suffering as they are now.

There is in this a clear warning for the people of the United States. It is not enough for us to elect a National Government, and then lose ourselves in our own private lives until the next election rolls around. We must have a continuing flow of reliable information concerning the job our Government is doing. In between elections, this is the only opportunity we have to check up on our public stewards, and to prevent them from making the wrong decisions.

We can never afford to have a few men in high places decide what we shall know, or what we shall not know.

The security and the progress of our Nation is dependent upon the participation of all our people, utilizing the wisdom and the resources of the whole that we call public opinion.

In this connection, the press itself has a great responsibility.

In the transmission of news, it must avoid the temptation to feature those reports that fit its editorial policies, and to bury those that contradict it.

As long as we have thousands of news outlets, and laws to protect us from monopoly in the gathering and dissemination of news, there is little to fear from the press.

It is the Government that we must watch.

Washington is the news center of the world.

Here is the nerve center of a vast and powerful Government whose policies and actions have a bearing upon the lives and fortunes of every American.

As citizens, we are all shareholders in that Government, and we have the superior right to know how it is being managed, and what it is actually doing.

No one advocates the release of information concerning special weapons and their performance, which the experts believe are unknown to the Kremlin.

But the cult of secrecy is extended far beyond practical caution.

It is used as a pretext to conceal mismanagement, fraud, and injustice.

It becomes the tool of intolerance.

Officials, to hide their own mistakes, would like to classify everything as confidential, secret, or top secret, so that the words themselves cease to have any meaning.

A Senate investigation into military procurement reveals how corruption thrives in secrecy.

This has led to the proposal that the United States Government should establish an Office of Inspector General, with a staff of highly trained investigators to ferret out fraud and corruption in the Federal service.

This proposal, as well as other investigations of Government operations that have become epidemic in recent years, would be unnecessary if the Government did not try to hide so much.

A government with little to conceal from its own people would have no occasion to give evasive answers to the press.

Even today, for instance, we have no reliable information concerning the dangers of radioactive fallout, or what we should do to protect ourselves against it.

The bungling of the Salk vaccine program; and the mystery surrounding the peacetime uses of atomic energy; are as nothing compared with the secret diplomacy that has always been favored by our State Department.

Based on the assumption that the less people know about these matters, the less criticism there will be for those on the top.

A convenient policy for leaders who want to have their own way, but hardly an American policy.

The larger and more complex our Federal Government becomes, the greater the danger that it will consider itself to be more important than the people from whom it derives its powers and its responsibilities.

Newspapers, radio, TV—plus individual Senators and Representatives—are alert to this trend.

Whenever they seek the facts about Government policies and operations, they often find themselves stopped by the invisible wall of censorship. Buckpassing is the most convenient device. But Federal officials are relying more and more upon the excuse that the information sought is classified as secret, to stop the search in its tracks.

The solution?

We had a good system of voluntary censorship during World War II.

This did not depend on withholding information from the press, or clamping down on it. Instead, the press in this country (free from certain restrictions that were necessary in the combat areas) was given access to much information. It was then put upon its honor not to publish anything that might jeopardize the national security.

Perhaps we might develop a similar working arrangement between representatives of the press—and Government—today. So that there will be no barriers in the way of legitimate news.

The freedom of information committee of the American Society of Newspaper Editors is disturbed by this tightening up on news sources. As it stated, and I quote: "The criticism of some recently released material has left officials, the press, and the public without any standard of release upon which they can rely to defend the disclosure of technical information. Unless this attitude is clarified, it is bound to have a profound and paralyzing effect upon the flow of information to the American public.* * * Only the most strenuous exertions of those who understand the degree to which information is vital to our liberty will preserve it against those who think secrecy is vital to our safety."

The American people have the right to know, up to the highest limit consistent with genuine security, the facts about the operations of their Government. And without whitewash.

No administration is justified, on the basis of personal and political reasons, for keeping them in the dark.

Adequate Highways: How and When

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. McGREGOR. Mr. Speaker, may I quote from President Eisenhower's state of the Union message to Congress January 5, 1956:

In my message of February 22, 1955, I urged that measures be taken to complete the vital 40,000-mile interstate system over a period of 10 years at an estimated Federal cost of approximately $25 billion. No program was adopted.

Continuing my quote from the President's message, and I quote:

If we are ever to solve our mounting traffic problem, the whole interstate system must be authorized as one project to be completed approximately within the specified time. * * * Furthermore, as I pointed out last year, the pressing nature of this problem must not lead us to solutions outside the bounds of sound fiscal management. As in the case of other pressing problems, there must be an adequate plan of financing. To continue the drastically needed improvement in other national highway systems, I recommend the continuation of the Federal Highway Act.

That, ladies and gentlemen, was a statement of the President of the United States and I am in accord with it 100 percent. I want to make it perfectly clear that I favor and will do everything I can to put into a law an adequate highway program, both for the interstate and the intrastate and I will be for a reasonable program whether it goes into effect as a one-package bill; or the interstate and intrastate in separate pieces of legislation.

The 1954 Highway Act, which it was my privilege to author, is a biennial highway authorization and it expires June 30, 1956. This bill authorized $315 million primary; $210 million secondary; $175 million urban, and $175 million interstate plus various amounts for forest highways, roads and trails, parkways, Indian reservation roads, and so forth. This total amount approximately equals the amount of revenue brought in by the 2-cent per gallon Federal gas tax.

This authorization is financed by taxes now in existence and no additional taxes would be necessary if the existing law, 1954 Highwy Act, Public Law 350, would be reenacted. Additional amounts or al-

locations could be added to each system, possibly $100 million total and we would still be within the limits of the revenue brought in by existing taxes. I am of the firm conviction that this law could be reenacted with very little opposition. You know the history of the Clay committee bill as well as the so-called Democrat or Fallon bill that was before the last session of Congress. Both bills were defeated and, in my opinion, because of the financing involved. Some refused to accept the Clay committee bond recommendation which called for $25 billion worth of bonds for highway purposes extending over a period of years. The Congress also defeated the so-called Democrat or Fallon bill because many felt that the revenue raising features or taxes were not equitable. Regardless of the arguments pro or con, the program was defeated. Regardless of the merits or demerits of the interstate-highway program, which is to be financed by an entirely new financial program, the question arises, Shall the interstate system, with a new financial program requiring additional taxes, be incorporated in the same legislation that includes the intrastate system primary, urban, and secondary roads when the financing is already established and no new taxes are necessary?

I hear the same arguments, and some new ones, on the floor of Congress and on the Hill that I heard last August. No one seems to object to the intrastate bill but most everyone seems to object to the interstate proposal financing program. Most everyone, with some exceptions, wants an interstate highway but they want the other person to pay for it. I hear some old arguments renewed, with more emphasis relative to financing the highway program and I am referring to the governor's conference group, and others, insisting that the roads, both interstate and intrastate, should be financed from revenue derived by the Federal Government from existing excise taxes on automotive products paid by highway users. A very fetching appeal. I would like, however, to point out some of the facts of life regarding this approach. Excise taxes levied by the Federal Government have been and are now levied and justified as a source of revenue for the general support of government. I know as well as you that while the Federal gas tax was never levied as a highway user charge, that developments over the past 10 years have more and more led to its being accepted as such and I think we all understand the reasons behind this acceptance. The excise-fuel tax yields approximately $1 billion a year. The total excise yield to the Government from this and related automotive excises now reaches $2.5 billion. I question seriously whether we are entitled to consider these excise taxes as highway user charges, certainly those taxes beyond the Federal fuel tax and lubricating oil taxes. I question the physical soundness of a move in this direction, at least beyond the Federal fuel tax. The other excises can, by no stretch of the imagination, be considered a fair measure of highway use. Congress at no time by legislative action has ever identified these excise taxes as highway user charges.

To earmark the total yield of the automotive excise taxes for highway purposes, as some are recommending, would deprive the general revenue now used for support of the Government of an additional $1½ to $2 billion over and above the fuel tax yield. This would unbalance our Federal budget to the tune of $1½ to 2 billion and would have to be made up from other tax sources if the budget is to be balanced and, ladies and gentlemen, the budget is balanced for the first time in many years. I am asking you would you deplete our existing general revenue fund by that amount of money to build highways? If you would, what tax would you recommend to take its place to make up this deficit? Would you want me to support or would you, if you were in my position, support an increase in the income tax, for example? Faced with this choice, it would seem to me—and I hope that you will agree—to be a sounder financial procedure to consider the levying of additional equitable charges on the highway users, who are the direct beneficiaries of a greatly expanded system, in some manner related to the benefits they derive.

May I again quote from the President, who has said on numerous occasions, and I quote:

> A sound Federal highway program, I believe, can and should stand on its own feet with highway users providing the total dollars necessary for improvements and new construction.

Another important factor should be considered when we are even thinking of depleting the general revenue fund. We all know that the general tax funds of all levels of our Government—Federal, State, and local—are presently drained nearly dry and with our tremendous increase of population, the burden placed on the revenues in the foreseeable future will require all the talent and ingenuity we have to prevent the complete destruction of our various government structures. The increasing demand for schools, hospitals, welfare, social security, sanitation, public buildings, and playgrounds presents us with a general revenue problem of staggering proportions. So, before your organizations or any of you individually proposes to deplete the revenue fund by $1½ to $2 billion for highway purposes, give consideration to the other urgent and, yes, vital needs.

It is never possible to devise a tax acceptable in full degree to those upon whom the tax is imposed. No tax that this Congress or any other Congress may devise will be completely painless to that individual or group upon whom the increase falls. I, personally, believe that there is equity and fairness in the theory that the highway user charge principle should be applied on the basis of benefits derived. I state positively and publicly that I do not believe that such a user charge should be punitive. The justification of levying a tax is to soundly finance an adequate highway program and not to exterminate or discriminate unfairly against a legitimate highway user.

I have endeavored to explain my position relative to a new financing program. You can readily see that it is controversial and subject to a great deal of discussion but remember, one thing ladies and gentlemen, if you are going to build highway somebody has to pay for them.

The controversial subject of financing the new program for the interstate system is not applicable to the existing law which was passed by nearly a unanimous vote of the Congress in 1954 and which I authored. It is known as the Highway Act of 1954. It expires June 30, 1956. I have previously given to you the amount of money that it spends for highways. It can be renewed and no new tax required over the existing taxes. I repeat, why jeopardize this new program now in effect by incorporating in the same legislation a 10- or 15-year highway construction program newly and entirely differently financed and which, in my opinion, will jeoepardize the passing of the existing law.

I firmly believe in an adequate highway program, including the interstate system as well as the intrastate system but I do not want the existing highway program destroyed and scuttled because of the insistence of some to incorporate into the legislation, soon to be before the Congress, new ideas including financing and distribution. I think the interstate system is strong enough to stand on its own merits in its own legislation and I think the proponents of the interstate system are weakening their position when they are attempting to have it carried in the program of the existing law. Let us not jeopardize the existing program that is working so well. Let us have a 10 year or 12 year interstate program in separate legislation and let us continue our intrastate highway program, bringing it before Congress once every 2 years for a look-see by the membership of Congress at that time.

Federal Aid for Flood Protection

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from Labor which I am certain will be worthy of perusal and be profitable reading:

LAYS FLOODS AT DOOR OF POWER TRUST

Maybe no flood control works would have completely saved the New England States from their two dire flood disasters in recent weeks, but there would have been a lot less destruction and loss of life if that region had not surrendered to the private power trust. For many years Labor has been pointing out a situation which was well summed up this week in a Washington Post editorial. It says:

"New England has resisted the recommendations of the Army engineers and other flood control proposals—in large part out of a doctrinaire distaste for creeping socialism. Every suggestion of flood control by multipurpose dams, which would generate electric power, has encountered the adamant opposition of the private power companies.

"The whole New England river situation should receive fresh and unprejudiced scutiny. And it would be well to bear in mind that there is nothing more creepingly socialistic about Federal aid for flood prevention than about Federal aid for the victims of disaster."

If the New England States continue to bow to the power trust and pay its exorbitant rates, they can't blame New England industries for moving elsewhere to get cheap public power and safety from flood disasters.

Natural Gas Legislation

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Washington Post and Times Herald of January 13, 1956, together with certain comments of mine on the editorial.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

THE PRICE OF GAS

The attempt by Senators MONRONEY and FULBRIGHT to penalize the Washington Gas Light Co. for its opposition to the Harris-Fulbright natural gas bill is wholly unwarranted and assumes the nature of a punitive act. The gas company has every right to oppose the Harris-Fulbright bill without being subjected to special harassment by Congress. To single it out, as Senators MONRONEY and FULBRIGHT would do, and to require it to publish on its bill a breakdown of gas costs, would be to punish the company for acting in what it regards as the public interest.

The truth is that the company seems to be speaking more in the public interest than Messrs. MONRONEY and FULBRIGHT, who are asking Congress to exempt gas producers from utility-type regulation. Everett J. Boothby, president of the Washington Gas Light Co., said he opposed the exempting legislation because it would make it possible "for the few thousand gas producers to get substantial windfall profits from millions of gas users." He is supported in that contention by a good deal of evidence and by what appears to be nearly half the Senate.

When the Harris bill passed the House last year, it seemed to this newspaper that there were sufficient safeguards in it to protect the consumer from spiraling gas prices. At least it seemed worth taking a chance on the bill in the interest of limiting the domain of Federal power and permitting free competition to have its play. But because of certain technical amendments which permit escalator clauses in contracts and because of other features that insulate the producers from price regulation, the opponents of the measure now seem to have the stronger argument. In a matter so complicated we recognize that there is room for honest difference of opinion and that it is almost impossible to arrive at a completely clear picture of what would happen under the proposed legislation.

However, the argument that the bill does not adequately protect the consumer and ought to be strengthened is backed by impressive testimony. Senator DUFF of Pennsylvania, who has had great experience in the oil business, is persuaded, for example, that "excessive increases in the price of gas might occur as the result" of this legislation. He adds:

"While it is true that the nature of the natural-gas business makes it exceedingly difficult of equitable regulation by yardsticks normally used in utility regulation, it is also true that serious abuses have arisen as the result of favored-nation, escalation, and spiral-escalation clauses that have resulted in millions of dollars of increased prices to the consumers by private negotiations and renegotiations in which the ultimate consuming public has had no representation and no voice whatever."

The proposed bill would not exempt the gas producers from all regulation but would strictly limit the FPC in its regulatory function. For example, it would authorize the Power Commission to establish reasonable market price in future contracts without defining the term or setting any standards for the guidance of the commission. In a field in which real competition is limited by the physical difficulties of moving pipelines, reasonable market price might reflect more what the producers thought they should have than any relation to cost of production.

The language of the bill also is obscure with respect to the escalation clauses, which say, in effect, that if a pipeline has a contract with Producer A and then offers to pay Producer B a higher rate he must also pay the higher rate to Producer A. The Senate, at least, should satisfy itself that FPC has full power to prohibit unjustified increases as a result of the escalation clauses. Senator DUFF and other opponents of the measure—including the Washington Gas Light Co.—do not believe that the bill as written provides sufficient safeguards.

If there should be excessive price increases for natural gas, industrial users might turn to other fuels. But residential consumers who had invested in equipment to heat their homes and cook their food with gas could not easily switch. The pipeline operators and local gas distributors are carefully regulated by public utility commissions. Can this regulation be effective—in view of the talk among producers of prices double those of today and 10 times those of 1946—unless the consumer interest is protected in the bargain made at the well-head?

STATEMENT BY SENATOR DOUGLAS

At the time of the House debate on the Harris bill last year, the Washington Post stated editorially that the bill was a compromise which seemed worth trying. The Natural Gas and Oil Resources Committee, propaganda agency for the gas industry, welcomed what it regarded as an apostate from the ranks of the opponents of the bill. Thousands of reprints of the editorial were distributed across the country, with the word that this was from a newspaper that had "switched sides." Perhaps it was more than thousands of copies, for that committee says it has distributed more than 5 million pieces of printed material in the effort to secure passage of this legislation.

Actually the editorial support for the bill was rather equivocal. But last Friday, January 13, 1956, the Washington Post dispelled the doubts which had arisen concerning its vision and devotion to the public interest on this issue with an editorial unequivocally condemning the attack on the Washington Gas Light Co. for its opposition to the natural gas bill. In part the editorial stated:

"The truth is that the company seems to be speaking more in the public interest than Messrs. MONRONEY and FULBRIGHT, who are asking Congress to exempt gas producers from utility-type regulation."

The editorial goes ont to point out why the bill is against the interest of the consumers of gas. Mr. President, recognizing that the Natural Gas and Oil Resources Committee will not undertake to distribute copies of this editorial to correct the record, and knowing full well that the gas consumers of the Nation have no fund with which to do so, and wishing the people of the country to know that this distinguished newspaper has not forsaken the public interest in this issue, I have asked unanimous consent for the printing of Friday's editorial in the RECORD.

Mr. Salerno Exposes Trickery

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Italian-American newspaper La Gazzetta, which appeared in the issue dated Friday, October 7, 1955:

MR. SALERNO EXPOSES TRICKERY

It is encouraging that Joseph A. Salerno, director of the Textile Workers of the CIO, and one of the most widely recognized of the talented and competent spokesmen for organized workers, has exposed the trickery of southern textile-millowners in a deliberate scheme to evade compliance with the Federal law which establishes $1 per hour as the minimum wage.

Mr. Salerno is far more than a representative of a labor organization. He is one of the best informed men in the United States upon both national and international affairs. He keeps informed of developments throughout the world. He understands their meaning. He has the faculty of foreseeing what these developments will eventually create.

Today, Mr. Salerno is generally accepted by both industrialists and workers as an articulate American citizen whose judgment is not restricted by prejudice of deliberate misconceptions. One indication is of his very accurate prediction of the inevitable end of Peron and his dictatorship in Argentina. He has similarly made comparable predictions about other equally as world-embracing situations.

That he has directed his attention to the greedy southern millowners has been inevitable. Upon facts, and not biased opinions, he has accused them of chicanery and deliberate deceit in circumventing the minimum wage law. True to the tradition of southerners they are nonconformists. They want to make their own laws and their own rules, applicable to the South.

Through trickery and inducements that time has revealed, have been financially disadvantageous to the South, they married northern textile mill owners who faced bankruptcy because they persisted in refusing to scrap obsolete machinery and equip their mills with modern inventions.

Notoriously low wage scales, typical of the South, were maintained by the enactment of local laws which virtually banned organizers of labor from certain areas.

Now, as Mr. Salerno, has very timely pointed out, they are refusing to do what Congress has ordered them to do—pay the same minimum wage of $1 per hour that is paid elsewhere in the Nation.

The method of evasion is typically southern. They set up a manufacturing corporation and a sales corporation. By claiming that the manufacturing company is engaged in intrastate business because they sell their

products only to the sales corporation, they are maintaining that they are not obligated to pay any attention to the national minimum wage law. The sales corporation which produces nothing and has only a limited number of persons on the payroll engages in interstate business and thereby comes under Federal regulation.

In other words the southern mill owners who are always bursting with false pride about this section of the Nation persist in wanting to pay their workers starvation wages. They are insistent upon retaining the very important wage advantage they possess over northern mill owners.

It is well that Mr. Salerno has exposed the deceit of these perpetual nonconformists. He has done the entire Nation a favor. He well deserves the prominence that he has for years held in the labor movement as well as the confidence and the friendship of industrialists. They know him for what he is, an intelligent, far sighted and particularly able man with ability to strike a satisfactory balance between two conflicting attitudes.

Constructive Medicine in Aging: Problems of the Mind in Later Life

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. HESS. Mr. Speaker, in view of the Nation's growing interest in problems of the aging, I would like to call attention to a conference which was held in Cincinnati last Friday.

The 1-day meeting, titled "Constructive Medicine in Aging: Problems of the Mind in Later Life," is the second annual symposium on gerontology sponsored by the William S. Merrell Co., of Cincinnati. Several hundred doctors heard eight of America's leading physicians tell of the most recent developments in mental problems of the aging.

The importance of this field of medicine is evidenced by the fact that there are approximately 14 million persons in the United States over 65 years of age. This number is currently increasing at the rate of about 400,000 a year. Of all new admissions to mental hospitals, 38 percent are in the 60-year and older group and 27 percent of all new admissions are older patients with senile psychoses and cerebral arteriosclerosis.

The general theme of the Merrell-sponsored symposium has as its primary objective the improvement of the state of health of persons who reach old age, and the improvement of the diagnosis and treatment of the infirmities of the old. The symposium will integrate basic research with its practical application to clinical medicine and will focus public and professional attention on the growing problems of our older citizens.

Merrell, producers of medicines since 1828, is recognized as a leader in the field of gerontological research, and is directing over 50 percent of its research activities toward the development of new and better drugs for our aging population.

Against a Mask for Stevenson

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Against a Mask for Stevenson," published in the Commonweal, and reprinted in the St. Louis Post-Dispatch of January 13, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AGAINST A MASK FOR STEVENSON

Adlai Stevenson is doomed to defeat, thinks Columnist Stewart Alsop, unless he changes fast. One thing that bothers Mr. Alsop is Mr. Stevenson's inability to deliver himself of political cliches with all the gusto of a man who has just coined a new and valuable phrase.

Perhaps, thinks Mr. Alsop, there is a solution: Candidate Stevenson should practice saying meaningless sentences like "Most oranges are round" with great sincerity and feeling until he has the hang of it.

That out of the way, there is just one more thing Mr. Alsop sees as a handicap—Adlai Stevenson, he thinks, simply lacks the instinct for giving an audience what it wants to hear; he persists in saying what he thinks, and something will have to be done about this failing, too.

Along somewhat the same lines, former President Harry Truman has his complaints about Mr. Stevenson. Mr. Truman's contribution to history is undeniable, but there is no doubt that politically his style consists in sharpening differences, not in lessening them, in emphasizing grievances, not in conciliating.

On the basis of his own remarkable upset victory over Thomas Dewey in 1948, Mr. Truman is now dead set against having as a Democratic candidate any man who talks about moderation or in any way sounds less liberal than Mr. Truman himself. In recent weeks the former President has displayed an obvious coolness toward Mr. Stevenson on this score, and it now seems plain that a concerted effort is underway to turn Adlai Stevenson into Mr. Truman's image of a down-the-line New Deal-Fair Deal candidate.

What is happening, it seems to us, is that the professional party men have finally begun to listen seriously to what Adlai Stevenson actually says. He has not changed since 1952; if any change has taken place, it is they who have changed.

Mr. Stevenson dislikes easy political labels; as he said recently, it is impossible to do justice to a man's whole political philosophy with essentially meaningless tags like "dynamic moderation" or "moderate dynamism." And since he himself is one of the most complex men on the American political scene, he is doubly hard to label.

Yet if the attempt has to be made, it seems to us that it has never been possible to classify Mr. Stevenson as a liberal in quite the way Harry Truman uses the word. Essentially, he has always struck us as a man of moderation and, if it were not for the character of many who have claimed the title of conservative these days, a better case could be made for so labeling him than for considering him as a liberal in any doctrinaire sense of the word.

In the fifties, a man can still be called a liberal, simply by using the cliches of the thirties; for Adlai Stevenson such a course is temperamentally impossible. In the context of the political present, he must be called a liberal, for lack of a better term, but only in the sense that he applies his creative imagination to the problems of the present, rather than merely repeating the liberal dogmas of yesterday.

In the end, perhaps as close as one can get to labeling Mr. Stevenson is to call him a moderate liberal, and this is satisfactory only to the extent that it describes his spirit of conciliation and lack of sharp partisanship, as well as his rejection of a conservatism that defines the best course as standing still. Thus at the recent Democratic rally in Chicago he said:

"I agree that this is an age of abundance, as well as an age of anxiety. I agree that it is a time for catching our breath; I agree that moderation is the spirit of the times. But we must take care lest we confuse moderation with mediocrity, or settle for half answers to hard problems. A democratic society can't stand still, and the world won't stand still. * * * Moderation, Yes. Stagnation, No."

In recent weeks, Republican Chairman Hall has been referring to Mr. Stevenson as a "repudiated" candidate who will be repudiated again. Party chairmen are expected to be partisan, and Mr. Hall is only acting in character.

But Mr. Truman and all the other Democrats who want to remake Adlai Stevenson should remember that he polled 27 million votes in 1952, despite the widespread feeling that it was time for a change and the presence on the GOP ticket of the popular Dwight D. Eisenhower. This is hardly repudiation, nor does it indicate any inability to wage an effective campaign.

We like Mr. Stevenson as he is, being himself, and we dislike efforts to turn him into a Midwestern version of Harry Truman or into a cliche-mouthing time-server. Win, lose, or draw, the real Stevenson can make a genuine contribution to the Nation's political life and understanding. And, no matter what the other Democrats think, Adlai Stevenson's spirit of moderation and lack or narrow partisanship may very well win him the Presidency of the United States.

Impact of the French Elections

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Impact of the French Elections," written by Constantine Brown, and published in the Washington Evening Star of January 6, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMPACT OF THE FRENCH ELECTIONS—VOTE PROVES POLICIES OF INDECISION AND TIMIDITY DON'T PAY DIVIDENDS

(By Constantine Brown)

The French elections have shown that the policies of timidity, sterility, indecision, or fear followed by the right-of-center governments in the free countries do not pay dividends. The rank and file of the people may be passive for a while. But they eventually get fed up, and when the time comes to cast their votes they favor direct action, as was

demonstrated in the large French vote for Communists and Poujadists.

In politically well-coordinated Britain we see the beginnings of a rebellion against wavering policies of Sir Anthony Eden, who is handicapped by the aftereffects of a serious illness followed by an operation in the United States nearly 2 years ago. Sir Anthony inherited from his dynamic predecessor, Sir Winston Churchill, a pretty good situation. This is now deteriorating. What irks the British Prime Minister's followers most is the unimaginative foreign policy which threatens whatever remaining prestige Great Britain may still possess in the Middle East.

There is an incipient rebellion in the West German Republic against the aged and ailing Chancellor Konrad Adenauer, who is being accused by the members of the coalition in power of being too tough domestically and sterile in his foreign policies. It is no use camouflaging the overwhelming desire of the German people for unity in Western Germany. Chancellor Adenauer's policy is wait and see and hope that the western political-military coalition will somehow, at some time in the indefinite future, effect the much-sought reunion.

Much as the Reds are hated in Western Germany, there is a growing sentiment among politicians as well as the general public that only by "going again to Moscow" could the Reich's unity be achieved. The results of the French elections have strengthened that sentiment. The new composition of the National Assembly is not encouraging for the NATO, which despite our efforts and our outpouring of more moneys is unlikely to become now the strong shield for the West.

Because of the weakness of France, one of the main links in the NATO chain, the Bundestag is even less inclined to vote appropriations for the new Germany army, which continues to remain a blueprint. The suggestion from Washington that we provide all the arms needed for the first year seems to leave the German parliamentaries cool. It is another solution in line with what Senator RUSSELL, Democrat, of Georgia, described last Tuesday to be the sterility of ideas and policies on the part of the State Department.

Senator RUSSELL may have erred in ascribing this sterility to the State Department. He might have been more accurate in laying it on the threshold of the Executive. Those who have followed the gyrations of our foreign policy since 1953 are aware that the State Department trio—Secretary Dulles, Under Secretary Herbert Hoover, Jr., and Assistant Secretary Walter Robertson—are not the Casper Milquetoasts they sometimes appear to be. But frequently when they suggested a policy more compatible with the moral and physical strength of the United States, they were overruled by President Eisenhower on advice of his intimate White House counselors.

Thus, the policies of agonizing reappraisal regarding France, massive retaliations concerning the Far East, especially at one time Indochina, and leading from strength all over the world had to be thrown into the junkheap. The substitute was a dollar policy tending to win friends and influence people by a continuation of lavish financial outlays abroad.

There are unquestionably some countries which need and deserve our financial assistance. But when we hear that tax moneys should be used in vast amounts to counter the phony promises of the Soviets in the Middle East and in the Indian Ocean area, the inevitable conclusion is that some of our policymakers are off the beam.

The French have indicated clearly by their protest vote against the do nothing politicians that they no longer want governments guided only by timidity and sterility. The attacks against Sir Anthony and the Conservative cabinet, not by the Laborites but by the Conservatives themselves, are an indication that the British, who in the past have favored wait-and-see policies, are also getting fed up. Similar trends are noticeable in Western Germany, where the Western Alliance begins to be regarded as a millstone around the Bonn government's neck. This is not prompted by any kind of sympathy for the Red regimes, but because the West gives the Germans the impression of timidity and fear.

Bicentennial of the Birth of Chief Justice John Marshall

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine address delivered by the senior Senator from Pennsylvania [Mr. MARTIN] on September 22, 1955, at a convocation at the College of William and Mary marking the bicentennial of the birth of Chief Justice John Marshall.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF UNITED STATES SENATOR EDWARD MARTIN, OF PENNSYLVANIA, AT A CONVOCATION HELD AT THE COLLEGE OF WILLIAM AND MARY, WILLIAMSBURG, VA., MARKING THE BICENTENNIAL OF THE BIRTH OF CHIEF JUSTICE JOHN MARSHALL, SEPTEMBER 22, 1955

I deem it a great honor to address this distinguished convocation assembled at the historic College of William and Mary to honor the memory of the great Chief Justice, John Marshall.

It is always a pleasure to come to the great State so ably represented in the Senate by such outstanding statesmen as HARRY F. BYRD AND WILLIS A. ROBERTSON.

They are men of ability, courage and patriotism. Senator BYRD's resolute fight to reduce the size and cost of government, for sound fiscal policies, and the decentralization of governmental functions will long be remembered as a historic milestone in American legislative history.

In my own Commonwealth of Pennsylvania we recall with pride and gratitude the vast contribution made by our sister Commonwealth of Virginia to the growth and development of the American Republic.

In early Colonial times Virginians and Pennsylvanians worked and fought to uphold freedom and dignity of the individual. They fought side by side in the French and Indian Wars to establish British supremacy on the American Continent. They suffered and sacrificed together in the War for Independence.

In the War Between the States they gallantly opposed each other on many bloody battlefields. The endurance, bravery and skill of that terrible and tragic struggle have never been equaled. Both sides fought with sublime valor for the cause in which they believed.

Yes, there is patriotic inspiration for every American in the proud history of the Old Dominion State, for traditional love of individual freedom and her firm allegiance of the ideals of liberty and independence.

Those sacred principles were woven into the fabric of our national existence by Virginia's illustrious sons. They were preserved and strengthened by the blood and sacrifice of her heroes.

Here the first permanent English settlement was established. Here the first representative legislative body in the New World was convened.

Here were taken the first courageous steps by American colonists in defiance of tryanny.

Here at Yorktown the heroes and patriots of the Revolution achieved final triumph over the armed might of the greatest power of that day.

The glory of Virginia shines forth brilliantly in such honored and revered names as George Washington, Thomas Jefferson, Patrick Henry, James Madison, James Monroe, George Mason, John Marshall, and those gallant soldiers, Robert E. Lee and Stonewall Jackson. Your many historic shrines and churches are rich in association with the glories of America.

Every American is proud of Virginia, today as always, a stronghold of self-reliance, a magnificent center of culture, and the home of deep religious devotion.

From the halls of this venerable college great leaders have gone forth to brilliant success in the service of their State and the Nation.

Three Presidents of the United States—Thomas Jefferson, James Monroe, and John Tyler—are among its distinguished alumni. It was here that John Marshall came to prepare for his outstanding legal career, attending a brief course of lectures given by the great scholar, jurist, and patriot, George Wythe.

Since it was established by royal charter in 1693, the College of William and Mary has made its influence felt in State and national history. How fortunate we are that it has survived numerous difficulties and stands today as a strong, vigorous, dynamic institution, combining the beloved traditions of its glorious past with the forward-looking, progressive spirit of these modern times.

In observing the bicentennial of the birth of John Marshall we pay tribute to a hero of war and peace.

As a soldier he placed his life in the balance in the cause of American independence. As a jurist he blazed a broad trail through the jungle of legal complexities so that succeeding generations might find the way to security and stability.

The enduring landmarks he erected will everlastingly guide Americans to a full measure of individual freedom under our system of constitutional government.

When John Marshall began his long and brilliant tenure as the fourth Chief Justice, the Supreme Court had been in existence 12 years.

Up to that time the Court had not yet advanced to its rightful place of importance in the system of government established by the Constitution. By 1791, when the Court moved from New York to Philadelphia, 2 of the 6 original Justices appointed by Washington had left the bench to take more attractive posts in their own States. Shortly thereafter, Chief Justice John Jay resigned to become Governor of New York.

So lightly was the Supreme Court regarded in relation to the other branches of the Government that John Jay refused the offer of President John Adams to return him to the Chief Justiceship. He declared that the Supreme Court lacked "the energy, weight, and dignity which are essential to its affording due support to the National Government."

The achievements of John Marshall stand out with dazzling brilliance because it was from this low point that he raised the Supreme Court to power and majesty as the guardian and interpreter of the Constitution. His invincible logic breathed life and vigor into the fundamental law and made it an unconquerable force for the protection of individual liberty.

The unparalleled growth and progress of the United States is proof of the wisdom of the Founding Fathers in establishing a government which placed the executive, legis-

lative, and judicial branches on an equal footing, limited in their powers to those specifically granted in the Constitution.

The men who framed the fundamental law were men of deep learning and broad experience. Of the 55 members of the Constitutional Convention, 38 were lawyers. Others had served as State governors and as chief justices in their State courts. They were familiar with the long struggle for human freedom. They had a thorough appreciation of the blessings of liberty which they sought to secure for themselves and their posterity. They knew from their profound study of history that government can become oppressive. They recognized that usurpation of power by the executive or the legislature could encroach upon the liberties of the people and could destroy freedom of the individual.

The experience of the American Colonies in that regard had been set forth in the Declaration of Independence as one of the grievances against King George III, which stated, and I quote:

"He has made judges dependent on his will alone for the tenure of their offices and the amount and payment of their salaries."

Therefore, they sought to erect safeguards against that danger by creating an independent judiciary that would stand as a bulwark of the citizen, protecting the rights granted to him by the Constitution against the power of government.

They wrote into the Constitution the provision that judges of the Supreme and inferior courts of the United States shall hold their offices during good behavior and that their compensation shall not be diminished during their continuance in office.

Thus the courts and the judges who composed them were placed beyond the reach of political pressure, free to guard the liberties of the people, to protect the constitutional rights of the humblest citizen against violation by the Government itself, by the Congress, or the Chief Executive.

John Marshall's fame will endure forever because he expounded the doctrine that the Supreme Court is the final interpreter of the Constitution, with complete authority to declare null and void any act of Congress which does not come within the powers granted by the Constitution.

Marshall's rule for testing the constitutionality of legislative enactment is well known, but I think it should be impressed upon the minds of every member of every law-making body.

In his decision on the case of *McCullough* v. *Maryland*, we find this formula, and I quote:

"Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional."

It was in this case that the great Chief Justice gave expression to the observation which is perhaps more widely quoted than any other:

"The power to tax is the power to destroy."

Another quotation from John Marshall is worthy of everlasting preservation as expressing the supreme importance of an independent judiciary.

It is, of course, well known to this audience, but I feel it is worth repeating.

It came in debate during the Virginia convention, 1829–31, and I quote:

"Advert, sir, to the duties of a judge. He has to pass between the Government and the man whom the Government is prosecuting; between the most powerful individual in the community and the poorest and most unpopular.

"It is of the last importance that in the exercise of these duties, he should observe the utmost fairness. Need I press the necessity of this? Does not every man feel that his own personal security and the security of his property depends on that fairness?

"The judicial department," Marshall continued, "comes home in its effects to every man's fireside. It passes on his property, his reputation, his life, his all. Is it not to the last degree important that he should be rendered perfectly and completely independent, with nothing to influence or control him but God and his conscience?"

Let us review, in brief outline, the influences that shaped the career of John Marshall. His youth was spent in the wilderness of the Virginia frontier. His early home was a typical log cabin of the backwoodsman. There was little opportunity for him to gain an education, but he absorbed the few books that came into his hands.

For nearly 6 years he was a soldier in the Revolution, rising to the rank of captain. He fought at Brandywine, Germantown, Monmouth, and Stony Point. He endured the cruel hardships of Valley Forge in the bitter winter of 1777–78.

His experience in the War for Independence strengthened his patriotic love for America. It implanted deep into his consciousness the hope that out of the struggle and sacrifice of the Revolution there would emerge, not a mere collection of States, but a united nation, and a government "competent to its preservation."

This feeling he so well described many years later in his autobiographical letter to his good friend and associate, Joseph Story, in which he wrote:

"* * * I am disposed to ascribe my devotion to the Union, and to a government competent to its preservation, at least as much to casual circumstances as to judgment.

"I had grown up at a time when the love of the Union, and the resistance to the claims of Great Britain, were the inseparable inmates of the same bosom; when patriotism and a strong fellow feeling with our suffering fellow citizens of Boston were identical; when the maxim, 'United we stand, divided we fall,' was the maxim of every orthodox American.

"And I had imbibed these sentiments so thoroughly that they constituted a part of my being. I carried them with me into the army, where I found myself associated with brave men from different States, who were risking life and everything valuable in a common cause, believed by all to be most precious; and where I was confirmed in the habit of considering America as my country, and Congress as my Government."

Schooled in the stern realities of war Marshall entered upon his career at the law which was to contribute so greatly to the preservation of the Constitution and the greatness of the United States.

With no formal legal training except the course of law lectures which he attended here for a period of several months, he gained admission to the bar of Virginia.

His success was immediate, not only in the courts, but in political affairs. He served in the legislature and gave strong support to the ratification of the Federal Constitution.

The qualities of leadership which he possessed brought him into prominence as a champion of the Federalist cause in Virginia. He defended the policies of Federal Government under Washington and the strong financial measures of Alexander Hamilton.

A brief venture into diplomacy brought him a measure of national fame as a member of the XYZ mission to France.

It was at the urging of George Washington that Marshall agreed to become a candidate for Congress in 1798. He was elected, but before he had completed his term President John Adams appointed him Secretary of War, but Marshall declined. Adams then named him Secretary of State, which he accepted and continued in office for a month after he took the oath as Chief Justice.

He was then 45 years of age and had never filled a judicial office.

Thus it became his responsibility to expound the Constitution in the most critical period of its history. It was given to him to preside over the Supreme Court when it was called upon to decide four cases of vital importance: *Marbury* v. *Madison*, *McCulloch* v. *Maryland*, *Cohens* v. *Virginia*, and *Gibbons* v. *Ogden*.

In each of these cases it was Chief Justice Marshall who wrote the opinion of the Court. In each case the continued existence of the Federal system, established by the Constitution, depended on the action of the Court. In each case the Court adopted a principle which is generally considered to be essential to the preservation of the United States as a Federal state.

Now for a moment let us consider some of the dangers that confront us as a Nation and some steps that we can take to defend America. Let us do this with the same unselfish courage that John Marshall met the fundamental issues of his day.

1. We have too much public and private debt. It now reaches the staggering figure of more than $600 billion.

2. Some taxes are almost at the level of confiscation. Thirty percent of gross income is a very high price to pay for self-government.

3. The rapid increase in the size of government is alarming. The payroll of Government employees is greater than all the steel mills of this Nation and twice that of the railroads. There is too much duplication in Government.

4. Local government is self-government. It is home rule. It should be preserved and strengthened. Local government should have adequate taxes under its own control to maintain its proper functions. Grants from the higher level of Government to the lower level mean some loss of local contol, which is not good or economical.

5. We must keep each of the three levels of Government in a sound fiscal position through balanced budgets, equitable taxation and honest service. Excessive debt destroys the purchasing power of the dollar.

6. Our people must realize that Government cannot assure security. That depends upon the individual. Government has nothing to give except that which is first given to it by the people.

7. A republic to survive must have a citizenship of high morals and a deep appreciation of the meaning of free government. The decay of character through dishonorable efforts, even within the bounds of law, can soon destroy the strongest republic.

A republic can be no stronger than the virtues of its people. Corruption in Government and the failure of people to take part in their Government are more dangerous than those who plot against the Government.

8. Unbridled emotionalism is destructive and means the end of orderly governmental procedure. John Milton said that order is "Heaven's first law". Unbridled emotionalism makes a republic an easy prey for designing demogogs. They operate by inflaming the masses and by organizing dangerous pressure groups. They promise things which can only be given by endangering the stability of the Government.

9. We must all appreciate the orderly procedure that the Founding Fathers conceived in our Constitution. The people themselves cannot legislate. In a republic they select their legislators but the legislator cannot administer. The administrator or executive cannot judge. This is left for the third branch of Government, the judicial. None but those strongly imbued with American ideals and principles should be given these places of honor and trust.

To avoid these dangers every American must be on guard and have the courage of John Marshall. He must understand Ameri-

canism and be proud to say: "I am an American."

In this day and age when human freedom is being blotted out in large areas of the world, every American should acknowledge, in praise and gratitude, our debt to John Marshall.

Because of his wisdom and courage generations far into the future will enjoy the blessings of government of laws and not of men.

No dictator will arise amongst us so long as we are guided by the philosophy of individual freedom expounded by the great Chief Justice.

Because of his strength and character every American, regardless of his station in life, will forever be secure in his inalienable right to life, liberty, and the pursuit of happiness.

The Founding Fathers, among whom Virginia was so ably represented, held these rights to be of Divine origin, the most precious gift bestowed upon mankind by Almighty God.

Let us live by that doctrine.

Let us be ever ready to uphold and defend the Constitution, as did John Marshall, and America will go on to a greater glory under God, true to its destiny as a free Nation of free men, with liberty and justice for all.

United States Aid for Russians and Chinese?

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Aid for Russians and Chinese?" written by Constantine Brown, and published in the Washington Evening Star of January 11, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES AID FOR RUSSIANS AND CHINESE?—UNDERWRITING MERE VICTIMS OF DICTATORS SEEMS TO BE COMING BACK INTO VOGUE

(By Constantine Brown)

The vision of politicians in Washington in this election year is necessarily obscured by what they think might appeal to their particular electors.

The voices of a handful of legislators who last spring and summer were loud in advocating some form of coexistence as a cure-all for our international troubles have been muted since the last Geneva meeting. There has been, however, a recent revival of their demands that the administration dip into the pockets of the taxpayers and give assistance to the wanting nations regardless of their government's attitude in the cold war.

In keeping with these views, Secretary of State Dulles this week overruled International Cooperation Administrator Hollister and restored $10 million in economic help to India which had been cut off as unnecessary.

The principle which is guiding the Secretary and a number of legislators in the matter of assistance to the so-called underdeveloped countries is that the peoples themselves cannot be made responsible for the actions of their political leaders.

Mr. Dulles knows better than anybody else how many headaches Prime Minister Nehru and his Ambassador at Large Krishna Menon have given us. But it is said that should not affect our moral obligation to help economically needy countries. The majority of Senators who intend to fight President Eisenhower's program of foreign assistance for an indefinite number of years describe this policy as cockeyed. On that basis, they say, we should help the Russian and Chinese Communist regimes because the overwhelming number of Russians and Chinese are mere victims of their dictators. Statistics prove this conclusively. Out of a population of 200 million people in Russia there are less than 2 million members of the ruling party. An even smaller number of party members are among the nearly 600 million Chinese.

If the claims of the Indian Government that it wants to remain neutral in the clash between freedom and communism are accurate there should be no reason indeed for us not to help its peoples. But the neautralism of Mr. Nehru and the government to whom he dictates is mere eyewash. There has not been a single instance in the last fateful years since the outbreak of the Korean war when the Indian Premier has not sided with the Communists.

When the Communist aggression in Korea occurred in 1950 and the Security Council of the U. N. decided to intervene militarily Pakistan offered to send a full division to South Korea. The only requirement of the Karachi government was an assurance from Mr. Nehru that India would not use force to settle the Kashmir question while the best Pakistani troops were fighting Communist aggression. This promise should have been easily given by the peace-minded Nehru. But he refused to do so and we were deprived at a crucial moment of the assistance of some 10,000 combat-ready troops.

If the proposed assistance program were to confine itself to sending agricultural surpluses out of the country there could be no objection. But the planners are thinking in terms of give-aways either in actual cash or materials with a strong marketable value.

The fact that a country prefers to be neutral in the present conflict of powers has not deterred us in the past and will not now deter us from giving needed economic help. When Marshal Tito was kicked out of the Comintern and was threatened by aggression from Communist satellites at his borders we rushed assistance although he told us frankly that we must not expect him to give up his Communist beliefs or his neutral position. More than $1.5 billion was invested in Yugoslavia. All the same we were made political suckers by the Red marshal. He is now throwing his weight around and is organizing so-called neutral blocs in the Arab areas. These blocs—momentarily neutral—will eventually be of utmost assistance to the plans of the men in Moscow and Peiping.

Discussions in the House and Senate cloakrooms indicate that the majority of the men in Congress believe that continued American foreign assistance is unavoidable. But they want the taxpayers' money to be dispensed for the best interests of the United States. This means a plan of selective assistance only to the countries which are our real friends or whose neutrality is beyond question. There are few in the latter category. Switzerland or Sweden are the only ones in Europe and they neither need nor ask American help. Indonesia might possibly qualify in southeast Asia although the Communists have made important strides in that former Dutch colony and the Jakarta Government has been reluctant in the past to accept our offerings.

Public Transit in the District of Columbia Faces Many Hurdles

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. McMILLAN. Mr. Speaker, under unanimous consent, I include the enclosed article entitled "Public Transit in the District of Columbia Faces Many Hurdles," which appeared in the Washington Evening Star on January 15, 1956. I would like to state that this article proves exactly the point I have made an effort to prove to the Public Utilities Commission and the District Commissioners for the past 8 months.

I was absolutely opposed to the Senate bill which canceled the Capital Transit franchise and also the seizure feature that appeared in the Senate bill. The House conferees were successful in having the seizure feature of the bill deleted in conference; however, the cancellation feature was retained in the bill.

I personally believe that Congress should repeal the provisions of the act that passed during the last few minutes of the 1st session of the 84th Congress canceling the Capital Transit franchise in order to give the District Commissioner ample time to secure additional bids from private interests to operate the streetcars and buses here in the District of Columbia. It is extremely regrettable that certain parties of Capitol Hill, the Public Utilities Commission, and the District Commissioners opposed the bill which passed the House and accepted certain features of the Senate bill which is calculated to deprive the city of Washington of any public transportation after midnight, August 14.

The article follows:

PUBLIC TRANSIT IN THE DISTRICT OF COLUMBIA FACES MANY HURDLES

(By William Hines)

Publicly owned transit seems to be in the cards for the District of Columbia. The only questions now are what kind of public operation, when, and how much it will cost—both in first cost and later, when it gets rolling.

This primary fact and these questions gained the center of the stage a fortnight ago when District officials plumped for public operation of transit as the only practical possibility left.

They made their pitch in letters to Congress December 30 after a predicted queue of ready, willing, and able successors to Capital Transit failed to materialize outside the District Building door. They left the door open, of course, in case a prospect might come around, but this now appears a slim possibility indeed.

Meanwhile, District officials are working closely with Blyth & Co., a leading securities firm, to prepare legislation for a public transit authority which would initially finance itself either by a Government loan or by sale of bonds to private interests, or both, and would support itself by revenues out of the fare box.

Such a setup will require congressional enactment and Presidential approval.

If Congress does not act, and things remain as they are today, mass transit in Washington will cease at midnight, August 14, when Capital Transit dies.

Before Congress can act, there is a long legislative road ahead. And even if, by some miracle, Congress should pass a public transit law tomorrow and the President should sign it Tuesday, there is serious doubt whether the authority would be in shape to operate 8 months hence.

WHAT IS IN STORE FOR DISTRICT RIDERS?

What will Washingtonians do if August 14 passes without a new law?

The answer seems to be: The same thing they did between July 1 and August 22, 1955—walk.

Eventually, according to plan, there will be public operation of transit here. Public Utilities Commission Chairman George E. C. Hayes and District Commissioner Samuel Spencer urged Congress on December 30 to take steps creating a public transit authority. Mr. Spencer outlined the general nature of the authority and Mr. Hayes gave a specific hint about it by saying:

"In Cleveland, Chicago, and Toronto public authorities provide modern, efficient, progressive and financially sound mass transportation services."

Mr. Spencer told Congress that legislative spadework was being done by Blyth & Co. The commissioner explained that the new authority, if created, would "be financed through the sale of its own revenue bonds without pledging the credit of the United States or of the District of Columbia."

It is understood that the Blyth draft of legislation will be modeled on the statute creating and governing the Chicago Transit Authority, which Blyth also helped write.

To see how the transit systems of Cleveland, Chicago, and Toronto operate, the Star sent a representative to those cities. In summary, here is what he found:

When proponents of public transit speak of privately financed, publicly operated, completely self-sustaining systems, they are talking about the unicorn. There ain't no such animal. Cleveland, Chicago, and Toronto all are subsidized rather heavily. In the two United States cities the subsidy takes the form of substantial tax relief—meaning that the taxpayers make up to the city treasury what the transit authority does not pay in taxes. In Toronto, the subsidy is in the form of an outright grant of cash by the municipal government to defray transit's annual deficit.

When public operation comes, rapid transit is normally not far behind. One of the Nation's top public operators says frankly that as long as he was a private transit executive he never mentioned subways, but that when he entered public service he immediately started plumping for high-speed, off-street rail lines.

When rapid transit comes to town, the public authority is willing to operate it, but loath to pay for it. In all three cities, rapid transit expansion is contingent on public construction of lines out of general tax revenues.

Public authorities insist on complete authority to regulate fares and services, with no veto power by any other government agency. This is not just a personality quirk of public operators—it is something that lenders insist on before they will buy bonds, because the only real backing for the securities is the money dropped in the fare box by passengers. Even the United States Government, in the person of the old Reconstruction Finance Corporation, insisted on transit board autonomy.

Public operation does not necessarily mean improved service or cheaper service than a community can get under private operation. Except for the speed of rapid transit, the service in Cleveland and Chicago is no better than Capital Transit Co. offers in Washington. Toronto has superb service on all lines—and operates at a $2.5-million-a-year loss.

Public transit authorities tend to branch out into subsidiary endeavors, such as parking-lot operation. These frequently compete not only with private enterprise, but also with other municipal facilities.

Transit riding is falling off in public-authority cities just as it is here. Only in Toronto are riders increasing in number, and there the rise is only one-third of 1 percent over last year.

And finally, there is the danger that when a public authority gains autonomy, it becomes no more responsive to public demand than does a private corporation.

Here, in more detail, is what the Star found in each of the three cities:

Cleveland—"lowest fare in United States" is claimed, but this is misleading; vaunted new rapid transit line hasn't caught on as predicted; county will spend $32 million in tax money so the subway can "come to town"; vital statistics are concealed, but rising costs are plainly outstripping revenues; outright city subsidy is conceded to be an eventual possibility.

The Cleveland Transit System was the child of a private transit mess dating from depression times. The franchise of the Cleveland Railway Co. expired in 1935, and the city set about trying to take over the ill-equipped property. Almost 7 years later, on April 28, 1942, the city took over the company's properties.

The deal cost the city $14.5 million, which was obtained through a $17.5 million issue of 3¾ percent, 20-year mortgage revenue bonds marketed to private investors. As a municipal issue, these bonds were tax-free, but the faith and credit (taxing power) of Cleveland was not pledged as security.

First a city department and then a three-man board answerable to the mayor, CTS became a completely autonomous five-man authority in 1949. The changeover was required by the Reconstruction Finance Corporation before RFC would lend $29.5 million. RFC did not want a politician's veto power hanging over the fare-setting functions of CTS.

TWENTY-FOUR THOUSAND FIVE HUNDRED DOLLARS FOR MANAGER

The system's five members are appointed by the mayor for staggered 5-year terms, one term expiring each year. The chairman receives $10,000 a year, other members, $7,500 each. Operations are under the general manager, Donald C. Hyde, who frequently comes to Washington as a public transportation consultant. He receives $24,500 a year, which is second only to the mayor's $25,000 among governmental salaries in Cleveland.

CTS employs a labor force of about 3,500, all under a civil-service type merit system administered exclusively by the transit board and entirely separate from the city civil service.

About 2,100 CTS employees are operators, organized under the same AFL union that has a contract in Washington. The top rate for operators is $2 an hour, the same as in Washington. This contract will expire July 1.

CTS and the union have an arbitration agreement, since workers are forbidden by State law to strike against public utilities. The last award, made by arbitration, was followed within 30 days by a fare increase.

Cleveland transit men say they have the lowest local fare of any big city in the United States. This is literally true, but misleading, because Cleveland's complicated fare structure forces most riders to pay more than the minimum. In 1954, when the basic local fare was 15 cents, the average rider seems to have paid 18.1 cents. An average ride today probably costs over 20 cents. Most passengers pay 21 cents a ride, and a large number pay even more.

Exact information about CTS traffic volume is difficult to obtain, because CTS does not report such basic vital statistics as the number of revenue passengers. Virtually all other big city transit systems make such reports, but there is no power in Cleveland to require this information from CTS.

The best figure on revenue passengers on CTS is 149 million riders in 1954—down 65 percent from 1947. The 1954 figure is about two-thirds the number carried by Capital Transit that year. The Cleveland and Washington systems serve populations of comparable size—about 1.2 million.

SURPLUS OR DEFICIT?

While CTS theoretically operates with a small surplus, this black-ink position is attributable to considerable tax relief. CTS exemption from State license plate fees, State sales tax, and Federal gas and excise taxes amounts to about $500,000 a year. If CTS had been saddled with these levies in 1954, as a private operator would have been, its balance sheet would have shown a $400,000 deficit instead of a $100,000 surplus.

Capital financing in the past has been by revenue bonds secured by mortgages on the property of the system. At the end of 1954—the last year for which a complete financial statement is available—CTS had a long-term debt of slightly over $31 million. The bulk of this was in 4 percent bonds.

Short-term financing (for the purchase of buses, etc.) is done with equipment trust certificates, paid for out of operating expenses, and therefore senior to the revenue bonds in point of servicing. In the past Cleveland has been able to obtain low rates, seven-eighths to 1¾ percent, on these certificates because of this method of servicing. Some financial men believe Cleveland would have to pay about 3 percent today.

Since March 15, 1955, CTS has had rapid transit. It stretches across town for 13 miles, much of the distance through railway yards remote from business and residential areas. An extension another 2 miles west is now planned.

RAPID TRANSIT EXPERIENCE

Originally projected to carry 100,000 passengers a day, the "Rapid" actually hauls somewhere between one-third (county engineer's estimate) to one-half (CTS' estimate) of that predicted number. This relatively light load appears due largely to the line's remoteness from the central business district. From the nearest "Rapid" stop, most downtown workers and shoppers are forced to travel on the surface from 9 to 20 blocks.

This shortcoming soon may be corrected. Voters of Cuyahoga County (roughly the metropolitan area of Cleveland) recently approved a bond issue to build a "distribution subway" in downtown Cleveland. It will carry the "Rapid" underground through the business district. The project will cost $32 million, and will be paid for not out of CTS fare boxes, but out of county taxpayers' pockets.

Cleveland transit officials are doing a high-powered and effective public relations job to lure riders out of private cars and into CTS vehicles. But, generally speaking, improvements in service at one point have been compensated for by cutbacks at other points—an absolute necessity if CTS is to break even. CTS has parking lots along the "Rapid" and offers downtown loop service from municipal lots at a 10-cent fare. But riders decrease in numbers, and fare hikes are imposed to improve the revenue position.

Costs are going up faster than revenues, however. CTS thinks there will have to be more fare increases or more tax relief. And some officials see the possibility that the city and county may eventually have to underwrite losses by direct subsidies from tax revenues. That time, however, has not yet come.

Chicago—Ninety-nine out of one hundred Chicagoans are within 3 blocks of transit—but what kind? Wages and other costs soar and riders disappear; more subways are

needed, but transit won't build them; tax-relief bag is about empty; fares are a uniform 20 cents; transit officials wonder where to go from here.

The Chicago Transit Authority has been variously described as the best of its kind in the United States and a "hydraheaded monster" with too many chiefs and too few Indians. Both descriptions have an element of truth.

Transit people, public and private, long have been trying to serve this tremendous city of 3.5 million people. They have had only lukewarm success at best. One of the predecessor companies of CTA set a bankruptcy record by staying in receivership for 21 years. By 1930, almost all Chicago's surface lines were broke. The Chicago Rapid Transit Co. was not much better off, and the only solvent operation in the city was an extra-fare bus company serving the plusher sections.

By 1945 things were so bad that the Illinois Legislature passed a law creating the Chicago Transit Authority as a "political subdivision, body politic, and municipal corporation" with authority to do virtually everything a city may do except levy taxes. In 1947 the authority bought the surface and rapid transit lines for $78 million, of which $24 million was represented by cash or new equipment bought by the predecessor companies during negotiations. This was about the only new equipment in town.

Later CTA bought out the solvent Chicago Motor Coach Co., and with minor exceptions thereby gained a monopoly on mass transportation within the city.

ONE HUNDRED AND FIVE MILLION DOLLAR BOND ISSUE

Initial purchase was made by means of $105 million in bonds secured only by farebox revenues without either public credit or CTA property being pledged. These securities, tax-free municipals like Cleveland's, paid interest at 3¼ to 3¾ percent and matured between 1953 and 1978.

New equipment has since been acquired on a tremendous scale with equipment trust certificates, of which $15 million may be outstanding at any one time. These 5-to-7-year securities pay an average of 4 percent interest, a far higher rate than Cleveland's. This is because Chicago's certificates cannot be handled as an operating expense (which they are generally conceded to be) bust must be deferred until after bonds are serviced. CTA estimates this gimmick—forced on the authority by the original lenders in 1947—costs the system one percentage point in interest, or $150,000 a year.

CTA is headed by a seven-man board appointed in a rather cocplicated way. Four members are named by the Governor of Illinois, subject to confirmation by the State senate, and three are appointed by the mayor of Chicago, subject to confirmation by city council. The Governor has the power to veto the mayor's appointments, and vice versa.

The 7 members served 7-year staggered terms, and may be reappointed. There is no political balance required by law. Six members receive $15,000 a year each and are not required to devote full time to CTA. The seventh, CTA's chairman, receives $35,000 and is prohibited from engaging in other business.

THIRTY-FIVE THOUSAND DOLLAR SALARY FOR MANAGER

Professional operating head of the system is General Manager Walter J. McCarter, who also receives $35,000 a year. Mr. McCarter, first general manager at Cleveland, joined CTA at its inception.

There is some criticism of the high-pay, full-time status of the chairman. Critics feel the system ends up with 2 heads, instead of 1 overall policy director and 1 chief executive officer.

By law, CTA is autonomous and self-governing. It may set its own fares without recourse to any other body, and acts as its own public utilities commission in establishing service schedules. It is prohibited by law from accumulating a profit or suffering a loss. If CTA starts going into the red, it must adjust fares and services; if it ends the year in the black, it must spend the money to modernize equipment.

Chicago's fares are the essence of simplicity. Adult riders pay 20 cents flat, with free transfers, for a ride anywhere inside the city limits.

To give service at actual cost, CTA has hiked its fares an average of 100 percent since the takeover in 1947.

CTA and the Amalgamated Union have an arbitration agreement which has averted strikes to date, though there is no anti-strike law in Illinois. Transit officials, however, are not overly enthusiastic about arbitration, contending that in general awards favor the union.

MOST WAGES TOP $2

There are four different hourly wage schedules for the 7,900-man operating force. Top rates on these schedules range from $1.97 to $2.10 an hour, including a 3-cent cost of living bonus. Next June 1 these rates will rise automatically to between $2.02 and $2.15.

While CTA's costs go up, surface riding is diminishing. A slight increase in rapid transit patronage fails to offset the surface decline, which means a net overall decrease. When CTA started operations in 1947, there were 1,120,000,000 dissatisfied riders on Chicago's obsolete transit vehicles. The equipment is newer now, and the riders are happier, but last year there were only 625 million of them.

CTA claims to have transit facilities within three standard blocks (⅜ mile) of 99 percent of Chicago's homes. The authority makes no claim for the excellence of all of its service, however. Quality varies from superb to practically nonexistent, and in many cases at night and on Sundays, to completely nonexistent.

MAKING ENDS MEET

Faced with rising costs and declining traffic, CTA has had to scratch to make ends meet. A direct subsidy being illegal, the alternative has been economy. These things have been done:

1. Change much of the surface equipment from 2-man to 1-man operation. Except for a couple of streetcar lines, this project has been completed.

2. Remodel rapid transit equipment so as to cut maximum operating crews from 8 men to 2. Most of this has been done.

3. Eliminate streetcars so as to free CTA from street paving and maintenance costs. Only three rail trolley lines remain.

4. Save capital outlay by drastically remodeling former streetcars for use on rapid transit lines. The bulk of this work is completed.

5. Alter service drastically at off-peak hours without actually eliminating routes. This has about reached the vanishing point.

6. Seek relief from taxes. This has now reached the stage where the tax-relief bag is about empty. CTA officials estimate that with the newest exemption, from State motor fuel taxes, the system escapes payment of about $5 million in levies each year.

COSTS HAVE BEEN CUT

So effective have been these economies that CTA officials say if they were operating today on the same basis as in 1947, costs would be about $35 million a year higher than they are.

CTA is convinced rapid transit is the cheapest and most effective way of moving people, and the authority wants to expand rapid transit services. But CTA does not intend to absorb the cost of building subways and other rights of way—and on future rapid transit lines is unwilling to pay even for the trackage and signal equipment.

Up to now, all CTA's securities have been retired on schedule or in advance, including $17 million worth of equipment trusts. What will happen if costs go up or revenues decerase further? CTA is not sure, but while there is no loud talk about city or State subsidies, it is evident that CTA officials fear conditions may some day come to that.

Arab Aid Faces Stiff Opposition

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Arab Aid Faces Stiff Opposition," written by Constantine Brown, and published in the Washington Evening Star of January 10, 1956.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ARAB AID FACES STIFF OPPOSITION—POLITICAL MOVES, NOT HUNGER, AT BASE OF MIDEAST PROBLEMS

(By Constantine Brown)

An American-British Marshall plan for the Arab countries to counteract the recent powerful inroads of Moscow and Peiping has been heartily indorsed by top policy advisers in the White House and State Department, where, other indications notwithstanding, it is still believed that communism takes root in economically hard-pressed countries.

Indications are, however, that the administration will have a hard fight to put over its point of view in Congress. This is despite the fact that two of the Democratic hopefuls, Adlai Stevenson and ESTES KEFAUVER, also advocate solving the world Communist problems by continued indiscriminate financial and economic support.

The reason a large number of Senators frown on the new scheme is that they doubt greatly that the spread of communism these days is due to bad economic conditions in the affected areas. They point to the spectacular victory of the Communists in France who have increased their seats in the National Assembly from 98 to 150. This was not due to economic conditions. France is today more prosperous than she was before the outbreak of World War II. Yet many of her citizens voted for the Moscow puppets.

On the other hand if the theory that communism thrives in countries where peoples are broke and desperate were accurate, Germany should have become Red in the days immediately after the war when Germans were homeless and starving. The armies of occupation were intent then on crushing naziism but they did not discourage Communist propaganda in the slightest. Yet communism made little headway either in Western or Eastern Germany.

The present conditions in the Arab countries are due to political developments and not to hunger. Egypt is better off than it was under the previous regimes. Saudi Arabia is a rich and prosperous country. Its oil resources exploited by the Arabian-American Oil Co., have helped develop the country in an unprecedented manner. Last week the Saudi Arabian government was able to lend Syria $10 million at nominal interest. Jordan is in equally good shape. And so is Syria. There is no lack of employment in

any of these countries. There is a need for technicians, which could be provided by the West to give the Arabs the necessary industrial and agricultural know-how.

The success of the Russians in the strategically vital Middle East is due to politics. The Arabs are dedicated to the eventual destruction of Israel, which they consider an alien body in Arab lands. Israel had been, until Russia injected herself into the Middle East, somewhat overconfident because it relied on Western backing and on the superior quality of its military forces.

The Soviet wedge in the Middle East was not obtained by economic but by military assistance. As soon as the U. S. S. R. announced that it was ready to provide Egypt, Syria, and all other neighbors of Israel with military equipment, these governments accepted the Kremlin's extended hand. It was from that time on that the anti-Western and especially anti-American waves began to spread.

Last week's disturbances in Jordan, when the American flag was trampled under the feet of the mob and American offices were stoned, were not the result of any economic distress. Jordan was until recently one of the staunchest supporters of the West.

The present tense situation was caused by the strong and positive foreign policy of the Soviet Union and not by her phony attempt to help economically her friends (actually the intended future victims). The rebellion against France in Morocco and Algeria is not the product of hunger and physical misery. It is definitely political. Russia injected herself skillfully among the freedom-seeking Arabs while we were passive onlookers for more than 3 years. We disavowed colonialism but did nothing to prove our disavowals. When the Moroccan nationalists, through the free Arabs, asked to present their case to the United Nations we abstained from voting lest we offend our French ally.

Despite these object lessons, from which we should have learned something, our policymakers still believe that economic and financial aid will help us solve the Middle Eastern situation which is definitely political. Senator RICHARD RUSSELL, chairman of the Armed Services Committee, described the State Department as sterile of ideas. And many other legislators in both parties believe with him that the giveaway policy which has cost the American taxpayers nearly $60 billion in the last 10 years is by no means the answer to our present troubles.

Ambassador John Sherman Cooper

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an editorial entitled "Cooper's Fine Job," published in the Washington Daily News on Thursday, January 12, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COOPER'S FINE JOB

The United States Ambassador to India, John Sherman Cooper, is coming home for consultations this month and we think he deserves a round of national applause for the job he's done the past year.

It would be hard to imagine a more difficult assignment than trying to be diplomatically and uncompromisingly nice to India's Premier Nehru in the face of his cynical attitude toward America.

But Ambassador Cooper has done that to a flawless degree. Objective reports from New Delhi, weeks after the visit of the Soviet showoffs, Messrs. Bulganin and Khrushchev, relate that Ambassador Cooper is as close to Mr. Nehru today as any other foreign diplomat in the Indian capital, not excluding Soviet or Red Chinese envoys.

This is all the more an agreeable surprise, considering the fact that Secretary of State John Foster Dulles made an unfortunate reference to Goa which roused Mr. Nehru at the time of the Russians' visit. And the fact that Mr. Cooper was preceded as Ambassador by the New Dealer Chester Bowles, who built up quite a reputation among the Indians by getting out among them and frequently patting Nehru on the back.

The soft-spoken Kentuckian, new to the profession of diplomacy, has carried off his task with dignity and courage. Americans can be proud of him. We never may be able to win over Mr. Nehru to anywhere near our position in the cold war. But we can be sure that under Ambassador Cooper's tenure our views will not be muted nor their exponent cowed. That, perhaps, is why Mr. Nehru respects him.

Egypt's High Dam

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Egypt's High Dam," published in the San Francisco Chronicle of January 10, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EGYPT'S HIGH DAM

EDITOR: I have read with great care the article by Mr. Drew Pearson in the Chronicle (January 5) in which he says: "Western Congressmen plan a bitter drive against Eisenhower on the Nile dam. Their mottos is: 'What is good enough for the Nile is good enough for the Snake.' Southern Congressmen plan to oppose the Nile dam for another reason. They don't want the United States to irrigate 1,000,000 acres for competitive Egyptian cotton."

I hasten to give the following information to allay the fears expressed by Mr. Pearson:

The land to be reclaimed by the High Dam project would be largely sandy soil, not suitable for growing cotton economically. The area to be reclaimed would be less than one-third of the total Egyptian cultivated land at present.

Thus it will hardly provide for the increase in population which will take place in the 20 years required for the completion of the High Dam and the reclamation of the land.

Egyptian government policy is to encourage the production of food crops and to discourage cotton production, to avoid dependence on one crop. The area under cotton cultivation is restricted to 33 percent of the present arable land of Egypt, while the area under wheat cultivation must be at least 33 percent. The government supports wheat prices at higher levels than international wheat prices, while cotton support prices are lower than international cotton prices.

It is hoped that the fruit and vegetables to be grown on a large scale on the reclaimed land would cover not only local needs, but also provide exports to Europe. This will reduce Egypt's dependence on cotton for her foreign exchange.

The reclaimed land will ultimately be distributed to landless farmers in line with the policy which has been followed by the new regime since the adoption of the land reform program.

One cannot exaggerate the social benefits of such distribution. It is also (and this is very important for the American democracy) the only way to avoid the appearance of any subversive ideas in Egypt.

As you see, it is not true that "what is good enough for the Nile is good enough for the Snake." What is good for the Nile is good for the world.

ABDEL MONEIM EL-KHEDRY,
Consul General of Egypt, San Francisco.

Virginia's Voice on Integration

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Virginia's Voice on Integration," which was published originally in the Wall Street Journal, and reprinted in the Greenville (S. C.) News of January 14, 1956.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VIRGINIA'S VOICE ON INTEGRATION

The other day the people of Virginia, by a two-thirds majority, voted to change their State constitution rather than be compelled to comply with the United States Supreme Court's segregation decision. This, it seems to us, is a voice of protest that the rest of the country should not ignore.

The Virginia protest is noteworthy in a number of respects, not the least of which is the form that it took and the manner in which it was taken.

What the Virginia people said, in effect, is that they will consider abolishing their public-school system for all practical purposes rather than submit to compulsory integration. The immediate question was whether to change their constitution so as to permit State funds to be allocated to private schools; the vote authorized the calling of a State constitutional convention for that purpose. This would not abolish the State school system. But it would permit it to be abolished in the extremity.

As a political act this may not seem as extreme as some of the other courses of action urged in the South since the Supreme Court's decision. Even in Virginia there has been a strong movement for the defiance direct to the Supreme Court's order, a declaration by the Virginia government that the Court was without power to do what it did and that therefore its action was nullified. The constitutional crisis that would rise in the Nation can be imagined.

But there is nothing trivial about this protest. A community does not contemplate the abolition of its public-school system except under great provocation. And it does not translate the protest of words

into the protest of action unless it feels the provocation intolerable.

Nor is this Virginia protest simply the voice of some rabble-rousing demagogues hoisted to power upon one suspender. Neither the governor nor the legislature, as has happened in some places, presumed to speak for the citizens; they put the question to a referendum. There was a political campaign, but there was no passionate campaign with the red shirts flying. The preelection days were so quiet they were hardly noticed in the press of other areas.

To people in other parts of the country this overwhelming vote may seem extraordinary. The educational and cultural progress of the Negro people in the past century has been so great that elsewhere many find it inexplicable that anywhere others should see an educational or cultural gulf remaining.

But however difficult for others to understand, here is impressive testimony that the people who live closest to this ancient problem do not believe it can be resolved by a Supreme Court decree which overnight threw down a long line of Supreme Court decisions under which the separate schools were built.

These people do not say "Never," the South has narrowed the gulf in every generation. What they protest is the insistence that in every place, and without regard to circumstances, the whole burden of solving the most difficult of social and political problems should be thrust upon a single generation of school children.

And unless you are to say that the entire Commonwealth of Virginia is peopled in its majority by men of less character, integrity and wisdom than the rest of us, then it is not a protest to go unheeded. It's a perilous business for a nation to thrust by force great social changes upon a part of it determined to resist.

Look Sinks to New Depths in Till Case

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, the current issue of Look magazine contains the most unfair, vicious, vindictive, baseless, scurrilous, scathing, and libellous indictment ever labeled against a State of this Union. Its obvious purpose is to discredit the good people of the State of Mississippi and to prejudice the Nation against us.

This article, which appears under the byline of one William Bradford Huie, is a lie out of whole cloth, embellished with the products of a depraved imagination and is an act of journalistic prostitution of the lowest form. Under leave to extent my remarks, I am including an editorial from the Jackson (Miss.) State Times, under date of January 11, 1956, making reply to this deliberate and unwarranted assault on the integrity of the people of my State:

LOOK SINKS TO NEW DEPTHS IN TILL CASE

Look magazine hit new depths yesterday in the desegregation campaign being waged by certain elements.

What appears under the byline of William Bradford Huie in the current issue constitutes a flagrant, ill-founded indictment of Mississippians for the slaying of young Emmett Till last August.

The great majority of our white citizens deplore the Till murder and wanted to see justice done.

Without crediting any sources of information, Mr. Huie accuses J. W. Milam of the Till murder.

Insufficient evidence brought acquittals of Milam and his half-brother, Roy Bryant. And northern as well as southern newsmen at the trial were generally agreed the not guilty verdict was the only one possible under the law where a man is assumed innocent until proved otherwise.

Yet Mr. Huie makes the blanket assertion that the majority of Mississippi white people "either approve of big Milam's actions or else they don't disapprove enough to risk giving their enemies the satisfaction of a conviction."

By this example of opinionated, baseless reporting, Look itself pays scant recognition to the traditions of American justice it claims were ignored by Mississippians.

We're not trying to refight the Till case in all its ramifications. Moscow race progagandists are making enough of the issue now.

But the gall of any publication to imply the majority of Mississippians are barbarians must be totally and categorically condemned by fair-minded Americans of all races everywhere.

The Uncongested Friendship Airport

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. BEALL. Mr. President, many years have passed since it first became apparent that the Washington National Airport could not handle its enormous task as safely as it should.

When the fact was first discovered many persons began searching for another site which could be used to accommodate some of the ever-increasing traffic. The hunt has gone on and on and on. But still there is no new airstrip—only opposition from families who recoil in horror from the thought that added airplane flights or entirely new operations might be foisted upon their communities.

Now we have reached the point where we must act immediately. There is no longer time to argue. The congestion in the air, according to a recent study is critical. To keep discussing the matter would be literally to talk some unfortunate plane travelers to death.

While experts decry the overcrowded conditions here, Friendship Airport has modern facilities going unused. The situation, I feel, was summed up graphically in an editorial in the January 14 edition of the Baltimore Sun. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE UNCONGESTED FRIENDSHIP AIRPORT

Traffic congestion at some of the country's major airports is by now an old story. This story is repeated in part in the latest report from a special Federal Government advisory group. But there is added the warning that there is also critical congestion along some of the major airways.

The airways are the formally designated and clearly defined sky highways along which planes travel between airports. The advisory group reports planes passing within 100 feet of each other. Even a novice would readily agree that this is too close for comfort and safety.

We have no suggestions to offer on decongesting the airways. Here is a problem for the experts and those who chart the travel lanes and regulate their use. But, as to the initial question, airport congestion, we do have something to offer on the situation in the Baltimore-Washington area.

Washington's National Airport has all the traffic it can handle. Sometimes it has too much traffic. The number of scheduled flights is not static, but increasing. While this is going on, our own Friendship International Airport has traffic far short of its capacity.

The ready and easy answer to National's congestion problem is Friendship. There is no need to build a new Washington airport at Burke, Va. There is no need to intermingle armed services flights and public transportation at Andrews Field. Friendly Friendship is available with open arms, open lobby, and open runways; and it is close to both Washington and Baltimore, being just off the most modern Baltimore-Washington expressway.

Bright Spot in Agriculture

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial written by Mr. Herbert Lundy in the Portland Oregonian:

BRIGHT SPOT IN AGRICULTURE

Dairying was the one major branch of agriculture which showed an improvement during 1955, says the year-end report of the American Dairy Association. It is expected that when final estimates of per capita consumption of dairy foods are obtained some months hence it will be shown that the average American consumed between three and four more quarts last year than the year before.

If one more glass of milk per week had been drunk by every man, woman and child in the country there would have been no surplus at all. For that one glass per week is the equivalent of 1955 government purchases under the price-support program.

Total government buying of surplus dairy products dropped almost 50 percent below the 1954 levels despite an increase in milk production of a billion pounds. At the same time, the government disposed of more than it bought, cutting stocks to lowest levels in several years and relieving some of the downward pressure on prices.

During 1955 there was a slight improvement in prices paid for milk at the farm, and prices for milk and butterfat remained above the level set by the government for price-support purposes, says the report. What this strength in one major field means to agriculture generally can be seen when one considers that retail sales of dairy foods amounted to almost $10,000,000,000 of a total for all foods of some $66,500,000,000. The

$4,200,000,000 paid to dairy farmers was better than 14 percent of the total farm income from marketing of farm products.

If dairying had followed the general trend downward of farm prices, the farm income situation would have been much worse than it is.

What are the reasons for the improvement in this one major branch of agriculture? Vastly expanded sales promotion efforts, says the American Dairy Association. The association itself, financed entirely by dairy farmers, has greatly expanded its budget for market, nutrition and product research, for nonbrand advertising in newspapers, magazines, television and radio, and for merchandising and public relations. Brand distributors of dairy products also have expanded their promotion efforts.

The dairy industry is developing the market for its highly nutritive product which fortunately falls into the American dietary trend toward consumption of more high-protein foods. The dairy farmers have shown that they have business acumen and are not going to drag their feet.

One might ask, however, what made dairy farmers get out and sell so well in the last 2 years. It is in this period that the big effort has been made in sales promotion and it is in this period, too, that the dairy industry has moved upward out of the price-depressing accumulation of cheese, butter and dried milk surpluses.

It is significant that the change for the better came after Agriculture Secretary Ezra Benson reduced the price-support level on dairy products from 90 percent to 75 percent of parity. In the dairy industry record of the past two years the administration has a potent argument for the flexible support program as a stimulant for efficiency and salesmanship.

The President's Farm Message—Radio Broadcasts by the Farmers Union Grain Terminal Association

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two recent radio broadcasts by the Farmers Union Grain Terminal Association, of St. Paul, Minn.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

TUESDAY, JANUARY 10, 1956.

The administration yesterday rushed its farm message to Congress. It came there hurriedly even ahead of the all-important buget message and the President's economic report to the Congress. The special message contained some 8,000 words. The administration is sticking by flexible price supports, embellished with a nine-point program.

M. W. Thatcher, general manager of GTA, commented on the message in a statement appearing in this morning's newspapers. He said, first, that he found the message most encouraging in two respects: "At long last the President realizes there is a farm depression and that farm income is made in Washington. The President's message shows he also realizes that the only way to meet this problem is to increase net farm income."

Thatcher then added that, "He does not propose a single measure which would help the farm family increase its net income, as time will prove." When the President recognizes that there is a farm depression and publicly says so, there is, indeed, cause for encouragement. Just a few months ago, his advisers in the Department of Agriculture were denying this fact of life, and persisted in maintaining that it was just "a statistical depression" on the farm, and nothing more. But, now we've got the word of the President himself expressing concern over income troubles on the farm. And he has recognized the role of Washington in making farm income.

But, what's to be done about farm income? That's the crux of the situation. And, there the message is disappointingly weak. It refuses to recognize all the important relationships to farmers' income of specific farm protection measures at an adequate level. The message is designed to try to save the political hide of the President's sliding-scale price support policy. A reading of it shows the President has adopted the form and language of Farmers Union recommendations of many years standing—like the one on the soil bank—but has distorted both the purpose and proposals of most of these recommendations.

It seems apparent that this represents an attempt to use high pressure advertisting techniques on poltically popular language to obscure the real aims of the administration farm policy in this election year. It's trying to preserve sliding-scale farm policy against election year pressure. Not only does the message contain no promise of improving farm income, but it actually proposes further weakening of price-support programs. It would give a full flexing to two important basic crops—corn and rice—with their price supports reducible to zero. Now, these two crops are supported at a minimum of at least 75 percent of parity.

The President's only assurance to farmers in the all-important question of price is that after 3 or 4 more years, farmers may be able to get higher prices out of a free market—in which he intends to have no effective support program at work. Heart of the President's program is a soil bank and conservation reserve program, recommended by the Farmers Union for years, but the Farmers Union has never considered it more than a necessary supplement to a broader farm program of parity supports for farm families and a broad program of available, adequate low-cost credit.

Farm families are looking for a farm program that will bolster their sagging income, give them take-home pay that is fair in return for the contribution they make.

This is GTA, the co-op way.

WEDNESDAY, JANUARY 11, 1956.

The President's farm message came on Monday, and a real barrage of comment on it has been touched off all over the Nation. Farmer leaders and Washington lawmakers have been busy giving out their views. And, editorial writers have been analyzing and passing judgment. The Washington farm reporter of the Minneapolis Tribune wrote that the message received a mixed welcome in Congress, and not all the unfavorable comment came from Democrats.

"Farm-State Republicans joined," he said, "though to a lesser degree, in commenting that the programs proposed in the message would not be bold enough or big enough to cope with agriculture's immediate ills. Generally, of course, Republican Congressmen reacted more favorably than Democrats." This farm reporter then set forth what he found were prevailing impressions that could be attributed to most Midwestern Congressmen regardless of party. First impression he noted was a feeling that the amount of money which the President proposed to spend on a soil bank plan was not enough to get farmers into the plan. The President's proposed $350 million was simply too thin, and a figure of $500 to $750 million was advocated instead.

Another finding was that Members of Congress who have supported firm price supports were sticking by their guns, in spite of the President's refusal to budge from the price-flexing policies of the administration's farm law. A third impression noted had to do with the President's idea of removing corn from the list of basic commodities with supports fixed by law and permitting those supports to range right down to zero, at the discretion of the Secretary of Agriculture. This idea found almost no favor, says the Washington reporter.

Congressman CLIFFORD HOPE, of Kansas, is a veteran Republican lawmaker, with over 32 years of service. He's made his mark as an expert in farm legislation, and when the Republicans were in the majority in the House, he served as chairman of the House Agriculture Committee. Commenting on the President's farm message, he noted that it reflected the President's "sincere, serious, and sympathetic concern with the problems confronting the farmers of this country." HOPE said he believed the President's plan for cutting surpluses were practical.

But, HOPE then put his finger on a weakness that he saw. "I am sorry," he said, "that there is nothing in the message which holds out any hope of increased farm income for 1956 when farmers need it so badly."

Another Republican, Senator THYE, of Minnesota, had some good words to say on behalf of the message, but he thought the soil bank proposal was too skimpy. THYE feels the President "has given us a tone of encouragement to be bold, where a year ago, we were threatened with a veto if we were bold."

Here's hoping that the Senator is right—that this is a call to boldness in dealing with the problems of sagging farm income. Then, let the Congress get to work and draft for the President's signature the kind of bold legislation that will do the job for the farm families of the Nation. The need is to shore up farm income right now in 1956, without further delay.

This is GTA, the co-op way.

Resolution Favoring Long-Range Highway Program Adopted by Central Illinois Section of American Society of Civil Engineers, Urbana, Ill.

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the Appendix of the RECORD a resolution adopted by the central Illinois section of the American Society of Civil Engineers at its annual meeting in Urbana, Ill., on December 20, 1955, favoring the enactment of legislation for an expanded long-range highway program, including provision for the complete construction of the national system of interstate highways in a period not to exceed 15 years.

The resolution follows:

Whereas the highway system of the United States has become increasingly vital to commerce, industry, agriculture, and mining, with more than one-seventh of the Nation's gainfully employed population engaged in highway transportation; and

Whereas an adequate highway system is vital to the national defense; and

Whereas highway inadequacies constitute a serious problem in the lives of our citizens, hampering transportation and bringing choking congestion to our towns and cities; and

Whereas these inadequacies are a prime contributing cause of traffic accidents with their toll of deaths, blighted lives and property loss; and

Whereas the highway network is now serving 61,300,000 registered vehicles compared with 30 million in 1946, with little or no increase in highway mileage and relatively little net improvement in highway conditions; and

Whereas because of mounting traffic volumes with consequent increased wear and tear on existing roads, and with long-range growth inevitable, time presses urgently; and

Whereas the present highway construction level throughout the Nation clearly has been proven inadequate in general for making a significant reductions in the accumulated highway deficiencies; and

Whereas authoritative data on highway needs and costs are available as a basis for devising sound Federal legislation in the public interest;

Whereas, with increasing traffic on all highways, the national system of interstate highways has emerged as the key network, carrying some 14 percent of all highway traffic on 1½ percent of the highway mileage and interconnecting the various regions and principal cities; and

Whereas while hitherto the States from their limited funds have contributed to the national system of interstate highways included in their highway networks, the possibility of greatly increased Federal participation both in amount and on a proportionate basis has created a state of indecision delaying further construction on this system: Be it therefore

Resolved by the central Illinois section of the American Society of Civil Engineers at its annual meeting in Urbana, Ill., on this 20th day of December 1955—

That the Congress of the United States enact legislation for an expanded long-range highway program, including provision for the complete construction of the national system of interstate highways in a period not to exceed 15 years;

That, in determining the details of this program and its financing, the problem be weighed in terms of the broad public interest, without regard to partisanship or self-seeking special interests, but rather boldly and with the knowledge that a direct and far-seeing approach is vital if a fair and equitable solution is to be found in the interest of all;

That a definite program of financing be enacted to permit orderly advance planning, preparation of necessary rights-of-way and construction;

That financing be on such a basis that complete rather than disconnected segments of needed new facilities can be brought to active construction and completion quickly, in order to provide the full benefit of efficient transportation;

That on determining the Federal highway program, special emphasis be given to the necessity of developing the national system of interstate highways to the highest engineering standards with full control of access to insure utmost transportation efficiency; and be it further

Resolved, That copies of this resolution be supplied to the Members of the Senate and House of Representatives of the Congress of the United States, representing the geographical area covered by the central Illinois section, American Society of Civil Engineers, in the State of Illinois.

Our Postal Operations

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article in regard to post office operations, written by Hon. Arthur Summerfield, Postmaster General, and published in the January 1956 issue of Nation's Business.

The Post Office Department, with its over 500,000 employees, handles over 50 billion pieces of mail annually. Under the very able direction of Postmaster General Summerfield, much modernization has taken place and many improvements have been made. As a result of congressional action last year, through passage of the increased pay and reclassification act, morale among the employees has been greatly improved.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

The United States Post Office Department has a new look—and a new spirit.

The new look is dramatized by the eye-catching red, white, and blue colors which now modernize mail boxes and postal trucks.

But the improvements taking place in the postal establishment—which serves more of our citizens more intimately and more frequently than any other Government department—are far more fundamental and much more significant than this new color scheme.

Never before have the post offices of the United States handled so much mail volume, so quickly, so efficiently, so economically.

Deficits are lower. The postal deficit of $362,700,000 for the 1955 fiscal year is less than half of the alltime high reported deficit of $727 million for fiscal 1952.

When our team of executives recruited from industry assumed responsibility for the management of the Post Office Department January 20, 1953, we found:

The post office had no certified public accountants on its payroll although its financial transactions exceeded $20 billion a year.

There was no modern personnel department to meet the needs of 500,000 employees.

No training program was being used.

The salary structure contained innumerable inequities and offered no real incentives for advancement to supervisory positions.

Although the Post Office Department handled more than 50 billion pieces of mail annually, it had no materials-handling engineers.

The worst highway safety record in Government.

No public information services were being used to help the public help itself to better mail service or to provide communication channels between management and employees.

No basic review of its transportation policies and methods had been made in 25 years.

Nearly 40,000 postmasters reported directly to Washington on even the most trivial problems.

Management control tools and methods were so completely lacking that when I first called for a financial report on the previous months' operations, I was told that such data would not be available for 18 months; that such reports were considered historical documents and never intended for management control purposes.

In 3 years the Post Office Department has been overhauled and reorganization is nearly complete.

Tried and proven concepts of modern business management have been introduced and the results are becoming increasingly apparent to the public.

The faster, more efficient, and more economical mail service is due in part to these improvements.

Mailers and postal patrons benefit from more than 70 changes in procedures. Post offices in most major cities are open longer and mail is collected later. More than 5,000 city letter carrier routes are being added annually. Modern rural delivery service is being expanded constantly. New services are being added—and others simplified. The new certified mail provides important benefits of registered mail, including proof of delivery, at lower cost. A new money order procedure eliminates forms and reduces time spent in line. New pamphlets help the public help itself to better mail service.

The internal procedures of handling money, bookkeeping, and finanical reporting have been greatly streamlined. Payrolls are being handled by modern punchcard checks and equipment in 15 centralized locations. The daily task of processing and accounting for 1,500,000 paid money order forms is centralized in the new Kansas City Money Order Center which will ultimately use the most modern electronic equipment. Simpler financial procedures generally will achieve a total reduction of 5,000 positions from the overhead. This program relieves postmasters of unnecessary paper work, gives them modern business methods, and enables them to concentrate on the major job of moving the mail.

A nationwide safety program has already reduced motor vehicle accidents from 13 to 8 per 100,000 miles. Even better results are anticipated.

Broader and better use is being made of all types of transportation by employing the one best equipped to do the individual job speedily, efficiently, and economically. This means expanded use of trucks and tractor-trailers, bus lines, highway-post offices, and air cargo carriers; using the unused space on scheduled airliners for the experimental movement of 3-cent mail; a better coordination with railroad operations; and revision of schedules to deliver the mail on the day it arrives at destination-post offices.

With the opening soon of the Wichita, Kans., Regional Office, postal operations will be decentralized into 15 regions and 91 districts, and operated on a home-rule basis.

The first coordinated progressive personnel program in the Department's history has been established. The installation of a sound salary structure, based on position evaluation, provides 508,000 postal employees with fair wages, incentive to advance in the career service, and compensation related directly to duties performed.

The Department has leased more than 900 new postal buildings, valued at approximately $45,000,000, through its commercial leasing activities from January, 1953, to Nov. 15, 1955. The new lease-purchase program by which buildings are bought out of rent, includes 27 further projects approved as of Nov. 15, 1955. This will create $14,000,000 in new construction. Both programs use the financing and construction capacity of private industry.

Close cost control has been established over the 85,000 motor vehicles the Post Office Department uses (of which 25,000 are owned by the government). Postmasters are charged for the use of this equipment and personnel to make them cost-conscious. A Post Office Department fleet is being developed consisting of four basic standard production-line trucks which will do the same job better than the seven types of special built, often hand-made vehicles

formerly purchased. The estimated savings are 20 percent in purchase prices and 20 percent or more in operating cost.

Practical training programs aimed at improving personnel and mail service—involving ten courses of instruction ranging from tying bundles of letter mail to executive development—have been launched. The Suggestions and Incentive Awards program has been modernized, and the Department received, in 20 months ending Nov. 15, 1955, double the number of employe suggestions offered in the previous five years, with savings estimated at $2,261,000. Uniforms are being redesigned, standardized and brightened effective this month, although employes having garments of the previous design in good condition will be permitted to wear them until January, 1957.

Unnecessary service units are being eliminated. Approximately 3,000 small post offices have been closed, at a saving of more than $4,000,000, with the patrons generally getting better service through rural delivery.

Practical experiments and research are being carried on continuously. Those now under way include: 1, a variety of motorized conveyances for city carriers; 2, an automatic mail facing machine; 3, automatic sorting by electronic scanning; 4, self-service equipment for post office lobbies; and, 5, mechanical parcel post sorting.

The first nationwide effort to attract desirable new career employees into the postal service was launched in December 1955. Display posters in 10,000 post offices and on 16,000 Air Force recruitment billboards in 3,000 communities are being used for a 30-day period, outlining salaries and benefits of postal employment.

Despite the progress made in modernizing the mail service and reducing its cost, the Post Office Department faces two serious problems.

One is the inadequacy and the deterioration of its physical plant. Many post offices were built 50 or even more years ago. Far too many of our postal facilities are badly rundown, outgrown, outmoded.

In some larger cities, facilities are so inadequate that mail is sorted outside post office on the sidewalks or in the alleys, rain or shine. At numerous points, trucks cannot squeeze into the small post office loading and unloading areas. Many post offices and mail terminals are dingy, badly in need of renovation and better lighting, and completely lacking in modern equipment to speed mail distribution.

To correct these conditions will take time and money. We cannot continue to ignore these needs, particularly since they grow increasingly worse as the mail volume of this dynamic and growing country is constantly increasing. It is now 45 percent greater in volume that it was 10 years ago.

The other and more serious problem concerns the fiscal plight of the Post Office Department. The postal deficit accumulated since World War II—during a period of unprecedented prosperity—has now reached $4,600,000,000 and is costing taxpayers more than $100 million a year in interest alone.

Despite the efficiencies and economies we have been able to make, the Post Office Department now faces a yearly deficit of about $500 million. Nearly $200 million of this is the cost of the recently enacted pay raises and other employee benefits.

Basically, our failure to operate on a more nearly break-even basis is due to the fact that postage rates today are essentially the same as they were in 1932. Meanwhile, the cost of nearly everything the Department buys or uses has more than doubled, as have most household or business expenses.

That is why we are recommending moderate increases in postage rates on first-, second-, and third-class mail to Congress.

We believe Congress and the American people appreciate the need for reasonable rate increases so that their Post Office Department may improve its services and facilities and operate on a self-supporting basis as do the postal establishments of most major nations. Our neighbor, Canada, for example, has shown losses in only 3 of the past 20 years with an over-all surplus for these 2 decades of $89,523,932.

Many Members of Congress have polled their constituents on this question of postage rates. So has the Post Office Department. In all parts of the country, the people queried indicated that they favor, usually by margins of at least 3 to 1, increasing postal rates to make the Post Office Department self-supporting. Public opinion here is apparently no different than in Europe where competent observers state that a postal deficit would not be tolerated.

If these rate increases are granted, we can complete the job the Post Office Department set out to accomplish nearly 3 years ago—provide better service—lower costs—reduce the postal deficit—and operate on a break-even basis.

Then the Post Office Department can provide the most efficient service possible to meet the constantly expanding needs of this most prosperous Nation on earth.

Good Times: Can They Last

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MULTER. Mr. Speaker, the December 1955 issue of the National Voter, monthly publication of the League of Women Voters of the United States, contains the following explanatory article on league procedure. I am pleased to call it to the attention of our colleagues:

GOOD TIMES: CAN THEY LAST?

As you fight your way through crowds of Christmas shoppers, comfort yourself that you are enjoying the zenith of American prosperity. Never were the people of the United States, as a whole, better off than in 1955. More things have been produced and more have been bought by consumers than ever before—more food, more houses, more automobiles, more furniture, more clothing, more gadgets. Of course the population has increased, but incomes and spending have increased even more.

This spending is by individuals for things to enjoy here and now, in contrast to the two recent periods of high spending caused by Government demands in wartime and speculative building up of inventories after Korea. The persistent demand by consumers for all kinds of "the good things of life" has stimulated high industrial activity and, in turn, active industry has meant full employment, high earnings, and high profits. At the same time the cost of living has remained remarkably stable. Is it too good to be true? Can it last?

SOME INEQUALITIES

Unfortunately, not everybody is equally well off. Some regions have suffered from declining industries as well as from hurricanes and floods. Farmers as whole have done poorly. There are large farm surpluses and total farm income has declined steadily since 1951; in the third quarter of 1955 it was a billion dollars less than in the same period of 1954. Most of our fundamental industries, however, are booming and yielding high earnings both to employees and stockholders.

These contrasts are concealed in the averaging of prices of all kinds of products to measure the price level. While both retail and wholesale price levels have remained relatively stable at 10 percent above the 1947–49 level, the prices of farm products have been about 10 percent below that level and those of metals and metal products have risen to over 40 percent above. Rubber and rubber products are even higher, and lumber and paper products are far above the average relative to the early postwar period.

DEMAND NEXT YEAR

The pressure of demand seems to be exceeding the capacity to produce some of these materials. "Never can the mills seem to roll enough steel," says Business Week. Yet higher demands are forecast for next year. The plans of the automobile companies add up to about 9 million cars for 1956 compared with 8 million this year. While shortages of building materials are reported in many places, the volume of contracts for new construction remains close to the peak. There is still need for more housing for low-income groups, and the shortage of school buildings for all the little Johns and Marys is worrying parents everywhere. Business plans for new plants and equipment in 1956, meaning more demand for steel, lumber, and cement, are 13 percent higher than in 1955. Moreover, there is pressure for more defense spending by the Federal Government and for spending by local governments for public works of various kinds.

Will this pressure of demand not mean still higher prices for raw materials? Will this not be translated into higher retail prices? Will this, in turn, lead to a higher cost of living, higher wages, higher production costs, higher prices, until we are caught in the too-well-known inflationary spiral? This sort of inflation, whether slow or fast, is the permanent dread of those who live on relatively fixed incomes, and in fact of all those who look ahead to living on pensions, life insurance, and the interest on long-term bonds.

Financial and monetary authorities of the Government have responded to this threat of inflation. The Treasury has been cold to proposed tax reductions, which would mean more money to spend for things which are already in short supply. The use of Government and reserve bank credit to expand demand has been restrained.

CREDIT AND SAVINGS

Credit has been said to be the lifeblood of modern industry. People who need or want to buy things now borrow the savings of others who are building up a surplus for future needs. An easy flow of savings to borrowers through banks and other credit institutions has helped keep national income high. The greatly increased spending in 1955 seems to be particularly related to the growth of installment buying and of mortgage credit. It is estimated that consumers owed over $26 billion of installment loans in September 1955—double the amount in 1950. The amount of debt for the purchase of automobiles alone has increased $3 billion so far this year. The total volume of outstanding real-estate mortgages was $101 billion at thet end of 1953, $113 billion at the end of 1954, and $126 billion at the end of September 1955.

While these types of borrowing have increased at an unprecedented rate, the rate of accumulation of savings, which ultimately supply funds for borrowing, has declined. The figures compiled by the Department of Commerce indicate that while the total personal income of the people of the United States reached a peak in the third quarter of this year, their personal savings were actually less than the average in 1953, 1952, or even in 1951, when their level of income after taxes was $45 billion less than it is now. This, perhaps, helps to explain why mortgage money is hard to get and why

mortgageholders have been turning to the commercial banks for loans on their mortgages. Added to the increased demand for short-term credit from the banks, this has contributed to the growth of bank loans and higher interest rates.

ANTI-INFLATIONARY MOVES

Government authorities have reacted to this situation by discouraging increased resort to Government agencies for credit or the guaranties of credit. The Home Loan Bank Board, for example, has acted to restrain the borrowing of savings and loan associations from the home-loan banks. The Veterans' Administration has shortened the terms of mortgages which it will guarantee. Four times this year the Federal Reserve Board, sometimes called the "trustee of the purchasing power of the dollar," has approved the raising of the interest rate at which Federal Reserve banks lend to their member banks. The Reserve banks have cautioned member banks to be conservative in their loan policies.

It is yet to be seen how effective these measures may be. The ultimate decision as to whether demand will push prices further and further upward lies with the consuming public. Advertising, salesmanship, and easy credit terms are likely to obscure the actual course of prices. Intelligent adjustment of consumption and supply may make possible the continuation of high production together with stable prices, which are basic to a rising standard of living. The voter, too, will influence the economy, either by supporting a policy of balanced budgets or by clamoring for lower taxes.

Address by D. E. Woodman to Decatur, Ga., Civitan Club

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. DAVIS of Georgia. Mr. Speaker, during the congressional recess I had the pleasure of listening to a splendid address delivered by Mr. D. E. Woodman, of Decatur, Ga., to the Decatur Civitan Club. Mr. Woodman is a successful businessman in the district which I represent. He is also a civic-minded citizen who is interested in good government.

One of the duties of a good citizen is to serve upon the grand juries and trial juries of his county and district. In performing this service Mr. Woodman learned first-hand that to serve as a member of a grand jury is one of the most important duties which a citizen can perform. The grand jury in America is one of the foundation stones of our system of justice. It is a protection which our form of Government affords against injustice and tyranny. In addition, the grand jury plays an important part in our local governments in a number of respects.

Mr. Woodman chose the grand jury as the subject of his talk to the Civitan Club. It was so well prepared and so interesting that I asked Mr. Woodman to provide me a copy so that I could insert it in the CONGRESSIONAL RECORD. The address is as follows:

Mr. President and distinguished guests, after hearing those glowing words I began to wonder, indeed, if it were I who was to make the talk. Yes, overstatement is really a frailty of mankind. Truthfully, though, I enjoyed hearing those words and I am humbly grateful for them.

I was happy to respond to the invitation to speak before this group.

I may be "carrying coals to New Castle." Each of you may have a far greater comprehension of the grand jury, its history, its powers, and its duties than I. Nevertheless, I am unabashed, for I believe that by iteration and reiteration we can impress upon ourselves and our community the real value of the grand jury and the thanks it owes to the men who serve.

I am no lawyer nor have I had formal legal training. I have a high regard for their techniques and their learning. But I am unimpressed by some of their archaic phraseology, intricate documents, legal stratagems, and small print. They are, however, an honored profession helpful to the community as a whole and to the grand jury in particular. But we, laymen of the law, must remember in our deliberation, officially and unofficially, that the law is sometimes too precious a thing to leave entirely to lawyers.

As a layman of the law my remarks tonight will sound technical only when I quote the law. And it may be quoted frequently as it has been the lawyers who have formalized the grand-jury system. To this we give them our hats and undying credit.

As with many too many citizens I paid little attention to the grand jury until my hair began to turn gray, then to silver, and the responsibilities of community citizenship began to fall upon my shoulders. My early service on petit juries was accepted almost as a burden instead of a privilege. My first service, several years ago, on the grand jury left me with no real understanding of its power and place in society.

Then about 2 years ago, I was called again to serve on the jury here in De Kalb County. The service really meant something to me. I began to realize that I was serving on one of the most powerful groups in America. I began to feel strength in its unity and a kinship to all other juries all over America who had the same type of strength and outlook.

I knew something of the grand jury system but to remain intellectually honest I felt that I should know more about this group which wielded so much power.

I began to dig. I began to read. I began to ask questions. Many, many questions. Some foolish but all geared to one goal. I wanted to know more about the group on which I had just served:

In general terms I knew what the grand jury was. Reading with unlawlike eyes in Corpus Juris I found that "A grand jury is a body of men who, according to laws are selected and summoned to serve before a competent court and are by such court impaneled, sworn, and charged to inquire with regard to crimes committed within its jurisdiction and to present all offenders against the law. It is an inquisitorial and accusatorial, rather than a trial body, and except in some States is not regarded a judicial body or tribunal." I learned, too, that in Georgia it has some civic responsibility.

Knowing that the the grand jury didn't just "combust," I looked into its history. I found no skeletons in its closet but romance in the law worthy to be told.

Some say the real origin of the grand jury is lost in antiquity. Others are very precise in their research. Rather than pose as an expert let me read with you in my research.

Raymond Moley in the Encyclopedia of Social Sciences informs that the grand jury as it is now known is directly derived from the ancient inquisitio brought into England by the Norms. It first appeared in England, according to Maitland, as "a body of neighbors summoned by some public officer to give, upon oath, a true answer to some question." The regular use of the grand jury to discover and present persons accused of serious crime, however, may be said to date from the Assize of Clarendon 1166. The use of this new piece of judicial machinery—presentment by a jury—came to be the most important function of the court known as "sheriff's tourn" which emerged as a distinct court at the end of the 13th century.

The most important function of the court known as "sheriff's tourn" which emerged as a distinct court at the end of the 13th century. The "sheriff's tourn" was the turn or circuit anciently made by the sheriff twice every year for the purpose of holding in each hundred the great leet of the county.

"This is the origin of the sheriff's tourn, which decided in all affairs, civil and crimial, of whatever importance, and from which there lay no appeal but to the Wittenagemote" (Burke: Abridgment English History, bk. ii, ch. vii).

"(Wittenagemote—an assembly of wise men, from witena, gen. pl. of wita—a wise man; witan—to know, and gemot—a meeting, an assembly, a moot.)

"English history: Among the Anglo-Saxons the great national or general assembly which met annually or oftener, whenever the King kept his Christmas, Easter, or Whitsuntide, as well to do private justice as to consult upon public business. It was composed of the athelings, or princes, ealdormen, or nobles, the large landowners, the principal ecclesiastics, etc. They formed the highest court of judicature in the kingdom, and their concurrance was necessary to give validity to laws, and treaties with foreign states. They had even power to elect the king and if the throne passed to the heir of the late king, the new sovereign had to be recognized formally by the witenagemot at a meeting assembled for that purpose." (International Encylopedia Dictionary, p. 4530.)

The presentments were made to a jury of 12 freemen of the 100, who had been chosen from a total of 100 freeman, said jury either accepting or rejecting them. Thus we learn of the origin of the "sheriff tourn." If they were accepted they were passed on to the sheriff, who sent those accused of more serious crimes to the itinerant justices after they had been taken into custody. The sheriff punished the lesser cases himself."

By the time America was settled according to 12 Ruling Case Law, page 1014, the grand jury was an informing and accusing body only, without whose previous action no person charged with a felony could, except in certain special cases, be put upon his trial. And in the struggle which in those times arose in England between the powers of the King and the rights of the subject, it often stood as a barrier against prosecution in his name." Thus it has grown up in America that the grand jury has supervision of the enforcement of law and order, the preservation and protection of morals, the supervision of public offices, and the inspection and examination of public records.

When I first served on the jury, I gave no thought as to why and how I was chosen. Interested, now, I learned.

A group known as the board of jury commissioners selected me as a person qualified to serve. This board is composed of upright, honorable, and discrete men, none of whom can be lawyers, county officers, or county commissioners. Fairness is the watchword in the selection of jurors. Names of the persons selected are written on a slip of paper and placed in compartment one of a jury box. The box is sealed and placed in custody of the clerk of the court. The key is given to the sheriff. The judge in open court then draws the jury and places those names in compartment 2 of the box. The drawn names make up the jury. The

box is then resealed and turned over to the proper authorities.

My name drawn, I wondered what qualifications caused me to be selected.

I read the Georgia code and learned that I had to be a citizen and over 21 years of age. I seemed to have those qualifications, all right. Residing in the county for the past 6 months, I passed satisfactorily. I was pleased to learn that I was not thought an idiot, lunatic, or insane, and that the commissioners believed me one of the most experienced, intelligent and upright persons in the county. This they could do for I was neither a county commissioner, a tax receiver, a tax collector, a member of the board of education, county school commissioner, ordinary, nor county treasurer. I was pleased that I did not have to meet the qualifications of 1788 which required "That all persons returned to serve as grand jurors at the said superior court shall every one of them have and be seized of not less than 250 acres of land, in their own right, in fee simple, feetail, or for the life of themselves or some other person, or shall be in commission of the peace"—cause I don't own that much land.

Selected to serve on such an old and honorable body, I was pleased to take the grand juryman's oath, now several hundred years old, to wit:

"You shall diligently inquire, and true presentments make of all such articles, matters, and things as shall come to your knowledge, touching this present service. The King's Council, your fellow's and your own, you shall keep secret; you shall present no person for hatred or malice; neither shall you leave anyone unpresented for favor, or affection, for love or gain, or any hopes thereof; but in all things you shall present the truth, the whole truth, and nothing but the truth, to the best of your knowledge; so help you God." To make this the oath that you once took, the only words changed were "King's Counsel" to "State."

Being a full-fledged member I looked around to see how many of my fellows were serving with me. I counted 23. I wondered the number. I am sure that at times it has varied but our rule of from 18–23 was passed on February 9, 1797. And talking of numbers I was told that to find a true bill or make a presentment at least 12 should vote for that purpose.

Remembering my remarks about the legal profession but realizing that their help is needed, the grand jury can ask instructions of the court and advice from the solicitor general. These are the only two sources from which the grand jury can receive instructions. All other counsel is completely verbotten. A good rule in these respects because the court and the solicitor general are guided by their oath of office and responsibility. Outsiders, in general would have no code of ethics to guide them in their counsel and ulterior motives would be suspect.

Receiving legal help from the bench—I wondered about our true relation to the court. I found that it was a very close relationship—and most of the time a very harmonious kinship. A former Chief Justice of our Supreme Court sums up this relationship, "A grand jury is a component, and a very important one, of the superior court, and the discharge of any duty which the law imposes upon the grand jury is one of the purposes for which a term of the superior court is held; for the grand jury has no existence apart from the court."

Now a full-fledged member of the grand jury, I wondered what power had been bestowed upon me.

I remembered the words accusatorial and inquisitorial. The grand jury had the power to accuse and investigate. It cannot judge. It cannot try.

As Corpus Juris says: The ordinary conception of the powers and duties of the grand jury is to guard the rights and liberties of the people, and the preservation and protection of moral and social order, the bringing to trial the proper persons, whose identity is established upon prima facie evidence of the proof of the commission of crime, and also in furnishing reasonable protection against malicious and unfounded prosecutions. Exercising its powers and duties involves all the powers necessary to complete inquiry to the subject matter in charge, without any limitations by acts of the court or a judge; but it is bound and limited by the proscription of the law under which it acts. Scope of its inquiry should not be limited narrowly by questions of propriety of the forecast, or the probable result of the investigation, or by doubts as to whether any particular individual will be found properly subject to accusation of crime."

In addition to this general instruction, the lawmakers have recited in the Georgia Code many special penal provisions that must be brought to the attention of the grand jury by the court.

Be it know, however, that the grand jury is not limited to the subject matter of special instructions from the court. The welfare of the people rests in the arms of the jury. And to protect that welfare and keep them safe from harm they can use their power in a way they see fit to keep the criminal from the borders of this county.

In many States, I have learned, the grand jury has no power in civil matters. Thank God this is not the case in Georgia. In *Kirby* v. *Long* (42 SE 386), it was settled that the jury has the power and is charged with the duty of inquiring into and reporting on conditions and management of the public prisons, and other public institutions within its jurisdiction. The bible of Georgia law—the Code—reports in detail the requirements of the grand jury in civil matters. There is no need to burden you with a recitation of these duties except to recount that tax lists, evaluation, jails, public buildings, county officers, records, to name a few, should be looked into periodically by the grand jury. Never overlook your city or township.

To me the real strength of the grand jury lies in its investigatory powers. I have learned this from my experience. I will say it now and I will say it again. The power of the grand jury to investigate is without limit, and no branch of Government (except Federal) located in the county is immune from such investigation.

I believe that the grand jury as an inquisitorial body has a wholesome effect upon the community. Its broad power to summon witnesses whose testimony is not confined to narrow legal questions, as in the case of a court of inquiry, makes it of inestimable value where a state of public corruption exists and widespread inquiry seems desirable.

I like this power of investigation. Under it, you and I, citizens of the community, are endowed with the right to investigate any potentially criminal situation, then find indictment or make a presentment—a statement to the court about the misconduct in the community.

This power gives us the right to defy judges—even the judge who charged us. He cannot cause the jury to be dismissed before the end of its term. I like the fact that our grand jury presentments are published in the daily press for all to see and read. We of the public who by virtue of being free citizens are really the grand jury, should deem it a privilege to study the grand jury presentments and then consider it a civil command to see to it that action is taken at once. Incoming grand jurors should have spot reference to previous presentments; should consider them summarily in the interest of saving time and thus be better able to effectively carry on. The presentments are of limited value without definite follow-through.

Don Wharton in a recent issue of the Readers Digest recounts a story that graphically illustrates how a grand jury can defy governors, sheriffs, police chiefs, even the President. "Some 75 years ago the Federal Grand Jury in Indiana was investigating a bank embezzlement. A United States attorney told the jury to cease because the President had so requested. The jury rushed to the court for instructions as any jury can when in doubt about its procedures. The judge told the jury that the President "has no more right to control your actions than the Tsar of Russia."

Neither can county politicians control the action of a duly sworn jury. A real function, I have found, of the grand jury is to keep tabs on county politicians and county government. By statute many items are listed which are required items for the grand jury to look into periodically. By examining these county offices, buildings, lands, and other county doings, criminal neglect sometime can be encountered.

In some States it has been held that a grand jury has a general inquisitorial power to inspect the books of officers, and to subject the officers themselves to examination for the purpose of ascertaining whether or not there has been any official misconduct in any public office, but in Georgia this power is granted by statute. (*Chatham* v. *Gaudry* (120 Ga. 121).) Let's use this power. And remember that Georgia does not limit the power of the grand jury investigating the acts of public officials to cases where there may be a prosecutor, and does not prohibit them from prosecuting by presentments on their own motion. (*Groves* v. *State* (73 Ga. 205).)

Yes, by digging. By studying. By asking questions I have learned a lot about the grand jury on which I once served.

I now know what it is. I glory in its history and the romance of the law. I know how I was chosen. I know the duties. I know the powers. I know the responsibilities. But does the public? And they should. The public is the grand jury. Are not our neighbors selected to serve? Do not they act on matters that concern the public? Although only 18 to 23 persons serve on the jury, does not the public have grand jury rights, too? Any citizen may present a bill of indictment to the grand jury and ask that it be acted upon, regardless of the wishes of the judge or the solicitor general.

Even on matters that might transcend county borders the grand jury has powers. Freedom is a big word. Many use it loosely and unknowingly. Yes gentlemen, freedom still remains, though heavily regulated and fast disappearing only because we as citizens are expediant, preoccupied with our own selfish gain and position—too busy to take time to defend what our forefathers paid for in blood. And in the talk of freedom, we have always placed too much emphasis on the big man in history. An event in the march of freedom that should be more than a footnote in the history books was the trial of the 11 Communist leaders several years ago. Judge Harold R. Median handled the case superbly but it would not have taken place without the painstaking investigation by the grand jury which handled the indictment. As Don Wharton has said, "Each time a grand jury exercises its powers it sharpens the weapon for other decent citizens to use in attacking the rottenness around us. It is the one weapon that can be fought effectively against corruption without blasting away freedom itself."

In brief, I have given to you my impression of the grand jury system and what it means to me. I have only one plea. The public should be better informed of the

nature of the grand jury. I would like to see a week set aside each year as grand jury week in which we would use all means possible to emphasize our work to the people—not forgetting that it is a day-to-day task too. To acquaint every person in DeKalb County with our objectives; (these are the Fulton County objectives):

1. To increase the effectiveness of the grand jury system by fostering, encouraging, and promoting a public demand for the serious consideration of meritorious grand jury recomendations by public officials empowered to act upon same.

2. To advocate such changes in criminal law and procedure of our courts as will more effectively provide for the acceleration of the trial of cases in order that the interest of justice, liberty, and public safety may be better served.

3. To influence legislative action for the purpose of improving and maintaining the grand jury system in Georgia.

4. To support and assist public officials in their proper plans for the prevention and suppression of crime and the treatment of criminals, and to criticize and oppose inefficiency and dishonesty in public office.

5. To enlighten the public on the importance of the grand jury and to acquaint prospective grand jurors with the powers and duties delegated to them by laws as grand jurors.

And as the public is enlightened, to utter a prayer for the Commonwealth in the selection of grand jurors, public officials, and yes, even private citizens:

"God give us men. The demands—
Strong minds, great hearts, true faith, and willing hands:
Men whom the lust of office does not kill.
Men whom the spoils of office cannot buy.
Men who possess opinion and a will.
Men who have honor, men who will not lie.
Men who can stand before a demagog and dam his treacherous flatteries without winking.
Tall men, sun crowned, who live above the fog, in public duty and in private thinking."

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. BROWNSON. Mr. Speaker, the subject of Federal aid to education has been widely discussed and carefully considered in light of the recent White House Conference, the President's state of the Union message and his recent messages on education. Nowhere has the discussion been more vigorous than in my own district, both within the city of Indianapolis and in the adjoining suburbs and communities of Marion County. I have found no individual who was unwilling to spend money to the extent necessary to assure the best possible educational opportunity for our youngsters. Two critical questions have been raised in the discussion. The first question is whether States and localities or the Federal Government is in the best position to finance schools which everyone admits are needed. The second question is whether Federal aid to education also spells Federal control of education, similar to those controls tied to existing grant-in-aid programs.

On Saturday, January 14, 1956, all three metropolitan dailies of Indianapolis featured editorials on the subject of Federal aid to education. I believe their position represents a consensus of the voters of my district whose opinion favors continuation and expansion of State and local responsibilities for schools to be controlled by the community rather than by professional administrators or an agency of the Federal Government:

[From the Indianapolis Star of January 14, 1956]

AID FOR AID'S SAKE

It has been months since there was a change of Secretaries in the Department of Health, Education, and Welfare. Yet HEW has not permitted itself to be influenced for the better by the developing facts of the public-school classroom situation. Far from modifying its Federal-aid proposals in line with changing factual estimates of the situation, the Department has become more ambitious. Far from advancing more convincing facts and figures as to the necessity for Federal aid, it relies more heavily than ever on the simple supposition that the necessity should be taken for granted.

These things are evident from the special message on education which the President has transmitted to Congress.

The proposed program of Federal aid is the same in structure as that proposed last year. There is a significant difference in size and duration. The proposal of last year was for a 3-year program costing about $1 billion. The new proposal is for a 5-year program to cost twice that. This jump in the proposal has been made in the face of the fact that each new survey of the situation, made by the Department, shows construction already in progress to be alleviating the classroom shortage more rapidly than had been anticipated in the last survey.

The Department of Health, Education, and Welfare has also looked to its own future in preparing the new proposal. Included is a recommendation for a major increase in funds—no amount specified—for the Office of Education. The purpose is to provide funds for research and to improve and expand other services. Educational research, it is said, has been a sorely neglected field. This in the face of widespread and intensive educational research in the last few years by both private and governmental bodies, such as we doubt has ever before been devoted to any single peaceful activity.

Moreover, the Federal aid promoters look to bigger things once public schools have been assimilated. The President has been persuaded, his message discloses, to appoint a commission to develop proposals in the field of higher education. Thus we are warned that colleges and universities are to be the next target.

In this message President Eisenhower again indicates his position that Federal aid is called for when States and communities—acting independently—cannot solve the full problem or solve it rapidly enough. The first condition seems reasonable. As to the second, we wonder who is qualified to decide when a problem is being solved rapidly enough. But that is the philosophy of Federal aid. How does it apply in the classroom construction matter?

What is the extent of the full problem? Missing from this message are such figures on present and anticiptaed classroom deficits as were advanced last year in justification of the Federal-aid proposal. The figures offered last year have now, of course, been discredited by investigation of their source and by later figures gathered by the Department of Health, Education, and Welfare itself. If there are new figures summarizing the shortage, they have not been disclosed. So we don't know what the Department now thinks it to be.

Is the problem being solved rapidly enough by community and State action? Without knowledge of the total size of the problem, it would seem difficult to arrive at an answer of any sort to that question.

What is being done? Figures published last September by the Department showed that between 65,000 and 70,000 new classrooms were completed by public and private schools in the 1954–55 school year. This number exceeded by 12,000 to 17,000 rooms the added space needed to meet the enrollment increase which occurred in that year. The same report indicated that construction for the public schools alone now approaches the rate of 70,000 rooms a year.

How does this rate of building affect the problem? A report of the Department last November, summarizing enrollment figures for the present school year, concluded that school enrollment now includes almost 2,400,000 pupils in excess of normal capacity of accessible publicly owned school plants in use. The method of arriving at this figure has been challenged by some authorities. But suppose for the moment we assume that it is not exaggerated. The same departmental report pointed out that if 66,300 scheduled new public-school classrooms are completed during the present school year, they would take care of almost 2 million of those pupils at the commonly used ratio of 30 pupils per room. That would leave 400,000. If in the next 2 years the rate of building continued to be only as much as the minimum excess estimated for the 1954–55 year, the other 400,000 would be taken care of within those 2 years, entirely by local and State effort. Then excess construction could be devoted to the replacement of obsolete and otherwise unsatisfactory buildings.

In the face of this prospect, where is the need for a Federal aid program for even 1 year, much less 5 years?

The 5-year proposal is based on the proposition that it would enable communities to catch up with accumulated needs, both of enrollment increase and replacement, by the end of the 5 years. After that, said the President's message, the States and localities should meet their current and future needs without Federal help. "Present construction levels indicate their ability to do this," he said. In other words, the justification for Federal aid is supposed to be found only in helping to wipe out the backlog more quickly.

Those present levels of construction involve local spending of something over $2.5 billion a year. To this the proposed program would add $400 million a year, or over the 5 years, about $2 billion in grants and loans. That's less than the equivalent of a year's outlay. So the program would help to eliminate the backlog by no more than 1 year How can Federal intervention in the precious local management of our schools be justified for so small a gain?

The whole Federal aid argument assumes that some States and communities lack ability to provide adequate schools out of their own resources. But is this really a fact? Where are the figures, names, and places to prove it? They have never been offered.

Congress turned down the school aid proposal of last year. Certainly no reason has been advanced to impel it to do otherwise this year. The likelihood that the Department will be able to prove a need for it is more remote now than it was before.

[From the Indianapolis News of January 14, 1956]

AGAIN, THE SIREN SONG OF FEDERAL AID

In 1954 President Eisenhower advanced a 3-year $7 billion program of Federal aid for public schools. Congress rejected it.

In 1955 the President proposed a more modest 3-year $1,100,000,000 program. Congress rejected it.

In 1956 the President is seeking a 5-year $1,250,000,000 program.

We hope Congress will reject this one, too.

In an editorial entitled "The Siren Song of Federal Aid," the News said after last year's proposal: "We have seen no statistics to convince us that any State in the Union is without the resources to provide for its school-construction needs if it has the will to do so."

That still goes.

And our judgment embraces the nebulous findings of the recent White House Conference on Education—which was loaded in favor of a big Federal-aid program.

No State today is spending as high a percentage of its income for education as it spent in 1929 or even in depression 1933.

The States today, nonetheless, are building schools at a $2-billion-a-year rate, highest in history.

In the last 6 years the country has built some $9 billion worth of schools to house some 8,100,000 pupils. Yet the increase in pupil population has been only some 6,100,000.

So the States are keeping well ahead of the growth in school population.

To be sure, much more needs to be done. The building rate must be stepped up. Old, inadequate schools must be renovated or replaced. In some areas there are shameful shanty schools.

But we never have seen any figures to show that the situation anywhere amounts to a "crisis" that would justify a potentially dangerous new Federal intervention in local and State public-school affairs.

And, by the way, just where is the Federal Government going to get its proposed school-construction money other than from local taxpayers—money which never would be returned in full to States and communities?

We are 100 percent in favor of better and better public schools.

But the argument that the Potomac colossus somehow can provide the will that may be lacking in some localities is the argument of superstatism.

We shall be happy to publish contributions from readers who can cite, chapter and verse, exactly where in this country State and local resources absolutely cannot do the job that Federal aid proponents want to do.

[From the Indianapolis Times of January 14, 1956]

AID FOR SCHOOLS?

The only justification for Federal aid to the public schools is the inability of a community or a State to provide adequate schools for its children.

Previous efforts for an aid program on the basis of need have foundered because representatives of the wealthier States have been unwilling to vote money to help schools in the poorer States. The result has been legislation which simply would hand out a certain amount of money per pupil to all the States. No Congress ever has passed such a bill.

We hope this one will not.

The program outlined in President Eisenhower's message however, would limit Federal aid to States and districts which actually need it, and apply the test of whether a State is doing the best it can.

This test is important. Some States spend a large proportion of their tax revenues for schools, but do not collect enough taxes to make the school share what it should be even for a "poor" State.

This newspaper never has favored Federal aid for the public schools, because it is convinced that the schools are the responsibility of the communities and the States and because it remains to be demonstrated that there can be Federal aid without Federal control. At best it will establish a principle of real danger to the continued freedom of all Americans.

But many people in Congress think some kind of Federal aid bill will be passed in this election year and the choice will be between a program along the lines of President Eisenhower's message and a more expensive nationwide handout.

If that is true, the Eisenhower program is by far the more sensible alternative.

But even it will be another burden to the taxpayer, who should never forget that when a dollar goes to Washington, it never comes back whole.

Additional Editorial Support for Coyote Valley Project

EXTENSION OF REMARKS

OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I desire to include an editorial from the January 11, 1956, issue of the Ukiah (Calif.) Daily Journal entitled "Back Coyote Valley Project."

On May 10, 1955, by a margin of 3 to 1, the voters of Sonoma County approved a bond issue providing local participating funds amounting to $5,598,000. Mendocino County, in which is located the dam site, will vote on January 24 to finance $630,000 in participation bonds for the proposed water district consisting of Sonoma and Mendocino Counties.

I have just returned from a survey of the flood areas in California with several members of the House Committees on Public Works and Interior and Insular Affairs. What we saw is convincing proof of the need for projects to prevent a reoccurrence of the dsiastrous floods in California's First Congressional District, as well as in other sectors of our State.

This editorial recognizes the need and points out that if the recent floods did not drive home the need for flood-control measures, then nothing else can. We hope the nuisance suit now pending to obstruct the construction of the Coyote Valley Dam will be dropped by the passage of H. R. 7930, which unanimously passed the House last Thursday, January 12, and is pending Senate action this week. As a further indication of local support of the project, I respectfully call your attention to the following editorial:

BACK COYOTE VALLEY PROJECT

If all the words that have been written about the Coyote Valley Dam in the past year could be turned into dollars the cost of the project would have been met long ago.

Almost all of these words have been in favor of the dam. And yet there is a small hard core of opposition that is determined to fight it out to the last ditch.

The Walter Robbins taxpayers' suit in Sonoma County to try to halt the delivery of the participation bonds is the most notable opposition of course. All the opposition's eggs are in that basket.

The finding of the superior court in throwing the case out of court and the subsequent ruling last week by the Third District Court of Appeals holding that the appeal was "devoid of merit" all point to the fact that any further higher court rulings will be the same. And yet the foot dragging goes on and on and new appeals will undoubtedly be filed.

No doubt these people feel they are right and the dam is being built in the wrong place. But they are fireside engineers who are disputing the word of the United States Army engineers, who just recently showed that the Coyote Dam would have saved millions in flood damage down river from here and even lowered the crest considerably up this far. We'll go along with that thinking.

Mendocino has to go to the polls January 24 to decide whether or not we will take part in the project to the tune of $630,000 in participation bonds for the proposed district.

The opposition recently sent out a letter in an attempt to frighten the taxpayer, hitting him in the pocketbook, so to speak. It's an old trick and doesn't tell the whole truth by a long shot.

If the recent floods didn't drive home the need for more and more flood-control measures in northern California then nothing else can. We think local voters share our views and will turn out to vote for the formation of a flood control district by a big majority.

We think the Coyote Dam is needed badly both by Mendocino County and by Sonoma County. We think other dams are also needed in this watershed, but for the present let's get this one job done and over with and stop the arguments. Get out and vote for it.

Retirement of Philip H. Parrish, Editor of Portland Oregonian

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1956

Mr. NEUBERGER. Mr. President, one of the outstanding editors and authors of the Pacific Northwest, Mr. Philip H. Parrish of the Portland Oregonian, retired from his position as editor of that newspaper on January 1, 1956.

Mr. Parrish and I have not always agreed on public issues. He is a Republican. I am a Democrat. But he is a man of wide intellectual attainments and of vast knowledge of the history, culture, and geography of a great American region. I believe his retirement should be taken note of in the pages of the CONGRESSIONAL RECORD, and I am happy to ask permission that there be included in the Appendix a tribute to Mr. Parrish written by Stewart Holbrook, of Portland, and published in the Northwest magazine of the Oregonian for January 8, 1956.

I should like to add that Philip H. Parrish was a close personal friend of one of the most distinguished men ever to serve in this body from my State, the late Senator Charles L. McNary, for many years Republican party spokesman on the Senate floor.

I ask unanimous consent that the article under the title "An Editor Gives Up the Reins," paying tribute to Philip H.

Parrish, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN EDITOR GIVES UP THE REINS

Back in the days when railroads had steam locomotives and train robbers, Reporter Phil Parrish was one of a posse of deputies, newspapermen, and bloodhounds chasing three murderous holdup men in the high Siskiyous of southern Oregon.

After some 18 hours, with no rest and little food, young Parrish came out of the timber to find a telegram waiting for him at summit station. It was from his city editor, demanding to know the names of the fugitives. Nobody knew who they were, but the exhausted reporter was sufficiently irritated to reply.

From the telegraph hut he wired the god of the city room: "Bandits identified as Edgar B. Piper, Philip L. Jackson, Fred L. Boalt, and John E. Wheeler. Bloodhounds have them surrounded." The men named were editors of the four daily papers in Portland.

Such was the classic legend that attended the young reporter, Phil Parrish, who a bit later joined the staff of The Oregonian. And this week the retirement of Philip H. Parrish as editor of The Oregonian's editorial page marks the end of an era in the century-long history of the most distinguished editorial page in northwestern America. Only two other men had charge longer: The pioneer Harvey W. Scott, 40 years, who died in 1910, and his successor, Edgar B. Piper, 18 years, whose passing was in 1928.

Parrish took charge in January 1939, only a few days less than 17 years ago. He resigned the first of this month and now will serve as consulting editor. His difficulty has been from failing health, largely asthmatic.

His 17 years began when the world was approaching the end of an unruly peace—when it was about to go crumbling and smoking into what many believed to herald the true Armageddon of the Apocalypse. His stewardship carried through the 6 years of history's worst war and the first frightening decade of history's worst peace.

During this period he has advised his readers wisely and fearlessly on controversial matters. Yet his deep knowledge of history and his devotion to literature, painting, and the arts in general have shone through, and have kept a balance such as exists on only a rare handful of American papers.

What caused the man and the hour to get together? What was the background he brought to the job? This article is my personal testament rather than a biography, yet certain biographical facts will help.

Parrish was born in 1896 in Michigan, a son of Randall Parrish, a minister who later won fame as a popular novelist. Philip grew up in Boyd County, Nebr., where his mother's people were farmers. He came to Oregon in 1913 as a boy, intending to take horticulture at Corvallis and then operate the apple orchard his father was paying for "on tick."

However, such orchard projects soon were bailing out for a dime a dozen. And, meantime, 3 years at the college had found Parrish's interests turning more and more to history, sociology, and literature. So in 1916–17 he transferred to the University of Wisconsin, and was there when World War I ended his formal education.

Returning to the west coast, he found the recruiting sergeants unimpressed by his 118 pounds, his 5 feet 4 inches, and his limited eyesight.

He went looking for work, seeking a reporter's job because, as he says, he literally couldn't think of anything else. He reported for some months for the old Morning Olympian in Washington's capital city, and another few months for the Bellingham (Wash.) Herald.

Then while covering the draft board at Bellingham he memorized the eye chart and got past the board into the Army.

Out of the service, he took off immediately for Portland. He had loved the city from the first. There were then four general dailies—the News, the Telegram, the Oregonian, and the Journal—in booming competition. Young Parrish talked his way onto the Journal and remained for 8 years, from cub to star reporter.

By the time I met him, "Phil," as he was invariably known, was already one of the foremost reporters in the Northwest. He had covered disasters such as the Astoria fire and the Kelso bridge tragedy; crimes like the Bromfield affairs in Roseburg, which included the then novelty of wiring an automobile to a package of dynamite; and the alarms, trials, and floggings due to the activities of the Ku Klux Klan.

Some of the finest reporting of the decade was that done by Parrish during the hunt in the Siskiyous for the three d'Autremont brothers, killers, and would-be trainrobbers.

What set his stories apart from others was the contemplative attitude. One sensed, even while knowing they had to be written hurriedly, within sound of the bloodhounds, that they were done by a reflective person. He wrote from a "frame of reference."

I met Phil first in the old Portland Press club, then housed in a decaying Victorian mansion on N. W. Davis Street. This was quite a place. I fancy that no visitor failed to be impressed with the old structure's deep melancholy. Its facade surely presented the idea that though this House of Usher might still stand, it stood none too stoutly; yet within its high ceilined rooms young men of the press gathered to discuss newspapers, art, literature, and lesser subjects.

Our gatherings were animated and often noisy. Most of the time Phil sat like a somewhat morose owl, peering out from under the thickest and most unruly head of hair in town, impassibe save for his dark eyes that lighted or dimmed according to his interest in the matter before the house. When he chose to speak, however, he said something to the point. It mattered little whether the point was serious or ribald, he illuminated it.

YEAR SPENT AS OSC EDITOR

In 1927 he married Margaret Sheridan of Portland and by way of a honeymoon they moved to Corvallis where he became Oregon State alumni editor. A year later, however, he was back at the Portland Journal doing work on the rim during vacation period and asking to be returned to the regular staff.

At that time, though, the Journal had a policy of being displeased with anyone who had once left its employment, and the editor in charge told Phil a permanent job probably, but not certainly, would be opened up by the time the vacation work was ended.

Phil was irritated by the indefiniteness. He walked north along Broadway, turned down Alder and so to the eighth floor of the old Oregonian building, where George Pritchard put him to work within 10 minutes. It proved, in view of Portland's subsequent newspaper development, a historic walk.

In quick succession Parrish was reporter, copyreader, assistant city editor, Sunday editor, and editorial writer. In his spare time he began a book which was to run serially in the Sunday paper and to be published in 1931 as Before the Covered Wagon.

Here was notice of a new major writer in the Northwest, a man with poetry in his soul who had also a profound respect for historical fact. It is a combination of some rarity.

BOOK INFLUENCED M'NARY

The late Senator Charles McNary read Before the Covered Wagon, which deals in large part with the Columbia River, on his famous trip to Washington that resulted in getting Bonneville Dam for the Columbia. The Senator later described the volume as the greatest book ever written on the Pacific Northwest.

It is, in fact, a classic already, made so by the adults and the generations of youth who have been reading it continuously for a quarter of a century. They have read it because of the magic imparted to its narrative by the writer as artist.

The immediate though regional success of Before the Covered Wagon came at a time when Sunday Editor Parrish stood at a crossroads: He could remain with the Oregonian, hopeful of opportunity, or he could go freelancing on the national market.

Paul Kelty, who had become editor, determined the matter by offering him a full-time editorial post. So during half a dozen years, early in the depression, he was advancing on the staff which included, besides Kelty: R. G. Callvert, specialist in politics and taxation; Larry Hodges, foreign affairs; and Ben Hur Lampman, who many believe was America's greatest nature essayist.

Tige Reynolds, and then Quincy Scott, drew the cartoons during those early years.

It was a brilliant training school, and evidently Parrish learned well; for in 1939 when Palmer Hoyt as publisher and M. J. Frey as business manager took charge for the heirs of the Pittock and Scott families, he was named Kelty's successor. This in spite of his being the youngest of the editorial writers (associate editors).

All of the original group now are dead except for Quincy Scott, who is in retirement. (Another casualty has been the late beloved Ralph Lee, cartoonist.)

Asked to compare the staff which he inherited in 1939 with the staff he passes along in 1956, Parrish pointed out the difficulty of judging:

"When I went into the editorial end, none of the men there except for Quincy Scott had ever been near a college. They were newspapermen, and particularly editorial writers, through sheer love of it. One of them, Ben Hur Lampman, was, in my opinion, most certainly a genius, a printshop his training school.

"However I am very proud of the new staff members and the manner in which they have taken over. Most of them are university men and scholastically far better prepared than the old staff. With the support of Publisher Frey, they were chosen as much for their devotion to the page as for their superior training. Herbert Lundy as editor and Malcolm Bauer, Jalmar Johnson, and Albert McCready as associate editors, will carry on in the highest tradition, as will Cartoonist Art Bimrose.

"I am all the more confident in saying this because of the conditions of control the staff will inherit. In the 10 years since M. J. Frey, now publisher, took charge, he has shown a deep concern for editorial independence and problems. I do not recall that he has ever reversed a single editorial decision. I owe him an unpayable debt for his protection.

"So far as the owner, S. I. Newhouse, is concerned, he is the answer to an editor's dream. After these several years I still haven't the slightest idea what Mr. Newhouse's policy is on any subject whatever."

READERS GIVEN RESPECT

Perhaps this is the place to mention that Parrish has consistently refused to write down to readers of the Oregonian, being convinced that readers have a sixth sense which detects snobbery and dishonesty. He never has shortened words or sentences at the expense of meaning, and points out that pages which seek attention through typographical trickery, such as big type and piles of blackface, soon lose most of their influence.

He started out determined to be as bold on public issues as Editors Scott, Piper, and Kelty had been before him, but without calling his opponents nasty names simply because they disagreed with him.

Nor does the Oregonian appear to have suffered from this combination of forthrightness and erudite syntax. At the depth of the depression the daily press run was down to around 90,000. Today it tops 230,000.

Meanwhile, though diverted permanently from the library to the newspaper office, Phil needed one more book to round out his family. Before the Covered Wagon having been dedicated to Mrs. Parrish, he required one for their daughter, Pamela (now Mrs. John H. Davidson and the mother of two children of her own).

So he wrote a textbook, Historic Oregon, in competition. It was selected (1937) and at the expiration of the present 6-year contract will have been the official textbook for the schools of Oregon, outside of Portland, for 24 years.

Thus for a quarter of a century Mr. Parrish has been at the breakfast table of most of us in the form of the Oregonian's editorial page, and for at least a quarter of a century the youth of Oregon has grown up with his description of Oregon and its past foremost in mind through the textbook. I can hardly imagine a more extensive power than he has been exercising, or a more unobtrusive one. He has been doubtless one of the most influential men in the history of the State—yet comparatively little known.

To complete this piece about the end of one era of the Oregonian and the beginning of another, I should remark that my regard for Phil Parrish, a close friend of many years, is such that I may not judge his achievements with proper objectivity. Yet, he happens to be one of the outstanding men of my acquaintance. I doubt that in this article I have made him bigger than life size, and time may well prove I hardly did him justice.

Hon. Martin P. Durkin

EXTENSION OF REMARKS
OF
HON. JOHN C. KLUCZYNSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. KLUCZYNSKI. Mr. Speaker, one of the Nation's most outstanding labor leaders, Martin P. Durkin, died on November 13, 1955. His passing was a great loss to the labor movement, which he so ably represented, and to his legion of friends.

The parents of Martin P. Durkin were Irish immigrants, and his father was an ardent trade unionist and head of a large family.

Martin P. Durkin was born and reared in the back-of-the-yards district on the southwest side of Chicago, the district which it is my privilege to represent. After attending elementary school and high school, he then went to night school to further his education. He started to work as an apprentice steamfitter, a trade which he followed during his lifetime.

In 1933, during the dark days of the depression, Gov. Henry Horner appointed Martin Durkin as director of labor for the State of Illinois. At that time I was a member of the General Assembly of the State of Illinois and served on the labor committee in the house.

It was during that time that I really got to know Martin Durkin and his great work in recommending legislation for the benefit of the laboring man.

To Martin P. Durkin belongs a great deal of credit for the passage in the State of Illinois of the minimum-wage law—an 8-hour working day for women—a law establishing the public-employment service and providing for unemployment compensation. He assisted greatly in obtaining improvements to the State workmen's compensation law. Under his leadership the Department of Labor for the State of Illinois became a model and example for the rest of the country to follow.

In 1953 Martin Durkin was selected by President Eisenhower to become a member of his Cabinet as Secretary of Labor, a position which he filled with distinction.

Martin Durkin had many outstanding characteristics, but to me his greatest virtue was his deep humility. He was a very religious man, and would never sacrifice principle.

To his widow, Anne McNicholas, and their sons, Martin and William and John, I wish to extend my genuine and sincere sympathy.

Honorable Debtor

EXTENSION OF REMARKS
OF
HON. GEORGE H. MAHON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. MAHON. Mr. Speaker, while we do not always see eye to eye with the Government of Great Britain, it is fortunate that through the years we have been able to work together generally in a spirit of good will and cooperation. That has meant a great deal to our country and to Great Britain, and it has meant a great deal to the peace and security of the world.

Recently our Government received a payment from Great Britain on a British financial obligation to the United States. I was much pleased to read a couple of editorials in regard to this payment in newspapers from the State of Texas; and, having received unanimous consent to do so, I insert them in the RECORD:

[From the Houston Press of December 30, 1955]

HONORABLE DEBTOR

The United States Treasury will receive from Great Britain today a check for $138 million.

It will be the fifth annual repayment installment of principal and interest on the $4.3 billion loan in 1946 to Britain.

Forty-five annual payments remain—meaning the last one falls due in the year 2000.

It has not been easy for the British to make these annual payments in dollars. They could have defaulted or used the escape clause in the loan agreement.

It is to the credit of our British friends that they are paying.

This year's payment, for example, is equal to all of Britain's earnings from about 3 months' exports to the United States.

The real pinch comes because Britain still has to import more from the United States—and pay for it in dollars—than she exports to the United States to obtain dollars. In 1955 Britains dollar gap was about $320 million.

The British check, therefore, means drawing on Britain's gold and dollar reserves.

We can only hope that the economic situation will so improve that Britain's subsequent payments will be made with greater ease—not so much because of the actual money involved but because in this day and age of easy credit it is encouraging to know of an honorable debtor.

[From the Houston Post of January 7, 1956]

BRITAIN PAYS $138 MILLION ON UNITED STATES LOAN

When a foreign country repays money borrowed from the United States it's news, and that country should get a big hand. But it is not unusual for Britain. She has just paid the fifth annual installment of principal and interest due on the $4,372 million loan made to that country in 1946.

The $138 million payment is equal to Britain's earnings from about 3 months' exports to the United States, according to the British Information Service. The major part of the loan was to cover essential purchases by Britain from our country. Britain has tried to close her serious dollar gap by increasing exports to the United States. But she still buys more from us than she sells in return.

Forty-five more annual installments and Britain's loan will be paid in full. More power to her.

A New Blow to a Persistent Political Myth

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. SCUDDER. Mr. Speaker, the lead sentence of an editorial appearing in the December 14, 1955, issue of the New York Times reads:

A new blow has been struck at the persistent political myth that the way to the heart—and the vote—of the American farmer is by espousing a policy of high, rigid price supports.

Under leave to extend my own remarks in the Appendix of the RECORD, I desire to include the editorial which is entitled "The Farm Vote."

The new blow theme on which it is based stems from a recent poll conducted by the American Farm Bureau Federation. This highly regarded organization, which has member bureaus in every one of the 48 States and which represents as estimated four-fifths of all the organized farmers in the country, polled its members on the question of rigid versus flexible farm price supports.

The result was overwhelming. Farmers of 33 States went on record clearly and unequivocally as favoring a system of flexible price supports. There is an apparent attempt being made by some individuals to the effect that farmers favor rigid supports, when there is ample evidence to the contrary.

The following editorial asks a question, and sets forth an answer which is worth considering:

THE FARM VOTE

A new blow has been struck at the persistent political myth that the way to the heart, and the vote, of the American farmer is by espousing a policy of high, rigid price supports. This was the poll taken of its membership by the biggest and most comprehensive of the Nation's farm organizations, the American Farm Bureau Federation, which has member bureaus in every one of the 48 States, and which accounts for, roughly, four-fifths of all the organized farmers in the country. The Farm Bureau poll showed that only seven States favored a return to the fixed high-level supports which had been introduced originally for dealing with the war emergency. Thirty-three States went on record as clearly and unequivocally for a flexible price support system.

If this vote represents even an approximately fair cross-section of farm opinion on the moot issue of fixed, versus flexible, price supports then how did the idea get abroad, as it obviously has (judging from the haste with which two of the leading Democratic candidates for the presidential nomination plumped for that policy), that the farmer, despite the widespread evidence of their evil economic consequences, nourishes a deep and abiding affection for high and inflexible supports?

The origins of that myth are by no means obscure. Two elements went into its making. The first, and the positive element, was the sedulous cultivation and circulation by friends of high-level supports of what, on its face, had the appearance of a valid syllogism. This argument ran as follows:

(1) President Truman's surprise reelection in 1948 was made possible by the farm vote; (2) the President symbolized the issue of high price supports versus flexible supports; (3) therefore, the smart thing to do is to string along with rigid price supports if you want to be elected.

To understand how the advocates of rigid supports have got as much mileage as they have out of this argument it is necessary to bring in the second element referred to above. This is the obvious, if disillusioning, fact that political party platforms are not regarded by the general public as must reading. Otherwise the public would have known that, if Mr. Truman was running in 1948 as the proponent of high rigid price supports, then he must have been running on some other platform than that of the Democratic Party, since the very first commitment made by that platform in the field of agriculture was a commitment to a permanent system of flexible price supports.

That Mr. Truman conducted his 1948 campaign against a background of high farm prices is, of course, true (though, as we now know, they had already been receding from the crest of the postwar peak as early as June of that year). But it is a misstatement of the facts to suggest that the postwar farm prosperity derived from the high, rigid supports, which, though professedly disapproved of by Mr. Truman and his Council of Economic Advisers, still remained in the law at that time as a hangover from the war. The high farm prices of those days were a product of the free price system at work. They reflected the fact that not only was there no $8,400,000,000 Government-held surplus of farm commodities casting its depressing shadow over the market, but that there was an insufficient supply of American farm products to meet the overwhelming world demand. For proof of this one has only to consult the Government figures showing the behavior of farm prices in the war and immediate postwar years vis a vis that the nonfarm prices. Prices received by the farmers rose well above parity with nonfarm prices in 1942 and remained in that relationship through 1948. This means, of course, that they were even further above the 90 percent of parity support level, and completely out of touch with and independent of it.

If anyone doubts that the identity of high supports and political success is a political fiction, he might take a brief glimpse at the other side of the coin. We know that in the 1948 election, which they won, the Democrats didn't, as the high-price support advocates would like to have people believe, espouse rigid supports, but flexible supports. In 1952 the Democrats lost the election. Did they lose it because they were identified with flexible price supports The answer is on record in the 1952 Democratic platform. That statement of party policy read: "We applaud the recent congressional action in setting aside the sliding scale farm price supports * * * and we will continue to protect the producers of basic agricultural products under the terms of the mandatory price-support program at not less than 90 percent of parity."

Usurping Legislative Functions

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. DAVIS of Georgia. Mr. Speaker, I read with sincere interest an article by Columnist Joseph H. Baird in the January 12 issue of the DeKalb New Era, regarding the tumult and controversy which has resulted from the unwarranted attempt of the Federal Supreme Court to usurp legislative functions.

In his column, the Passing Scene, Mr. Baird has given us a thoughtful discussion regarding this important question. In the following paragraph he asks a very pertinent question:

We have heard much talk during the last 2 years of the 14th amendment, on which the Supreme Court presumably based its decision. But is any amendment to the Constitution more sacrosanct than any of the others? And what of the 10th amendment?

In the article Mr. Baird also emphasizes a fact which many of us have been pointing out in speeches and otherwise that the opinion of the Court is not based on law but on sociological arguments. On that point Mr. Baird's article states:

I am convinced by recent study that the United States Supreme Court's ruling in the segregation cases was based entirely on sociological arguments, and that it lacks any firm legal bases.

As a part of these remarks, I insert herewith the above-mentioned column in its entirety:

THE PASSING SCENE

(By Joseph H. Baird)

Not since the days of Reconstruction following the War Between the States has the Legislature of Georgia faced such solemn and dynamic problems as the body which convened in Atlanta Monday. It must decide whether the State of Georgia, acting within the limits of the Federal Constitution, shall defy the United States Supreme Court.

There are strong indications that it will.

Gov. Marvin Griffin and the Georgia Education Commission have urged the legislature to declare the Supreme Court's decision of May 1954 ordering the end of segregation in the public schools null and void.

The commission holds that the Supreme Court acted in violation of the solemn compact between the Federal Government and the several States. In this contest over power, the commission holds, only a constitutional amendment, proposed by Congress and passed upon by the States, can settle the issue.

It seems to me that the commission has taken a strong and defensible position, although I am aware that there will be shouts of "nullification" from the North if the legislature acts in accordance with the commission's recommendation.

We have heard much talk during the last 2 years of the 14th amendment, on which the Supreme Court presumably based its decision. But is any amendment to the Constitution more sacrosanct than any of the others? And what of the 10th amendment?

This amendment, a part of the Bill of Rights, provides:

"The powers not delegated to the United States by the Constitution, nor prohibited to it by the States, are reserved to the States respectively, or to the people."

Nowhere in the original Constitution is there any mention of the public-school system or of education generally as a province of the Federal Government. In the light of the 10th amendment, it seems obvious that the men who framed the Constitution intended that control of the schools should rest in the hands of the States or of the people.

Nothing in any of the latter amendments, including the 14th, was designed to extend the power of the Federal Government over education.

Unfortunately, the issue of segregation in the public schools has been so beclouded by emotionalism that clear and logical thinking has become difficult. Many people press to the conclusion that anyone who supports the Supreme Court decision is a friend and anyone who opposes it is an enemy of the Negro race.

Such thinking, or lack of thinking, is mental rubbish.

I believe I am typical of many southerners who ardently favor any reasonable measures to promote the political, economic and cultural advancement of the Negro race. I realize that progress in the South is partly dependent of ever-rising living standards for Negroes as well as Whites.

Yet at the same time I am convinced by recent study that the United States Supreme Court's ruling in the segregation cases was based entirely on sociological arguments, and that it lacks any firm legal bases.

We have here to consider not only the question of segregation in the schools. The Supreme Court's decision raises the even more basic question of whether that august body is not trying to usurp the powers granted to the co-equal executive and legislative branches of the Federal Government.

The role of the judiciary is to interpret the law—not to conceive it. As observed earlier, the Constitution gives the Federal Government no control over education. Congress has not seen fit to assert such control. Neither has the President of the United States. How, then, can the Supreme Court properly arrogate to itself such control, as it does by issuing directives to the States to end segregation?

Readers of this column may recall that I have not always agreed with ex-Gov. Herman E. Talmadge on racial issues. But this does not blind me to the worth of a recent book, You and Segregation, written by Governor Talmadge. While parts of it may have been written with an eye on the coming Senatorial elections, there remain large areas of the book where he has done excellent research work on the segregation problem and particularly on the Supreme Court's

encroachment into fields of power reserved to the States.

Those interested in the coming fight in the legislature will find the book well worth a judicious reading.

Mr. Dulles, Champion of Irresponsibility if He Did What He Claims He Did

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a very pertinent editorial entitled "The Dulles Self-Appraisal" which appeared in the St. Louis Post-Dispatch on Friday, January 13, 1956. The editorial follows:

Through the medium of an article in Life magazine, Secretary Dulles has published a fascinating encomium on the record of his 3 years in charge of the State Department. The issues he raises could be left for history to evaluate were it not that they have an important bearing upon the present conduct of foreign policy. For Mr. Dulles' praise of himself gives us a disturbing index of his attitude toward the problems American diplomacy faces today.

The Secretary does not quite claim to be "Superman," but he does modestly take credit for preserving the peace of the world on three occasions. It was his recommendations to President Eisenhower, he suggests, that averted world war over Korea in 1953, over Indochina in 1954, and over Formosa in 1955. On each occasion, Mr. Dulles says, the country "was brought to the verge of war. * * * We walked to the brink and looked it in the face. We took strong action." And this strong action he credits with compelling Communist retreats and saving the peace.

As to Korea, it is Mr. Dulles' contention that the Communists did not start to negotiate a truce seriously until he and President Eisenhower decided, while returning from their post-election trip to the Far East, that if the war continued in stalemate we would attack Manchuria with atomic weapons. This stand, Mr. Dulles argues, frightened the Communists so badly that they did not even dare break off truce talks when Rhee freed the war prisoners.

Obviously, nobody can know how scared the Communists really were in the absence of testimony from their side. Mr. Dulles' claim as to the motivations of the truce cannot, then, be finally evaluated. But this can be said: If he did counsel an atomic attack on Manchuria, at the risk of world war, he was guilty of an inexcusable gamble with the destiny of the human race.

In early 1953 the fighting had all but ended in Korea, with a de facto though not yet formalized cease-fire along the 38th parallel. To advise an expansion of the war in these circumstances—to invite Russian intervention under its China defense treaty and an atomic holocaust on a world scale—was unforgivable.

Mr. Dulles' claim that his "strong action" saved the peace in Indochina in 1954 conflicts directly with the facts as they have been brought out to date. These facts are that he failed in his attempt to organize collective intervention with British participation. His story now is that, nevertheless, Eden and Mendes-France were able at Geneva to negotiate from his "strength"; and that it was the possibility of combined intervention that frightened the Chinese Communists out of intervention of their own.

This is too tenuous a theory to be taken seriously without further evidence beyond Mr. Dulles's naturally biased interpretation. But again it can be said that if he did actually advise allied intervention in a colonial war, and did advise "massive retaliation" with atomic weapons in case China came in on the side of Ho Chi-minh, then he was guilty of a scandalous act of irresponsibility.

As the facts now appear, peace came to Indochina not by Mr. Dulles' show of strength, but by the patient perserverance in diplomatic negotiation of Eden and Mendes-France, again Mr. Dulles's will and at times his active opposition.

As to Formosa, Mr. Dulles argues that the Chinese Communists were deterred from attacking that island by the congressional resolution which he sponsored to authorize the President to use force in its defense. This resolution, he said, made American intentions clear and eliminated the possibility of Peiping miscalculation.

But the conspicuous fact about the resolution at the time was that it did not make our intentions clear. On the vital question as to whether we would fight for the coastal islands as well as Formosa, the Chinese and everybody else were left in a fog of doubt; and Mr. Dulles at the time, instead of making a virtue of clarity, argued that to "keep the enemy guessing" was the height of clever strategy.

So it is most difficult to agree with the Secretary's self-appraisal as an architect of peace. It seems to us that peace resulted not so much from his reckless brandishing of atomic weapons as from the restraint and caution of the British, the French, the American people and even the Communists.

Let history settle that controversy. The alarming fact remains that we now have as Secretary of State a man who still thinks that bluff and bluster and threat of force are the appropriate methods of diplomacy in this perilous age.

"The ability to get to the verge (of war) without getting into war is the necessary art," says Mr. Dulles. Does President Eisenhower fully understand that his Secretary of State has this concept of the aims of foreign policy?

Montana Resources

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Montana Resources," appearing in a publication called Montana Business, issued by the School of Business Administration of Montana Statae University. The article indicates how great a State is Montana.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONTANA RESOURCES

Montana has a total area of 147,148 square miles, making it the third largest State in the Union, and a population of some 640,000, ranking it 46th in population density, with an average of approximately 4 persons per square mile. Despite its areas of mountainous terrain and wasteland, the State obviously has space to spare—no overcrowded cities or miles of traffic jams in Montana. It is also generously endowed with natural resources, particularly mineral, timber, power, and agricultural resources, which could support a considerably larger population.

The statement is sometimes made that Montanans do not want to see their resources developed and new industries established. It is true that few Montanans would wish to see their State heavily industrialized and over-crowded, although this possibility appears remote at the present time. On the other hand, the need for additional industry to add diversification to the Montana economy and to provide adequate employment opportunities for the normal population growth is generally recognized. New industries are necessary merely to maintain the present level of prosperity and to provide opportunities for the growing numbers of young people who will soon be entering the labor force as a result of the high birth rates of the 1940's. The majority of Montanans recognize this and many are working actively toward the attraction of desirable new industries.

Montanans are generally good salesmen for their State. Some of the most taciturn can become eloquent in describing its scenic beauty and pleasant way of life; however, the extent of Montana's natural resources are not always so obvious. Since one of the first requisites of a good salesman is to know his product well, this brief survey may serve as a reminder of the scope of Montana's resources and production and the potentialities as yet undeveloped.

A quick inventory of resources reveals, for example, that the State can claim huge mineral reserves, including the largest known deposits of chromite, manganese, and vermiculite in the United States, hundreds of millions of tons of phosphate rock, and over 200 billion short tons of coal; an estimated 56 billion board feet of live saw timber; installed hydroelectric power capacity which places it ninth among the States, with huge resources as yet undeveloped; and approximately 14 million acres of cropland and 45 million acres of pasture.

Productionwise, in 1954 among the 48 States Montana ranked first in zinc, chromium, and vermiculite, second in manganese, fourth in phosphate rock, fifth in copper, ninth in hydroelectric power, second in wheat, third in barley.

HUGE MINERAL RESOURCES

The abundance of mineral resources makes "the treasure State" an apt description of Montana. Total value of mineral production in the State since 1951 has averaged over $125 million per year. (The March 1955 issue of Montana Business includes a table which gives production and value of minerals for 1950–54).

Copper, zinc, and oil currently make up about two-thirds of the total value of Montana's mineral production. Lead is produced as a byproduct of zinc mining. The production of gold, the discovery of which brought many settlers to the State, is relatively unimportant today. Silver also is declining in importance, being produced mostly as a byproduct from copper and lead-zinc ores. With the development of cheap underground block caving methods at Butte, the long-term outlook for copper and zinc production appears excellent. With tremendous reserves, Butte will be a leading mining center for many years to come, and earlier predictions of its deterioration into a deserted mining camp now seem ridiculous.

Varying estimates have been made of the extent of petroleum reserves in Montana. Most are in the nature of guesses, since exploration of the State's oilfields are not complete. Nevertheless, Montana is known to have large oil resources, perhaps in the neighborhood of a billion barrels.

Although most widely known for its copper, lead, zinc, gold, silver, and oil, the State has many other mineral resources. Some are already making important contributions to Montana's prosperity; others will no doubt see future development. The list which follows includes only some of the more prominent and promising minerals in the State. Many others are also present, although not necessarily in commercial quantities, and others will undoubtedly yet be discovered.

Barite: Barite occurs in several spots in Montana and is currently being mined near Greenough in Missoula County. A processing plant is located at the mine and both crushed and ground barite are produced. Barite is used in paint pigments, chemicals, and as an adulterant or filler in products such as rubber and paper.

Cement rock: Limestone and shales suitable for cement manufacture are present in vast quantities. Only one cement plant is located in the State, however, at Trident in Gallatin County.

Chromite: The Mouat mine in Stillwater County is producing chromite concentrates under a Government contract. Last year this mine produced over three-fourths of the total United States output. The United States Bureau of Mines estimates that chromite deposits in Stillwater County amount to 80 percent of all known reserves in North America. High production costs would make operation of the mines economically unjustifiable were it not for chrome's importance to national defense as an essential metal.

Coal: Tremendous reserves of coal, virtually untouched, are present in Montana. The United States Geological Survey estimated the State's coal resources at 222 billion tons in 1949. Practically all of this is located in eastern Montana and is subbituminous coal or lignite. Production in the State has been declining since the war, amounting to only 1.4 million tons in 1954.

Fluorspar: Fluorspar, used in the ceramic and steel industries, has been reported in several locations in Montana. Production at the present time comes only from the Crystal Mountain deposits near Darby in Ravalli County.

Gypsum: Very little gypsum is produced in Montana, although deposits run into millions of tons. The bulk of the gypsum produced comes from Fergus County and is used in the Trident cement plant.

Manganese: Until Nevada took over in 1954, Montana was the leading manganese producer in the United States. Battery manganese has been produced at Philipsburg since before World War II. During the war production of high grade manganese was begun at Butte and at Philipsburg. Government stockpile depots are still maintained at the two towns.

Phosphate rock: Enormous reserves of phosphate rock suitable for use by the fertilizer industry and additional huge reserves of lower grade material suitable for elemental phosphorus exist in the State. Phosphate rock is mined in the Garrison area for shipment to a Trail, B. C., fertilizer plant. Rock for the Anaconda fertilizer plant comes from Idaho. The Victor Chemical Works elemental phosphorus plant uses rock from Beaverhead County.

Talc: A large volume of readily available talc exists in Montana. In 1954 it was produced in the Beaverhead-Madison County area and shipped to out-of-State grinding plants.

Tungston: Montana became an important producer of tungsten in 1954, with the development of the Ivanhoe Mine in Beaverhead County.

Vermiculite: Montana is the leading producer of vermiculite in the United States by virtue of the Zonolite Company's operation at Libby. Other deposits are also known to be located in the State, in Ravalli, Madison, and Hill Counties.

FIFTY-SIX BILLION BOARD-FEET OF SAWTIMBER

One-fourth of Montana (over 22 million acres) is classified as forest land. Seventy percent of the forest land is rated as "commercial"; that is, suitable and available, now or prospectively, for timber production for industrial use. Estimated total volume in Montana's commercial forests is 56 billion board-feet. About one-half of this is Douglas-fir and larch; other important species are ponderosa pine, spruce, and lodgepole pine. (Table 1.) The annual cut of lodgepole and spruce in the State could be substantially increased. In addition, there are large areas of dead timber which can be utilized and large amounts of wood residue from logging and milling operations suitable for various forest products. Recently, plans for a plywood plant which would utilize waste wood were announced for Missoula. A small plant of the same type is already in operation in Polson. Other lumber-products industries frequently mentioned as possibilities for Montana are hardwood, pulp, and paper.

TABLE 1.—*Volume of live saw timber, Montana, 1949*

Species	Millions of board-feet	Percent of total
Douglas fir	15,359	27.5
Western larch	11,760	21.0
Ponderosa pine	10,969	19.6
Spruce	6,953	12.4
Lodgepole pine	6,947	12.4
Western white pine	1,119	2.0
Cottonwood	677	1.2
White bark and limber pine	628	1.1
Alpine fir	610	1.1
Grand fir	393	.7
Western red cedar	356	.6
Miscellaneous [1]	189	.3
Total	55,960	100.0

[1] Includes aspen, birch, box elder, green ash, willow, elm, western hemlock.

VAST POWER POTENTIAL

The most superficial survey of Montana's resources would not be complete without mention of hydroelectric power. Practically all of the power generated in Montana is hydroelectric; the State has vast potentialities as yet undeveloped. Plans and proposals by both private and public agencies indicate that further development will take place in the near future. The availability of low-cost electric power has played an important role in attracting two new industries to the State—elemental phosphorus and aluminum.

FIFTY-NINE MILLION ACRES IN FARMS AND RANCHES

Altogether, Montana has approximately 59 million acres in farms and ranches, of which about 14 million acres are classified as cropland and 45 million acres as pasture. In 1954, the State produced 76.6 million bushels of wheat, slightly below the previous 10-year average but ranking second only to Kansas as the Nation's leading producer. (Table 2.) Preliminary estimates of the 1955 wheat crop are placed at 97.6 million bushels, second highest on record. Montana is also an important producer of barley (ranking third among the States in 1954); mustard seed, first; flaxseed, fifth; and sugar beets, eighth. The total value of all main crops produced in the State in 1954 is estimated at $279,700,000.

TABLE 2.—*Montana's major crops, 1944–53*

Crop	Unit	Average production	Production	1954 [1] value	Rank (production)
		Thousands	*Thousands*	*Thousands*	
All wheat	Bushel	80,013	76,557	$159,557	2
Winter wheat	do	28,107	33,605	67,210	9
Spring wheat	do	51,906	42,952	92,347	2
Barley	do	16,861	33,332	28,999	3
Oats	do	11,307	11,151	7,248	23
Corn	do	2,698	2,813	4,501	36
Flaxseed	do	728	670	1,876	5
Mustard seed	Pounds		11,510	570	1
Potatoes	Bushel	2,410	2,401	3,962	23
Sugar beets	Ton	709	687	7,900	8
All hay	do	2,574	2,863	58,692	14
Alfalfa hay	do	1,118	1,348		14
Wild hay	do	680	654		5

[1] Preliminary.

Source: Agricultural Marketing Service, U. S. Department of Agriculture.

Montana is also widely known as a livestock State, ranking 9th in the number of beef cattle (2.4 million) behind several Midwestern corn States and Texas, Oklahoma, and South Dakota, and 4th in the number of sheep (1.7 million) on its ranches in 1955. The combined total value of sheep and cattle in Montana was estimated at $273.9 million on January 1, 1955.

Much progress has been made in methods of agricultural production in recent years, resulting in greater efficiency, higher yields, and increased ability to withstand the hazards of unfavorable weather conditions. Further advancement will undoubtedly be made. As a result, the agricultural sector of Montana's economy represents a growing market for such products as fertilizers and chemicals. Although fertilizer is now being produced in the State, there appear to be possibilities for expansion. It is also possible that some agricultural chemicals could be produced.

Food processing plants based on the State's agricultural industry currently make up an important segment of manufacturing in the State. With the exception of beet sugar and flour, however, most of the products are for local consumption only and further expansion will be largely dependent upon population growth.

AND AN ALERT AND ENERGETIC POPULATION

Natural resources are of little use unless combined with the most important of all resources—men and women and their skills and activities. Montana has only a small population and labor force, but its people are energetic, adaptable, and better educated (in terms of number of years of school completed) than the population of the United States as a whole. The proportion of Montanans over 25 years of age who have completed high school and of those who have had some college work is substantially above that of the total United States citizenry in the same age groups. (Table 3.)

TABLE 3.—*Education of Montana and United States population over 25 years of age, 1950*

Years of school completed	Percent of total	
	Montana	United States
Elementary school: 8 years or less	42.6	46.9
High school:		
1 to 3 years	15.1	16.9
4 years	23.0	20.2
College:		
1 to 3 years	10.7	7.2
4 years	6.1	6.0
Not reported	2.5	2.8
Median years completed	10.2	9.3

Source: U. S. Bureau of Census, 1950 census of population.

It is unfortunately true that Montana is losing a substantial portion of its human resources to other areas. Unlike natural resources, human beings are mobile and tend to move where their skills and abilities are most fully utilized. Thus in 3 short years, between 1950 and 1953, Montana's population in the productive age groups 18 to 64 declined 2.5 percent compared to a gain of 5.6 percent in those age groups in the 11 Western States as a whole. The answer, of course, is to provide more and better employment opportunities in Montana through development of resources and industry.

Construction of Powerplants Abroad

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, January 16, 1956

Mr. SCHOEPPEL. Mr. President, a most provocative article has been brought to my attention recently which I believe would provide food for thought to the Members of the Senate. I therefore ask unanimous consent to have printed in the RECORD this article, entitled "America's Most Dangerous Experiment," written by David Shea Teeple, and published in the December 1955 Mercury magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S MOST DANGEROUS EXPERIMENT

(By David Shea Teeple)

The United States has gambled on many noble international experiments in recent years. For the most part they have been based on fantastic delusions about human behavior. They have resulted in fiascoes. Always communism has grown stronger and freedom weaker. Thus far, however, the strength and resources of our country have been sufficient to absorb the damage.

This year we launched a venture which could be disastrous and perhaps fatal to our existence as a nation. We are now advocating and assisting in a program to construct atomic powerplants in the so-called power starved areas of the world.

Ten years ago, in 1945, a special committee of the United States Senate was established to investigate problems relating to the development, use, and control of atomic energy. By their own admission, an organized pressure group of eminent scientists appeared before that committee. Without exception they were dedicated to the belief that the atomic weapon which they had helped to create made war obsolete. They sincerely believed that the only solution was an international agency to prevent the manufacture of such weapons.

Since their thinking influenced the conduct of our legislators and our diplomats, it is no more than fair that we recall the statements they made at that time. We were told by Dr. Vannevar Bush, president of Carnegie Institution of Washington and the Director of the Office of Scientific Research and Development, that:

"Eight years ago there were two countries in the world whose people had been trained for over a generation to prepare for a war of aggression, Germany and Japan. The leaders of those countries had their peoples so propagandized and so under control that they did not know the world situation; and that was an enormous threat to the world and out of it came a great war.

"No such situation exists today, and those two nations are conquered and under control and should remain so. We have no nations in the world today that do not wish a long, fruitful period of peace; and, in my opinion, every country is anxious to bring that about, not only the peoples of every country but the rulers of every country. We have no situation such as then existed.

"I am quite sure that the Russians do not feel that we are a threat. We do not have interests which conflict seriously." [This and subsequent excerpts are from the official transcript, hearings before the Special Committee on Atomic Energy, 79th Cong., 1st sess.]

Dr. Irving Langmuir, at that time associate director of the research laboratory, General Electric Co., who had recently returned from an 18-day visit to Russia, said:

"When you go to Russia and you find that Kapitza, Fersman, Frenkel, and Joffe—all of those men who are working on problems that have nothing to do with atomic energy—when Joffe tells me and shows me the cyclotron started in 1938, work on which was discontinued during the war and is now just starting again, and tells me the cyclotron will be finished in December of this year—and he is the most prominent physicist that has had anything to do with nuclear

physics—when you see that, you are convinced they are not carrying through a Manhattan project."

Yet, as the world now knows, 4 years after Dr. Langmuir spoke, the Russians in 1949 detonated a nuclear device.

The wartime head of the Manhattan Engineer District, Lt. Gen. Leslie R. Groves, stated that he believed we could keep ahead of any other nation in the world in atomic energy for all time to come provided that the rules were the same for everybody. He said:

"When I say that the rules are the same, if we have secrecy, and they have secrecy, we will be ahead. If we have free and open distribution of every bit of knowledge we have, and they have secrecy, they eventually are going ahead because they will finally find out something that we don't know and we won't find it out."

The rules weren't the same for everybody. We talked; the Soviets didn't. They engaged in espionage; we didn't. Where we stand today is anybody's guess.

The panacea for the world's problems in 1945 was to be international control and inspection of atomic energy. General Groves was very skeptical of the possibilities of such inspection.

Most of the scientists emphasized that inspection could only be feasible before a widespread atomic energy industry existed throughout the world. Dr. J. Robert Oppenheimer, then Professor of Physics, California Institute of Technology and the wartime Director of Los Alamos, said:

"Inspection must be based on a formal and open recognition on the part of the governments that they are not interested in making atomic weapons, that they are not interested in doing any of this work secretly. * * *

"It is my conviction that the easiest time, and, in fact, the only time when one might hope to discover that there were violations of the convention would be the time when it is started, when you are pulling in your technical people, when you are having the equipment manufactured, when you are building the plants. * * *

"I say if you are dealing with open plants, the problem of inspection is not so tough. If there is a powerplant some place and we are allowed—we, or the United Nations, or what have you—are allowed to maintain inspectors there, this problem does not look hopeless.

"The problem starts looking hopeless if you have a country where you do not know what is going on, a country where there are limitations of freedom and movement."

It was admitted by the scientific witnesses that once atomic weapons had been manufactured, they could be successfully hidden. Dr. Oppenheimer put it this way:

"There are no ingenious devices whereby one nation could detect or control atomic armament in another nation committed to sovereignty and secrecy in this field.

"If you hired me to walk through the cellars of Washington to see whether there were atomic bombs, I think my most important tool would be a screwdriver to open the crates and look. I think that just walking by, swinging a little gadget, would not give me the information."

All of the expert witnesses testified that in any atomic war a tremendous benefit accrued to the aggressor. Again Dr. Oppenheimer expressed the generally held viewpoint when he said:

"Although the fear of retaliation is a very serious one, the advantages of attack are enormous, the advantages of initiative are enormous.

"I believe, when the thing goes far enough and the stockpiles get bigger and bigger, that, at least, the advantages, the seeming advantages of the initiative will outweigh any possible disadvantages of having other powers gang up on them."

Dr. Alvin M. Weinberg, speaking as a representative of the Federation of Atomic Scientists, said: "My feeling is that the advantage which accrues to the aggressor is overwhelming."

There was another accepted concept advanced by our scientific fraternity—that any plants for peacetime applications of atomic energy could be readily converted to military use. Dr. Harold C. Urey, Nobel Prize winner, suggested that we have no such plants pending the time when we had really come to the agreement that guaranteed world security. Dr. Langmuir shared this view and stated:

"Much of the discussion of the human value of atomic energy has been based on the thought that such energy may displace coal and oil as sources of industrial power. This, I think, is a relatively trivial matter. Even if coal or oil cost nothing as fuels, this would not have a very great effect on our civilization: we would not use our automobiles much more and our electric power bills would not be cut as much as they already have been within the last 15 years by the improvements that have occurred in power production."

Pursuing this question as to whether or not there could be a reasonable separation of the manufacture of atomic energy for peace as differentiated from its manufacture for war, Dr. Oppenheimer stated:

"The manufacture of atomic energy for peace, in any plants that I have heard discussed, would make material latently which could be used for war. If you did this, if you made atomic energy and sold it in kilowatts and so on and definitely made no provision for military inspection of the products which you were making at the same time and did this on a large scale, you would have perhaps solved, let us say, more than 60 percent and less than 90 percent of the problem of making atomic weapons."

Senator TYDINGS pursued the question with Dr. Leo Szilard, then of the University of Chicago, as follows:

Senator TYDINGS. Therefore, I take it that your answer meant that unless there was an international climate created which would make the control of the bomb or the elimination of the bomb, whichever it might be, reasonably feasible with a promise of safety that, as an alternative it would be better if we could have an agreement that nobody would manufacture atomic energy even for peacetime purposes, because it would be so easy to slip over into the field of war purposes. Am I correct in what I have said?

"Dr. SZILARD. Yes; precisely."

Dr. Urey expressed it this way:

"In considering the problem of control there are two assumptions that might be made: First, that there would be no peacetime large-scale powerplants; and second, that peacetime powerplants would be permitted on a large scale. In order to secure power for industrial purposes from atomic energy, it is necessary to have very large-scale plants. If these large-scale plants were all in existence, as they might be some 10, 20, or 25 years in the future, they would contain considerable amounts of fisisonable material that could be used for bombs. It would then only be necessary to withdraw the material from these plants and manufacture this material into bombs."

The belligerence of our scientists as to what steps they would take in the event that nations would not cooperate in international control was very surprising. Dr. Oppenheimer stated, in reply to a question from Senator BYRD as to what he would recommend in the event any nation secretly and surreptitiously broke an agreement for international control:

"If this situation arose, and it is clear from what I have said that I don't think it needs to arise, I would use military measures of all kinds against the offending country."

On the subject of the reliability of international agreements, there was one scientist who differed with his colleagues. Dr. Ross Gunn, then technical adviser to the naval administration of the Naval Research Laboratory, stated that one of the basic principles of science was that if an experiment was performed a number of times and the same answer always resulted, that unless the fundamentals were changed, one could expect the same answer if the experiment was performed again. Translating this scientific principle into the realm of human conduct, Dr. Gunn stated:

"When people talk about international agreements, I would like to ask them to give me a quantitative figure of the probability of an international agreement lasting 25 years, 50 years, or 100 years. And if that probability isn't finite and of appreciable size, then I say we should not do the experiment over again. That is all I know about it, sir."

Another conclusion which was pretty firmly fixed in the minds of our scientists was that any atomic arms race would eventually result in atomic war. Dr. Oppenheimer bluntly stated: "I believe that if there is atomic armament there will be atomic war."

In reviewing the advice given in 1945 by our men of science it is clear that the future conduct of our atomic energy and diplomatic programs was to be based upon certain theses, as follows:

(1) That international control of atomic energy was a necessity.

(2) That a climate of peace existed in the world which would make such control possible.

(3) That fee and unlimited inspection was a necessary prerequisite to such control.

(4) That such inspection could only function prior to the manufacture of atomic weapons by any other nation since atomic weapons once manufactured could never be detected.

(5) That there was no defense against atomic weapons.

(6) That it would be extremely dangerous to allow the development of a worldwide atomic energy power program prior to the securing of reliable control safeguards.

(7) That in an atomic war the aggressor would have a tremendous advantage.

(8) That in an atomic war the United States must attack first.

All of the scientists testified that the possession of a power reactor would constitute from 60 to 90 percent of the possession of atomic weapons. They further stated that it would be impossible to prevent diversion of fissionable materials from a power reactor to a weapons program. In hammering this point home, it was the consensus that in view of the threat of diverting fissionable materials from peacetime applications to weapons, the peacetime benefits were trivial in comparison to the dangers involved.

In the 10 years since 1945 the rosy picture of cooperation painted by Dr. Bush has rapidly dissipated if it ever existed. We have been through the Korean war, we have witnessed the rise of Red China and the expansion of communism throughout the world.

We are now launched upon a full scale atoms-for-peace program which violates the technical advice given to us by our men of science.

(1) Another nation, the Soviet Union, did clandestinely manufacture not only fission devices but also fusion devices. No man of science has advocated preventive war as most of them in 1945 stated should be done if this situation arose.

(2) There are no reliable international control mechanisms. There are no present

prospects that there will ever be any reliable controls inasmuch as both the United States and Russia how have atomic stockpiles which the scientists say can never be detected by inspection.

(3) We have entered into 20 bilateral agreements for the exportation of fissionable material, uranium 235, to foreign countries. Thus far the material is in 6-kilogram lots, insufficient for weapons purposes, but there is no doubt that once the politicians are committed to the program it will snowball and within a few years accumulated stores of the material sufficient for weapons will be available in many countries.

It has been said on many occasions that the fissionable material which we are going to make available to foreign countries for power reactors is not "weapons grade." We are told that it is 20 percent enriched in the isotope U_{235}. The isotope 235 of uranium is the fissionable weapons material. Only 0.7 of 1 percent of 235 occurs in natural uranium.

An elementary student of nuclear physics and the uranium separation process knows that when uranium has been brought from .7 of 1 percent to an enrichment of 20 percent U_{235}, the remaining task to bring it to weapons grade is not difficult. The big task is to enrich the material from its natural state to 5 percent. From that point on any nation with an isotope separation process can bring the material to the proper enrichment for weapons very rapidly. Almost all of the costs of the preparation of weapons enriched material are expended in the first 2 percent of enrichment. To tell the American people that 20 percent enriched uranium 235 is not weapons grade, though technically correct, is a very dangerous half-truth.

No American is opposed to the rapid advancement of nuclear science insofar as it will assist in conquering disease, improving medicine, biology, agriculture, and industry. These humanitarian applications, however, are accomplished by radioisotopes which are produced in reactors. They have no relationship to the exportation of fissionable material. The present worldwide reactor program is designed for the production of power.

The power program needs U_{235}. This material can be used to make atomic bombs.

Despite the extravagant statements that have been made for atomic power, the McKinsey and Co. (consultants) reported to the Joint Committee on Atomic Energy in July 1955 that:

Present technology for the production of electric power is based simply on atomic energy replacing fossil fuels as a source of heat, with the balance of the process for the production of electric power remaining the same. Under this technology, authorities do not now anticipate that the cost of electric power in the United States will be substantially lowered through the use of atomic energy as a fuel. This fact limits the extent of the impact on the economy of the United States, but has real significance for other economies where the costs of fossil fuels are substantially higher. (Appraising the Impact of the Atom, McKinsey and Co., July 1955.)

If atomic power is developed, therefore, its benefits will accrue to foreign nations, not to the United States. In addition to increasing the industrial potential of foreign nations, we are placing in their hands material which in quantities will tremendously increase their war potential.

Once we sent scrap iron to Japan and later it rained from the skies at Pearl Harbor. The risks to the United States in the present program do not justify the possible benefits. The atom has no morals. "Atoms for Peace" can become Atoms for War. This, therefore, is truly America's most dangerous experiment.

Farmers Need Cash Now

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. CARLSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the January 11 issue of the Salina Journal. This is one of the large daily newspapers published in the Kansas wheat belt, and the editorial expresses concern that the proposed farm legislation does not provide sufficient immediate cash payments where they are badly needed.

The State of Kansas has suffered seriously from a severe drought during the past 3 years, and the immediate problem facing our farmers is some cash payments which will help them through this period until we produce another crop. Needless to state, it is a serious situation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE JOURNAL'S OPINION—FARMERS NEED CASH NOW

Drought-threatened, pocketbook-flattened Midwestern farmers will find scant consolation in President's Eisenhower's farm message.

With two exceptions, the benefits it proposes may not reach the farmers until the harvest of 1957 or later.

But the farmers need help in 1956. Particularly will they need it if the drought is not broken and if the new harvest is thin.

The purchase of beef and pork and the refund of gasoline taxes will help. But they are not enough.

Congress should put the loan price for the 1956 wheat crop at 100 percent of parity. For the 1956 crop only.

Wouldn't this be inconsistent? It would be, except that the whole plan is to be changed.

In proposing the soil-bank program, the administration in effect has scuttled the flexible support scheme—although it may not want to admit it. If the flexible scheme is not to be relied upon to reduce production, then the reason for lowering the loan price has ceased to exist.

The immediate question is a subsidy for ailing agriculture. Considering the need, the subsidy might as well be adequate.

And as long as full parity support would be only temporary relief, the Government might well apply some limit on the total amount any one farmer might receive.

These, of course, are "crash remedies," temporary, and not part of a long-range program.

President Eisenhower's message, quite properly, was mostly concerned with the long view. It was faulty only in failing to make immediate provision for an immediate situation.

With much of the 9-point program farm leaders will agree. There will be questions, however, about the soil bank that need to be answered in detail. For example, one wonders just what should be done with the acres to be removed from production and put in the bank.

This is as tough a puzzle as where and how our surplus stores of wheat should be dumped.

It is heartening to know that the President and the Congress are giving such emphatic attention to the farm problem. But farmers and all of us who depend upon them will be more cheered if Congress takes emergency action as well as provide a long-term solution.

Don't Make FBI Political Gestapo

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. DAVIS of Georgia. Mr. Speaker, the high-handed action of the Federal Justice Department which was denounced on the floor of the House by Congressman HENDERSON LANHAM, of Georgia, on January 5, has aroused great resentment among people who believe in law observance and law enforcement, and this resentment is justified. The brazen conduct in question has also affected the high regard in which the Federal Bureau of Investigation has been held in the past.

The action to which I refer was that in which an Assistant United States Attorney General ordered FBI agents to go into Cobb County, Ga., obstensibly for the purpose of investigating the question as to whether Negroes are prohibited from serving on a grand jury.

There was no justification for that action. It was reprehensible in the extreme. It is being resented by right-thinking people everywhere.

One of our excellent newspapers in Atlanta, the Metropolitan Herald, carried an editorial in its January 4 issue which voices the fears which are beginning to take shape that under the domination of a political-minded Attorney General and Justice Department, the FBI may degenerate into a political gestapo.

The editorial is as follows:

DON'T MAKE FBI POLITICAL GESTAPO

The extent to which the United States Supreme Court and the Department of Justice have both become pawns in the hands of power politics is clearly shown in the current investigation by FBI agents of Cobb County's method of selecting white and Negro jurors.

This investigation was ordered by an Assistant Attorney General, presumably on order of Attorney General Herbert Brownell, after the United States Supreme Court upset the conviction of a Negro in Cobb County on the grounds that his constitutional rights "may have been violated" (those are the exact words of the court) because no Negroes served on the grand jury which indicted him or on the trial jury which convicted him of rape.

Cobb County officials report that a number of Negroes have served on juries there and that names are in both the grand jury and trial jury boxes. There is no distinction as to race on the name slips in the jury boxes, in compliance with another United States Supreme Court edict, they state. Despite this fact, the Nation's highest Court and the Department of Justice are treating Cobb County as if it were the criminal in this case.

The United States Supreme Court evidently did not take into consideration that the conviction it upset was the second trial granted the defendant. The first conviction was overturned by the Georgia Supreme

Court because of a trial error, the Georgia court being determined that the Negro defendant should have every legal consideration. The fact that the defendant was under sentence as a sex offender when he was convicted of this latest crime seems to have made no difference to the Federal court or to Mr. Brownell.

It must be embarrassing to John Edgar Hoover to have his FBI agents snooping around trying to find a legal technicality to free a dangerous, twice convicted criminal because his superior, Mr. Brownell, and the United States Supreme Court bow before the powerful political force of the National Association for the Advancement of Colored People.

It is a dangerous situation when we find the Supreme Court and the Department of Justice practically always doing everything possible to free dangerous, convicted Negro criminals because their civil rights may have been violated. Thus the record of the United States Supreme Court and Brownell's Department of Justice.

We agree with Governor Griffin, Attorney General Cook, and Cobb Solicitor General Hames in their condemnation of the Department of Justice in its veiled threat against the courts of Georgia. It is a violation of our most basic laws for the FBI to be used as a political gestapo.

Address by Congressman John J. Flynt, Jr., to the National Association of County Officials

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1956

Mr. WILLIAMS of Mississippi. Mr. Speaker, on July 17, 1955, our distinguished colleague, Hon. JOHN J. FLYNT, Jr., of Georgia, delivered a memorable address to the National Association of County Officials at their annual meeting in Richmond, Va. Congressman Flynt's address emphasized the importance of local governments and stressed the very pressing need of our people for the right of local self-determination. Under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include the major portion of Congressman FLYNT's address:

EXCERPTS FROM ADDRESS BY CONGRESSMAN JOHN J. FLYNT, JR., TO THE NATIONAL ASSOCIATION OF COUNTY OFFICIALS ANNUAL MEETING IN RICHMOND, VA.

Mr. President, ladies and gentlemen, I am grateful to you and your executive committee for the invitation to meet with you today, and I am especially delighted to discuss with you our joint responsibility to the respective subdivisions of Government which we serve. In most instances you who serve your counties, districts, and parishes do so because of a genuine desire to be of public service. It matters not what capacity in which you serve. I believe I make a safe statement when I say that each of you put far more into the job you perform than you receive out of it in monetary compensation.

In the entire history of the American people of our Nation and of the States and local subdivisions of government which comprise our Nation, it has been a historical fact that the best public servants and the best public officials are those who serve out of a genuine and conscientious desire to improve the community, State and Nation in which they live.

The principle is well established that the responsibility of government under our law and Constitution rests with the people. The American people are the only sovereign power under our form of Government. We who in one form or another have been chosen to elective office have received from this sovereign power our commission and our mandate to be public servants in a representative form of Government. If ever we fail to realize that we are a part of a representative form of Government and if ever we fail to fulfill the commission entrusted to us, then we have failed in the basic concept of the form of Government which has made this Nation the greatest in the history of civilization.

There is a phrase in the State constitution of my own State of Georgia. In fact, it is paragraph 1 of article I of our State constitution. It reads:

"All government, of right, originates with the people, is founded upon their will only, and is instituted solely for the good of the whole. Public officers are the trustees and servants of the people, and, at all times, amenable to them."

Of the responsibilities which rest upon you as a governing official of the county in which you live, three of them stand out above all. First, there is a responsibility to your own local government of which you are a part to lend to it a dignity and stature so that all persons may have a genuine and deserved respect for constituted authority.

In this connection, it seems to me that the first responsibility of local officers, indeed the first responsibility of all public officials, is to maintain and preserve the principle of local self-government and local self-determination. This country of ours and our government on every level has become the great Government that it is and the great Nation which we are because of strong foundations on the local level.

We could no more have built a strong national government with weak local foundations that you could build a pyramid on its point or suspend this building in space without solid, genuine foundations.

It is for this basic, underlying reason that we who live in the South are so firm and so confident of the rightness of our position which the Supreme Court of the United States has recently sought to overturn and overthrow. If the Supreme Court of the United States, or any other tribunal by whatever name it may be known, can destroy the principle of local self-government and local self-determination on the issue of public schools, then it can also do it in every phase of local government. This decision of the Supreme Court to which I refer was aimed at the South, and under the guise of a legal decision it overturned every precedent known to legal minds. Those of you who have read the Supreme Court decision are well aware of the fact that it admitted that it was not based on law but was based on sociological and psychological factors.

Therefore, we urge and call upon you who live in other parts of the United States to join with us as we seek to preserve the principle of local self-government and local self-determination.

Don't say it can't happen to you, for just as surely as the principle of local self-government is destroyed in Georgia or Virginia or Alabama, then before you know it, even perhaps before the moon changes again, you will lose certain rights which you think are safe and secure to you today.

So, never send to know for whom the bell tolls, it tolls for you.

We have long believed that we enjoy more freedoms than any other people in the world, and yet by recent decisions of the Supreme Court of the United States, that Court has destroyed the most basic and fundamental freedom of all, the freedom of choice.

Secondly, a public official owes a responsibility to the citizens of the political subdivision he serves, whether it be on a municipal, county, State or national level. "A public office is a public trust." Any public official who undertakes to conduct the duties of his office in any spirit other than that he is performing a sacred trust is unworthy to hold the position to which he has been chosen.

The third of the three responsibilities which are enumerated here is the responsibility to one's self. "This above all: To thine own self be true, and it must follow, as the night the day, Thou canst not then be false to any man." If and when this thought becomes the guiding spirit which motivates each public official in the performance of his public duty then we shall be assured for all time of better and finer government on every level of government known to American people.

Public confidence in public officials and in local self-government is determined largely by the manner in which the duties of local public offices are conducted and carried out. Each and every public official is, and at all times should be, responsible for his every public action.

It is, of course, necessary on all levels of government to hold what are known as executive sessions, that is in certain phases of legislation and certain phases of carrying out administrative and executive duties, it is necessary that these sessions be conducted in relative privacy. But one indispensable part of our form of government is that the results and actions of these executive sessions, once they have been made, be made freely and openly available to inspection by the public generally. This is as it should be, because truth is a weapon of freedom; and conversely the suppression of truth is a weapon of dictatorship.

There are two essential characteristics which a successful public official must possess. One is a thick skin and the other is courage.

It is not necessarily right, but it is nevertheless true and correct that any public official, good or bad, is at all times subject to attacks sometimes minor and on the other hand sometimes extremely vicious. He, therefore, must at all times be ready, willing and able to withstand any attack which may be made upon him as an individual or as an office holder. He must be able to laugh at those which are made in either a joking or half-joking fashion, and at the same time, he must be able to repel by whatever means necessary those of a vicious and scurrilous nature.

The other characteristic which every public official must have is that of courage. He must be able to make decisions and to stand upon the decision he has made so long as he believes that decision to be right and just. He cannot vacillate and he cannot change his mind with each changing wind or each waxing moon.

There is a story told that during the reign of Henry VIII, of England, there was a bishop of Westminster by the name of Hugh Latimer. Whatever faults Henry VIII had, he was a regular attendant at worship services in Westminster Abbey Sunday in and Sunday out. One difference between him and other worshippers was that he didn't sit in the congregation as you or I do; Henry VIII sat in his royal box and looked down upon the pulpit and congregation alike. Whenever he disagreed with anything contained in one of Bishop Latimer's sermons, he would voice something akin to a negative amen. One day at the end of Bishop Latimer's sermon, Henry VIII rose in his royal box and said, "Bishop Latimer, your King is speaking to you. On next Sunday morning, you will return to this cathedral and renounce and

recant every word which you have spoken today." Needless to say, it was not necessary to send out notices to fill the pews the following Sunday. When next Sunday rolled around, the bishop was in his pulpit, the King was in his royal box, and every available pew and standing space was filled. After the prayer was prayed and after the hymns were sung, Bishop Latimer took his place. He first turned in the direction of the King and addressed himself: "Bishop Latimer, Bishop Latimer, understandest thou that thou are in the presence of the Sovereign King of England who has the power to sever thy head from thy shoulders?" Then Bishop Latimer lifted his eyes toward the sky and again addressed himself, saying, "Hugh, Hugh, knowest thou that thou comest from Almighty God who has the power to cast thy body and soul into everlasting hell. Speak the truth, man, speak it with all thy heart." And then he proceeded to preach the identical sermon he had preached the Sunday before. There wasn't a sound in the cathedral as he finished. Everyone was waiting for what would come next. Presently, Henry VIII rose, faced the bishop and faced the congregation, and said, "I thank God for one man in my kingdom with the wisdom to know what is right and the courage and strength to say it, even in the face of death."

A great many, perhaps most of you, are men and women who occupy positions charged with the building and maintenance of public roads and highways. In view of this, I am sure that you are vitally interested in the legislative deliberations in the United States Congress on the proposal known as the Federal highway program. I think that you might be interested to learn of the plans that have been advanced. The administration plan, oftentimes called the Clay plan, has not been passed and probably will not be passed by either House of Congress, and I am one of those who would have opposed it if the administration's plan had reached the floor of the House of Representatives. This particular plan had what I consider five basic defects which would render it unsound, ineffective and actually un-American legislation.

1. Under the pending proposal contemplated in the administration plan, every dollar's worth of road would eventually cost the taxpayers $1.55.

2. The average life of a road is 20 years. Under the administration plan, it would take our children 30 years or more to pay for the cost of roads which had long since been worn out.

3. The administration plan would completely unbalance our road program, by freezing all work on our regular primary and secondary systems at $622½ millions annually while spending $2 billion each year (three times as much) on an interstate network of super-highways. Three-fourths of all Federal road funds on a system which constitutes only about 2 percent of our highway mileage and carries only one-seventh of our traffic.

4. The increase the administration plan seeks to provide is too abrupt. During the fiscal year just ended, we've appropriated $25 million for this particular network. The administration bill would increase this to approximately $2 billion, or 80 times as much * * * an increase of 8,000 percent.

5. The administration plan would increase our national indebtedness by $31.5 billion and ultimately mean an unavoidable increase in taxes.

I hope that you and each of you can and will make your views on Federal highway legislation known to your respective Members of Congress, for I believe I speak the sentiments of my colleagues in the House of Representatives when I say that we have a great deal of confidence and faith in the county officials who serve the counties which comprise the districts we have the honor to represent.

I am confident that I speak the feelings and sentiments of all of us when I say we are truly living in a changing world. We are living in a world which perhaps stands on the brink of the greatest era of world progress in which the American Nation will naturally play a leading part, or we stand on the threshold of destruction and eternity.

There are many people who believe that the cold war is almost over and that that which will follow will be peace or destruction. Whichever comes, we will go through a considerable change—an era of transition.

Public officials are called upon to take the lead, to make decisions, and above all, to show courage in times of crisis and on days of decision.

If you and I, as public officers, are to serve our Nation, our States, our counties, our families, and ourselves, it is the solemn responsibility of each of us to accept the challenge which comes our way and to meet with courage and determination each decision which we have to make.

An Italian poet, Alighieri Dante, once said:

"There is one heaven and one hell, but there are many roads which lead to each."

To that he added:

"The hottest places in hell are reserved for those who in a period of moral crisis maintain their neutrality."

The United States of America, the youngest of the great nations of the world, has become the greatest economic, moral, and spiritual force in the history of civilization. This has been no accident; it has been because of the will and the determination of the American people. These people, even as you and I, who have carved out of the wilderness the greatest Nation in the history of mankind, have done so because of their intense desire for a way of life similar to that preached by the Man of Galilee 2,000 years ago. They have lived it in their daily lives; they have charted their course for the future in times of prosperity and times of adversity, and that course has been based upon the same principles and ideals which are expressed in a quotation on a statute on the capital grounds in Atlanta, Ga.:

"Give us the fortitude, which through the coluds, and gloom, and sorrow of apparent failure, can see the distant pinnacles upon which the everlasting sunlight rests."

Some time ago, I read a pamphlet in which a 10 or 12-year-old, barefoot boy dressed in overalls and a straw hat, freckled face with a fishing pole over one shoulder and a can of worms in his hand, was looking up to you and me. This boy, my friends, is typical of American boys all over, and this is (in essence) what he said:

"Why not hold off turning everything over to the Government, so that the Government can issue it back in the form of so-called 'security and welfare benefits?' How about giving me a chance at America the way you found it when you first came of age?"

We owe the greatest of all responsibilities to this boy who asks you and me that simple question. We owe it to him and to all others like him to fulfill our responsibilities and obligations to them as well as to the Nation we love and serve and thereby leave to him the kind of country he wants to live in and has a right to live in.

Our democratic institutions, and with them our American way of life, exist by reason of their very virtue. If ever they cease to exist, it will be when you and I have forgotten the past, have become indifferent to the present, utterly reckless as to the future.

Courage has been exemplified in the lives of four centuries of Americans who by their lives have kept up the installments on our contract with freedom, and the blood of American heroes who have given their lives in defense of our Nation has been the moisture content which has built the concrete structure we call America—this same America of which Oliver Wendell Holmes spoke when he said:

"The thing that sets America apart from the rest of the world is that we always sail on. Sometimes we sail with the wind, sometimes against the wind; but we always sail. We never drift or lie at anchor."

Opposition to the Appointment of Wesley D'Ewart as Assistant Secretary of the Interior

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 16, 1956

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some introductory material, including some editorials and resolutions, in opposition to the appointment of Wesley D'Ewart as Assistant Secretary of the Interior.

There being no objection, the editorials and resolutions were ordered to be printed in the RECORD, as follows:

[From the AFL News-Reporter, Washington, D. C., October 28, 1955]

GIVEAWAY PROTECTOR

First it was tidelands, then Dixon-Yates, Hells Canyon, and now it's Wesley D'Ewart.

The administration has nominated for the post of Assistant Secretary of the Interior for Public Land Development, Mr. D'Ewart, who when he was Congressman from Montana supported legislative measures which infringed a sound public policy in respects to public lands. Here is a nominee whose legislative record shows that he favors turning over to special interests vested legal rights in our public domain and other natural resources.

Now he's been named by the President to be Assistant Secretary of the Interior for Public Land Development—a post in which he's supposed to protect our public lands.

[From the Oregonian of October 8, 1955]

MCKAY'S BAD CHOICE

Secretary of the Interior Douglas McKay's penchant for baring his neck on the political guillotine baffles us. The latest incident is his appointment of Wesley A. D'Ewart, of Montana, as Assistant Secretary of the Interior for Public Land Management. The odds are that the Democratic Senate never will confirm this appointment when it meets in January. It should not.

As a Representatve in Congress Mr. D'Ewart was the warm friend and spokesman for a group of big-spread cattlemen who have been trying for years to rewrite the land acts to give them feudal rights in the public domain. In 1953 the bill he introduced at the request of the cattlemen, known as the D'Ewart bill, or the Stockmen's Grazing Act, aroused a nationwide storm of opposition from conservationists.

In defense of the rights of 30 million Americans who use the public domain annually, as well as in the interest of conserving watersheds on which urban life and cropland farmers depend for water and power, and in opposition to the demands of 14,830 ranchers who have permits to graze cattle and sheep in the national forests, the Oregonian said at that time:

"In brief, the bill would give ranchers a vested right to national-forest grazing lands which now they use as a public privilege. The right would be perpetual in virtually all cases. Grazing lands would become, in effect, a part of the rancher's property, without the cost of taxes and administration and for payment of a low fee. They could be sold with the home ranch to a new owner and handed down to descendants. Wealthy ranchers could buy other base property strategically located to give them a monopoly on all the grazing lands they could use. A reasonable supposition is that the result would be larger and larger ranches and fewer smaller ranches."

The D'Ewart bill was defeated by the Republican Congress and Representative D'Ewart himself was defeated in his race for the Senate against Montana's Democratic incumbent, JAMES E. MURRAY, by 1,728 votes. A new grazing bill was written by James E. McArdle, Chief of the Forest Service, and introduced as the Hope-Aiken bill. The new proposal eliminated many of the bad features of the D'Ewart bill. But conservation interests divided on it, and the Democratic attacks carrying over from D'Ewart's efforts obscured its good features.

Democratic candidates in 1954 tried to paint the stockmen's bill as an administration raid on the public lands for private interests, treating the vicious D'Ewart bill and the reasonably fair Hope-Aiken bill as one and the same. What will they say now that Secretary McKay has turned over administration of Interior's public lands to Mr. D'Ewart? Politics aside, we cannot agree with the Secretary that Mr. D'Ewart is "a man of very, very good judgment." The sponsor of the infamous 1953 stockmen's bill cannot be expected to press for multiple use of the public domain.

RESOLUTION FROM ST. HELENS ROD AND GUN CLUB, ST. HELENS, OREG.

Whereas Wesley D'Ewart, former Congressman from the State of Montana, introduced legislation while in Congress, which would have adversely affected the interests of the majority of the States entitled to the use of public domain and the forest reserves of the United States; and

Whereas Mr. D'Ewart vigorously worked this legislation, as well as other legislation, detrimental to conservation interests; and

Whereas the Secretary of the Interior, Mr. Douglas McKay, has recently appointed Mr. D'Ewart to a position in control of the Range Management Division of the Department of the Interior: Now, therefore, be it

Resolved by the members of the St. Helens Rod and Gun Club, this 21st day of November 1955, That we recommend to the various clubs, and other interested parties, that we protest the appointment of Mr. D'Ewart; and be it further

Resolved, We request the withdrawal of the appointment of Mr. D'Ewart, in view of his known attitude with respect to conservation matters detrimental to the interests of the general public; and be it further

Resolved, That copies of such resolution be sent to Secretary Douglas McKay, Secretary of Interior, Washington 25, D. C.; to Senators Richard Neuberger and Wayne Morse, Congresswoman Edith Greene, the Oregon Game Commission, the Idaho Game Commission, and the Washington Game Commission.

NOVEMEER 29, 1955.

Mr. DOUGLAS MCKAY,
Secretary of the Interior,
Washington, D. C.

DEAR MR. MCKAY: The Powder River Sportsmen's Club, Inc., an organization of some 700 sportsmen in Baker County, Oreg., did, at their regular meeting on November 21, 1955, conclude that:

Whereas Wesley D'Ewart, former Congressman from Montana, while a member of Congress, introduced certain legislation which we believe would have adversely affected the interests of those entitled to use the Public Domain and the Forest Reserves of the United States; and

Whereas Mr. D'Ewart worked vigorously for this legislation which we consider detrimental to sound conservation, and;

Whereas Mr. Douglas McKay, Secretary of the Interior, has recently appointed Mr. D'Ewart to a position in charge of range management fo the Department of the Interior; Now, therefore, be it

Resolved, That we, the Powder River Sportsmen's Club, vigorously protest the appointment of Mr. D'Ewart to this position; and be it further

Rsolved, We request the withdrawal of this appointment in view of his known attitude in conservation matters, highly detrimental to the interests of the general public; and be it further

Resolved, That copies of this resolution be sent to Senator RICHARD NEUBERGER, New Fliedner Building, 1017 Southwest Washington Street, Portland, Oreg.; to Senator WAYNE MORSE, Postoffice Box 136, Eugene, Oreg.; to EDITH GREEN, Congresswoman, Portland, Oreg.; to the Oregon State Game Commission, Postoffice Box 4136, Portland 8, Oreg.

Sincerely,
POWDER RIVER SPORTSMEN'S CLUB,
F. J. MURPHY, *Secretary.*

MULTNOMAH ANGLERS & HUNTERS CLUB.
Portland, Oreg., December 28, 1955.

Senator WAYNE MORSE,
Room 402, Loyalty Building,
Portland, Oreg.

DEAR SIR: I have been instructed by the board of directors of the Mutnomah Anglers & Hunters Club to send you a copy of a resolution passed on by the board of directors.

RESOLUTION

Whereas Wesley D'Ewart, former Congressman from the State of Montana, introduced legislation while in Congress which would have adversely affected the interest of the majority of the States entitled to use the public domain and forest reserves of the United States; and

Whereas the said W. D'Ewart, vigorously worked this legislation as well as other legislation detrimental to conservation interests; and

Whereas the Secretary of the Interior, Douglas McKay, has recently appointed the said W. D'Ewart to the position in control of the Range Management Division of the Department of the Interior: Now, therefore, be it

Resolved by the Multnomah Anglers & Hunters Club of Portland, Oreg, this 20th day of October 1955, That such appointment be, and the same is, hereby protested in view of his known attitude with respect to conservation matters detrimental to the general public.

MULTNOMAH ANGLERS & HUNTERS CLUB,
By WM. E. KNAUER, *Secretary.*

Commendation to Chairmen and Members of Aviation Subcommittees of Senate and House Interstate and Foreign Commerce Committees

---

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks, I would like to have printed a resolution commending the chairmen and members of the Aviation Subcommittees of the Senate and House Interstate and Foreign Commerce Committees, which was adopted by the National Association of State Aviation Officials at their annual meeting held last year in Dallas:

Whereas the record of the 84th Congress is outstanding in the field of aviation legislation: Now, therefore, be it

Resolved, That the National Association of State Aviation Officials in convention assembled especially commends the chairmen and members of the Aviation Subcommittees of the Senate and House Interstate and Foreign Commerce Committees for:

(a) Desirable amendments to the Federal Airport Act, Public Law 211;

(b) Recommending permanent certification of local carriers, Public Law 38;

(c) Not recommending enactment of the so-called omnibus aviation bills in their present form (S. 308, S. 1119).

County Commissioners Association Urges Fair Return for Farmers

---

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. BURDICK. Mr. Speaker, I have been trying to convey to this Congress and to Congresses before it that farmers of this Nation are fighting mad about the sliding scale as their income continues to slide downward while the rest of the Nation enjoys prosperity. In this connection it is my pleasure to include with my remarks a resolution just passed by the County Commissioners Association of North Dakota. Represented are commissioners from every county in the State. I will not include all their names as all are written in longhand, but well over 100 are listed.

The resolution follows:

Whereas agriculture is the foundation of our national wealth, it is the basic industry of the entire world, along with forestry and mining the first link in our economic chain;

Whereas the economic structure of our township, county, State, and Federal Government is based on the existence and the purchasing power of the American farmer;

Whereas the family-type farm and the continuing existence of the family-type farm is contingent upon the prices received for the products produced; and

Whereas the prices received for farm commodities have greatly reduced compared to prices received for other basic commodities thus imperiling the standard of living of the American farmer; and

Whereas the standard of living established on the American farm must be maintained in order to preserve the very fundamentals of our American democracy; and

Whereas the average North Dakota farmer retained a net income of 49 cents from each cash dollar he received in 1950 compared to a net income of 27 cents per cash dollar received in 1954; and

Whereas from 1910 until 1949 farm income and national income rose and fell together, resulting in parity purchasing power for the American farmer; and

Whereas since 1949 the national income has risen steadily and the farm income has decreased steadily until it is a peril to eco-

nomic stability for all segments of the economy in America: Be it

Resolved, That, if the powers of our democracy can justifiably be used to stabilize the many major segments of our economy that those same powers be used to stabilize the most basic of all economic segments, the American agriculture; be it further

Resolved, That greater recognition be given family-type farm, that the economy and standard of living be maintained on a level deserving of our democracy; be it finally

Resolved, That the County Commissioners Association of North Dakota ask and petition the President of the United States, Secretary of Agriculture Ezra Benson, and the Congress, that immediate recognition be given the problems of agriculture and a positive program be initiated.

Dated at Minot, N. Dak., this 10th day of January 1956.

JACOB SWENSON,
President.
FRANK J. WANNER,
Vice President.
GILMAN WASTVEDT,
Secretary.

Why Congressmen Can't Do Their Jobs

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues to the following article which appeared in the January 8, 1956, issue of This Week magazine. The author, Mr. William L. Rivers, magazine writer and journalism instructor at the University of Miami, Miami, Fla., worked for 2 years in the offices of Members of Congress:

WHY CONGRESSMEN CAN'T DO THEIR JOBS—OUR LAWMAKERS ARE SO SWAMPED BY LETTERS, 100,000 A DAY, THEY CAN'T FIND TIME FOR THEIR WORK

(By William L. Rivers)

Question: With the new session of the 84th Congress now making headlines, a reader who wishes to remain anonymous, writes us, "I've read about how many Congressmen are missing from the floor during important sessions. Why is this? Are they letting their constituents down?"

Answer: It's an alarming truth that most of the day-to-day legislative work in Congress is done by a relatively small number of men. One Congressman estimated that as few as 100 "regulars" handled the work of the House of Representatives. "The rest," he said, "are busy answering letters from home."

This is probably an exaggeration, but not too much so. There is no doubt that the heavy flow of mail is the biggest single problem that keeps Senators and Representatives from their proper tasks.

Recently Dr. George Gallup's American Institute of Public Opinion discovered 21 million Americans have, at one time or another, written to Congress. Most Congressmen laughed incredulously when they heard the figure. They felt that Dr. Gallup had overlooked a hundred million or so.

I don't agree that Dr. Gallup made a mistake. I think that 21 million letterwriters might be the right figure, but these 21 million write in again and again.

Why do they write so much? Well, a friend of mine handles correspondence for a Senator from a far western State. This Senator regularly receives mail from an old prospector who walks 17 miles to the mailbox. By writing to his Senator, he can be sure the trek will not be in vain. The Senator will write back.

RSVP ALWAYS

For, if there is one certainty about Capitol Hill it is that letters are answered—on any imaginable subject. Some of them find their way into the "Crackpot File." These files mean work. They, too, must be answered.

Why? It's a matter of practical politics that not even the biggest statesmen in Congress can afford to forget. The late Representative William Bankhead, of Alabama, Speaker of the House, was asked by a freshman Representative what he should do to get reelected. Bankhead promptly replied: "Answer your mail. It's the way you handle your mail that determines your reelection."

Years ago, the burden was reasonably modest. From about 1910 to 1920, each Representative averaged 15 letters a week, Senators a little more. There is now a flood of more than 100,000 letters a day to all of Capitol Hill—an average of 188 for each Member every single day.

A freshman Senator, elected by a thinly populated State in November 1954, came to Washington on January 3, bringing with him a six-man staff that knew his State's problems intimately. On January 8, less than a week later, he reported that he and his helpers were hopelessly behind. "They elected me a Senator," he said, "but what they really wanted here was a business agent."

His constituents were asking for everything from seed packages to autographs of President Eisenhower—and the Senator is a Democrat.

HOMEWORK HELP?

Throughout the year, the lawmaker will receive a mountain of requests for visas that the Department of State could have handled directly, agricultural information that the Department of Agriculture would have sent without senatorial prodding, requests for an appropriation for a constituent who slipped on the post-office steps back home and appeals from high-school students for information on homework assignments.

He will get some even weirder communications. There have been at least two letters from recently arrived Japanese students asking if their military service to the Mikado in World War II entitled them to the benefits of the GI bill of rights.

And my former boss, Senator FULBRIGHT, once received a request from a beverage concern asking him to pose for an advertising picture with a glass of beer in his hand.

Some of the letters are of astonishing length. The unofficial record so far is held by an exserviceman requesting veteran aid. The letter ran to 90 dages, closely written on both sides. Veterans' appeals, in general, outnumber all other varieties. In nearly every case, the lawmaker must first get in touch with the Veterans' Administration office back home, which may be just around the corner from the constituent.

DEAR "SPARKY"

There are some correspondents who write letters so they can say they know a Senator on a first-name basis. The first letter is formal: "Dear Senators." The second runs: "Dear Senator SPARKMAN." The third is "Dear JOHN." A fourth received in Senator SPARKMAN's office started: "SPARKY."

To handle the flood of mail, Senators and Representatives may employ from 3 or 4 to 2 dozen office workers. A Representative from a small district may average as few as 30 letters a day during the session, while a Senator from a small State will get 70 to 150 a day, and a Senator like PAUL H. DOUGLAS, of Illinois, 500 a day.

Now, it would be a mistake to suggest that constituents stop writing their Congressman altogether. Senators and Representatives won't even suggest that, both from fear of the consequences and because they don't want to work in that kind of a vacuum.

But a letter that asks the Congressman to list the Presidents of the United States in order is costing a great deal of money, comparatively. Such information could be found in the public library.

Petitions and resolutions might be cut down if people realized how little attention is paid them. Senator KEFAUVER, of Tennessee, has said flatly: "No one reads them. They gather dust in Capitol files until carried away. They seldom influence legislation."

This seems to run counter to the first article in the Bill of Rights stating: "Congress shall make no law * * * abridging * * * the right of the people * * * to petition the government for a redress of grievances." However, the sad truth is that it is possible to get some people to sign anything, worthy request or otherwise.

JUST WANT TO SAY HELLO

The letters that often do count are those that represent quite obviously the honest convictions of the writer, however unimpressively they may be worded.

And the correspondence that probably does much to insure that your lawmaker will have a chance to do his job is the one that closes: "Please do not answer this letter."

Time-consuming correspondence is costly, both in money and ultravaluable time, but there are other ways that lawmakers are prevented from doing their proper work.

There are sometimes as many as 15 or 20 pepole in the reception rooms of Senators and Representatives from large States near Washington. About one tenth are on important business. Most of them just want to say hello.

It might be a good idea to remark to the neighbor who mentions that he "had a couple of hours with the Senator while I was in Washington" that the interlude may have been more profitable to one party than to the other.

Add to the drop-in visits those that require the Senator to do something and it's small wonder a Member of Congress sometimes when reaching the floor late, slides into his seat and asks a neighbor of like political faith: "What are we voting on and how should I vote?"

American Servicemen Entitled to Protections Guaranteed in Constitution, Bill of Rights

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. GROSS. Mr. Speaker, the Waterloo (Iowa) Daily Courier has rightly spoken out against treaties and agreements which permit the trial of American servicemen in foreign civil courts and incarceration in foreign prisons. Two excellent editorials on the subject appeared in the Waterloo newspaper last year, but I received them too late for inclusion in the RECORD before adjournment of Congress, and I want to include them as part of my remarks at this time.

Resolutions to revise these thoroughly un-American treaties and agreements are still pending before the House Foreign Affairs Committee. Included is one I introduced, House Joint Resolution 321. I am confident that an overwhelming majority of the Members of this body are opposed to the trial of American servicemen in foreign courts, and I hope the Foreign Affairs Committee will give all Members an opportunity to express themselves on the matter by reporting one of the resolution to the House floor without undue delay.

Mr. Speaker, the first editorial, which appeared in the Waterloo Courier on July 26, 1955, is as follows:

GIs DESERVE AMERICAN TRIALS

The House Foreign Affairs Committee is holding a hearing on what has been happening to American GIs being tried in foreign courts under the official status of forces treaty with NATO countries and under Executive agreements negotiated with other countries including Japan.

This treaty and the executive agreements provide that American servicemen abroad are tried in foreign courts for alleged offenses committed while off duty. Offenses committed while on duty bring a military court martial.

The Courier believes that, despite the need to minimize friction in areas where American troops are stationed, the trial of GIs in foreign courts is unfair and unnecessary.

In the first place, American boys are drafted and sent abroad involuntarily. Then they are denied their United States constitutional rights in foreign courts. While foreign judicial practices naturally vary widely, a GI in a foreign court could be denied such rights as presumption of innocence, right to bail, right of trial by jury, right of habeas corpus, protection against self-incrimination, protection against cruel and unusual punishments, the right of having the prosecution assume the burden of proof and numerous other rights.

In the second place, this practice is directly contrary to established international law and to United States Supreme Court decisions.

In the third place, the American military code specifically makes a violation of domestic law in the country where a soldier is stationed a violation against the military code. Since this permits courts-martial for offenses against foreign laws, there is no need whatever to turn the GIs over to foreign courts.

The stationing of American troops in foreign lands no doubt does create friction. But this friction is apt to prejudice the native population against the GIs and deny him an unprejudiced court trial.

These foreign trials of GIs have unfortunately become an issue between the internationalists and the isolationists, thus introducing an emotional element in debate of the subject. But we feel confident the average American father and mother would consider it desperately unfair for their son to be drafted, sent overseas, be accused of some crime, be thrown into some stinking foreign jail, be denied bail and then tried by former enemies (as in Japan) in a court proceeding conducted in a foreign language that he can't understand.

The Courier's second editorial, printed in the August 3, 1955, edition, follows:

GIs DESERVE CONSTITUTIONAL RIGHTS

Stationing large numbers of troops in the vicinity of civilan population centers is inevitably a cause of friction. That friction exists within the United States in the relationships between Army camps and nearby cities. It is not surprising, therefore, that it should exist to a greater degree when American troops are stationed near civilian centers abroad.

As a gesture of good will, the United States State Department, with the reluctant acquiesence of the Defense Department negotiated the Status of Forces Treaty with NATO countries which provides that American GIs may be tried in foreign courts for alleged offenses committed off duty. Executive agreements provide for a similar course in other nations, including Japan, where United States troops are stationed.

Questioned by congressional committees, United States officials have been unable to furnish evidence that this arrangement was requested by any of the countries where United States troops are stationed. The action was apparently a voluntary gesture by the American Government designed to prove that citizens of this country do not consider themselves superior to those of other countries.

Certainly Americans do not wish to adopt a jingoistic attitude on this question. Although the danger of prejudice against foreigners always exists, everyone concedes that an American GI would probably receive as good or better treatment in a British court as in an American judicial proceeding.

But whereas British and American justice is designed to give every protection to a possibly innocent man accused of a crime, the law in other countries is designed to give maximum protection to society when there is doubt of guilt. The accused is considered guilty unless he proves his innocence. It is not surprising that an American GI, accused in a foreign land where he does not speak the language and denied the guaranties of Anglo-Saxon law, could easily be convicted when completely innocent.

Representative FRANK T. BOW, of Ohio, recently released a part of the official report of American observers at the trial of three Marines in a Japanese court:

"After careful consideration, taking into account the ramifications involved in a trial under foreign laws, and cognizant of the fact that the court, not the representatives of the United States, are the judges of credibility of witnesses and weight of the evidence, the United States representatives are of the opinion that the three accused were not afforded a fair trial. We are of the opinion further that the accused stand unjustly convicted * * *. We cannot in conscience overlook the paucity of evidence upon which the convictions were based."

A report from Time Magazine early this year gives an account of French justice:

"In the week when the French Assembly proved again its willful capacity for chaos, French justice also came in for well-deserved attack. 'What is wrong with our justice?' demanded France Dimanche. 'Henceforward,' added Paris' Paris-Presse, 'it is hard to see how we can have the nerve to give lessons to totalitarian police.'

"French justice, based on the Napoleonic code, has long been viewed with cynicism by its friends anl alarm by disciples of Anglo-Saxon procedures * * *. Last week the case of a Nantes stevedore, only the most recent of a series of setbacks of justice touched off a storm of indignation.

"Seven years ago, someone accused Stevedore Jean Deshays of killing an old man, beating his wife, and robbing them of $50. Police briskly beat a confession out of Deshays, and he was sentenced to 10 years' hard labor. Last year police discovered that three other men had committed the crime."

Such miscarriages of justice, of course, are not unknown in Britain and the United States; but no unbiased observer would claim that an American GI would have as much opportunity of proving his innocence in a French court as in a United States military court martial. In France, for example, the GI might be tried by a Communist judge with every incentive to find him guilty. In Japan, the GI might be tried by a judge who had lost relatives in American bombing during World War II. Perhaps this danger has been exaggerated by opponents of international cooperation; but it nevertheless exists.

The Courier approves most of the steps taken by our Government to create international understanding and to build good will among our allies. But it believes that in this case the State Department has gone too far. An American youth drafted into the Armed Forces and involuntarily sent abroad should be entitled to the constitutional protections which he was allegedly drafted to defend. Such a policy would be fully in accord with established concepts of international law.

God, Country, and the Constitution

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. BURDICK. Mr. Speaker, I believe the following timely statement of the basic concept and prime purpose of the American Legion, as prepared by Dean Manion for Post 558 Biennial Membership and Business Directory published November 1955, should be brought before the Members of Congress and called to the attention of other readers of the RECORD. It is followed by the preamble of the constitution of the American Legion, which embodies ideas and principles to which all good Americans can gladly subscribe.

The author of the statement, Dean Manion, conducts the Manion Forum of Opinion on which informative broadcasts of subjects of national importance may be heard, and transcripts of which are available on request.

TO LT. COL. JOHN HOWARD POST 558:

For God and country and the American Legion was originally assembled, and in that interest it has since been maintained.

In the next breath of its new life, the Legion logically took a pledge to uphold and defend the Constitution of the United States.

GOD, COUNTRY, AND THE CONSTITUTION

To this ideal trinity, and to this trinity of ideals, everything else is subordinated.

In the official organization of our country, God is the basic supporting fact. The truth that all men are created and endowed by their Creator with an indestructible God-designed nature, was responsible for the birth of our country in the Declaration of Independence.

The necessity for holding Government in service to this God-given nature of man required establishment of the American Constitutional system, which was crowned and capped by the Constitution of the United States. For the protection of this trinity of ideals, every American soldier has been recruited from 1776 to the present day.

The Legion is the great association of these "Old Soldiers," still marching in the same cause and in the same spirit of patriotic resolution that:

A. The religious inspiration and motivation of America and Americanism shall not be destroyed or contaminated by atheistic communism or by dictatorship of any kind or name.

B. The Sovereign Independence declared in 1776 and preserved by the blood and sacrifice of all American servicemen since then, shall never be compromised by one-worldism, or superstateism.

C. American local, State and Federal Government shall never be freed from the divisions, checks and balances, and prohibitions placed upon it by our Constitution and Bill of Rights.

In this resolution, legionnaires carry out their individual community, State, and national obligation to "combat autocracy" and "make right the master of might." For these purposes the American Legion was born. To these ends its patriotic sentinels are posted in every hamlet in the land.

PREAMBLE TO THE CONSTITUTION OF THE AMERICAN LEGION

(From back of membership cards)

For God and country, we associate ourselves together in the following purposes:

To uphold and defend the Constitution of the United States of America;

To maintain law and order;

To foster and perpetuate a 100 percent Americanism;

To preserve the memories and incidents of our associations in the great wars;

To inculcate a sense of individual obligation to the community, State and Nation;

To combat the autocracy of both the classes and the masses;

To make right the master of might;

To promote peace and good will on earth;

To safeguard and transmit to posterity the principles of justice, freedom and democracy;

To consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

Crisis in the Middle East

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. AUCHINCLOSS. Mr. Speaker, under permission granted to me, I am pleased to include in the Appendix of the RECORD a copy of the resolution adopted by a group of American Jews who met in Asbury Park, N. J. Those attending this meeting were American citizens who are disturbed about the developments in the Near East, particularly between the State of Israel and the various Arab nations. I know that our Government is well aware of the situation in that part of the world and I feel sure will cooperate with other peace-loving nations to maintain peace and the principles of justice and liberty. The resolution follows:

RESOLUTION ADOPTED UNANIMOUSLY AT THE BERKELEY CARTERET HOTEL, THURSDAY, JANUARY 12, 1956

This assembly of American citizens of Monmouth County, N. J., unites in calling the attention of the American Government and people to the grave crisis in the Middle East which threatens the peace and security of Israel and of the entire free world.

The State of Israel came into being May 1948, "by virtue of the natural and historic right of the Jewish people and of the resolution of the General Assembly of the United Nations." Aided by the moral and material assistance of the Government and people of the United States and by the unstinting sacrifices of the Jewish people of all free lands, Israel has built and consolidated a democratic commonwealth in the Middle East. In addition, Israel has laid the foundations for a decent society and a sound economy.

Now this great achievement faces its greatest crises. Defeated in their attempts to destroy Israel at birth, its enemies have intensified their war against its existence. They are now aided by the Soviet Union, which is pouring into the Arab world heavy armaments in large quantities. These armaments have already been and are continuing to be used by Egyptian military forces for aggression against the territory of the State of Israel, thus increasing the danger of an outbreak of general hostilities between the Arab states and Israel which is unlikely to be confined to that area.

This assembly solemnly declares that the security of the State of Israel and the stability of the Middle East are vital to the defense of the free world against Communist aggression and are consequently American interests of the highest priority.

We therefore urge our Government to negotiate without delay, security treaties with the State of Israel and any other states of the Middle East which desire the preservation of peace, guaranteeing the frontiers and boundaries of such states against aggression from any quarter.

We further urge upon our Government that it make available to the State of Israel military means for its legitimate self-defense.

The highest interests of justice and the security of free democratic nations everywhere demand that America shall act today firmly and decisively before it is too late.

Let's Remove the Patronage Tumor

EXTENSION OF REMARKS

OF

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. WRIGHT. Mr. Speaker, I have today introduced a bill to do away with the outmoded and unattractive practice of political patronage appointments in the postal and classified civil service.

The terms of my proposal would place postmasters in the competitive civil service, and would bring to an end the prevalent practice of obtaining political clearance either from Congressmen or from political party committees for appointees to civil-service jobs.

I am convinced that the American people both desire and deserve this type of reform, and that it is long overdue.

The Government of the United States is undoubtedly one of the most immense employment organisms on earth. It employs a working force of 4½ million and hires approximately a half-million new people annually to fill job vacancies of one sort and another.

To maintain this Government in all of its operations costs the average taxpayer about $350 a year in taxes.

For his $350 investment he would like—and he has every reason to expect—the assurance that this Government which belongs to him will be operated with the maximum of efficiency and the minimum of political job making.

He has every reason to expect that the people employed to conduct his affairs for him will be selected on the basis of ability and not in payment of political obligations.

Admittedly, positions of Cabinet rank and top policymaking stature must be filled by people in harmony with the governmental philosophy of the administration in office. My bill, therefore, does not disturb the existing relationship of Presidential appointment and Senate confirmation for positions of this type.

Yet there can be no logical reason or defense for requiring the President to appoint and the Senate to confirm local postmasters in the 40,000 communities they serve, except it be to create or perpetuate a nationwide political machine founded upon patronage.

In this specific connection, the Hoover Commission Task Force on Personnel and Civil Service said:

The present system of selecting first-, second-, and third-class postmasters is a hybrid between political appointment and a true merit system. It is incompatible with a businesslike management of the largest civilian business that the Government operates. It does not invite genuine competition from well-qualified persons and offends the American ideal of equal opportunity on the basis of character and ability. By reserving the key posts for patronage, it limits the incentive to enter the postal service as a career, and discourages postal employees from trying to go ahead on their merits.

The average American has shown again and again that he has nothing but contempt for the spoils system and everything that distasteful term implies.

The sole purpose of public employment should be to promote the most efficient possible conduct of the affairs of our Government, not to provide jobs for members of any party machine.

Millions of Americans voted for General Eisenhower in 1952 because they were convinced that he would usher in an administration which would clean up what they regarded as a mess in Washington.

"The single choice, the single standard," he had assured the Nation in a speech at Duluth, Minn., "shall be merit and not political reward."

Granting the personal sincerity of the President, it must be disappointing to him as it is to many of us of both parties in the Congress that the administration which surrounds him has fallen considerably short of living up to that expectation.

Many public positions are today being filled with strictly partisan political appointments.

It would be unbecoming of me as a Democrat to say that the Republican Party is behaving more crassly in this regard than my own may have done in the past. I realize that decency and honor and integrity wear no partisan party label.

As a first-term Member, it would be presumptious of me to say that present practices are worse than they have formerly been, for I have never before enjoyed this vantage point of observation.

But I do think it is fair to say that I have been shocked and keenly disappointed by the very partisan political complexion of certain job-placement

policies presently in vogue in our Federal Government.

That it may have been going on for years makes it no less reprehensible. That the other party on occasion may have been guilty of the same objectionable practice is no defense.

Some of these practices display what appears to be a brazen contempt for the principles which motivated civil-service reform and the Hatch Act.

The Pennsylvania State Republican Committee last spring sent an official delegation to Washington to confer with the White House and the National Republican Committee on patronage jobs.

Writing at the time in the Washington Star, columnist Joseph Young quoted a spokesman for the group as saying:

> The situation is vital to our staying in political power. It is the precinct workers and the rank-and-file political aids back home who win elections for us, and we've got to take care of them as far as jobs are concerned.

Which brings up the question: What is the purpose of Federal employment—to perform necessary government functions? or to win elections?

A year or so ago, under what came to be known as the Willis order, Federal agencies were directed by the administration to cooperate with the Republican Party by finding jobs and winning promotions through government for people with GOP political backing. In its original form, the order applied to all jobs, without exception, including presumably under civil-service protection.

The order required Federal agencies to notify the Republican National Committee of job vacancies on forms to be supplied by the party committee. All jobs paying $9,600 or better were to be frozen for a period of 30 days, presumably to allow the Republican committee time to clear prospective appointees.

In a strongly worded statement of indignation over this policy, the 74-year-old, nonpartisan National Civil Service League stated:

> A career system of civil service by definition and by its nature cannot be part of a political spoils system or a reservoir of political patronage. The only means of keeping a career civil service permanently useful is to keep it scrupulously nonpartisan.

When the plan became publicly known, it aroused a storm of protest, and has since been modified.

But the pattern was made clear. It has also been made clear in the pronouncements of local party chairmen over the country who are openly stating that the first qualification they will consider in filling an opening is whether or not the applicant had a reliable record of Republican Party activity.

Let me make myself clear. Such party activity should certainly not mitigate against a person's being considered, but it is definitely not a qualification for handling difficult administrative duties.

Public employees are not paid by any political party; they are paid by the people of the United States.

Yet the present party, and some of its spokesmen in the administration, have not been content merely to fill the vacancies which normally arise with people to whom they owe patronage favors.

There is considerable evidence to indicate that they are feverishly trying to clear out as many career servants as they possibly can from present employment in order to make room for more political appointments.

One such disturbing development is the recent action in removing deputy United States marshals from the competitive service, against the strong recommendations of both the Hoover Commission and the nonpartisan National Civil Service League.

Another such development was brought to light during the last session by the gentleman from Texas [Mr. RUTHERFORD], who sounded the alarm on a move in the Treasury Department under which career Bureau of Customs employees, living and working for years in El Paso, had been given notice of transfer to such distant points as Vermont, Maine, and North Dakota.

Obviously, their long service and valuable experience with the customs problems of the Mexican border could not be expected to qualify them for any increased contribution to the service in any such distant points. We might as logically send an expert on far eastern customs procedures to Greenland.

Mr. Rutherford reported that one such employee, upon finally deciding to accept such an assignment, was quietly told that what was really expected was his resignation.

Senator MONRONEY has said that "Postmasters with years of truly distinguished service are being highballed out of office on the flimsiest of pretexts." The only conceivable explanation seems to be to clear another place at the pork barrel.

Some effective protection against these practices can be afforded for the conscientious career servant by abolishing the pork-barrel method of selecting his successor.

Senator JOHNSTON of South Carolina has expressed concern over reports of job selling in the Post Office Department, involving appeals from party officials conveying the strong suggestion that applicants for local postmasterships contribute certain stipulated sums to the State political organizations.

As to these and similar disturbing reports from over the Nation, I cannot attest with any certain knowledge concerning the motivations behind them. This much, however, can be said with sure conviction:

The widespread use of public positions as political patronage to reward the faithful or punish the erstwhile opposition, by whatever party or individual it may be practiced, is inconsistent with our finest American ideals of clean government.

It is an unnecessary and unhealthy growth upon the body politic. Like a tumor, it serves no useful purpose, but can grow to grotesque proportions. The bill I have proposed would be the corrective surgery necessary to remove it.

Such surgery is long overdue. There can be no better time than now.

The Soil Bank

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the January 10, 1956, edition of the Washington (D. C.) Post. It is gratifying that President Eisenhower's soil-bank program is meeting with such universal approval.

THE SOIL BANK

President Eisenhower's soil-bank proposal is a remarkably persuasive and comprehensive approach to some of the country's major agricultural ills. Like his state of the Union message, it undoubtedly will be viewed by some persons as a campaign-year remedy. Quite irrespective of any political implications, however, it represents a sober and constructive effort to advance a number of desirable objectives in land conservation and control of farm surpluses. We hope Congress will regard it in this light. The disequilibrium of the agricultural segment of the economy is both serious and complex. Any attempt to play politics would be likely, not to relieve it, but to aggravate the causes.

Correct diagnosis is the first step in prescribing medicine. The President is right, in our opinion, in attributing the current problem of falling farm income and increasing surpluses to three principal factors: wartime production incentives too long continued; large harvests and livestock production compounding existing surpluses; and increasing farm costs. These factors have overshadowed the operation of the 1954 flexible-support law.

Flexible supports might have provided a satisfactory check if Congress had permitted them to take effect in 1948, before the huge glut of surpluses accumulated. Today they are plainly an inadequate remedy. Mr. Eisenhower wisely recognizes that none of the ordinary means of surplus disposal through domestic or foreign channels will suffice; and he will be applauded abroad particularly for emphasizing the injurious effects of dumping.

Already there has been considerable support for the principle of the soil bank, which is simply a plan to compensate farmers for withdrawal of acreage now in production. The first part would be what Mr. Eisenhower terms an acreage reserve, consisting of lands now allotted to production of staple crops in surplus. A farmer who agreed to reduce, say, his corn acreage and let the withdrawn acres lie fallow would receive in return either surplus corn or a negotiable certificate. The net effect would be to use up surpluses on hand and to reduce storage costs.

The second part would be a conservation reserve made up of marginal land that basically is not suited to tillage. Farmers who placed such land in grass or trees would be compensated on the basis of the time required to shift to new use. This latter proposal has much to commend it as a long-term investment in the restoration of land that has been abused and contributes to dust bowls. The emphasis on timber production is especially welcome as a conservation measure.

There is much sense to Mr. Eisenhower's plan to barter more surplus commodities for strategic materials. There likewise is sense in his suggestion that the law be amended to facilitate disposal of surpluses to

other than "friendly" countries. If the United States can trade surplus products to the Soviet bloc to net advantage, it ought to do so. For the first time, Mr. Eisenhower also suggests that Congress place a dollar limit on the amount any farm or farmer could receive in price support loans. This suggestion recognizes that the large, efficient operations generally are not in great need of help; indeed, in the past they sometimes abused the help given. By the same token, the marginal farmers who do not benefit much from price supports probably need more help in readjustment than either the administration or Congress has contemplated.

As in all approaches to the farm problem, the big question with the soil bank proposal is whether it is broad enough to provide a real remedy. Certainly, it should help; and certainly a return to the system of rigid supports that stimulated overproduction is not the answer. We wonder, however, whether the experience of the last decade does not warrant more exploration of the use of farm income instead of farm prices as a standard of support, with perhaps more adaptation of the production payment system used on sugar and wool. But irrespective of whether the soil bank provides a broad solution, it deserves to be received for what it is—a constructive plan to accomplish something that ought to be done anyhow, in the interest of the general public as well as of the farmer, to conserve land resources and move surpluses. It ought to be accepted in that spirit.

One Hundred Good Years

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, John J. Burkhard, Sr., of Monroe, Wis., has lived to be 100 years of age. I join with his many other friends in extending my sincere greetings. Anyone who can reach that age in life has achieved considerable.

Mr. Burkhard was one of the pioneer swiss cheese makers in Green County, Wis. He came to this country from Switzerland and brought his trade with him. For many years he has been an outstanding exponent of the swiss cheese industry and especially of the farmers who supply the milk for that wonderful Wisconsin swiss cheese.

Mr. Speaker, the contribution made by this grand old man upon the community in which he lives will remain forever. Many happy returns of the day, Mr. Burkhard.

Under leave to extend my remarks, I am including an editorial from the Monroe Evening Times apropos Mr. Burkhard:

A HUNDRED GOOD YEARS

Attainment of 100 years in the span of life no longer is so unique in this modern age as to cause widespread acclaim. The legion of centenarians is pretty well filled over the country these days.

What an individual has done with those 100 years, what his life has meant to his community and to his family, however, are of very great interest to his fellowmen.

John J. Burkhard, Sr., we think, is one centenarian who can look back on his many, many years in this community with confidence that its residents respect him for this good life. We believe he is aware that they were happy to join in warm congratulations to him and his family on his 100th birthday yesterday.

Mr. Burkhard represents one of the last surviving links with the pioneer cheesemaking days in Green county. He is dean of the dwindling group of men who made swiss and limburger in those early years when this area was just beginning to feel its way along the road toward an entirely new farming economy.

Although he later switched to farming, Mr. Burkhard always championed the cause of the cheesemaker. He knew the problems from experience. He had an old world background of knowlege on foreign type cheeses, their flavor and their quality.

In his long retirement, Mr. Burkhard has enjoyed to the fullest his role as head of a large family, the successes of its members and each generation of new faces. He also has been blessed with a circle of old friends who in their own advanced years could join with him in frequent reunions and reminiscences on old Switzerland days.

We believe most people will agree with us that some of the colorful characteristics of this communiity remain strong because of men like John J. Burkhard, Sr. We are happy that he has stayed with us and that he starts his second century in such good spirits.

Total Incredulity

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by Mr. Arthur Krock which appeared in the New York Times, Friday, January 13, 1956, in which Mr. Krock criticizes Secretary Dulles for his statements which appeared in a recent edition of Life magazine:

ONE MORE VERY CURIOUS OFFICIAL INCIDENT

(By Arthur Krock)

WASHINGTON, January 12.—The article in the current issue of Life magazine in which Secretary of State Dulles is directly quoted as asserting that bold and timely warnings by this administration that it would use atomic weapons in the Far East had thrice forestalled war in that area "at the brink" bears all the familiar marks of high official cooperation and approval before publication. The leading detectors of these marks are the Washington reporters.

Therefore they heard with what can politely be termed total incredulity the replies Secretary Dulles made yesterday to questions about the Life article. For these invited 1 of 2 extraordinary inferences. The first was that a reporter and the editors of a mass-circulation magazine were reckless enough to put out such an article without checking it for approval in an authoritative quarter (for instance, Dulles' assistant in charge of his press and public relations, Assistant Secretary McCardle). The alternative inference was that the functionary who did the checking, though the article quoted Dulles extensively and was replete with foreign policy revelations and claims certain to be politically provocative, made slight mention of it (if any) to the Secretary.

He said specifically in answering questions about the article, that he had not read it, had not seen it, had no precise recollection of what he may have said to the author, and would hardly say it was an exclusive interview because he had talked to a great many reporters in one way or another at one time or another.

If he had not seen the publication (which, presumably, means it had not come under his eye in the mimeograph copy that Life distributed widely in Washington Monday or in the current issue of the magazine), of course he had not read it either when he met with the newsmen yesterday. Accepting those words as statements of technical fact did not, however, induce his audience also to accept the inference that the article had been published without authorized official imprimatur.

POSSIBLE ASSUMPTIONS

But the Secretary indicated such total unfamiliarity with the contents of an interview in which he was freely quoted as to leave for evaluation the second inference—that, though his public-relations aides knew the matter would certainly arise at the press conference, they took no steps to acquaint him with it. That is possible if it can be assumed that the Secretary was too busy recently to find time to be briefed on this particular subject, or simply declined to allow his aides to bring it up. But, considering his lively interest in what appears about him in print, considering the reaction this article was sure to evoke, and further considering the risk that would be taken by an aide who passed such an article without advising Dulles of its contents, both situations are difficult to conceive.

Mr. Dulles' responses to yesterday's questions, even before he dismissed the subject on learning that the article was not to be released until hours after the press conference was held, enter the category of official mysteries. It is known that the material was submitted to appointed checking authority in the State Department before it was circulated by mimeograph or published in the magazine. It is on the record that the Secretary had not "seen," and hence not "read," the interview before he was asked about it. But how and why are facts that remain in the realm of the curious and the unknown.

Dulles was virtually alone in unfamiliarity with the publication by the time his news conference assembled yesterday, so far as the political, press, and diplomatic communities in Washington are concerned. The Capitol buzzed with the public attribution to him that the President and he three times had averted war for the United States (a) by notice to the Communist powers that in certain aggressive circumstances we would attack Manchuria, and make aircraft carriers ready to bomb South China ports, and (b) through the Senate resolution drafted by Dulles that authorized the President to take any military course he thought necessary to defend Formosa. In two instances the use of nuclear weapons was specifically mentioned in the warnings; in the third it significantly was not excluded.

These revelations—or clarifications of what the executive department previously had but barely indicated—had atomic effects of their own. Diplomats of European nations were shocked and alarmed that the threat of nuclear war they dread had been revived, and in this casual way. Democrats in Congress, noting that Dulles was loaded with praise in an article (full of his quotes) as the boy on the burning deck whence all but he and the President had fled, resented his hero portraiture and angrily classified it as a 1956 Republican campaign document.

The shudders of the self-styled neutrals could be heard from New Delhi to Belgrade. And hard things were said about the timing, just before Eden's visit here, of an open complaint attributed to the Secretary that the British had reneged on the United States at a critical time.

Fiftieth Anniversary of Pure Food and Drug Law

EXTENSION OF REMARKS
OF

HON. J. PERCY PRIEST

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. PRIEST. Mr. Speaker, this year marks the 50th anniversary of the enactment of the first Federal Pure Food and Drug Act and the Meat Inspection Act. Both of these acts were signed by President Theodore Roosevelt on June 30, 1906. In order to commemorate this important event, a 50th anniversary committee has been formed on which serve representatives of the food, drug, and cosmetic industries, Federal, State, and local food and drug control officials, and consumer organizations.

For the purpose of bringing to the attention of the American people the importance of these laws, the committee conceived the idea of celebrating the 50th anniversary year by holding appropriate meetings and other events from coast to coast through the year.

In launching this series of observances, the committee held a luncheon at which I was privileged to give a brief talk on the changes which have taken place in the legislative picture during the 50 years which have elapsed since the enactment in 1906 of the first Federal legislation in this field.

ADDRESS OF CONGRESSMAN J. PERCY PRIEST, CHAIRMAN, COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, AT LUNCHEON COMMEMORATING PASSAGE OF FIRST FEDERAL FOOD AND DRUG LAWS IN 1906, FEDERAL ROOM, HOTEL STATLER, WASHINGTON, D. C., JANUARY 11, 1956

The opening of this 50th anniversary year commemorating the passage of the first Federal Pure Food and Drugs Act is indeed a significant occasion. I am honored to speak at this luncheon and I accept that honor in behalf of my colleagues of the House Committee on Interstate and Foreign Commerce. Our committee has had the primary responsibility through the years of drafting revisions and amendments to this important legislation, and the committee is very proud of this excellent opportunity to be of service to our people.

It is a particular pleasure to be here today because my friend Gene Holeman, Superintendent of the Food and Drug Division of Tennessee, is serving this year as president of the Food and Drug Officials of the United States. Gene Holeman is also the chairman of the 50th anniversary committee which is providing the information and inspiration for this luncheon and similar activities designed to bring to the attention of the country the importance of our food and drug laws.

Actually, June 30 will mark the birthday of both the Wiley Pure Food and Drug Act and the Meat Inspection Act, which President Theodore Roosevelt signed on the same day. However, the idea of celebrating a 50th anniversary year instead of a birthday seems to me an excellent one. This law—the pure food and drug law—means so much to so many different people and organizations all over our country that a single anniversary observance would hardly do it justice. So today I am happy to join with you in launching a series of observances that will take place from coast to coast and last throughout the year.

Others are much better qualified than I am to talk about the enforcement of food and drug legislation. I would like to review with you very briefly how the legislative picture has changed since the year 1906 when the efforts to enact Federal legislation in this field finally succeeded after many years of hard campaigning. This legislative picture today reflects a basic change in the attitude of the public. The American public today has come to accept completely the need for consumer protection with regard to food and drugs.

When in 1890, Edgar Richards, a chemist in the Department of Agriculture, reported such practices as the watering of milk and butter, mixing of lard with cheese, adding cottonseed oil to olive oil, soapstone and sand to tea, and coloring of pickles with copper salts, he commented on the attitude of the public toward such things as follows: "The average American repudiates the idea of a paternal Government supervision over his affairs or anything trained with that idea. * * * We would * * * regard with apathy any general law that would guarantee to the public the liberty of purchasing pure food with a reasonable certainty that they were not imposed upon in their purchase."

It took another 16 years before Richards' chief, Dr. Harvey W. Wiley, finally succeeded in overcoming this general apathy. In the 27 years from 1879 to 1906, more than 100 food and drug bills were introduced in the Congress. One bill actually passed the Senate in 1890. However, the issues involved were very controversial. Many compromises had to be made.

In recommending the enactment of the Hepburn bill which became the 1906 act, the House Committee on Interstate and Foreign Commerce stated frankly that the bill might be ineffective in some respects, that it might not go far enough in some particulars while in others it might go too far. The committee, however, was emphatic that the bill represented its earnest thought and work, that it was not drawn to aid any special interests, that it had not been framed by, or at the behest of, any class of trade which will be specifically benefited thereby.

However, the committee felt that enactment of this legislation was badly needed because, and I quote from the committee report, "The sand with which our forefathers are reputed to have adulterated their sugar, while a fraud upon the purchaser, was doubtless comparatively harmless. The adulterations of the present day are neither so clumsy nor, as a rule, so harmless.

In a strongly worded minority report, the dissenting members argued that the Federal Government was without power to enact this legislation and that the bill was an attempt of exercising police power within the States under the pretense and guise of regulating commerce. As a substitute for the Hepburn bill, the minority offered a bill which would have subjected food products or drugs shipped in interstate commerce to the police laws of the various States whenever they are transported into the States for sale or use in the same way that spirituous liquors and beer were made subject to the laws of the States by the act of August 8, 1890, when transported into the States for use or consumption.

The 1906 law established the basic principle that Government—the Federal Government as well as the State governments—should protect the consumer by barring from the channels of trade foods or drugs which are adulterated or misbranded.

The act of 1906 was a strong law for its times, but eventually it became obsolete and had to be replaced. Instead of a quarter of a century, however, it took 5 years this time to develop and enact the present law which was passed in 1938. Again, there were many controversial issues which had to be resolved, but most of these were issues of method, rather than of principle.

Interestingly enough, again we find minority views expressed signed by 6 members of the committee on both sides of the aisle. However, what a change since 1906. While the minority in 1906 argued vehemently against the constitutionality of the Wiley Act, the minority in 1938 was in complete agreement with the objective of the bill. The minority in 1938 merely disagreed with a particular feature of the bill reported by the majority. Thus, by 1938, the powers of the Federal Government to regulate interstate commerce in food and drugs had come to be accepted completely by the public and as a matter of law.

Since 1938 the law has been amended several times. I would like to mention just three of the most important of those amendments: First, the 1945 amendment to provide for the testing and certification of penicillin, followed by later amendments extending this requirement to several other antibiotics. Second, the Durham-Humphrey amendment of 1951 which defined the classes of drugs which require medical supervision for safe use and which under the law may only be sold upon a doctor's prescription. Third, the Miller Pesticide Amendment of 1954 which provides a procedure for establishing safe tolerances for residues of pesticide chemicals on raw food crops. All three of these important amendments have one thing in common—each of them was made necessary by the progress of science and industry in developing new products—products which presented new problems of regulation to protect the consumer.

Each of these amendments applied the basic principles of the law to a specific, highly technical problem, or to a set of problems. These amendments illustrate a point that I would like to emphasize—that our food and drug legislation today is no longer concerned with the basic principle of consumer protection, for this principle has been accepted. Instead, the writing of new food and drug legislation today is generally concerned with designing methods and procedures to deal with some new situation.

The design of such legislation requires expert knowledge. Members of our committee aided by its professional staff and the office of the legislative counsel have devoted endless time and effort to legislative problems such as those raised by the amendments I have mentioned. Even so, we could never have produced the legislation without the intimate knowledge and guidance of the experts from industry and the Food and Drug Administration.

Our contribution has often been to prod the representatives of industry and Government to compromise extreme positions—and to find solutions which will accomplish the desired objectives without sacrificing principle or causing unnecessary hardship. In such legislation we are engaged in a cooperative enterprise together with the executive branch and with industry representatives.

Some of the bills now pending before our committee fall into this class of bills designed to provide consumer protection in a special new area—the area of food additives. I, myself, have introduced several bills which would solve in different ways the procedural problems involved in determining what

chemical additives may safely be used and what additives shall be excluded as dangerous to the public health. The issues raised by these bills are of the kind which require a cooperative approach in order to bring about legislation which will give the consumer the protection to which he is entitled without imposing unnecessary hardships on the producers of the food additives and the food processors who are using these additives.

In closing, I would like to express to you the good wishes of the House Committee on Interstate and Foreign Commerce and our hope that this 50th anniversary year will contribute greatly to a better understanding of the significance of our pure food and drug laws, local, State, and national. We hope it will also emphasize the importance of adequate support for the administration of these laws.

Finally, we believe that this anniversary should help the American public to appreciate the achievements of our food, drug, and cosmetic industries, under the food and drug laws, in raising the quality of their products. Nowhere in the world is there such a standard of living as we have in the United States, and our food, drug, and cosmetic industries are surely making a great contribution to that standard of living.

Basic Science: A Field in Which We Cannot Afford To Be Bested

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. O'HARA of Illinois. Mr. Speaker, we have all heard of Russia's new 5-year plan and been alerted to the part scientific research will play in the achievement which is designed to place Russia in a position of superiority. Last year the National Science Foundation requested an increased appropriation of $7 million for the promotion of basic research. The request was refused in the name of economy. In view of questions raised on the floor during the debate of March 30, 1955, and when it was my contention that the increased appropriation should have been made, seeking to point out the vital need for adding to our reservoir of basic science as differentiated from applied science, I am extending my remarks to include an article from the New York Times magazine of Sunday, January 15, 1956:

THE BASIC REASON FOR BASIC RESEARCH

(By Esther Everett Lape)

The President's current recommendation of significantly increased funds for medical research raises the question of how this research money can be most effectively spent. Will there be a greater return in projects aimed at some specific disease and its cure? Or in the fundamental research basic to solutions of all medical problems? The former approach is standard: a leading ophthalmologist observed the other day, "Congress seems quite willing to earmark funds for trachoma, which is no longer a problem in this country, but balks at specific requests concerned with basic physiology of the eye." Yet comprehensive knowledge of the physiology of the eye would undoubtedly throw light on a host of eye diseases.

Research showing results that are obviously practical (and not too long delayed) such as a new miracle drug or a new vaccine always commands support. Adequate support has not always been available, however, for research which may ultimately have a far greater "practical" value for medicine but which has not yet reached the stage when it can be directly applied by physicians and surgeons. Realization that, quite aside from phenomenal "discoveries, research in laboratories of biology, chemistry, physics and atomic energy is steadily remaking medicine certainly needs to be heightened in the public mind.

There have been many evidences of the practical value of work that may have appeared for years to be remote from medicine. In the second World War, heavy mortality from shock among men suffering the intensified wounds and burns of modern warfare could be combated only by blood transfusions, but supplies of whole blood for this purpose were desperately inadequate. In the Harvard laboratories of physical chemistry, intensive work had been going on for many years on fractionation of blood. This work had been described only a decade before the war by the foundation that was supporting it as "abstruse and likely only slowly to come to widespread recognition for its essential importance." Yet, this "abstruse" work was able, in the emergency, to produce the essential fractions that could substitute for whole blood. Deaths from shock were sharply decreased.

The Salk poliomyelitis vaccine was possible only because of a preceding half-century of fundamental work, some of it quite outside the virus field. The intervening phases were many, involving many workers. Of the earlier steps, one of the most important was development of a simple method of tissue culture by Harrison of Yale. Of the later steps, an essential one was cultivation of the poliomyelities virus in other than nerve tissue by Harvard workers, Enders, Robbins, and Weller. Virus cultivated in nerve tissue had been found to involve danger of paralysis, and therefore to be unsuitable for vaccines.

When a new drug for treating tuberculosis was found and justly acclaimed, perhaps a few stopped to think back to the research in optics that went into the microscopes that made it possible to see the germ—a visualization essential to understanding the disease. Fewer still perhaps thought of the chemical research on the glass that made possible the optics; or of the development of the stains that aided in visualization of the organism through the glass; or of the methods of culture or the fundamental studies in microbial nutrition that made possible the culture media. Yet these and literally thousands of other details constituted the basic research essential to the ultimate discovery of the drug.

Experience showed the entirely practical value of fundamental research to many of the national lay organizations established with the hope of swiftly finding the cause and cure of such diseases as cancer, heart disease, poliomyelitis, rheumatism and arthritis, multiple sclerosis, muscular dystrophy, and other conditions that bring death or ruin life. Under the chastening influence of their developing work, these organizations inevitably learned that basic research has to be applied all down the line in order to get the facts that must be applied to the final achievement.

The American Cancer Society has put millions of dollars into fundamental studies of growth, essential to understanding cancer, which is abnormal cellular growth. The National Foundation for Infantile Paralysis has spent millions in basic research on the nature of viruses. Better understanding of any one virus, among the approximately half-hundred viruses that cause human disease (ranging from fever blisters, warts, the common cold to influenza, "shingles" encephalitis, poliomyelitis, smallpox) might shed a degree of light on all viruses.

We have not reached the millennium. It may be a long time before all physicians and all the public fully realize that dealing with the end results of disease is an unsatisfactory business and may be a longer way around than dealing with fundamental problems of the cell and protoplasm, which is the essential substance of the cell.

All diseases are, in the last analysis, problems of protoplasm. Most of our present knowledge of biology and medicine is attributable to a century of work on the individual cell, its chemical composition and structure, its organization, the principles or substances that regulate or influence its activity. Since disease and the process of aging are merely alterations of the normal behavior of cells and tissues, understanding of the normal cell is the first line of approach to understanding disease.

It would be hard to forecast from just which type of laboratory will come the beam that will illumine some intractable medical problem. The cell physiologist, working on division and growth in normal cells of sea urchins, is making no prophecies as to how far, and when, his work will be applicable to the abnormal division and growth of human cancer cells. Yet it is from such work as this that promising vistas are being opened in cancer research.

The neurophysiologist, concentrating on the single axon of the squid, is not promising that his work will solve the problem of mental illness. He simply knows that all work on the structure and function of the nervous system is in some way related to mind and behavior. Sometimes, when no clue seems to exist in any particular direction, the only course open to the investigator is relentlessly to pursue basic research for its own sake.

Basic research is the safest and the most direct road to solution of the outstanding problems of medicine, from cancer to schizophrenia. The basic research involved is wide and varied. It includes, for instance, the whole field of biology.

Detlev Bronk once raised the question as to whether we are rigidly to continue calling the man who studies the mechanism of the heartbeat in the lobster a zoologist and the man who studies exactly the same thing in human beings a physiologist. "If it had not been for studies on peas and insects," the National Research Council's committee on problems of sex pointed out, "we should probably know little of the principles of determination and heredity of sex in man." Any fundamental discovery in biology, whether related to sea urchins, fruit flies, frog's eggs, squids, has reprecussions throughout the entire realm of the biological sciences, especially in the complex science that we call medicine.

The basic sciences of chemistry, physics, and mathematics (electronic brains) are continually making contributions to biology and medicine. So also is atomic energy research. From it the greatest benefit to medicine is probably the radioactive isotopes produced by the uranium chain-reacting pile. Istotopes have stimulated hope of understanding the nature of the cancerous cell and why and how it is able to spread to other parts of the body.

Thus—constantly drawing upon research in biology, chemistry, physics, atomic energy—medicine is a freewheeling eclectic. Some finding significant for medicine may come to pass in almost any laboratory. To survey, in easily comprehended terms, all the lines of basic research that may ultimately turn out to be important for medicine would be an ambitious project. Yet somehow the story needs to be made clear

if the basic research needed for medical progress is to be understood and adequately supported. At present, would the man who digs deep into his pocket for a contribution to the cancer campaign support a drive for more intensive work on a subject so far away sounding as, for instance, the structure of proteins?

To such a question, we can all furnish the answer. Yet, protein structure, a problem that has been called "equivalent to life itself," is actually an urgent medical problem. Almost all components of every tissue are either proteins or in a state of dynamic interaction with proteins. Proteins are important in the maintenance of tissues in the healing of wounds, in the integration of joints, in all vital processes. They are significant in the growth and division of the cancer cell, of the egg cell determining fertility.

The protein of the heart muscle, involved in every heartbeat, is significant in all heart conditions. Modified proteins ("antibodies") are significant in infection and immunity; "abnormal" proteins (viruses) are important in all virus diseases. And because the nature of proteins lies at the very root of health and diease, investigators (as Linus Pauling, Nobel laureate in chemistry) have said of the only partly solved problem of protein structure: "It must be solved; the future of medicine depends upon it."

Some of the connections between fundamental research of this kind and nine of medicine's present unsolved problems are illustrated in the current report of the American Foundation, Medical Research: A Midcentury Survey. While the nine diseases were selected merely to illustrate the need of basic research in each (and in all disease), all nine are also leading causes of mortality and morbidity. Three of them—arteriosclerosis, hypertension, rheumatism—are related to heart disease, the major killer in this country. Cancer ranks second among causes of death throughout the Nation. Tuberculosis, virus diseases, infertility, chronic alcoholism, schizophrenia are all among the gravest medical problems.

For some of these a degree of control has been achieved. For others, the responsible microorganism is known. But real understanding and rational instead of empirical treatment of them all is dependent upon further basic research.

Some of the conditions require research converging from several directions. But often they are not yet really converging. This is true, for instance, of schizophrenia, the No. 1 riddle in mental illness. One group (including the psychiatrists and psychoanalysts) holds that both the cause and cure are psychic. The other group (neurophysiologists, electrophysiologists, biochemists) holds that schizophrenia is as truly physiological as any other disease but simply too subtle for solution by research at its present stage. They, nevertheless, emphasize the physiological as against the psychiatric approach on the theory that there can be "no twisted thought without a twisted molecule." Yet in both camps perceptive leaders admit the need of combined attack.

"Let the biologists go as far as they can," said one psychiatrist, "and let us go as far as we can. Some day the two will meet." But the meeting will not take place until much more fundamental work has been done on both sides.

Every new discovery or achievement is a summons to further research. Salk was the first to say of his vaccine: "This is only a beginning." The current vaccine presents pressing questions which only further research can answer: can safer strains be found or developed; for how long can immunity be achieved; is live or killed vaccine the best hope; what principles can be established for developing effective vaccines for other virus diseases—measles, influenza, encephalitis, mumps, the common cold?

Only further research can place the powerful remedies, ACTH, cortisone, hydrocortisone, on a rational instead of the present empirical basis. In spite of their often dramatic effects, they do not change the disease processes themselves. Yet they are reported to be used in a hundred diseases and as the remedy of choice in 45. They dampen but do not extinguish the fire. They provide "an asbestos suit behind which the patient, like some biblical Shadrach, Meshach, or Abednego, protects his tissues from the fire. If this protection is removed prematurely, before the fire has spent itself, the patient and his tissues will react again to the burning. But if the protection is not discarded until the natural duration of the fire is over, the patient remains largely free of symptoms and apparently well."

One investigator said of these remedies a few years ago: "We are putting coins in the music box and out comes the music, but we have no idea of what we are doing." Further fundamental work must be done before physicians can rely on anything but inspired guesses to tell them with whom and for what to use these hormones.

Streptomycin research in tuberculosis has been described as having raised more problems than it has answered. These new problems (how the drug really acts, why resistance to it develops) can be solved only by further laboratory research.

Not only streptomycin but all the "mycins" now highlight the danger of application that is not oriented by continuous research. While accomplishing their miracles, the antibiotics have also raised fundamental biological questions. The present tendency to use them in all infections, minor as well as major, and to use them seriatim, "one on top of the other," is not, as pointed out by Finland of Harvard, based on any clear relation between the condition treated and the efficacy of the particular antibiotic.

Perhaps the greatest challenge the antibiotics present to basic research is the emergence of resistant strains of organisms in infections that had at first responded to one or several combinations of antibiotics. "As each antibiotic is introduced," observed Dowling in 1953, "we hear first of miraculous cures, secondly of deleterious reactions, and then of the appearance of resistant strains. There are no combinations of antibiotics, so far as I know, which will prevent the emergence of resistant strains; they merely delay their appearance or diminish their number."

The Salk vaccine, the antibiotics, ACTH are all epochal achievements in modern medicine. But "there is something curiously ephemeral," as Esmond Long once put it, "about a method of treatment or prevention. The one thing that lasts is the growth of knowledge and there is no end to that."

By way of endorsing basic research in principle, we as a Nation took a long step forward in 1950 when Congress established the National Science Foundation. Its function includes encouragement of a national policy for promotion of basic research in the sciences, including biological and medical science.

Public interest in the foundations' functioning—as translated into congressional action—was not, however, sufficient to provide the foundation with funds commensurate with its research mandate. The President's budgetary request for $14 million for the year 1951–52 was scaled down by Congress to $3,500,000. By June 1955, the foundation (since 1951) had made over 1,500 awards totaling $15,560,000 "for the support of basic research and related matters." Approximately half of this not very large sum for a 4-year period was directed to awards in biology and medicine.

Certainly there is need for enlarging the Nation's basic research, whether governmental or extragovernmental, bearing on biology and medicine. Those who want the fruits of research (antibiotics, vaccines) must appreciate, as Paul Weiss of the National Research Council once observed, the need of starting with the seed, the proper soil, and the need of tending the orchard. It is from scientific capital, from the backlog of research in the purest realms of science, that new products and new processes result.

Conflicts in History?

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article which was featured in the Washington Post and Times Herald on Saturday, January 14, 1956, in which the writer, Chalmers M. Roberts, discusses the story of Secretary Dulles which appeared in Life magazine recently. Specifically, Mr. Roberts discusses the situations which exist in Korea, Indochina, and Quemoy-Formosa.

DULLES STANDS FIRM ON VERGE-OF-WAR FACTS

(By Chalmers M. Roberts)

The Eisenhower administration has now at long last officially conceded that the United States was on three occasions on the verge of war—over Korea, Indochina and Quemoy-Formosa.

But in making such a statement, something neither President Eisenhower nor Secretary of State John Foster Dulles has ever directly told the American public, Dulles, through the medium of a friendly magazine writer, offered a version of history far different from that dug out, piece by piece, over many months, by various Washington newsmen.

Confirmation of the quotations attributed to Dulles in a Life magazine article came yesterday from State Department spokesman Lincoln White. He said Dulles had authorized him to say:

"The Secretary has now read the Life article. He feels that the statements specifically attributed to him do not require correction from the standpoint of their substance."

The article, entitled "How Dulles Averted War," has roused a storm in Britain—and partial denials—because of its criticism of British policies in the Indochina affair last year. It has brought criticism at home mainly because of a Dulles statement that "the ability to get to the verge without getting into the war is the necessary art."

Dulles also said in the now-confirmed quotations:

"Of course, we were brought to the verge of war. * * * We've had to look it square in the face—on the question of enlarging the Korean war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action. It took a lot more courage for the President than for me. His was the ultimate decision. * * * The President never flinched for a minute on any of these decisions. He came up taut."

Here is a run-down on the major facts as given in the Life article and as this reporter was able to find them in nearly 2 years of questioning dozens of persons here and in Europe connected with the events:

Korea: The Life story, written by James Shepley, chief of the Life-Time bureau here, says General Eisenhower as President-elect made the vital decision that if the Chinese

Reds tried to continue a stalemate, the United States would fight to win, including an air attack on Manchuria and the use of tactical atomic arms if hostilities were resumed.

Dulles, the story goes, on a visit to India, told Prime Minister Jawaharlal Nehru that if the war continued "the United States would lift the self-imposed restrictions on its actions and hold back no effort or weapon to win." The earlier Eisenhower decision was reaffirmed later when South Korean President Syngman Rhee freed prisoners in defiance of the United Nations command. Dulles himself, incidentally, has frequently told the Nehru story in Washington with the added implication that he expected Nehru to pass his words on to Peiping.

A year and a half ago it was learned that the President had decided it was essential to win the Korean war and that he intended to attack Manchurian bases, using atomic bombs. A check of competent sources brought the report that the President, in exploring possible ways to carry out his campaign commitment to end the Korean war, had, indeed, ordered exploration of such a military move—as a possible alternative—but that he had never adopted such a policy.

PEIPING NOT TOLD

Nehru is known to have told a British correspondent that Dulles did tell him the United States might expand the war and might even use atomic bombs. Nehru told the correspondent he thought this was an obvious bluff and paid no attention to it and did not pass it on to Peiping; however, another check on the story in mid-1954 brought the report from New Delhi that Nehru did not recall any such Dulles statement and certainly told Peiping no such thing.

Indochina: The Life account says that after several National Security Council meetings, Dulles concluded that an American aircraft carrier strike to save the beseiged fortress of Dien Bien Phu, as requested by the French, was a poor way for the United States to get involved. Instead, on April 4, 1954, Dulles and Admiral Arthur W. Radford, chairman of the Joint Chiefs of Staff, presented the President with a proposal for action. America, Britain, and France were to oppose the Communists on the ground in Indochina and, if the Chinese Reds intervened, to destroy with United States airpower their south China staging bases. The President, the story says, concurred and American carriers with planes armed with atomic weapons steamed toward the area. But a Dulles plan for an Allied meeting of nations "which would jointly take up the battle in Indochina" was frustrated because Britain had a change of heart.

But, the Life story goes on, since Dulles had seen to it that the Chinese and the Soviets knew that the United States was prepared to act decisively to prevent the fall of all of southeast Asia, the French and British at the Geneva Conference found themselves able to bargain from Dulles' strength and much of Indochina was saved by the truce.

As the story is pieced together, however, the President in March 1954, initiated an NSC decision that Indochina intervention should be undertaken by the United States if necessary to prevent its loss.

Such intervention was to be on the conditions that it (a) be Allied action, (b) at French request, (c) have congressional approval, and (d) that France grant Indochina's three states full independence. Congressional leaders, as revealed in detail in this newspaper on June 7, 1954, were sounded out on April 3 of that year on a joint resolution giving the President power to order intervention. Dulles was told to line up Allies—and given no commitment even if he did.

BRICK WALL

Dulles ran into a brick wall in the form of Winston Churchill, then British Prime Minister. (Churchill told the President during his Washington visit that June that "never will we allow a single British troop to go into Indochina." At this time Dulles was saying privately that the United States was "ready under decent conditions to go into Indochina and fight.")

Anthony Eden, then British Foreign Secretary, met in Paris on April 24 with Dulles and Radford. Radford proposed not only the Dien Bien Phu air strike but also dropping atomic bombs on China. Radford earlier had told congressional leaders that he alone of the Joint Chiefs approved intervention. Army Chief of Staff Matthew Ridgway completely opposed the so-called immaculate war idea and argued that at least 6 American divisions of ground troops would be needed. Eden took the position that ground troops would be called for within 48 hours of an air strike. There is no doubt that Radford had alerted the Navy for action. One officer aboard a carrier was prepared to parachute into Dien Bien Phu to instruct the French garrison on how to protect itself once the atomic bombs began to fall around the fort.

But intervenion collapsed the day before the Geneva Indochina Conference opened when the British Cabinet flatly refused to go along. Dulles covered up his intervention moves by confirming for an American newsman a French report that he had written Premier Georges Bidault that it was impossible because of American Constitutional limitations and because no allied plan had been worked out.

Thus the Geneva Conference began with the Western allies in disagreement and in a publicly exposed state of weakness rather than, as Life would have it, with Britain and France bargaining "from Dulles' strength." It should be added, however, that toward the end of the months-long conference the United States made some sort of offer, two Marine divisions one report had it, to the French if they would go on fighting. Nothing came of this if, in fact, that was the offer.

The conference outcome was taken in Washington as the best of a bad bargain or worse. The United States signed nothing. Now, however, the outcome is pictured as acceptable and due to Dulles planning.

Quemoy-Formosa: The Life account completely skips the September 1954 Quemoy affair and says that war was avoided mainly by the resolution drafted by Dulles and passed by Congress in January 1955, authorizing the President to use force to protect Formosa and Quemoy-Matsu if he thought necessary.

As was disclosed in this newspaper on November 8, 1954, 3 of the 4 Joint Chiefs—with Dulles initially concurring—approved a proposal in September 1954 that under certain conditions American planes should attack the Communist mainland in order to prevent a Red landing on Quemoy, then threatened. But President Eisenhower, at the now famous September 12 NSC meeting in Denver, refused to buy that proposal. Instead, he ordered a search for peace through the U. N.

When the Far East crisis recurred in January 1955, the Dulles-drafted resolution did pass Congress and, as Life says, the Chinese Reds "were publicly put on notice that Eisenhower was ready and authorized to retaliate at once." But the public has never yet—even in the Life article—been told by the administration itself the story of the long route which led to that congressional action.

The United States has, indeed, been brought by the Eisenhower administration to the verge of war. Many diplomats agree that American war talk and war moves—or deterrence may have in fact deterred the Communists. Dulles without doubt has consistently advocated deterrence both publicly and privately. But whether everything that has happened in the past 3 years was planned that way is something else again.

One Small Candle May Light a Thousand

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address by the distinguished historian of South Carolina, the Honorable J. Harold Easterby. Mr. Easterby is regarded as one of the foremost authorities in his chosen field. To be sure, he speaks with authority on the instant question.

ONE SMALL CANDLE MAY LIGHT A THOUSAND

(Address by Hon. J. Harold Easterby)

Three hundred and thirty-five years ago a band of Englishmen landed at Plymouth, Mass., on the 4th day before Christmas. This day was called Forefathers' Day. It is the day we are celebrating here tonight.

The year after the landing of the Pilgrims, William Bradford, their principal chronicler, wrote the following words: "Thus out of small beginnings greater things have been produced by His hand that made all things of nothing, and gives being to all things that are; and as one small candle may light a thousand, so the light here kindled hath shone unto many, yea in some sort to our whole Nation; let the glorious name of Jehovah have all the praise."

In writing these words Governor Bradford had no other purpose than to give thanks for the news that certain Pilgrim ideas on the subject of church organization had been favorably received by others; but he may well have applied his metaphor to the Plymouth venture in general, because the sufferings of the Pilgrims for the sake of religion and the courage and resourcefulness with which they overcame almost insuperable obstacles have been a constant inspiration to the American people. In this sense their achievement was a candle from which many others were lighted, first in New England and then in every part of the country to which New Englanders migrated.

But I am not here to praise New England, however appropriate that would be on this occasion. My assignment is to speak to you about another candle—one that was lighted on the coast of South Carolina, at Old Charles Town, not far from the spot where we are now assembled, one that may be said, with a little stretch of the imagination, to have been kindled from the same original fire which, less than 50 years before, had set the Plymouth candle aflame, and one from which many others in the Southern States have been lighted.

I do not propose to deal directly with the first settlers of Charles Town or to trace succeeding events in great detail. I shall raise only three questions: First, were the South Carolinians who lived in the period when our traditions should have been formed worthy to light a candle in the sense that I am using the term; second, if they were, why does their candle burn so dimly for us today; and third, what can be done to make it the beacon it should be. To the answers that I shall give, I would like, in the historian's

cautious way, to add many footnotes qualifying this statement and explaining that. Obviously this cannot be done, but I am sure you will understand that broad generalizations can never be precisely accurate.

My first question may best be introduced by asking another. What do we expect of our forefathers; what tests would we like them to pass? I believe that we want the men and women who founded this State to have been typical pioneers—hardy, self-reliant, practical people, bent on making new and better homes for themselves. I also believe that we would like to know that, sooner or later, they created a social order in which rank was based on achievement rather than birth, that they made substantial progress toward acceptance of the ideal of religious freedom, that in some measure they practiced democracy in government, and that they subscribed in general to the belief that individual initiative is the mainspring of economic progress. I believe, in other words, that we want to have the assurance that they had a part in advancing the great principles on which this country is organized today.

In order to determine whether our forefathers were pioneers, or frontiersmen if that is the more accurate term, we will do well to remind ourselves that the South Carolina in which they played their parts was a vastly greater region than that embraced by our present boundaries. North Carolina was separated from the original Carolina Province early in the process of colonization but it was not until half a century later that Georgia was established, and the colonial period was almost at an end before this southern neighbor was able to do much more than guard a thin line of settlements on the Savannah River and its adjacent seacoast. It was therefore, in the main, South Carolina's problem to advance along a 700-mile frontier against two vigorous foes—the Spanish in Florida and the French on the Mississippi—who, more often than not, were united in their resistance; to win allies among the powerful Indian nations of the disputed zone; and to furnish for years to come the permanent settlers who would follow the paths marked by the soldier and the trader.

Though few in number and increasing only slowly in strength, the Charles Town colonists sent an expedition far into the interior before the end of their first summer. Three years later they opened a trade with the Catawba on the Wateree. In 1680 they broke the Westo barrier on the Savannah River and were soon penetrating deep into the Creek country of western Georgia; in 1685 they reached the Chattahoochee; by 1690 they were in contact with the Cherokee in the Carolina foothills, and 2 years before the close of the century they crossed the country of the Chickasaw and Cocktaw and emerged on the banks of the Mississippi. No one who has read even the meager accounts that have come down to us of these daring exploits can fail to be amazed; no one who has heard the fragmentary stories of the sack of Stuart Town, the Tuscarora campaign, the Yamasee War, the attacks on St. Augustine, the siege of Port Loudon, and the invasion, near the close of the colonial period, of the mountain towns of the Cherokee can doubt that the early South Carolinians were frontiersmen in the best American tradition. To say that their victories were indecisive is to look at them from the wrong point of view.

Long acustomed to thinking of our State as one which did not attract immigrants in later years, we are disposed to underestimate the number of nationalities represented among its early settlers. We have read of the French, and we are conscious of their contributions to our heritage. We remember the Scotch-Irish who settled Williamsburg and later stamped their character indelibly upon our upcountry, and we admire their hardihood. But we are less aware of the Scots, who came singly rather than in groups; the Swiss of Purrysburg, Orangeburg, and Saxe Gotha; the Welsh on the Peedee; and the Germans of the Dutch Fork. We have largely forgotten that these people often served as the shock troops on our advancing line of settlement. We too often overlook the highly significant fact that our ethnic heritage, insofar as it was developed in the colonial period, is as diverse as that of Pennsylvania.

Our forefathers were not Cavaliers. We gave up the hoary legend half a century ago. Some of the first colonists, to be sure, were of higher social standing than others. Some were men of means and influence, and a few had the distinction during the proprietary period of possessing titles of nobility, the only titles of the kind conferred in the American colonies. But the rank and file of early South Carolinians were plain men, many of them without money in their pockets to pay their passage who would have faced years in bondage if the provincial government had not discharged their debt, given them land, remitted their taxes for a number of years, and provided other benefits on a scale unequaled in any other of the Thirteen Colonies. It cannot be denied, however, that, instead of diminishing, class divisions actually increased as some men prospered and others failed to make the best of their opportunities; but, contrary to what we commonly believe, there was never a time in these early years when a man of ability could not climb to the topmost rung of the social ladder.

The oldest extant letter written in South Carolina is a petition to the proprietors from the Puritan Governor, William Sayle, asking for the services of a Puritan minister, which is not as surprising as it may seem if we bear in mind that the persecution of dissenters was revived in England after the Resoration and that some of these people sought refuge in the colonies where paradoxically toleration was being fostered by the home government. The Carolina charter undoubtedly required the establishment of the Church of England. It encouraged, however, in no uncertain terms the toleration of dissent. It was therefore forbidden in our early law that any man should "disturbe, molest, or persecute another for speculative opinions in religion or his way of worshipp." The few Catholics who came to the province and a notable Jewish community which developed in Charles Town lived under certain political disabilities; but Huguenot and Presbyterian, Congregationalist and Baptist, Lutheran and Quaker, and a large element who were not members of any denomination paid no penalty for their religious views other than that they were compelled to contribute through taxation to the support of the established church. A substantial part of the tax money came back to those dissenters who lived in the well-organized parishes in the form of public services performed by the church, such as the care of the poor and the management of the free schools. There were many, however, who disapproved this system, and they were quick to seize the opportunity presented by the Revolution to separate the state from the church and to adopt the principle of religious freedom.

Our first constitution has been called a monstrosity of medievalism and condemned because its preamble asserts that one of its purposes was to avoid the erection of a numerous democracy. This, however, is no reason for us to hang our heads in shame. It is true that the fundamental constitutions of Carolina reflect that curious blend of public and private law which characterized the feudal system, but so did the frames of government of other colonies. If certain provisions of the South Carolina constitution appear to the modern eye to be absurdly reactionary, it is due in some measure to the fact that they are written side by side with others that are startling anticipations of things to come. There is nothing strange or unnatural in this, for the ideas behind these provisions were adapted by John Locke from James Harrington's utopia, The Commonwealth of Oceana, and both of these men were groping their way toward the concepts of modern government.

Democracy, as the term was then applied, was not held in high esteem in the latter years of the 17th century. You will remember that it was Governor Winthrop, of Massachusetts, who described it as "the meanest and worst of all forms of government." But the people of all free countries have come to feel very differently about democracy, and they recall with particular pride the early stages of the struggle through which it was achieved. We may, I think, reasonably doubt that the advance of democratic government was slower in early South Carolina than it was in other parts of America. The contention that it lagged far behind is based mainly on the belief that high property qualifications kept the electorate small and excluded most citizens from membership in the popular branch of the legislature, but one can hardly believe that the requirement of possession of 50 acres was a serious impediment to a prospective voter who was entitled to claim that much land for himself and an equal amount for his wife, for each of his children, and for every one of his servants and slaves; or whether the alternative requirement of payment of a 3-shilling annual tax prevented men from voting who were liable to pay both poll and income taxes. The requirement that members must own 500 acres of land and 10 slaves was unquestionably responsible for keeping men out of the commons house of assembly. It should be noted, however, that there was an alternative also in this case permitting a man to qualify if he possessed property of any kind valued at £145. And it may be worth mentioning, too, that, while voters at elections in most countries of that day were expressing their preferences by a show of hands or by calling out the names of the candidates, South Carolinians were using the secret written ballot as prescribed in the fundamental constitutions.

Those of use who look to our forebears for arguments to support the laissez-faire doctrines with which we seek to curtail the functions of government will be disappointed on first acquaintance with their views. They did not fear government, and the evidence indicates that they wanted more, rather than less, of it. They resisted, to be sure, and in the end repudiated a distant imperial authority, but the provincial government was permitted, and even encouraged, if we may judge by the debates in the general assembly, to regulate commerce, to fix prices, to outlaw monopolistic practices, and to foster new enterprises by means of bounties and subsidies. Frequent changes in the laws on these subject show, however, that regulation was flexible, expanding, and contracting as the needs of the community required, and that it was thought to be, in the final analysis, the responsibility of the individual to stand on his own feet.

In the age before the advent of the machines the greatest need of the pioneer community was manpower. In order to supplement the supply of free labor in the American colonies white men were made indentured servants and Indians and Negroes were reduced to slavery. Laborers in each of these groups were to be found in all the colonies, but in none did the ratio of Negro slaves to white freemen exceed that in South Carolina. The claim that Negro labor was so highly esteemed by our forefathers that white immigration was deliberately discouraged is false. As a matter of fact, white men lived in such a constant state of dread of slave revolts that they did all they could to recruit their own numbers. But, in spite of their fears and contrary to their better judgment, they continued to import the

Negro and thereby to compel men of different races and different levels of civilization to live together. In so doing, despite the incidental good which may have been accomplished, they created such a problem for both races that its solution is still the greatest concern of their descendants.

This is the conclusion of the answer to my first question. I have tried to convince you that the founders of this State were fit to light a candle. If I have exalted them for their virtues, I have not failed to mention their faults; and I have dwelt at some length upon what, I believe, may justly be called their one great mistake.

Now this mistake lies close to the core of my next question, which in substance is this: Why are we so ill informed regarding our past; and why are there those among us who seem to feel at times that they must apologize for it? Some of us have put the blame on the national historians. We say that they follow a rigid pattern of interpretation to the effect that the southern States upheld slavery long after it came to be regarded elsewhere as a moral wrong, that in defending slavery the South brought about a war which not only cost the lives of thousands of men but also jeopardized the future of a country already marked for a great role in advancing the cause of democracy, and that South Carolina was the leader in this unholy conspiracy. The conclusion must therefore be that there was nothing in its record worthy of emulation, that its whole history was a contradiction of the American tradition.

There are others who say that this is only half the story. They contend that in forging his defense the South Carolinian has obscured his past instead of revealing it. He has driven out the pioneer, with the exception of two or three robust chracters who will not be denied; underestimated the non-English elements in his heritage; overemphasized the rigidity of the social system; hidden the ugly side of slavery; idealized the plantation; and neglected the substantial contributions of his forefathers in the fields of religion and government. In short, he has created a legendary past as little related to reality as that invented by the national historians.

There are, of course, elements of truth in both of these explanations. But there is a more important explanation—a simple and obvious one—one, in fact, which underlies both of the others. We have failed to comprehend our past because we have not preserved our records in sufficient number, because we have not made available all of those that have survived, and because we have not adequately interpreted the ones that are available.

If given a little time, everything that we create becomes a record—our houses, our machines, our printed books, and those handwritten private papers and public documents called manuscripts. It would not be desirable, even if it were possible, to preserve all of these things; but, far more than most of us realize, both our material and our spiritual welfare depend upon our success in saving and utilizing records. Fortunately some records—those, for example, which have intrinsic value—more or less automatically survive; but in the case of others a conscious and systematic effort must be made to prevent their destruction.

Circumstances have not been favorable to the preservation of records of any kind in South Carolina; they have been particularly unfavorable to the survival of written documents. Fire and storm and war have taken a heavy toll, but indifference and neglect are responsible for greater losses. A list prepared some years ago of books printed in this State between 1801 and 1820 contains 225 titles, but copies of only 97 of these titles are now to be found in our libraries. According to a list of newspapers published in the United States prior to 1821, South Carolina ranged 12th among the 29 States of that period in the number of papers published, but not a single issue of 27 of its 59 newspapers is in the possession of any institution in the State today. These figures show how careless we have been about our printed records.

The losses of private manuscripts have been even greater. Partly because our grandfathers were too impoverished and dispirited after the Confederate War to give more than the meagerest support to the institutions already established for the preservation of records and partly because we have been slow in these days of returning prosperity to strengthen our libraries and historical societies, the documents that would best enable us to understand our economic and social development have been allowed to perish or to be gathered up and taken away by collectors in other parts of the country. Out of all our forefathers who lighted the candle in 1670 and kept it burning during our first 100 years there is only one who is honored today by having a fairly complete set of his papers preserved by an institution within this State, and relatively few of the papers of the others are anywhere to be found.

When the State was occupied by the British during the Revolution, some of the public records, then almost entirely concentrated in Charleston, were successfully evacuated; others were protected by occupation officials. The losses seem therefore to have been comparatively light. Less than a century later, when a Federal army burned Columbia, our second capital, this story was repeated with variations. Prompt action on the part of the State officials saved the main collections, and, with the exception of the contents of the State Library, there was no wholesale destruction of records. We can say, then, that our State documents, in contrast to our private papers, are numerous and, it may be added, of exceptionally good quality.

In asserting that we have not made available all of our extant records I mean that large numbers are literally not physically accessible because we lack an adequate archives building. Many others are not available in the sense that they have been arranged for effective use. And still others are not within the reach of historians because they are of a kind that should be published, and publication is long overdue.

When I say that our available records have not been adequately interpreted, I am not forgetting the excellent studies made by our native scholars and those from other States and countries. I mean that, considering the great amount of research to be done, these studies are far too few in number and that not infrequently they are concluded without a complete examination of the sources. How little we know, for example, of the development of agriculture in this State, the rise of industry, the history of education, the evolution of our constitution, and the background of this problem of race relations that is troubling us so deeply just now. Perhaps we can get along without the inspirational values that other people find in their past, but I doubt that we can make proper use of the opportunities now crowding upon us if we persist in our refusal to draw upon our great treasury of experience.

What can be done to correct this situation? I would like to answer this, my last question, with a proposal. Fifteen years hence South Carolina will observe its tercentenary, the three hundredth anniversary of the landing of the first permanent settlers. I suggest that we begin at once to prepare for a celebration. I want to propose:

First, that we build a State archives in which every part of our great collection of public documents may be arranged, made available for study, and exhibited on occasion.

Second, that we continue and greatly increase our support of the South Carolina Historical Society, the South Caroliniana Library, the Charleston Library Society, the Carolina Art Association, the Charleston Museum, the South Carolina Historical Association, the University of South Carolina Graduate School, the University of South Carolina Press, and similar organizations in their efforts to collect, to preserve, and to interpret our private records.

Third, that we seek to acquire, and to place where they may be most effectively used, photocopies of South Carolina documents now outside the State, particularly those in foreign countries.

Fourth, that we provide for the permanent services of an archeologist, either through one of our educational institutions or as a State official, in order that our early historic sites (especially that of Old Charles Town) and our rich prehistoric remains may be studied.

Fifth, that we complete the publication of our colonial and State public records in accordance with plans now in progress, that we provide the means to enable Clemson College and the University of South Carolina to publish the edition of the papers of John C. Calhoun which they have undertaken to sponsor, and that in the same manner we encourage the South Carolina Historical Society to publish the papers of Henry Laurens, and the Charleston Library Society to issue the microfilm edition of our colonial newspapers which has already been planned.

And sixth, that we furnish the necessary support for the writing and publishing of a history of the State to consist of several volumes, each volume to be written by that historian in the State best qualified to present the period with which it deals.

This is a plan which calls for the cooperation of the businessman and the leader in public affairs, of the amateur and the professional historian, of the patriotic society and the historical association, and of the private organization and the State government. It is one which should have the support of the low country and the up country. It is one from which lasting benefits could be derived—better textbooks for our schools, noble examples to be followed in shaping our personal lives, and the knowledge and understanding upon which to base our economic and political policies. It is, I believe, the only one that will make the candle lighted by our forefathers shine as a beacon now and in the future.

A Pension Doesn't Cancel Other Rights

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Courier-Journal, Louisville, Ky., of January 15, 1956:

A PENSION DOESN'T CANCEL OTHER RIGHTS

The Veterans' Administration has now officially restored the disability pension of James Kutcher, a legless war veteran. Mr. Kutcher appears to be a free-speaking member of a small Trotskyite sect called the Socialist Workers' Party, which is solemnly

enrolled on the Attorney General's list of subversive organizations.

A man who has lost his legs in the service of his country might seem to have earned the right to be as unorthodox and as cantankerous as he pleases. But this is not the case. Mr. Kutcher was fired for his politics in 1948 from a $45-a-week-job with the VA. His parents are now resisting eviction from a Federal housing project because their son cannot sign the loyalty form now required of subsidized tenants. His pension was suspended because, on the word of anonymous informants, he was accused of "rendering assistance to the enemy" by criticizing the Government and expressing the admittedly forlorn hope that some day the Socialist workers would control the Government of the United States.

Mr. Kutcher's pension is restored, according to the VA, because it does not feel it has proof that he really said these things and, "in order to support forfeiture, it must be established beyond a reasonable doubt that the veteran did knowingly and intentionally render assistance to an enemy of the United States."

Any person who knowingly and intentionally aids an enemy of his country would seem to be guilty of treason and should properly be charged with treason. Article 3, section 111, of the Constitution says that: "No persons shall be convicted of treason unless on the testimony of two witnesses to the same overt act or on confession in open court." For this reason, the attorneys who have been fighting Mr. Kutcher's long battle demanded an open hearing with his accusers present and testifying on oath.

The VA consented, under strong pressure, to an open hearing. But it produced no witnesses and no accusers, and now says, in effect, that the charges which constituted its evidence no longer carry conviction. It has evaded confrontation, preferring rather to discredit its nameless informers, thus following what has come to be standard policy among Government agencies called upon to justify security procedures based on anonymous accusation.

But there is a more important point even than confrontation in the case of James Kutcher. Suppose he said all that the informants said he said: Why shouldn't he say it? When did it become treasonous for any American to criticize the Government, to argue against it, to express a hope of changing it? Nobody professes to have heard Mr. Kutcher threatening to blow up the White House, or urging a march of his fellow-Socialist Workers. Nobody even accused him of conspiring to advance their cause. His sine seems to be a defiant adherence to a splinter party so small that most of us never heard of it.

He himself made the relevant point about his plight, back in 1949 when he was first beginning his struggle to live in the country he fought for: "I don't want any special sympathy or pity because I lost my legs; all I want are the rights that belong to any man or woman. The significant thing in my case is not that I lost my legs but that I lost my rights which are infinitely dearer and more precious to me." Among those rights would seem to be the one, clearly guaranteed by the First Amendment to the Constitution, which the Veterans' Administration has now charitably decided he didn't exercise, after all. But he has the right to exercise it, to go on criticizing his Government, to go on working for his obscure and unattractive little party. We might all have more reason to feel pleased by the restoration of James Kutcher's pension if the VA had admitted that nothing he says in criticism of his Government can alter that Government's duty to compensate him in part for the mutilation he suffered in fighting for it.

Dual Observance Marks the 50th Anniversary of the Organization of the Polish Citizens Club, Du Bois, Pa., and the 176th Anniversary of the Death of Count Casimir Pulaski, Who Commanded the Famous Pulaski Legion in the Revolutionary War

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. VAN ZANDT. Mr. Speaker, it was my privilege on October 9, 1955, to deliver the principal address at a banquet of the Polish Citizens Club, Du Bois, Pa., in my congressional district, at which time the 50th anniversary of the founding of the club was celebrated and the 176th anniversary of the death of the illustrious Polish patriot Casimir Pulaski was commemorated.

The Polish Citizens Club of Du Bois which was organized in 1905 with 30 charter members now has a total membership of 750 which indicates the growth and progress of this fine organization which plays such an important part in the fraternal and social life of Du Bois, Pa.

The anniversary banquet was held in Pulaski Hall, constructed by the Polish Citizens Club in 1929, and was attended by several hundred members.

The program for the occasion and my address follow:

PROGRAM

National anthem.
Introduction: Frank Kosempa, president, Polish Citizens' Club.
Invocation: Rev. Louis Kozlowski.
Master of ceremonies: Michael E. Nowak.
Address: Hon. Pat. B. Dillman, mayor, Du Bois, Pa.
Address: Rev. Louis Kozlowski.
Address: Hon. Frank O'Niel, representative to Pennsylvania State Assembly.
Musical selection.
Address: Rev. John Piathowski, Sykesville, Pa.
Address: John Cherry, Esq., club attorney.
Club progress for 50 years: Anthony Monikowski.
Musical selection.
Address: Frank Kosempa, president, Polish Citizens' Club.
Address: Hon. James E. Van Zandt, House of Representatives, Washington, D. C.
America.
Polish national hymn, Boze Cos Polske.

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE 50TH ANNIVERSARY DINNER OF THE POLISH CITIZENS' CLUB, OCTOBER 9, 1955, PULASKI HALL, DU BOIS, PA.

I am honored to be given the opportunity of commemorating two notable anniversaries—the 50th anniversary of the Polish Citizens' Club and the 176th anniversary of the death of Count Casimir Pulaski.

You, the members of the Polish Citizens' Club are to be congratulated for the 50 years of building American citizenship and the contribution you have made in the preservation of the American way of life.

Your ancestors were God-fearing people who loved freedom and instilled such love in the hearts of their sons and daughters.

That is why, in every war in which this Nation has been engaged, and particularly in World War I, World War II, and the Korean conflict, Du Bois has been represented by many courageous young Americans of Polish descent.

This observance of your 50th anniversary is a happy occasion, for it reflects over a half century of love and service to your community, State, and Nation.

In many respects the celebration of the 50th anniversary of the Polish Citizens' Club and the 176th anniversary of the death of Count Casimir Pulaski is highly significant, mainly because they symbolize the strength and the durability of the Polish tradition in our American civilization.

Probably more than any other Pole Count Casimir Pulaski hold a place of endearment in the heart of the American people.

Every American, every schoolchild, has at one time in his life been inspired by the dramatic life of this great Polish soldier.

I know whenever I leave Capitol Hill and going down Pennsylvania Avenue past the statue of Pulaski in downtown Washington, I momentarily reflect upon the great service this Polish nobleman rendered toward the winning of American independence.

As a personality Casimir Pulaski was indeed a remarkable man.

Born and bred in the finest traditions of Polish culture he was a nobleman and a courageous soldier who won the respect of both his enemies and his friends.

Count Casimir Pulaski was to the Poles what Lafayette was to the French. To Americans both were and continue to be something special, something apart from the ordinary war hero. And rightly so, for both fought for the worthiest of ideals, freedom and national independence.

Fearless in battle, extraordinarily courageous, resourceful, and confident, Pulaski brought to war-weary armies of General Washington a dash and boldness that must have electrified all who saw him in action.

Pulaski's contributions to the American cause were great.

At the time of the Revolution the American conception of the cavalry was not clearly and accurately formed.

A trained soldier and an outstanding horseman the young Polish count gave freely of his skills and knowledge in the organization of the American cavalry.

As General Washington said of Pulaski when he recommended the young Pole in the Continental Congress he was "a man of real capacity, experience, and knowledge."

Thus as a leader in the American cavalry, Pulaski became the first of the great cavalry commanders that sparkle across the pages of American history, men like General Sheridan, of the Union Army, the Confederate cavalryman, Jeb Stuart, Theodore Roosevelt's Rough Riders of 1898, and finally, General Patton of World War II fame.

In the role of cavalry commander of the Continental Army and later as commander of the famous Pulaski Legion, the young Polish count established for himself a remarkable war record, fighting in such historic battles as Brandywine, Germantown, Egg Harbor, Charleston, and finally, the ill-fated battle of Savannah. At that memorable battle, Pulaski was killed in action on October 9, 1779.

In all these battles of the Revolutionary War Pulaski displayed in full the heroism and gallantry for which he was universally known.

His finest hour at the siege of Savannah was indeed his last.

A martyr of liberty, he died a hero's death.

He gave his life for freedom's sake and for the sake of American national independence.

Undoubtedly the supreme tragedy in the life of Casimir Pulaski was his untimely death which prevented him from returning to his native Poland, and like Kosciuszko, another great Polish soldier in the American Revolutionary War, to take up arms again for the freedom and independence of the Polish nation.

But if Pulaski was not with Kosciuszko and his comrades in being, he was certainly with them in spirit, because the ideals for which Pulaski fought and gave his life were the same ones that inspired the Polish nation to fight for its independence in the closing years of the 18th century.

More than that, these same ideals inspired the Polish people to rise in revolt in the 1830's and the 1860's in an effort to throw off the Russian yoke of imperialism.

When at last the Polish Republic was reestablished after World War I and the Polish nation was again free and independent, the success that was Poland's was also in a sense the success of Casimir Pulaski.

And then when Poland underwent the supreme tests of World War II, it was again the same spirit of Casimir Pulaski, the spirit of freedom and national independence, which manifested itself and sustained the Polish nation at a time of deadly peril.

Yes, my friends, the name Casimir Pulaski emblazoned on the record of world history has meant for both the American people and the people of Poland freedom and national independence.

And when we hold Poland today, caught up in the Communist tyranny, it is a source of great sadness.

All America feels the loss of Poland to the free world for through men like Pulaski and the many sons and daughters of Poland who, since the close of the 19th century, came to America to begin life anew, a strong bond of affection has been established between the two nations.

America never has nor can she ever be indifferent to oppression wherever it occurs and I am proud of the work of our American Congress in exposing not only Communist oppression in Poland but in exposing every form of Communist aggression and tyranny.

One of the most shocking outrages committed by the Soviet Communists against the Poles was the Katyn Forest massacre.

The congressional investigation of this massacre under the able leadership of my good friend and colleague Congressman MADDEN, of Indiana, exposed to the world the dreadful slaughter of thousands of Polish officers by the Soviet Government.

Nowhere was the true nature of communism, the sheer brutality and ruthlessness of this way of life, revealed with such shocking clarity as in the evidence submitted at this congressional investigation.

When this investigation was undertaken members of the committee conducted hearings here in the United States and in Europe and before the investigation itself was completed the committee had accumulated an imposing collection of documented material showing conclusively that the Russians had committed this horrible crime against humanity.

Eyewitnesses to the massacre reported in detail how the Russian soldiers and NKVD (the notorious Soviet secret police) had tied the hands of the doomed Polish officers with wire and, stuffing sawdust in their mouths, shot them in the head.

While many of the thousands so executed died immediately, many others were actually buried alive.

Rather than shoot some of them the Soviet authorities threw them into the mass grave to suffocate.

The massacre at Katyn Forest first came to the attention of the world in 1943 when the German Government announced to the world that it had found mass graves of Polish officers numbering into the thousands.

At the time the free world read of this account as a purely Nazi propadanga trick.

During the war many Americans did not want to face the realities of Soviet brutality and discounted much of what had been published.

The Germans, however, went to great pains to show this massacre was a Russian affair.

They requested the International Red Cross to investigate all the circumstances.

In addition, they had neutral newsmen inspect the remains of the massacre and the evidence. They even went so far as to bring an American and a British officer, both imprisoned in a German prisoner-of-war camp, to the scene of the crime.

At first these men were convinced this was another Nazi propaganda trick. They went to the Katyn Forest, certain in their own minds, that this was a Nazi crime and not a Russian crime.

However after the graves were opened, both officers came to the independent conclusion that what they had seen was in fact the work of the Russians and not the Germans.

In his testimony before the committee, Col. John H. Van Vliet, Jr., the American officer, said that he noticed that the clothing on the unfortunate Polish officers was new clothing and that their boots and shoes were likewise new and gave no indications of wear.

Colonel Van Vliet, who had been a prisoner himself for many months and realized the wear and tear a prisoner's clothing receives, stated in his oral testimony:

"If those Polish officers had been alive and in prison camp until the Germans overran the Polish prison camps, and if the Germans had in fact killed these Polish officers, then by the very virtue of the fact that their clothes had been worn and their shoes had been walked in, they would show much more wear."

Strangely enough the Germans did not notice this bit of evidence that struck the British and American officers.

Yet this was the evidence that convinced both men that these atrocities were committed by the Russians.

As Lt. Col. Donald B. Stewart, of the British Army, stated:

"The decision I reached I can never forget. My decision was that those (Polish) men were killed by the Russians while they were prisoners of the Russians."

And Colonel Van Vliet arrived at a similar conclusion when he observed:

"The sum of circumstantial evidence, impressions formed at the time of looking at the graves, what I saw in people's faces—all force the conclusion that Russia did it."

As a result of this, as well as other evidence uncovered by the House committee, the committee itself concluded that Katyn was truly a Russian crime.

Now I want to read briefly from the conclusions of the committee's report:

"This committee unanimously finds—beyond any question of reasonable doubt—that the Soviet NKVD (Russia's secret police) committed the mass murders of the Polish officers, and intellectual leaders in the Katyn Forest.

"The evidence, testimony, records, and exhibits recorded by this committee through its investigations and hearings during the last 9 months, overwhelmingly will show the people of the world that Russia is directly responsible for the Katyn massacre.

"Throughout our entire proceedings there has not been an ounce of proof or even any remote circumstantial evidence presented that could indict any other nation in this international crime."

Ladies and gentlemen, such was the manner in which the Soviet leaders tried to destroy the Polish officer corps.

But, it was in fact, their own undoing, because when the Germans invaded Russia in June 1941 Polish and Russian interest, heretofore antagonistic, had joined in common accord.

Both wanted to defeat the Nazis and liberate the occupied areas of their respective countries.

When attempts were made in Russia to organize Polish army units questions were asked about the officers who were to be in command.

On one occasion, Lavrenti Beria, head of the notorious Russian secret police, was said to have remarked in answer to the question why the Soviets did not enlist the officers from the Soviet prison camps for the proposed Polish army he said:

"We have committed a great blunder. We have made a great mistake."

Yes, the Russians committed a great blunder, they had made a great mistake, but their blunder and their mistake could not compare to the enormity of their crime against humanity.

Today as we stand on what may be the threshold of a new era called peaceful coexistence with the Soviet Government, and with communism in general, it might be well to read the evidence of the Katyn massacre.

This investigation is only one of many congressional efforts to call attention of the world to the Communist threat.

Noteworthy also for doing excellent work in laying bare the facts of Communist aggression in Poland, the Baltic States, and elsewhere in eastern Europe was the work of the House Select Committee on Communist Aggression.

This committee of the House of Representatives, under the very capable leadership of former Congressman Charles Kersten, did a service of great value in exposing Communist aggression.

Extensive hearings were held in the United States and in Europe.

And again, as in the Katyn massacre investigation, a huge amount of documented evidence was accumulated to prove conclusively the imperialistic nature of the Soviet Union.

Through these highly important congressional investigations the bold facts of Communist tyranny have been placed before the world.

They are now a matter of permanent record.

This is, I believe, very important because in the days ahead the Soviet Government will continue to do much to persuade the free world that the Soviet Union wants to live in peace and that it desires to coexist peacefully with the West.

Only the future will reveal whether the Communist leaders sincerely desire peace.

But at least the Katyn massacre and Soviet aggression in Poland are now part of the historical record of not only the American Nation but also part of the historical record of the world.

The record will stand for all ages, and for those who desire to see communism for what it is, let them look at this record and ponder upon it thoughtfully.

Tyrannies have risen and fallen since Casimir Pulaski was mortally wounded on the battlefield of Savannah.

But history is a living drama in which the tyrant will perhaps be always present to play his part.

However, so long as men like Casimir Pulaski, men who are dedicated to truth, virtue, honor, and liberty, rise among us the tyrant will not long endure and at length, peace, harmony, and freedom will prevail.

Over 175 years ago the world lost a great patriot and fighter when it lost Casimir Pulaski.

The ideals for which this courageous young Pole died did not die when he was stricken in battle.

Rather they emerged triumphant as a result of the War of American Independence and were carried to broader horizons by the Nation for whom he gave his life.

The hope of all America today is that the same ideals for which Pulaski fought and died, freedom and national independence, will be extended to Poland, the land of his birth, so that one day in the future Poland can take her rightful place among the free and independent nations of the world.

More Heat Than Light

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Journal of Commerce:

MORE HEAT THAN LIGHT

The farm problem will develop into one of the more important campaign issues of 1956.

The Democrats already have served notice that they will start an all-out attack against the Republican farm policies as soon as Congress reconvenes in January. The Republicans, in turn, have no other choice but to accept this challenge unless they want to take the risk of losing the farm vote by default.

Already the newspapers are full of charges and countercharges. Hardly a day goes by without publication of some additional material on the farm problem in the form of a new committee report, a fact sheet of one kind or another, or another campaign guide for one side or its opposition.

It is not surprising that, thus far, these political skirmishes are providing more heat than light.

Actually, there is little chance that political debate—as we have witnessed it since the end of World War II and, in intensified form, since the end of the Korean war—will ever lead to a solution of the farm problem. As long as the two political parties vie for the farmer's vote by outdoing themselves with promises of higher farm prices and greater farm prosperity, no real solution to the farm problem will be found.

The basic evil is that strong and competing farm blocs exist in both major parties. This has effectively blocked any bipartisan approach to the problem.

Yet, if there is to be a solution, it has to be a bipartisan one and nobody but the farmers themselves—through their own organizations and, in the final analysis, their individual votes—can bring about such an approach.

The most significant difference between the Republican and Democratic parties with respect to farm policies lies in the fact that the Democratic leadership has identified itself completely with the political aims of the Democratic farm legislators. In contrast, the Republican leadership—taking its cue primarily from Secretary of Agriculture Ezra T. Benson—has insisted on the development of what it considers a sound economic approach to the problem, although this does not completely satisfy some of the Republican farm State representatives, who are straining at the leash.

The Republican stand is currently based on the claim that the Republican farm policies are gradually taking hold, that the worst in the decline of farm prices is over and that therefore there is no immediate need for basic policy changes. The Democrats, in return, are stressing the continued deterioration in farm prices and incomes, and the sharp jump in actual farm support costs during the past 2 years. In their book, the administration's flexible farm price support program is a complete failure, despite the fact that thus far this system has had no time to prove itself and despite the fact that, not so very long ago, the Democrats themselves saw in it the only practical solution to the farm problem.

The Democrats have been very active in suggesting alternate solutions to the farm problem. Chief among them are the return to rigid farm price props at the wartime emergency level of 90 percent of parity, farm subsidies for the diversion of substantial acreages to pasture, and a revival of the Brannan plan-type of farm income subsidies.

All of these proposals are designed for the purpose of creating additional farm income props at the expense of the taxpayer. The Democratic politicians are trying to sell the country on this with the argument that such subsidies would be cheaper for the economy as a whole than a farm-generated general business decline.

This argument assumes that the farm sector of the economy not only is as important to the general economy now as it was 20 or 30 years ago, but also that the farm sector now is in danger of deteriorating rapidly into something like its situation in the early thirties.

Both assumptions are dangerous—but the trouble is that no progress toward a sound long-range farm program can be made as long as these assumptions persist and political debate is centered around them.

The Republican leadership thus far has refused to accept these premises, although of late there are signs of rising panic among some of its congressional farm Representatives. It has recently been stated publicly that Republican farm experts are hard at work in order to come up with an answer to the question of how to change the current administration farm platform for next year.

Time may still be in favor of the Republicans, since it is more than a year until election time.

However, while it is quite possible that the decline in farm prices is about over for this year, the situation hardly justifies any complacency on the part of the Republicans.

Much will depend on the future work of the administration's National Agricultural Advisory Commission, which has just issued an optimistic interim report on the farm situation.

If this Commission succeeds in strengthening its stature and acceptance to the point where it can develop a truly bipartisan approach to the farm problem, it will gain for itself the reputation of great economic wisdom. Otherwise, its reports will merely add to the excess wordage dealing with the farm problem.

Storm Around Mr. Dulles

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial which appeared in the New York Times, Saturday, January 14, 1956, in which that paper takes Secretary Dulles to task for his statements which appeared in a recent edition of Life magazine:

Secretary Dulles has to his credit so many creditable achievements, from the Japanese peace treaty to the completion of a world-encircling defense system of free nations, that it is regrettable to find him the center of an international storm aroused by some unwise remarks of his which are, to say the least, an extreme example of how not to conduct diplomacy. The remarks, which he acknowledges, are contained in a Life magazine article which, aside from the controversial facts involved, represents him as taking pride in practicing the "art" of leading the United States three times to the verge of war to deter Communist aggression without getting us into war.

In supplying material for such an article Mr. Dulles apparently intended, by citing the specific cases of Korea, Indochina and Formosa, to emphasize the established American policy of "peace through strength" which excludes appeasement and seeks to prevent war by creating an approximate balance of power with effective retaliatory means to deter Communist aggression. But by the specific manner in which this has been done he has not only brought upon himself both domestic and foreign charges of "distortion" of history; he has also provided new grist to the mills of both the Communists and the European appeasement elements, and thereby unwittingly impaired the very policy he seeks to support.

It is, of course, a fact that in resisting Communist aggression in the three cases mentioned in the United States and other United Nations members did get into war in Korea, and France in Indochina, before Mr. Dulles became Secretary of State. It is likewise a fact that these free nations faced up to the risk of even bigger wars unless Communist aggression halted. There were ample official warnings of that risk at the time, not the least among them the Sixteen Nation Declaration that a breach of the Korean armistice would expand hostilities beyond the Korean frontiers, the congressional resolution for the defense of Formosa and Mr. Dulles' own warning against armed Communist Chinese intervention in Indochina. But it is one thing to proclaim a considered policy and quite another thing for the American Secretary of State to be cast in the role of an "artist" juggling with threats of war.

Such a representation is quite contrary to the general policy enucniated by President Eisenhower—namely, that while we must maintain a strong defense posture, we must wage peace, not war, because in the atomic age there is no alternative to peace. It is also contrary to the President's specific declaration in reference to Indochina that while each situation involves its own degree of risk, each such situation must be met on its merits.

The Leading Question

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

Mr. FORAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following broadcast over the CBS radio network January 8, 1956, 10:30 to 11 a. m., the Leading Question. Guests: the Honorable JOHN W. MCCORMACK, United States House of Representatives, Democrat, of Massachusetts; the Honorable LESLIE C. ARENDS, United States House of Representatives, Republican, of Illinois. The leading question: "What will happen to the President's program?"

Mr. NOVINS. This week the 84th Congress returned to open its 2d session. Three days ago President Eisenhower sent his state of the Union message to Capitol Hill, outlining his program for this final period, and the leading question is: What will happen to the President's program?

The two gentlemen who will help us try to find an answer to that question are extremely well equipped to do so, for they are both charged by their parties with responsibility for seeing that their parties' policies are translated into legislative action.

Congressman JOHN W. MCCORMACK, Democrat, of Massachusetts, is the House majority leader. Congressman LESLIE C. ARENDS, Republican, of Illinois, is the House minority whip.

Gentlemen, we are going to try to preview in a half hour what Congress is going to take many months to try to settle, but let me ask each of you: How do you appraise the President's message?

Congressman MCCORMACK, would you start?

Mr. MCCORMACK. The President's message was rather long. On domestic affairs, it contained recommendations and observations that the Congress is thoroughly acquainted with because we have had them up in various forms in the past years. Most of his internal or domestic recommendations were simply embracing the New Deal of the late Franklin D. Roosevelt, and the Fair Deal of former President Harry S. Truman, and, of course, we Democrats welcome him into the fold in this respect. We are glad to see that he is converted to good Democratic principles.

If these recommendations on the domestic field, in the main, go through, it will be because of Democratic support, because his greatest difficulty would be with his own party. I am sure Congressman ARENDS would be better qualified to state what support the President might get from his own party in the House on the progressive recommendations that he has made, the President has made, which are strictly Democratic policy.

Mr. NOVINS. Well, let's ask Congressman ARENDS how he feels about the speech, and then perhaps he will answer your question, too.

Mr. ARENDS. Well, first let me say I am very pleased to be here with my good friend Majority Leader JOHN MCCORMACK to discuss this question of what this Congress might do, the last session of the 84th Congress.

I thought the President's message was rather lengthy, too, yes. But it did cover some things that needed to be talked about.

First, I think he mentioned several things which this past session of the Congress failed to do, namely, the shortcomings of the Congress under Democratic leadership, which should have been taken care of in the first session of the Congress.

And he reemphasized the needs on the part of the country to have these particular legislative proposals gone into, and something done about them. I believe this Congress will, because of the attitude as expressed by Congress MCCORMACK this morning, that while he thought some of it was New Deal legislation—and if such is the case, then we can expect better cooperation from the standpoint of the Majority side of the aisle in this session of Congress to fulfill the recommendations of the President. I think we will have a pretty constructive Congress this year, if they will just go ahead and do that.

Mr. MCCORMACK. Well, it is rather interesting to hear the remarks of my good friend, Congressman ARENDS, whom I deeply respect and for whom I express a very happy New Year, and successful in every respect. I do that without limitation.

Of course, we all know that there is going to be Democratic success next fall, but the record shows that in the last 3 years of the Eisenhower administration, that the President has received far more support from the Democrats on domestic matters and on foreign affairs, too, clearly on foreign affairs, than he has from his own party.

I hope the Republicans will get together behind an effective road bill and vote for one, and a pay-as-you-go policy, not the one that will give the bankers of the country about eleven to eleven and a half billion dollars of taxpayers' money over the next 30 years.

And that is about the only bill that I know of that didn't pass last year, but the Republicans wanted to put through a bill that would cost the taxpayers eleven to eleven and a half billion dollars more over the next 30 years than the Democrats. We wanted the pay-as-you-go policy to save that eleven to eleven and a half billion dollars. The school construction bill has gotten the farthest it ever has. It got out of the committee, and it ought to come up in the near future.

Mr. ARENDS. I am very glad to have you discuss these two big items on which we failed to take action in the last session. You must constantly bear in mind you have majority votes in the House of Representatives, and the Republicans can't do anything unless you fellows are there to supply the vote.

On the question of the road bill, it is going to cost the American people money, regardless of how it is financed, one way or another, if we are going to build these very much needed roads. Now, then, the point is: how are we going to get an agreement on this question.

I think that the thing to do is, all of us forget for a moment about politics and not try to gain any political favor in building these roads, because all Americans need them and use them, and go right ahead and reach some compromise and do the job.

The same thing about the school program. I am sure that if we can get out of the Rules Committee, controlled, as it is, by your group, if we can get that bill out of the Rules Committee and on the floor, I am sure we will pass the school-construction bill, which I think will be helpful, as it is so vitally needed in this great country of ours.

Mr. NOVINS. Which of these issues is going to get priority action?

Mr. MCCORMACK. Well, I would think that the school construction, because it is out of committee and that is the furthest it has ever gotten in the House of Representatives. It came out toward the latter part of the last session, and it is in the Rules Committee, as Congressman ARENDS says.

Of course, there are four Republican members of the Rules Committee, and their votes are very helpful, or some of their votes, at times. And I think there should be bipartisan cooperation in connection with getting that rule and trying to get the bill through.

On the road bill, I would agree that it is going to cost the people money, but we Democrats were trying to save the people eleven to eleven and a half billion dollars that the Republican proposal wanted them to pay. And under our bill we would have saved that tremendous amount during the next 30 years, and I think the people are interested in a saving of eleven to eleven and a half billion dollars.

Mr. ARENDS. Mr. Congressman, can I just ask you a very simple question. Wasn't it amazingly surprising to you—it certainly was not to me because I anticipated it—that when the rollcall came on the question of whether taxes should be raised or not, by an overwhelming majority it was defeated in the House, not only by Republican votes but by Democratic votes, and I think the Democrats surprised themselves by voting against any increase in taxes.

Mr. MCCORMACK. Well, of course, the amazing thing to me was that after the President's proposal, which was opposed by the Comptroller General and by another commission appointed by him, that you Republicans overwhelmingly voted against the pay-as-you-go bill.

Now, the responsibility rests upon each individual Member. The rollcall shows that a far larger percentage of Democrats voted for the pay-as-you-go bill than you Republicans. As a matter of fact, the pay-as-you-go bill was drafted in committee by a combination of Republicans and Democrats. The amazing thing to me is that we know most Republicans in the committee were opposed to the President's bill, and they helped draft the pay-as-you-go bill, and yet they voted for the President's bill as against the pay-as-you-go bill, which they helped draft.

Mr. ARENDS. As did a majority of the Democrats.

Mr. MCCORMACK. But the larger percentage, much larger percentage, of Democrats voted for the pay-as-you-go bill than did Republicans.

Now this year, with the experience of the last year, we ought to try and get together and get a bill through that the leadership of both parties as well as the President will support. If that is done, why, we ought to get legislation through. If not, we will get probably a straight authorization bill through.

Mr. ARENDS. Yes; we want no more stalemates. Let's get something through, that's right. It is needed.

Mr. MCCORMACK. We are all in harmony and agreement on that.

Mr. NOVINS. Let me ask about what kind of a something that is going to be, Congressman ARENDS. What form should the bill take?

Mr. ARENDS. I think the whole issue is still cloudy even as far as the members of the committee are concerned, because I have talked to them.

If it is a question of raising revenue, I think it should go to the Ways and Means Committee under public open hearings, and discuss how much tax is necessary to provide the funds for these roads, and let's bring it out before the American people and let's be equal and fair about the taxes that are to be levied.

Mr. NOVINS. Do you feel that the charge that Congressman MCCORMACK made a few moments ago is an incorrect one, this $11 billion——

Mr. ARENDS. Of course there is nothing new about financing things like that. We do repeatedly and have done it in the Federal Government repeatedly in the various agencies, like the building agencies, HOLC, RFC, and the different things, we have done that repeatedly over the different years.

In my State of Illinois, the first hard road building program we started with a $100 million bond issue, people sort of threw up their hands, but we paid off the bonds and the interest thereon and today, even after the first 20 years expiration date, we are still enjoying the uses of those many,many roads, and that was the way to do it at that time to get started.

Mr. NOVINS. Certainly one of the great and important issues that will be coming up in this session of Congress is the farm question, and I wonder what your opinions are on that.

Mr. MCCORMACK. Well, of course, I haven't got a farm in my district, but I have always supported farm legislation. I have some very strong views, but I assume that Congressman ARENDS has farms and farmers in his district. It would be very interesting to get his views.

Mr. NOVINS. I would like to get the views of both of you, but if you want to go ahead——

Mr. MCCORMACK. I mean coming from a farming district——

Mr. NOVINS. All right. Let him start.

Mr. ARENDS. I would be very glad to talk about it. Congressman McCORMACK, I realize that you come from the city and so are not too close to the farm situation, and it is understandable, and I live right in the heart of a great farming area out in the plains of Illinois.

This is a terrific and most involved question, and from the standpoint of the domestic front, I think it is the most bothersome problem that we will have before this Congress. And it ought to be considered as expeditiously as possible for the welfare of agriculture.

Now, I am not so smart, although I think I rather well understand the farm question, because that is my business and I suppose, in this last recess of Congress, I was in at least 100 farm elevators; I talked to farmers over the fence, on the tractors, whatever they might hove been doing, I called groups together to discuss the question, and not too much unanimity among the farmers themselves because no one knows which way to turn. But this problem is so vital to the economic welfare of the farmer and the country as a whole that we are just simply going to have to do something about it.

Now, as I well know about yourself and myself, we can forget our politics, and on this question of the farm program I hope and pray that those of us who are sincerely interested in the agricultural program for the future, that we will forget our politics and, for the best interests of the farmer, get busy and do something which will be helpful to them, not only immediately but in the long run. It is the most vital question that faces us at this time.

Mr. NOVINS. Congressman, as a practical matter, you really don't expect that the farm question will not be a political issue this year, do you?

Mr. ARENDS. Well, I am a little afraid about it, but I plead with all the sincerity of my heart that those of us who are intensely interested in agriculture do something about it.

Let me put it this way: I am in no position to legislate for a Republican farmer on one side of the road as against a Democrat farmer on the other side of the road, and vice versa. In other words, I am either going to have to legislate for the best interests of agriculture or against agriculture, and I want to constructively and objectively legislate for the welfare of agriculture.

Mr. NOVINS. How do you feel on the price-support program?

Mr. ARENDS. Well, I was one of those who have not only in this last Congress but in a previous Congress voted against rigid parity support prices, feeling in my own mind an honest belief that that was the beginning of some of our troubles, the rigid parity support prices, and flexible parities, knowing full well the flexible parities in itself was not the complete answer to the farm question.

And so I have been one of those who have adopted the principle of flexible, hoping that other things would follow, and I think they will in this session of Congress, which will in substance and in accumulative effect be beneficial to agriculture as such.

Mr. NOVINS. Congressman McCORMACK.

Mr. McCORMACK. Well, I said, Mr. Novins, that I haven't got a farm in my district, but during the entire 28 years I have been in Congress, I have always supported farm legislation.

Mr. NOVINS. You have consumers in your district.

Mr. McCORMACK. I know, but politically my votes have sometimes been contrary to public opinion up my way, and I have consistently voted the way I have because I realize that the agricultural community of our country is a very important segment of American society, not only as human beings, but also economically, and an important segment of our national defense.

I don't apologize for any one of my votes. The farmer buys in a protected market, he sells his farm excess or surplus farm commodities on the world market, which is an unprotected market. Industry is protected through tariffs, and the farmer in the world of today has got to receive some kind of protection. And to me it is a fundamental question.

Now, let us see what has happened to the farmer. Parity ratio has reduced from 115 in 1947 to 85 for the first 10 months of this year, and to 87 for October of 1955, rather. The aggregate realized net farm income shows $10,600,000,000 for 1955 against a peak in 1947 of $17,200,000,000.

Mr. NOVINS. Congressman, if I may interrupt——

Mr. McCORMACK. Yes. This, while we have a record economy in business.

Mr. NOVINS. There is, I think, general agreement that the plight of the farmer is not a happy one, and I think our problem is how do we solve this situation.

Mr. McCORMACK. Well, I supported 90 percent of parity. In the Democratic platform we made a promise. The Republican platform promised 100 percent, or the President in his speeches, 100 percent parity at the market place. Now, if they call the flexible parity compliance with their party platform pledge, it is difficult for me to reconcile myself with it.

Mr. NOVINS. Are you saying that the Republican Party did not meet its campaign pledges to the farmers?

Mr. McCORMACK. In my opinion, the pledge of the Republican Party in its platform and the speeches made by the candidates for President and other prominent Republicans in 1952 show a marked inconsistency with compliance.

Mr. ARENDS. Of course, I can't agree with that, Congressman McCORMACK.

Mr. McCORMACK. Well, the farmers will do their own deciding.

Mr. ARENDS. Well, I wouldn't get too excited about what the farmers are going to do politically.

Mr. McCORMACK. I am not talking politically. I am talking on this question now.

Mr. ARENDS. They are very disturbed about this whole problem, and they want a solution regardless of who brings a solution about.

Mr. McCORMACK. We give a solution.

Mr. ARENDS. Congressman, your 90 percent of parity support prices is not the solution. It has created the tremendous surpluses. It might interest you to know that the consumption of the production in this last year has been approximately on an even keel, but these huge surpluses hanging over our heads are the depressing effect on the market today, and we are going to have to do something about these surpluses.

Now, did you know, Congressman, that in this last year only approximately 25 percent of the people, farmers, have voluntarily gone into the program for support prices? Did you know that? Maybe in my district I would say it was a little bit more, but on the whole only 25 percent have voluntarily gone into this program, which is a strange thing indeed, because here we had the chance for these rigid parity support prices and they themselves know it is not the answer to the problem.

Mr. NOVINS. Will the Republican Party have a program for reducing some of this surplus?

Mr. ARENDS. Yes, we will; and next month the message will come up from the administration, and I suppose through the cooperation of Mr. Benson and those interested in the Agriculture Department down here who are going to make some very good recommendations to the Congress and to the country as to what we might think will help improve the situation materially, and very quickly.

Mr. NOVINS. Can you tell us something of the nature of those recommendations?

Mr. ARENDS. No; I am in no position to do it until the message is brought up, although I have some cognizance of what might be contained in the message.

Mr. NOVINS. Congressman McCORMACK, does the Democratic Party have a solution for the surplus problem?

Mr. McCORMACK. We have put through bills in connection with that. We have given great authority in disposing of surplus farm commodities abroad and in the United States.

Mr. NOVINS. Given authority to the President, you mean?

Mr. McCORMACK. We have given authority to the administration, either the President or the Secretary of Agriculture. It is the administration.

The question of parity in my opinion is a very, very important one. Flexible provisions do not meet the situation. We Democrats have voted for something definite.

I don't like to see my friend from Illinois get himself on the side of Secretary Benson, and I am sure he is not on that side. I wouldn't want to put him on that side. But he has unconsciously and unintentionally placed himself on that side when he tries to defend the Republican position on flexible parity, which he knows has been a failure.

Mr. ARENDS. Let's not raise the personality question because, as I said earlier in this program, I am interested in solving this problem and no one man is going to do it. But the thing that bothers me so extremely about this thing, what are we going to do about these great surpluses?

And if you are willing to ask for rigid parity support prices and put the farmers in a complete straitjacket and put them under complete acreage and allotment controls, then I don't believe you quite understand the American farmer and what he wants.

Mr. McCORMACK. Well, I think that the American farmer has a very clear idea as to what they want. When they go under controls it is done in the democratic way, they vote for it. If they don't want it, they don't have to vote for it.

One thing is certain: The American farmer's plight is very bad, and I know that when the American farmer's plight is bad, the workers in the cities are going to be bad within a year or two.

Mr. ARENDS. That's right.

Mr. McCORMACK. The first indication of a coming business recession of a marked degree starts with the farmers. And they are a very important segment of our economic society as well as American society, and I agree with you, something should be done even if your party is doing it in the fourth year of its administration, with another election coming around.

Mr. NOVINS. Congressman, do you see those indications of a coming recession now?

Mr. McCORMACK. Well, indications among the farmers, it is there.

Mr. NOVINS. You feel that is the first step of a major recession?

Mr. McCORMACK. It always has been in every recession or depression we have had, the study of every one of them since our constitutional history, shows that it starts first among the farmers, and then it spreads to the cities where the workers are.

Mr. ARENDS. Congressman McCORMACK, with your responsibility as majority leader, I hope—and let me say that I am expressing this not only in my capacity as a Congressman and Representative of a fine agricultural district but as an American citizen terrifically interested in agriculture—that you will do your utmost to see that we get the farm question disposed of as expeditiously as it can be done.

Mr. McCORMACK. I don't know anyone who has more consistently supported farm legis-

lation on the floor of the House on several occasions when Representatives from farming districts were undertaking to question me. I have challenged my record with their record.

Mr. NOVINS. Gentlemen, let's look at the state of the Union message again and in another area. The President made quite a point, and it is a very important issue, I think, before the American people, and that is the issue of continued and continuous foreign aid over at least the foreseeable period of time. I wonder how you feel about that, Congressman ARENDS?

Mr. ARENDS. Well, of course, I think it must be continued. The economic aid, the military aid in particular, must be continued to some of our allies and our friends, and if need be, stepped up. I do not think the American people will object to that particular angle of aid.

I am always sorry that they call this foreign aid, use those terms, because I think it is more than that. I think it is the kind of aid which makes possible the friendships and the carrying forward of the objectives of free people and free nations of the world, to the end that we finally solve these problems and all of us remain as free individuals. That is the big problem involved in this thing.

Mr. NOVINS. You tie it then as an integral part of the national security program?

Mr. ARENDS. I do. It certainly is.

Mr. NOVINS. Do you expect that we will get that kind of legislation in this session?

Mr. ARENDS. It is a question whether or not the attitude as expressed by many individual Members of Congress, whether it will be stepped up in sum. That I do not know, and I am not prepared to discuss it in detail until we really understand exactly the proposal that will be forwarded to us in such a message.

Mr. NOVINS. Let me ask you, in principle would you vote for a commitment, say, of 5 years of a continuous program?

Mr. ARENDS. If it can be shown to me after hearings by the proper committees of the House that that is a necessary part of our relationship with foreign nations, those of us on the side of free peoples of the world, why, then, I would be prepared to do so.

Mr. NOVINS. Fine.

Congressman MCCORMACK?

Mr. MCCORMACK. As a matter of fact, when foreign aid first came up, some years ago, and when the argument was made it would be a year-to-year basis, I made the statement on the floor in a speech that I had made that we might just as well face the fact that it is going to be at least 5 years, and probably longer.

I thoroughly agree with the substance of what Congressman ARENDS said. We of this generation, our duty and our responsibility is to preserve America. We have inherited from the past, from the Founding Fathers, the past generations. They built this country, and it is our job to preserve it.

And Americans are fighters. We are not quitters, and we are not going to let the Communist world killers dominate the world. And that doesn't mean war, but it means that we can be so strong as to deter them.

But, on the other hand, we must not only be strong militarily, but we must be strong morally, and we must do those things in the field of foreign affairs, not only in military aid but in economic aid that is for the national interest of our country.

The primary question before us at all times, whether a Member of Congress or not, as Americans, is what course of action is for the national interest of our country, and that transcends Republicanism or the Democratic Party.

Mr. NOVINS. Congressman, you said Americans are not quitters, and of course we agree, but I wonder if you would feel that the inability of Congress to pass a 5-year commitment, if there is such an inability, would be quitting.

Mr. MCCORMACK. No, no. I would not say that, no.

Now, if a 5-year program is not put through, that would not fall within that category at all. If the evidence, as Congressman ARENDS well said, presented, justifies it, I would support it. I support it because I consider it to be for the national interest of my country that such legislation and appropriations be enacted into law. But if we should only extend the foreign aid for 1 year, there is nothing about that which would indicate weakness.

Mr. NOVINS. Gentlemen——

Mr. ARENDS. Do I have time to say this? I think, as we just discussed now, if the facts were brought forward, I think you will see no cleavage or difference on the Republican or Democratic side of the aisle as to what we ough to do in unity on this matter of foreign relations.

I think as one, for instance, went way back in the Democratic controlled Congresses, I voted for the so-called Marshall plan, which probably wasn't too popular a thing out in my part of the country. I voted for the aid to Greece and Turkey, and which today I think was a fine vote on those instances, because that was a beginning of a part of this whole program which we are trying to carry out in a unified way and in a bipartisan manner by this Congress.

Mr. MCCORMACK. I might also say that as much discretion in carrying out the national policy of America should be given to the President as is possible. He is in a position to know by reason of information he has what things are necessary, more necessary.

And there are times he can't make them public, where at a later date he can. I am a great believer in the field of foreign affairs in delegating the necessary power and authority to carry out that power to the President.

Mr. ARENDS. Wouldn't you say, Mr. MCCORMACK, that you feel there will be great unanimity again in this session of Congress on this matter of foreign affairs, as there was in the last?

Mr. MCCORMACK. Exactly.

Mr. NOVINS. We are talking, of course, when we are talking about foreign aid, of things that cost money, and I wonder what your prognostications are as to the tax program. The President has suggested we should not try to cut taxes until we have balanced the budget and gotten a pretty good start on reducing the debt.

Mr. ARENDS. Frankly, I liked his approach to this question of taxes and balancing the budget. I have said repeatedly, and I did publicly in my district, when I was on this, that if the time comes in this fiscal year that we see we have a balanced budget, then I think we have a right to consider the matter of tax reduction, bearing in mind, of course, that some token payment on the national debt would be good. And therefore I particularly like that part of his message where I think he is on sound fiscal ground by taking the approach that he did.

Mr. NOVINS. Let me ask you again as a matter of practical predictability, will it happen? Will there be no tax cut this session?

Mr. ARENDS. That is projecting into the future, because no one knows what the spending rate will be between now and the last 6 months of this fiscal year, and therefore I think we just about have to withhold our judgment on that matter until we can see exactly what the income is and what the outgo has been.

Mr. NOVINS. Let me put the question another way. Do you think there is a possibility of a tax reduction before election?

Mr. ARENDS. Well, there are a lot of people who want one, and whether you are asking me for a personal opinion, I would say that I want to see the clear picture before I make my guess on what ought to be done.

Mr. NOVINS. All right, sir.

Congressman MCCORMACK, what about your position on the tax question?

Mr. MCCORMACK. Well, on the tax question I said that the last Republican tax bill should not have been passed. As a matter of fact, if we had greater revenue than outgo, it should have been used to reduce the national debt. I think that is the matter of primary importance, not a token payment, but substantial payments.

The present national debt is a constant threat to uncontrolled inflation, and in connection with the tax bill this year, why, if the President makes a recommendation, we Democrats will see that a tax bill is passed which considers low-income tax groups.

Mr. NOVINS. You are not expecting that the debt will be materially diminished before election day?

Mr. MCCORMACK. No.

Mr. NOVINS. So I would assume your position is there would be no tax cut, at least you favor that?

Mr. MCCORMACK. I would not say that. I would say that the reasonable probability is that there will not be. But I wouldn't want to commit myself definitely because we Democrats might do things where we can raise revenue and give the lower-income tax group the deserved consideration that the Republicans denied them 3 years ago, and at the same time lose no money for the Treasury.

Mr. ARENDS. Is the gentleman from Massachusetts suggesting that they are going to raise some more taxes? I hope not.

Mr. MCCORMACK. Oh, no; we might undo some of the inequities of the last Republican tax bill and bring in additional revenue and at the same time give consideration where it belongs.

Mr. ARENDS. I think in the last 3 years we have clearly demonstrated to the American people that we are following a sound fiscal policy in this country. Inflation has disappeared. There is some economic stability, and here we are today talking about a balanced budget, which is good.

Mr. NOVINS. Thank you both, Congressman ARENDS, Congressman MCCORMACK, for helping us with this preview of what will happen to the President's program, this week's leading question.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, January 16, 1956

Mr. COLMER. Mr. Speaker, at the beginning of this, the 2d session of the 84th Congress, we are advised by the press that the President will request another huge appropriaiton of almost $5 billion for foreign aid. This notwithstanding the fact that the American taxpayers have already sent foreign aid to the tune of some $50 billion since World War II. Many of us in the Congress, who have consistently opposed these gargantuan expenditures of the taxpayers' money in such a dubious venture, hoped from year to year that each appropriation would be the last one. But these hopes have, alas, been in vain. For, it is obvious that the same philosophy which prevailed in the Truman Administration in our foreign affairs has been adopted as permanent by the Eisenhower Administration.

Mr. Speaker, I hope that I may be pardoned for again repeating the advice which I humbly gave to my own Democratic administration some 10 years ago and oft repeated on this floor. I stated upon my return from a 2 month's tour of Europe, including some 2 weeks in Moscow, that Russia wants neither war nor peace. Her objective is to destroy our economy and take over in the ensuing chaos and confusion. Certainly with a national debt of $280 billion, with all of the earmarks of ruinous inflation steadily progressing, we are playing into the hands of the Kremlin masters.

Mr. Speaker, in this connection, my attention has recently been called to an article by the noted commentator, Henry Hazlitt, as well as to an editorial from the Prentiss Headlight, a rural newspaper printed in Jefferson Davis County, Miss. The one reflects the economic point of view, the other reflects the viewpoint of the small taxpayer and the cross-country thinking. The articles are as follows:

FOREIGN AID FOREVER?

(By Henry Hazlitt)

The request of the administration for an appropriation of almost $5 billion for foreign aid, as compared with $2.7 billion for the current fiscal year, is so ill advised and unjustified that all I can do here is to list some major objections to it and leave further elaboration to a later time.

1. Secretary Dulles' defense of this request is that the actual rate of foreign-aid spending will increase from $4.2 billion in the current fiscal year to only $4.4 billion in the fiscal year beginning next July 1. His defense of an 80-percent increase in the appropriation is that it is necessary to keep foreign aid flowing, to keep the pipeline filled up. Yet even without this addition to its foreign-aid reserves the administration will have a $7-billion carryover of foreign-aid appropriations at the end of this fiscal year.

Moreover, the administration's present line is a complete reversal of its previous attitude on budgetary carryovers. At a press conference on April 30, 1953, President Eisenhower said: "No more glaring illustration of the lack of balance between the military logic and the economic logic could possibly be found than the situation that existed when we took office. On the one hand, we found our allies deploring our unfulfilled defense promises. On the other hand, we found that there was a total carryover of $81 billion in appropriated funds, largely committed, for which cash must be provided from revenues in future fiscal years over and above the normal cost of Government. It's just as if the late administration had gone to the store and ordered $81 billion of goods, which we've got to pay for as they're delivered."

If Mr. Eisenhower was right in 1953, he is wrong now. A larger appropriation now means that the taxpayers must spend that much more, whether in the next fiscal year or later. Only by rejecting the present demand can Congress hope to control even future foreign aid, not to speak of bringing it to a long-overdue termination. The suggestion of a pledge to continue foreign spending for 10 more years is an unwarranted attempt to tie the hands of future Congresses.

2. We have already spent $50 billion of the taxpayers' money in foreign aid since the end of the Second World War. Propagandists for this aid boldly give it entire credit for the postwar European recovery that has taken place. But it could just as plausibly be argued that this recovery would have been faster without it. Certainly it has subsidized and prolonged foreign exchange controls and socialism.

3. As the old excuses for foreign aid run out, our bureaucrats invent new ones. The present somewhat hysterical clamor for it rests on the tacit assumption that allies can be bought if we only raise our price. We are told we must outbid Russian offers of foreign aid. Yet even Secretary Dulles admitted that we ought not "to put ourselves in a position where the Soviets, by just making paper offers, can require us to make real offers to top them. That would mean that the Soviets would be spending nothing except a piece of paper but would require us to spend a great deal of money." Yet this is precisely what we are doing, for example, in offering American taxpayers' money to help Egypt build a grandiose dam.

4. The tacit assumption behind nearly all our so-called foreign economic aid has been statist or socialistic. It assumes that a nation prospers by handouts, rather than by attracting private investments through encouragement of free enterprise.

5. Even our so-called military aid rests on the dubious economic assumption that other countries cannot afford to pay for their own defense, and that American taxpayers must asume that burden.

6. The foreign-aid program is merely one more symptom of budget irresponsibility. The administration is not only asking more for foreign aid, but more for agriculture, more for highways, Federal aid for local schols, and so on. It wants to give other nations more than $4 billion a year, though we groan under onerous taxes, we haven't yet balanced our own budget and are already $280 billion in debt.

[From the Prentiss (Miss.) Headlight of January 12, 1956]

WASHINGTON NEEDS TO CURB FOREIGN ECONOMIC AID

J. A. Thigpen, State welfare commissioner, reports that during the month of December State old-age assistance payments to over 70,000 recipients totaled $2,019,940, and that welfare payments during the month distributed to over 122,000 persons totaled $2,588,238. Of course this money had to first come from the pockets of the taxpayers.

On the same front page of a daily paper it was reported that 76,000 persons, members of families of sharecroppers in Louisiana, were destitute and on the verge of starvation due to two successive crop failures, and would be given United States surplus foods to keep them from starving.

We were told at the recent legislative-press meeting in Jackson that the Federal Government had cut the funds to the bone for health services in this country because of the outpouring of funds for sanitation and health in foreign countries.

From where we are viewing the situation it appears that it is time for America to begin to think more of the welfare of Americans. Money has never bought the friendship of nations or individuals, and it won't do it now. Economic aid to foreign countries first has to be taken from the pockets of the American taxpayers, and the taxpayers could use a little relief from their tax burden in these times.

The Till Case: A Catholic Student Speaks

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. MULTER. Mr. Speaker, the following statement on the Till case appeared in a recent issue of the Truth, weekly publication of Temple Beth Emeth, of Flatbush. The statement, written by Roger Goebel, a Catholic student at Manhattan College, is deserving of our attention:

My brother is dead. He was just a boy, but he's dead now. Perhaps you knew him—he was your brother, too.

Why are you so startled? Have you forgotten him so soon? His name? His name doesn't matter—it might have been Abel once. I suppose you have forgotten him. He's buried now, just as all news of him has been buried in the back columns of the newspapers. He wasn't really very important, and a murder in Mississippi certainly can't compare with the latest, raciest scandals in New York.

Well, he's dead now. And he was a boy. He was only 14, just beginning to grow up. He was full of the wonderful feeling that comes when a boy becomes a man. He was on his first holiday, a thousand miles from his Chicago home. He must have been very proud of his years and of his self-reliance; he must have loved to be alive.

And now he's dead. They killed him. They killed him because of a boastful voice and a cocky whistle; they killed because he was "fresh"—they killed him because he was black. They took him out in the dark of the night and led him away; they beat him, and then they shot him with cold steel bullets whose chill could not match the ice of their hearts. They were fools; they murdered him because of the blackness of his skin, but what blackness could ever match the blackness of their hearts.

And now the boy is dead and soon he'll be forgotten. You feel uncomfortable already, and wonder why I mention him. What's done is done, and who's dead is dead; it happened weeks ago, and you were not to blame. There are more important things now—wars and tensions and world crises. You can't remember a murder—even the murder of a boy—forever.

But he was just a boy and he is dead now, and he was my brother and your brother, too. And you didn't kill him—but you let him die. You let him die, and now you're forgetting him, just as you'll forget others like him. You let him die when you didn't fight to save him, not from death but in life; when you didn't save him from his slums and when you didn't give him an education like your own, when you made him take the poorest seats in your buses and wouldn't let him live in your neighborhood, when you made him a second-class citizen and a second-class man. Now you're willing to give him justice, but you were never willing to give him love.

He was just a boy, and he happened to be a Negro. He might as well have been a Slav, or a Jew, or a Puerto Rican, or any other whom the breath of prejudice taints. He's dead, but he might as well have lived in the shadow of your indifference for 3 score years and 10. And soon you'll forget him, as quickly as you forget me.

My brother is dead. He was just a boy, but he's dead now. Perhaps you knew him—he was your brother, too.

The Honorable Sam R. McKelvie

EXTENSION OF REMARKS

OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 5, 1956

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include in the RECORD two

articles from the Arizona Republic, January 10, 1956, and the Phoenix Gazette, January 9, 1956, that express the admiration felt by all Arizonans for the Honorable Sam R. McKelvie an adopted son of Arizona. Sam McKelvie was Governor of Nebraska for 4 years and in his passing, one of the great builders of the West has been lost:

[From the Arizona Republic of January 10, 1956]

ADOPTED SON

The Valley of the Sun is happy to play host to all its winter visitors, but it is proudest of those who adopt the State as their second home and return each fall to spend part of the year here. Such a man was Sam R. McKelvie, former governor of Nebraska, who owned a small ranch near Chandler where he kept up his interest in farming and basked in the winter sunshine.

Sam—and hardly anyone called him anything else—was one of the Nation's great authorities on Hereford cattle. His By-The-Way Ranch at Valentine, Nebr., had one of the Nation's finest herds of white-faces. The annual auction there attracted cattle buyers from all over the country, to say nothing of hundreds of Sam's friends who turned up for the unforgettable barbecues.

Governor McKelvie, who held the job for 2 terms from 1919 to 1923, didn't raise Herefords in Arizona, but he did bring his interest in politics along with him. He took an active part in the 1952 campaign in this State, contributing to the Republican sweep that occurred that year. He was a persistent exponent of the "pay-as-you-go" philosophy of Government finance which has helped Nebraska carry out an extensive public works program without amassing a big debt.

Like most Arizona farmers, he constantly fought the twin enemies of high taxes and low water levels. He also published the Nebraska Farmer and the Colorado Rancher, through which he preached the gospel of higher yields and better breeds.

Mr. McKelvie died at his Chandler home Friday, after two heart attacks. He was 75, and could look back on helping the development of two great States. His neighbors will miss him, but they will hope that Mrs. McKelvie, once a concert pianist and a fine artist in her own right, will continue to make her winter home in the Valley.

[From the Phoenix Gazette of Jan. 9, 1956]

GRAND OLD GENTLEMAN

The death on Friday of Sam R. McKelvie on his ranch near Mesa took a grand old gentleman from his nationwide host of friends and deprived the political scene of an outspoken, anti-Socialist figure. The former Nebraska Governor (1919 to 1923) made political speeches in Arizona, his adopted home, as recently as the 1952 elections.

No one ever had to wonder where "Sam" stood. He saw the danger in Federal budget deficits—"undermining our economy and in the long run will result in our America becoming Socialist, or even Communist, economically." Governor McKelvie was noted for Nebraska's pay-as-you-go plan of State financing without bonded debt.

Speaking of Trumanism in 1952 to Arizona voters, he pointed out that in 7 years of the Truman administration, Government spending amounted to more than $347 billion compared with less than $300 billion for the Nation's previous 156 years since the first President.

Sam McKelvie had been a Nebraska rancher before he bought similar property in Arizona for a winter home beginning in 1946. For many years he had published the Nebraska Farmer and the Colorado Rancher. He was outstanding among the noted persons who have chosen Arizona for their later years.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate hearings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the official reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix, but this rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD Appendix the full report or print of any committee or subcommittee when said report or print has been previously printed.

10. *Official reporters.*—The official reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this restriction shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. The Public Printer or the official reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Illustrations.*—Pursuant to section 182b, title 44, United States Code (as shown above), requests for authority to insert an illustration in the RECORD should be submitted to the Joint Committee on Printing through the chairman of the Committee on Printing of the respective House in which the speech desired to be illustrated may be delivered. Illustrations shall not exceed in size a page of the RECORD and shall be linecuts only. Copy for illustrations must be furnished to the Public Printer not later than 12:30 o'clock p. m. of the day preceding publication.

13. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Anderson, Eastland, Clements, Humphrey, Scott, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, Kilgore, McClellan, Robertson, Magnuson, Holland, Stennis, Clements, Bridges, Saltonstall, Young, Knowland, Thye, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, and Potter.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Duff, and Welker.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Lehman, Monroney, Morse, Capehart, Bricker, Ives, Bennett, Bush, Beall, and Payne.

Committee on the District of Columbia

Messrs. Neely (chairman), Bible, McNamara, Morse, Frear, Beall, Hruska, Case of New Jersey, and Allott.

Committee on Finance

Messrs. Byrd (chairman), George, Kerr, Frear, Long, Smathers, Johnson of Texas, Barkley, Millikin, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, and Bennett.

Committee on Foreign Relations

Messrs. George (chairman), Green, Fulbright, Sparkman, Humphrey, Mansfield, Barkley, Morse, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Kennedy, Symington, Ervin, Humphrey, Thurmond, McCarthy, Mundt, Mrs. Smith of Maine, Messrs. Cotton, Bender, and Martin of Iowa.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Long, Jackson, O'Mahoney, Scott, Bible, Neuberger, Millikin, Malone, Watkins, Dworshak, Kuchel, Barrett, and Goldwater.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Daniel, Ervin, Bible, Thurmond, Bricker, Schoeppel, Butler, Potter, Duff, Purtell, and Payne.

Committee on the Judiciary

Messrs. Kilgore (chairman), Eastland, Kefauver, Johnston of South Carolina, Hennings, McClellan, Daniel, O'Mahoney, Wiley, Langer, Jenner, Watkins, Dirksen, Welker, and Butler.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Neely, Douglas, Lehman, Kennedy, McNamara, Smith of New Jersey, Ives, Purtell, Goldwater, Bender, and Allott.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Neely, Pastore, Monroney, Hennings, Scott, Neuberger, Carlson, Jenner, Langer, Curtis, Martin of Iowa, and Case of New Jersey.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, Symington, Thurmond, McNamara, Neuberger, Martin of Pennsylvania, Case of South Dakota, Bush, Kuchel, Cotton, and Hruska.

Committee on Rules and Administration

Messrs. Green (chairman), Hayden, Hennings, Gore, Mansfield, Jenner, Barrett, McCarthy, and Curtis.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Reed, of Kentucky, the Mayflower.

Tenth judicial circuit: Mr. Justice Clark. Colorado, Wyoming, Utah, Kansas, Oklahoma, New Mexico.

Appendix

Benjamin Franklin

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poem entitled "Benjamin Franklin" by Horace C. Carlisle.

The poem follows:

Wisdom is the principal thing; therefore get wisdom; and all with thy getting get understanding. (Proverbs 4: 7.)

BENJAMIN FRANKLIN

On Sunday, the seventeenth of January,
Sev'nteen hundred and six, was born
America's Benjamin Franklin, the statesman
Whose name and whose works will adorn
Our national history, throughout the ages,
Because of his wondrously great
Inventions, discoveries, and sound achievements,
That centuries can't liquidate.

Unborn generations will ever keep reaping
Rich harvests from seeds that he's sown,
And ever enjoy the ripe fruits of his labors,
Which they'd, without him, not have known—
He's laid down full many a faultless foundation,
On which his successors today
Are building a monument to him, that's truly
Built in "the more excellent way".

He put thought in words and then put words in action—
This trinity was the great source
Of wisdom that guaranteed his great successes,
Through wisdom that guided his course—
He worked for the present, and planned for the future,
And trod trails that no man had trod—
With faith, hope, and charity, he daily labored
To be approved by men and God.

Reverses caused Franklin to be more determined—
Discouragements could not control,
Nor stop him, nor slacken him down, in his efforts
To win, in the long run, his goal—
He would not permit faithless friends to dishearten
Him, as he kept on keeping on;
But he labored on, with the spunk of a Spartan,
And never gave up till he won.

To Benjamin Franklin the world is indebted,
For he lit the initial spark
That started the powerful electric current
That illuminated her dark—
Wherever we go, in all civilized countries,
It matters not, in the least, where,
In coal mines and factories and shops and foundries,
Electric lights are shining there.

On Benjamin Franklin's unyielding foundation,
Laid down in the sweet long-ago,
Our scientists still are successfully building—
"Praise God from whom all blessings flow"—
Elab'rately both for the present and future,
And finishing what was begun
By Franklin, as he, back in the past, planned it,
Before his work on earth was done.

—*Horace C. Carlisle.*

Some Blunt Words From a Good Neighbor

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1956

Mr. UDALL. Mr. Speaker, one of the ablest and most perceptive diplomats on the international scene today—to the good fortune of our country—is Canada's Secretary of State for External Affairs, Mr. Lester B. Pearson. Last fall Mr. Pearson journeyed to the Soviet Union and held several candid, off-the-record talks with Soviet leaders. He presented some of his frank conclusions last month in a brief Look magazine article. I believe many of our colleagues will be interested in Secretary Pearson's observations, and will want to weigh his advice alongside the newly enunciated "brink of war" policy of Mr. Dulles. I therefore present Mr. Pearson's report:

SOME BLUNT WORDS FROM A GOOD NEIGHBOR

(By Lester B. Pearson, Canadian Secretary of State for External Affairs)

As a Canadian, I like to think that I can speak frankly to my American friends without being misunderstood. That's one advantage of being good neighbors on a big continent. We look at the world from the same perspective and can talk about it over the back fence.

Having recently returned from a journey to the Soviet Union, South Asia and the Middle East, I feel impelled to lean on that back fence and get a few things off my chest. For I have come back very worried that we may be failing to adapt our foreign policies to the changing conditions of what is going to be a long, "hard cold war." And by "our" policies, I mean those of the Western democratic coalition in which the United States inevitably plays the leading role in charting the common course.

In Moscow, I had an opportunity to talk frankly and at length with top Soviet leaders. I found them confident that things were going their way in this cold war; that the triumph of their system was just a matter of time. In South Asia, I found the leaders of new nations proud of their independence, generally sympathetic to the new China and often, if unfairly, suspicious of American motives. In the Middle East, I found increased tension and Arab-Israeli bitterness being exploited by Soviet policy.

Nor is there enough evidence that our side is prepared to cope with the new phase of the cold war called "competitive coexistence." Where there exists a clearly defined Western policy, it is too often concerned with the necessary, if limited and often inadequate, goal of containing communism merely by military means.

The Russians apparently feel sure of success in competitive coexistence, a competition which they expect will be conducted under their rules—or under no rules. This confidence is one reason why I believe they are not plotting all-out military aggression. They realize, as we do, that an atomic war would be disastrous for both sides. Their new leaders are not suicidal Hitlers. Moreover, as Nikita Khrushchev told me, "In peaceful coexistence, the best system will survive." They think it is theirs. So why should they provoke "massive" atomic retaliation?

Their confidence is based on the belief that their people have the toughness, the patience and the discipline to carry them through the long period of nonmilitary conflict for which they are preparing. They think that we are too soft, too impatient, and too disunited to stand the gaff. They hope that our freedom will encourage laziness and license. They claim that our alliances will crumble away when the fear that binds them together has been dispelled. Naturally, therefore, they welcome a relaxation of tension.

I was impressed by the candor and realism of the Soviet leaders. I believe that their desire for this peaceful interlude is genuine, though of course self-interested. (They repeatedly expressed concern for President Eisenhower's health and hope for his recovery, as they felt he was a man "who sincerely wanted peace.") But I was also shocked and frightened by what appeared to be their colossal and dangerous ignorance of the West. They are—or claim to be—convinced that NATO is an aggressive American creation designed to make war on the Soviet Union. For this reason, they dread German rearmament in NATO. These leaders—like the masses—may be the victims of their own propaganda, but it is alarming to realize that they exercise totalitarian control over so many millions of indoctrinated, unquestioning people.

These Soviet leaders know what they want—a Communist Soviet-dominated world, to be achieved by any method short of all-out war. They think they know how to get it—by flexible, aggressive, and insistent diplomacy in every corner of the world. Can we say as much? Have we been acting as though we knew how to handle this baffling but well-disciplined adversary? Let us look at the map.

In Europe, there is above all Germany. Here, there is no simple and easy solution, but we should avoid becoming tied to a policy which would give us little room for diplomatic maneuver. The Russians are having too much success in obscuring the real issue—which is whether a Germany unified by free elections is to have the right to decide its own future alinements—by hammering away at the false issue that we are insisting that a unified and rearmed Germany must remain in NATO.

In the Middle East, war could flare up any day between Israel and the Arab states. The Soviets are fanning the embers with arms shipments to Egypt (and incidentally, with other Communist governments, capturing about half of Egypt's foreign trade). Yet the West, which could exercise tremendous

influence on both sides, has not been able to use that influence to bring about peace. All we have now is an uneasy truce, with deadly enmity and deep fear.

In the Far East, there is no settlement of the dangerous situation on the Formosa Strait. No one seriously expects Chiang Kai-shek to return to the mainland. Yet if we seem to support his ambitions, especially on Quemoy and Matsu, a situation is perpetuated that could conceivably develop into a war. Are any of us really willing to go to war to help repel an attack on these "offshore" islands? Have we merely painted ourselves into a corner here, without any obvious way out?

In south Asia, a system of military pacts—justifiable as may be the purpose behind them—has irritated and alarmed nations like India, Burma, and Indonesia, whose friendship could be decisive in the years ahead. They refuse to accept the view that military alliances—what they call America's "aggressive-defensive" policy—are the most effective means of meeting the challenge of Communist aggression in that area. The Russians for their own selfish purposes give enthusastic, if hypocritical, endorsement to their doubts. We would do well to give them at least serious and sympathetic examination, instead of dismissing them as neutralist appeasement.

In Africa, we can already detect the first signs of the same kind of revolution that has changed the map of Asia. New native leaders and governments are emerging, and the Communist coexistence planners are moving in to exploit African aspirations for independence and equality. Colonial control is on the way out. The West accepts that, but because our acceptance is often, and rightly, qualified so that the process can be sure and orderly, we are portrayed by governments whose own peoples enjoy limited or no freedom, as colonial reactionaries clinging to a privileged and superior status.

In NATO, which too many people still think is some kind of breakfast food, it has not yet been possible to construct the political and economic underpinnings of an organization that will not survive as a mere military coalition. NATO cannot live on fear alone. Yet NATO is essential, both as insurance against Soviet aggression in Europe and as a means of coordinating the policies of the Western democracies. Now that the atomic stalemate—plus NATO—has become the main protection for Western Europe, we should be emphasizing the nonmilitary potentialities of the organization during this period of nonmilitary conflict.

I hope I have not sketched too dark a picture. Despite the painful indecisions that have often characterized western policy, we have not yet lost much ground in the cold war. The reason I am concerned is that we will lose ground unless we being to readapt our tactics to a new kind of conflict. We have been sitting in our trenches too long. (And I remember, from my service in World War I, how even trenches can become comfortable—at least psychologically.) It is time we got out in the open where there is the opportunity for maneuver. There is also the risk of ambush. But if we keep our mine detectors in front of us, there is no reason why we should not welcome what the military call a more fluid situation.

We all need to reappraise our cold-war tactics. We need not oscillate so much (as we North Americans are inclined to do) between alarm and optimism. We should have neither chips on our shoulders nor stars in our eyes. This is a time for bold but hard-headed statesmanship, for vigor and vision, where negotiation must not be confused with appeasement, and the positive challenge of competitive coexistence must replace the sense of fear and urgency as the binding element in our democratic coalition.

Because our nations are free democracies, we may not be able to regain the initiative as easily as have the new rulers of the Soviet Union since the death of Stalin. We cannot cynically manipulate public opinion as they can. We cannot abruptly switch our policies nor make decisions as quickly as our adversaries, who have no political opposition at home to contend with, or an enlightened and vigilant public opinion.

But this is not an excuse for making no decisions, nor for finding reasons for not taking action when action is called for, nor for pretending that all is going smoothly when in fact we may be headed for some jarring bumps. This is no time for wishful thinking.

I believe that the next few years are as perilous—for the West—as any since the onset of the cold war. I do not mean that a hot war has become more imminent. Quite the contrary. I do mean, however, that there are things to do, and the sooner we do them the better.

What are these things? I am not the kind of neighbor who preaches over the back fence, but I believe that I speak for many of America's good friends and allies when I say that I would like to see the leading power of the free world giving us a strong lead, with our common policy based firmly on the following considerations:

1. Let us keep our military strength as a deterrent to aggression—but let us bear in mind that NATO has a political as well as a military function. It should serve, as it has begun to serve, as a forum for coordinating the policies of all of its member nations and for increasing cooperation between them.

2. The summit conference at Geneva appeared to assume that neither side will resort to nuclear war as an instrument of foreign policy. So let us take advantage of this opportunity to utilize all of our political and diplomatic skill and flexibility now that we are in a position to get out of the trenches.

3. Let us not hesitate to be bold and imaginative. Why could we not press the Russians to abandon propaganda offers and to join in concrete international programs of technical assistance to underdeveloped Asian and African nations? Whether they accepted or refused, such a move would be hailed in a part of the world where Americans are often, though unfairly, suspected of imperialism.

4. We should recognize the fact that the Peiping government, and not Chiang Kai-shek, is in control of continental China and likely to remain so; that there are basic problems to be settled in the Far East which cannot be settled without the participation and agreement of that government. We can negotiate with Peiping when necessary and desirable without implying approval of that regime or without weakening our opposition to communism.

5. We should keep our German policy under continuous examination (flexibility is the word), remembering that it may not be our own views which will be decisive, but those of the German people. We must also be more effective in exposing the falsity of Moscow's insistence that, if only the Germans rejected NATO, free elections for unification could take place.

6. We should encourage arrangements by which more people from the Soviet world can come and see for themselves what life is like in the West; something of which they are abysmally ignorant. This is not easy to do on any acceptable basis. If we try, however, and the Communists refuse, as they appeared in Geneva to refuse, we shall have called their bluff that the Iron Curtain has been raised. But we must not let them take the initiative in this field.

7. We must avoid making bellicose and provocative statements. These are seized upon by the Soviets as proof of our aggressive intentions. They could at the worst provoke a war no one wants. At best, they are grist for the Communist propaganda mills all over the world.

It is the initiatives in Western foreign policies coming from the United States that have, of course, the maximum effect. The rest of us can do little without the leadership and cooperation of the major partner in our coalition. We must work closely together. Signs of disunity or disagreement only serve to make the Soviet leaders more arrogant, more difficult to deal with, more certain of eventual victory.

All this places a heavy burden on the American people. They are going to have to think harder than ever about problems that have long seemed remote to us North Americans.

Furthermore, they will have to carry on this hard and constructive thinking in an election year; a time when, in all free democracies, long-range purposes occasionally tend to be confused with short-range tactics.

But America's impulses in foreign affairs have been so often right, and so seldom wrong; so often courageous and farsighted, so seldom petty and partisan, that her friends, and especially those like Canada, who know her best, have good reason to hope that out of debate and discussion and reappraisal will come the right response to the new Soviet challenge.

Much is at stake. We cannot afford to drift, to improvise, to "hope for the best." For the first time since the cold war started, time is perhaps no longer on our side.

Good Neighbor Policy

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. POAGE. Mr. Speaker, the following article was published on November 14, 1955, on the front page of El Pais, one of the leading newspapers of Asuncion, Paraguay. It refers to the Subcommittee on Foreign Agricultural Operations of the House Committee on Agriculture. True, it was published on the day of the arrival of the subcommittee. I hope that the comments after we were gone were just as favorable, and from the comments of our United States Ambassador at Asuncion, I feel that we can assume this to be the case. Admiral Ageton, our Ambassador to Paraguay, wrote the chairman of the subcommittee on November 29:

We certainly enjoyed and obtained great benefit from the visit of your colleagues and yourself to Asuncion. We especially appreciated the courtesy and promptness with which all of you accommodated yourselves to our rather difficult schedule. * * * We shall always be happy to have a visit from such an agreeable and cooperative group as your committee proved to be.

Many of us fail to understand the feeling of our good neighbors who happen to be away from the great cities and off the highroads. I think that it is ofttimes even more important for congressional committees to visit the less accessible areas than it is to make the usual tours of the great cities, either in South America or elsewhere. I think that it is the especial obligation of the Agriculture Committee to establish contacts with those of our friends who are primarily dependent upon agriculture, and that includes a surprisingly large

portion of the population of the world. Nowhere were we received more graciously or hospitably than in Paraguay. The members of the subcommittee feel that our visit was worthwhile. By the same token, we feel that the sentiments expressed by El Pais are worthy of the consideration of our own citizenship. The article is as follows:

GOOD NEIGHBOR POLICY

Arriving today in our country is a delegation of United States Representatives, members of the House of Representatives Agricultural Subcommittee, who are currently touring various Latin American nations, and who bring a message of brotherhood from the American people. As representatives of the great northern democracy, their presence is a living testimony of the affection of a people who have grown big through industry and through an unbreakable fidelity to the superior standards of right. These illustrious representatives come to confirm once again with their symbolic warm handshake the good neighbor policy that the United States, responding to an historical compulsion, inaugurated and has been improving in their relations with the people of Latin America who are justified in hoping that there can be derived concrete benefits from the world freedom which is in danger of being destroyed through Russian totalitarianism.

These messengers of American good will come at an opportune time, since through their visit they will come to know many aspects of our way of life, which, no doubt, will teach them at the same time new reasons for increasing our relationship between the two countries. They will also see at first hand the Paraguayan environment which the people of the United States cannot appreciate fully through distance, though they are always trying to maintain friendship with the peoples of Latin America. Knowing that these representatives are in the field of agriculture, we feel they will understand better the agricultural problems of the countries of Latin America, countries which are waiting for the solution to their agricultural problems by means of the cooperative spirit established by the Government and people of the United States.

We wish that the short visit of these representatives could be of valuable experiences and give them an opportunity to appreciate our efforts in striving for a better future. In that field of agriculture, the Paraguayan people have enough reason to give thanks for the help given us by the technical cooperation on the part of the Government and people of the United States. We hope that this continuing problem, which, as in the field of agriculture is also fundamental in the field of social welfare among others and which is supported firmly by the friendship between Paraguay and the United States. For all that, we cordially welcome to our country you representatives of the great American people.

Dr. Sparks Points the Way

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. BEAMER. Mr. Speaker, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD an editorial from the Indianapolis News of January 9, 1956.

Dr. Sparks, the retiring president of Wabash College, my own alma mater, helps to voice the thinking of millions of Americans who want to help themselves especially when they want to help themselves:

DR. SPARKS POINTS THE WAY

The future looks brighter for private colleges, in the opinion of Dr. Frank H. Sparks. The dynamic president of Wabash College is retiring February 1 to become chairman of the board of trustees.

The encouraging outlook was noted by Dr. Sparks in his final chapel address. And it has come about because privately financed education has discovered a great new friend in the corporations of America.

Characteristically, Dr. Sparks did not mention his own part in this development. Yet it is in a considerable degree due to his vision and energy that business and industry have begun to share in the support of private educational institutions.

In 1955 alone, 2,500 corporations gave more than $5 million to the operating funds of more than 400 liberal arts colleges.

Fortunately Dr. Sparks will continue to devote part of his time to the encouragement of financial assistance by corporations.

Business and industrial leaders more and more are becoming aware of how much the freedom and progress of the Nation depend on the kind of education provided by the private colleges. Their support is the American way to solve the financial problems of higher education.

This is in bright contrast to the philosophy that demands Federal aid for public schools.

Dr. Sparks views the resurgence of such demands with deep concern. He rightly contends that Federal aid is not the best solution for the schools, for the children, or for the Nation.

He believes the school-housing problem can be solved at a comunity level by the communities themselves.

"Let's have schools fit for all American youth but let's get them the American way," he said in his chapel speech.

This is the attitude that has brought about the brighter outlook for the private colleges. It is an attitude which should motivate Congress. There is no good reason to rush into any gigantic Federal spending program on the public-school level.

To Prohibit the Leasing of Government-Owned or Controlled Land for the Purpose of Farm Commodity Production To Be Disposed of by Sale

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. McGREGOR. Mr. Speaker, I have today introduced a bill which will prohibit the use of real property, owned by the United States, for the production of agricultural commodities which are in surplus and are to be disposed of by sale. I believe that if this bill were enacted, it would be of great help in reducing our enormous surpluses of agricultural commodities. These Federal lands, purchased and owned by the Government, such as, abandoned military posts and reservations, flood-control projects, and so forth, are usually leased at a very nominal sum to individual farmers who then produce on these lands the very crops that are adding to our already great surplus of commodities.

This land could be retired to grass and other soil conserving legumes and then in the event of a future emergency could be put into high crop production. The bill provides that no officer or agency of the United States shall use, or permit the use, of any real property owned or controlled by the United States for the production of agricultural commodities which are to be disposed of by sale. May I further emphasize that this would help reduce our present surpluses and at the same time provide a valuable land bank for the future.

The Rogue River Basin

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of a resolution adopted and signed by numerous organizations in the Roque River Valley of Oregon, including the Grants Pass and Josephine County Chamber of Commerce, Grants Pass Rotary Club, Business and Professional Women's Club of Grants Pass, Grants Pass Active Club, Josephine County Pomona Grange, Williams Creek Farm Bureau, Grants Pass Board of Realtors, Redwood Grange, Rogue River Valley Grange.

The resolution referred to follows:

The Honorable WILBUR BRUCKER,
Secretary of the Army.
The Honorable DOUGLAS MCKAY,
Secretary of the Interior,
Washington, D. C.

DEAR SECRETARY: Whereas the December 22, 1955 flood of the Rogue River caused disastrous damage to the residents of Josephine and Jackson Counties, Oreg.; and

Whereas the United States Corps of Army Engineers has been requested to make a detailed evaluation of the extent of the damage and financial loss caused by the flood; and

Whereas flood control of the Rogue River is essential to prevent a repetition of this disastrous flood; and

Whereas the Corps of Army Engineers of the United States is equipped with the necessary personnel to make a study of the means and methods of preventing similar floods of the Rogue River: Now, therefore, be it

Resolved, That the United States Corps of Army Engineers immediately conduct a comprehensive survey for the purpose of formulating plans for flood control in the Rogue River Basin and that said survey and planning be made in cooperation with the Bureau of Reclamation and all other interested agencies, including the Oregon State Game Commission and Water Resources Board of the State of Oregon; be it further

Resolved, That the survey and planning shall take into consideration alternate methods of flood control, particularly whether the same can be accomplished by tributary dams or must be done by one high dam; be it further

Resolved, That the survey and planning shall give full consideration to cost of con-

struction, methods of payment, attendant benefits, economic, and recreational interests of the Rogue River Basin; be it further

Resolved, That all necessary steps be taken by your respective offices to secure necessary funds to conduct the above survey and planning; be it further

Resolved, That a copy of this resolution be forwarded to the Honorable WAYNE MORSE, the Honorable RICHARD L. NEUBERGER, and the Honorable HARRIS ELLSWORTH and that their cooperation in accomplishing the purpose of this resolution is herewith requested.

The Poisoned Air of Nationalism

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. ADAIR. Mr. Speaker, the following editorial from the Fort Wayne (Ind.) News-Sentinel of December 20, 1955, will be of interest to those who believe that love of country is a worthy emotion:

THE POISONED AIR OF NATIONALISM

The United Nations Educational, Scientific, and Cultural Organization (UNESCO), is the victim of a set of the most remarkable contradictory coincidences we have ever heard of. UNESCO claims that it has no official views on world government and related matters, and insists that it does not tell teachers what to teach.

However, in face of this impassioned disavowal we find UNESCO-financed booklets that express very definite views on world government and related subjects, and their phraseology definitely is directed to teachers. And what is more these booklets somehow, some way, by some strange happenstance, do find their way into the hands of the teachers.

Some of them—12 to be exact—also found their way into the hands of the Veterans of Foreign Wars, and from the hands of some of the teachers at that, and we are indebted to the VFW for reviewing them and annotating some of the rather pertinent parts of them. For instance, under the title "Toward World Understanding," there is this interest-arresting chapter, strangely enough "telling the teachers what to teach." The revealing chapter follows:

"Our children should be educated to live with others and to prepare themselves for citizenship in a world society. So far as the school's part in this is concerned, we may summarize its object as being to secure in the child a sense of loyalties which will enable him later to reach the climax of membership in a world society.

"The United Nations and its specialized agencies is the greatest contemporary effort, on an international governmental scale, to move toward world society. We shall presently recognize in nationalism the major obstacle to the development of world-mindedness.

"As long as the child breathes the poisoned air of nationalism, education in world mindedness can produce only rather precarious results."

Now UNESCO still insists it has no official view on world government and the like, but pray if not official, what kind of a view would you call that expressed in the UNESCO-sponsored booklet when it urges that every child should be prepared for citizenship in a world society, and when the United Nations takes credit for being the great contemporary effort, on an international scale, to move toward a world society. What pray is a world society if not a world government? How could a world society possibly be governed except by a world government?

And pray what does world mindedness connote if not both world society and world government? And if the United Nations entertains no official distinction between nationalism and internationalism (or world government), why in the world does it get itself so exercised over the subject as to bellow forth with such an intemperate conviction as is expressed in the poisoned air of nationalism?

Knowing the United Nations and its UNESCO, as we do, we can understand that it would be greatly shocked that there actually still are people in the world today who glory in the traditions of the land from whence they sprang. We can see how they would hold up their hands in holy horror at the mere thought that, in spite of the valiant missionary efforts of the United Nations, there are still people in the world who are so benighted that they actually believe in such base earmarks of nationalism as a Constitution of the United States, a Bill of Rights, and a Declaration of Independence.

But to go so far as to label such traditions of American freedom and independence, the poisoned air of nationalism, the top one-worlders in the U. N. indeed must be beside themselves in their concern over the grave dangers of these to the world.

The only thing that we can think of that might make them more hysterical would be for a class of American schoolchildren to stand up and sing, "My Country 'Tis of Thee, Sweet Land of Liberty."

That indeed would be the last word in one world blasphemy.

Agrarian Reform in South Italy

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17, 1956

Mr. LEHMAN. Mr. President, a great and good Catholic prelate, Msgr. John O'Grady, executive secretary of the National Conference of Catholic Charities, has just returned from a study trip to Italy, a land which he well knows. He made a special study of conditions in the south of Italy. His observations on these conditions, as described in a letter he wrote to the Washington Post from Italy, which the Post published on its editorial page on January 14, make fascinating reading. It should be read and noted by all who are concerned with the economic and political health of the free world.

I ask unanimous consent that this report on the situation in the south of Italy by Monsignor O'Grady, whom I am proud to claim as an old and greatly valued friend, be printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

AGRARIAN REFORM IN SOUTH ITALY

During the last days of 1955, I toured south Italy again for the fourth time in 5 years. I had already acquainted myself with all the available information in regard to the improvement of the Italian economy during the past 5 years, but over against these steady improvements there remained the stark fact of Italy's 2 million unemployed which had been reduced very little, and also the large number of the underemployed.

As part of the tour I decided to take a new look at as many as possible of the hundred thousand families that had been assigned parcels of land. It was encouraging to see the large numbers of new houses, both in the high mountains and the plains. Their inhabitants had just begun to show the benefits of the agrarian reform. The majority had been in their new homes more than 3 years, a considerable proportion had occupied them for only 3 months.

When one thinks of what all this has been in the countryside, one must conclude that it has been a complete revolution. One hundred thousand families, who heretofore were part of a backwoods feudal economy, were now on their own. The land had been transformed, new roads, new schools, new churches, new health centers, new villages had been built. Farm machinery had been acquired to be used under a cooperative plan.

I have been concerned about the extent to which the Communists might have been able to use the agrarian reform for their own purposes. I have asked many times what was being done to develop a positive leadership among the new settlers. Now such a leadership is in the making. It is a rank and file leadership, based on mutual aid and self-help. One can see the practice of self-help spreading from one to the other. This is the new counter force to communism. It can provide the base for making the south Italian agrarian program into a truly Christian reform movement.

While the people of the United States will be encouraged by the bright side of the Italian picture, they must not fail to look at the dark side. There are large pools of unemployment almost everywhere in south Italy. There are many areas that have not been affected by the agranian reforms. The situation will be improved by the placing of 100,000 more families on the land.

It is quite clear, however, that the completion of the agrarian reform and the new industrial developments will not solve Italy's overpopulation problem. This becomes quite clear as one moves around in village after village. The people will refer to the 300 families who have received parcels of land, and to those employed in new industries; but what of the 2,000 people in a town of 15,000 for whom there is no visible employment and how about the 2,000 who are employed less than 6 months a year?

This will explain the difference between the political status of the Communists and the Christian Democrats. Sometimes the Christian Democrats have a slight majority and sometimes the Communists have a majority. These are still hard facts in every town and village in south Italy.

The people are very sensitive to the situation. They will tell you about the outlets that are provided for their surplus people by Australia, Argentina, Canada, Brazil, and Venezuela. The people in towns and villages were very sensitive to the closing of United States applications for visas under the Refugee Relief Act. It is clear that a considerable flow of emigration must remain as the hope of the south Italian economy.

Italy and its friends throughout the world are looking to the United States to help with south Italy's immigration problems. It can do this by continuing its support of the Intergovernmental Committee on European Immigration. It can help by turning over to Italy the estimated 60,000 visas under the Refuge Act that will not be used by Germany, Austria, and the Netherlands.

It can also help by removing the discrimination against Italy included in the

present Immigration Act, or, failing this, it can extend and liberalize the present refugee legislation. It is important that the United States now take positive steps toward relieving the impact of population in south Italy, otherwise it may be too late.

My 1955 story of south Italy would not be complete without reference to what has been done by American food distribution to relieve poverty and suffering in south Italy. I have heard many references to what it has meant to the unemployed and their families without visible sources of support. The surplus food distribution highlights the work of the Pontifical Commission on Assistance and the Catholic relief services of the National Catholic Welfare Conference.

The resources that the Catholic relief services have placed at the disposal of the Pontifical Commission have contributed greatly to its work and the work of its allied agencies, ACLI and the Junta Cattolica, in their joint contribution toward the creation of a truly Christian social program in south Italy.

More Evidence of Drought Emergency

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. EDMONDSON. Mr. Speaker, evidence continues to come in to my office on the continuing and critical nature of the drought emergency in the Southwest, where many families have been fighting this problem for more than 3 years. The half-hearted, half-way measures of this administration in the direction of a drought program must be supplemented by aggressive action on the part of Congress. I earnestly hope there will be no further delays in final passage by both Houses of the small projects bill, to assist smaller communities and areas with their water problem. I earnestly hope the Congress will act even more vigorously than it did last year in appropriating funds for dams and reservoirs to provide stable water supplies in the drought region.

I pray that Washington will recognize the full gravity of this problem for the millions of people who must earn a living in the distressed areas, and will afford to them the consideration and the generous response to their needs which they deserve.

The following editorial, from one of the fine county newspapers in Oklahoma's Second District is submitted for the information of the House:

[From the East Oklahoma Tribune]

A CRISIS LOOMS

Unless heavy rains visit this area within the next few weeks, Sequoyah County will find itself in the clutches of the Southwest's most costly foe—drought.

Unlike other natural disasters, such as tornadoes or floods, a drought is an invisible, creeping enemy, but its effects are just as devastating as the most spectacular of calamities. What's more, serious drought presents acute problems to towns as well as to farmland.

Locally, less than one inch of precipitation was recorded during any of the last 3 months of 1955. So far, none has been recorded for January and, as this is being written, none is in sight.

Many stock ponds and rural water wells of the county are very low. Grazing lands are little more than stubble in some sections. If moisture is not received within 3 to 4 weeks small grains will be a doubtful risk.

Insofar as our agriculture's plight is concerned, the State and Federal Governments soon must find better ways of protecting the man who tills the soil and raises the livestock. Presently, the economic machinery is horribly out of gear. Now, with the specter of prolonged drought staring our farmers and cattlemen in the face, the lawmakers need to cut governmental red tape and join hands in insisting that the rural areas be rescued.

Advocating more billions for foreign aid may be a noble deed. But when drought or any other disaster threatens or strikes, we say it's high time to apply the brakes and to steer more help back home.

At the local level, something positive can be done.

If the drought continues several Sequoyah County towns, including Sallisaw, will face an acute water shortage by or before the summer months. The whole picture shapes up into a first-rate crisis.

Even with normal rainfall, Sallisaw's water reserve is inadequate. With an increasing population here and also with hopes of landing more industries, it seems imperative that prompt action be taken (1) to safeguard the community, and (2) to insure an ample water supply on a long-range plan. And when it's done let's not forget the urgent need of a filtering system.

Water in abundance is among this section's proudest boasts. But oceans of it could pour past Sequoyah County and serve no useful purpose unless it can be harnessed and utilized.

Three separate groups here are cognizant of the looming crisis. For example, the chamber of commerce president believes Brushy Creek may be the most logical source of supply. The mayor and city manager feel that another Big Sallisaw Creek dam may offer a temporary solution. Our State representative continues to work tirelessly for a flowline across the county as a longer range plan to provide more water for industry and irrigation as well as for municipalities.

None of these men contends that his particular proposal is the best or the only solution. Somewhere within the framework of these three ideas lies the solution to one of the most acute situations in the community's history. Whenever a decision is reached, and it needs to be very soon, it should be met with our all-out backing and support.

Political Cause Celebre

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial written by Mr. Frank Streeter which appeared in the Grants Pass (Oreg.) Courier, January 12, 1955. The editorial which is an interesting statement regarding certain hearings now being held, follows:

POLITICAL CAUSE CELEBRE

Renewed efforts to make the Al Sarena mine in Jackson County a nationwide political cause celebre continues apace.

Monday's edition of the Medford Mail-Tribune carries a front-page story based on Washington dispatches quoting Senator KERR SCOTT, the Senate subcommittee head who is bossing the investigation, with making statements, which are untrue.

Drew Pearson, the Washington "crystal ball" columnist, devotes his entire column in Tuesday's Oregon Journal to the case—in typical Pearson fashion. We'll go into details on that later.

The Mail-Tribune story quoted SCOTT as saying that his Portland hearing "very strongly indicates the Department of the Interior concocted a scheme to deal from the bottom of the deck and pass under the table about half a million dollars worth of publicly owned timber to a private company."

SCOTT did so pop off thusly at one time, but later issued another statement to the effect that, under mining law, the Department of the Interior had no other recourse than to take the course it did, in view of the record before it.

The Medford Mail-Tribune itself had published the latter Scott statement but ignored it in the story Monday.

The M-T story also quotes SCOTT as saying that 15 disputed claims were turned down, and the case reopened in 1953 by the Interior Department.

That statement is untrue.

The disputed claims never were turned down during the many years they were considered by the Department of the Interior under Oscar Chapman.

Chapman simply would not give a decision.

It was Congressman ELLSWORTH'S request to the new administration that a decision be expedited which gave his political opponents something to howl about in the 1954 general election campaign.

It is true that the Bureau of Land Management had recommended disapproval of issuance of patents to 15 disputed claims of the 23 which comprise the mining property.

Now for Pearson's yarn.

Pearson says "the sale of Rogue River National Forest timber to political friends of Representative HARRIS ELLSWORTH" is being investigated.

When he wrote that statement, Pearson knew full well that issuance of a patent to mining claims staked years before there was any market for timber was the subject of the controversy, not sale of timber to anybody.

Pearson also knew that the original mining activity had begun even before there was a Rogue River National Forest. He knew that the the 1872 mining law was in effect and that a legitimate mine showing entitles the claimant to a patent and that with it goes surface timber.

Pearson makes much of the fact that the McDonalds (owner of the mine) wanted not only the underground mineral rights but the above-ground timber rights.

Certainly they did. And so has many another claim owner who eventually qualified for a patent since 1872, under both Republican and Democratic administrations.

As to Pearson's statement about Ellsworth's political friends: The McDonalds live at Trail in Jackson County but they are natives of Mobile, Ala., and lifelong Democrats.

This writer knows of his own knowledge that one of them, at least, was an ardent supporter of Democratic Senator KEFAUVER for President in 1952.

We doubt that ELLSWORTH ever heard of them until they appealed to him as constituents from his district for aid in getting a decision from the Department of the Interior on their application for a patent.

The current hearings in Washington now are centering not on the legality or justifiability of the Department of the Interior's action in granting patent to the disputed claims but to the reliability of the concern which provided the assay certificates on which proof of necessary mineral content was based.

The testimony so far has shown, however, that former Truman administration officials had acted on assay reports from the same firm over the years, including showings of chrome deposits.

The sessions are bitter politically, too, with frequent face-to-face clashes between Republican members and the Democratic chairman, SCOTT. We may expect it to continue that way to the end because the power behind the scene is none other than United States Senator RICHARD NEUBERGER, who attempted to make the Al Sarena case a political issue in his 1954 campaign.

Dulles Deals From Strength

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. DAGUE. Mr. Speaker, it must be a source of great satisfaction to every American who believes in firmness in dealing on the international scene to learn from a recent magazine article the steps taken by Secretary of State Dulles, with the full approval of President Eisenhower, which have resulted in a termination of hostilities or an avoidance of new hostilities in three specific instances.

In short, what Secretary Dulles has reinserted into our diplomatic policy is that which was first proclaimed by Theodore Roosevelt; namely, "speak softly, and carry a big stick."

In the case of Korea, the Reds were unquestionably impressed with the word relayed to them by Nehru that unless they negotiated with sincerity and stopped their senseless shenanigans, we would without hesitation use the atom bomb on their Manchurian installations. In any event, an armistice was agreed upon and the killing was stopped. Score one for Dulles.

In the second instance we encountered the not unusual experience of having the British run out on us at the last minute in the matter of Indochina, and we found them dealing offside with the Reds while we were staging a show of force in the South China Sea. Despite their about-face, however, England and France were able to bargain with the Reds from Dulles' show of strength and an agreement of sorts was reached, not perfect certainly, but avoiding another explosion in southeast Asia and at least rescuing from Red domination a part of Indochina. Score two for Dulles.

The situation in the Formosan Straits is more clear-cut than that in the case of either Korea or Indochina for the simple reason that the position taken by Secretary Dulles and President Eisenhower had the full backing of the Congress as expressed in the resolution—drafted by Dulles—and passed by an overwhelming vote in both Houses. And corollary to the defense of Formosa and the complete freedom of the Formosa Straits was the President's evident determination to defend Quemoy and the Matsus. Score three for Dulles.

As Dulles himself points out, in any program of retaliation there must always be a calculated risk. In his words, "You have to take chances for peace, just as you must take chances in war. Of course we were brought to the verge of war. The ability to get to the verge without getting into war is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost. We've had to look it square in the face—on the question of enlarging the Korean War, on the question of getting into the Indochina war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action."

The test of any nation's foreign policy is the avoidance of war—the ability to walk to the brink—to skirt the edge of the abyss—without plunging in. Three times we have walked to the brink and, walking from strength and with firm resolution, we have avoided war.

The bankruptcy of a nation's foreign policy occurs when it goes to war. Three times within my generation we have seen such collapse; in 1917, in 1941, and again in 1950. In each instance we were not prepared to fight and advertised the fact in advance. Three times we paid for indecisiveness and vacillation in the blood of our citizens.

Thank God, that era of doubletalk is past. From here on we shall continue to walk softly and without a chip on our shoulder. But withal we shall continue to step forward firmly and resolutely. From here on our policies will be formulated in Washington and not in London and Paris. And we shall continue to prayerfully and gratefully acknowledge the leadership we have in President Eisenhower and his Secretary of State, John Foster Dulles.

Llewellyn J. Scott

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. AYRES. Mr. Speaker, Mr. Llewellyn J. Scott is the founder and director of Blessed Martin de Porres Hospice. The average person, after hearing that, might be inclined to say, "so what?" But to the unfortunate man who finds himself without a friend, Mr. Scott and the Blessed Martin de Porres means comfort.

Who is Llewellyn J. Scott? On October 5, 1955, this humble man appeared on the TV program This Is Your Life. Those of you who saw it were impressed with this man, small in stature, dark of skin, slow in speech, strong in his faith in God, and devoted to the belief that there is some good in every human being. You would have been thrilled to share my experience last evening.

I met Mr. Scott, visited with the unfortunate, attended the inspirational service and saw the gleam in Mr. Scott's eye when he said:

If only people will have faith in God. I tell all those who come to me for help: "trust in Him—I can give you only temporary shelter and food."

On entering the Blessed Martin Hospice I was tempted to turn back—15 wretched humans on the stair steps—10 more in the hall—the smell of alcoholic breath—damp clothes. Why were they there? It was time for church. The pastor was present and soon said the rosary. Although I was raised a Methodist, the service was an inspiration to me.

It would be helpful for every member of Congress to visit the Blessed Martin de Porres Hospice, meet Mr. Scott and see first hand the work he is doing for those who find themselves in difficulty. Incidentally, it is only a few minutes walk from the Capitol—38 I Street NE.

Mr. Scott is grateful beyond words to those of you who have helped with the work he directs. He has wanted to thank you personally for the assistance many persons gave him after his TV appearance. You would all have heard from him if he had had a secretary—but there are only two in this work—God and Mr. Llewellyn J. Scott—Mr. Scott thanks you and God will bless you.

The Middle East: Stability Necessary To Prevent Soviet Penetration

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the dangerous situation that exists in the Middle East as a result of the Arab-Israeli tensions requires that our foreign policy be based upon the needs of that area and not upon local political considerations. One need not be pro-Arab or pro-Israeli to understand that if communism penetrates the area that all of Africa and Southeast Europe will be controlled by the Russian imperialist government.

Mr. Speaker, under leave to extend my remarks, I am inserting a letter that I received from a man who has been close to this situation for some time and a few years ago made a special trip to the Arab nations and Israel on a mission of inquiry. Dr. Morris S. Lazaron, of New York City, commands the respect of all students who have an interest in the Middle East. This issue must not become a political football and Dr. Lazaron suggests a plan of action.

The letter follows:

DECEMBER 29, 1955.

Hon. LAWRENCE H. SMITH,
House Office Building, Washington, D. C.

DEAR MR. SMITH: Several years ago I was 1 of 3 men sent by American friends of the Middle East, Inc., to the Arab Nations and Israel on a mission of inquiry. Accompanying me were Dr. Harold Fey of the Christian Century and Mr. John Cogley then of the Commonweal. Our assignment was to get the facts and report them objectively. I represented the Jewish Newsletter.

On our return we presented our findings to the Secretary of State, Mr. Dulles, and to the Under Secretary of State, Gen. Walter Bedell Smith. We urged at that time a policy of impartiality in the Middle East and also that the Government should support efforts more effectively to enlighten American public opinion on the issues. Many things we foresaw have come to pass. With Russia now in the picture, I feel positive action is needed more than ever before if we are to prevent disaster to us and the free world.

In this regard the President's own declaration of impartiality as well as the addresses of Mr. Henry Byroade and the Secretary of State have been substantialy helpful. But despite statements, assurances and suggested programs, the middle-eastern nations drift toward a senseless war which will solve no problems, bring disaster upon themselves and weaken the defenses of the free world.

The American people are concerned because our policy of impartiality is not yet clearly defined. It is important for us to state, for instance, whether we are prepared to support the present armistice lines or the U. N. partition of 1947 or some compromise between them, as a basis of discussion. Once we have made our position clear on this basic issue, subsidiary problems will surely be more amenable to negotiation.

These subsidiary issues are: compensation, the principle of repatriation, equal rights and full citizenship for the Arab minority in Israel, a land bridge between Egypt and Jordan, a Jordan outlet on the Mediterranean, lifting the Suez blockade, abolition of the economic boycott of Israel and the internationalization of Jerusalem.

With all our unselfish approaches to this problem, the main issue—our stand on a compromise between present armistice lines and partition resolution lines—is still obscure.

Meanwhile Arab suspicions and uncertainty as to our sincerity persist. Zionist pressures for preferential treatment for Israel continue. Propaganda beats upon the American people from all sides. We need guidance and leadership in a policy whose clarity all can understand, whose justice all will appreciate and whose wisdom everyone will support.

One thing is certain and our fellow citizens should be told it: the crisis is much larger than differences between the Arab nations and Israel. It must be lifted out of this smaller context and put in its real and true perspective as part of the conflict between autocratic Communist imperialism and the free democracies. If our policy of impartiality were put before the American people in this way and in more definite terms, I believe it would receive the unreserved support of all fair-minded citizens.

I appreciate the constraint which the harassed men in the State Department have put upon themselves. They are not anti-Semantic and do not want to be so labeled. On the contrary, they understand the tragedy of Jewish life which gave impulsion to Zionist claims. They appreciate what has been built in Palestine and sympathize with those who have found a home in Israel. They have no desire to see Israel destroyed. They are often blocked by the intransigence of the Arab nations. They comprehend the far-reaching complexities of the Middle Eastern situation. However, our own national security and the security of the free world take precedence over all other considerations.

It is true the Arab nations and Israel stand before the bar of world judgment in the United Nations and you will probably agree that under no circumstances should we act unilaterally but in concert with England and France and through the U. N. However, the core of the problem for our country lies not in the Middle East but here in the United States. We can make a real contribution if we face the problem here.

I have written the President about this situation and within these terms and have suggested that he address the Nation on this issue if his health permits; if not, that the Secretary of State make such an address.

I likewise suggested:

1. Jewish and Christian leaders should be invited to Washington and told by someone high in authority, that no pressure will change our policy of impartiality and that our Government expects their cooperation as a patriotic duty.

2. Politicians and candidates for office who advise State Department and Government to go slow because of fear of an alleged Jewish vote, should be told how their activities are hamstringing our effective action in the Middle East. If it is blameworthy for some Jewish and Christian leaders to advocate greater help for Israel, Jewish suffering and need make it at least understandable. But it is inexcusable and shameless for politicians to pander to group feelings to corral votes on an issue where our national interest and world freedom are involved.

The issues are so clear no one can accuse the administration of attempting to censor thinking or to stop criticism. We must have the moral courage to do what we think is right and wise.

The destiny of nations in the course of history has often been determined by the hesitation of leadership in time of crisis. But man has achieved his most glorious moments when, with faith and courage, he dared to lift his voice for justice, cooperation and brotherhood, though all the powers of evil were leagued against him.

Any support you may be moved to give will, I think, have good effect at this time.

Respectfully yours,

MORRIS S. LAZARON.

NEW YORK, N. Y.

Article in Life Magazine Quoting Secretary Dulles

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, January 17, 1956

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the RECORD an article written by David Lawrence, which appeared in the Washington Star of last evening. The article, entitled "Dulles' Meaning: Not Bluffing," sets forth a very interesting explanation of the recent article, published in Life magazine, concerning the Secretary of State, and it presents a very adequate and clear defense of the Secretary of State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DULLES' MEANING: NOT BLUFFING—ARTICLES BELIEVED TIMED TO ANSWER ACHESON AND DEMOCRATIC CHARGES

(By David Lawrence)

A warning to the world, and specifically to Soviet Russia, has just been proclaimed by the Secretary of State, John Foster Dulles. It is a warning that the United States, in order to defend itself and its allies, can and will in case of an aggression resist, even using atomic weapons if necessary, and that peace-at-any-price is not the policy of the Eisenhower administration.

This is the true significance of the much-talked-about article in Life magazine giving the views of Mr. Dulles about the brink of war. Instead of being a matter of inept timing, as some foreign critics refer to it or the rewriting of history as the petty partisans here suggest, the revelations constitute a timely and constructive contribution to the worldwide discussion of the best way to achieve and maintain peace.

The facts contained in the Life article are correct and the magazine is to be commended for its enterprise in bringing the subject matter to the attention of the world at this time. For, while there is in the article one brief quotation which might better have been revised for clarity reasons, the essential points are historically true and realistic.

The main thesis, that the United States has not been and is not bluffing and will go to war if challenged, is affirmed by Secretary Dulles, as well it should be. For there is no more certain way to bring on war and to encourage the aggressors to take fatal chances than to let them believe America is bluffing when issuing warnings that there will be massive retaliation in the case of attack on a broad front or selective retaliation in the event local wars require it.

This correspondent can say of his own knowledge, based on talks with high officials of France and the United States at Geneva in 1954, that the article does not rewrite history and that British critics are merely repeating now their version of what happened in the conferences in London at that time over policy in Indochina. This was then and still is at variance with the American version. It was a difference in method of approach rather than objective.

But what Mr. Dulles emphasizes is that, despite those differences of opinion, the world has since benefited by those very differences. It was possible, for example, for Sir Anthony Eden, then Foreign Secretary, to say privately at Geneva in May 1954 to Chou En-lai, Foreign Secretary of the Red China Government, that while the British had not as yet agreed to go along with a common front in Indochina, he knew the United States meant business. It was made clear that if military intervention did come, Britain could not afford to remain aloof. This hitherto unpublished fact might well have been included in the Life article.

To put it another way, the Dulles effort to get France and Britain to agree to united action if the Red Chinese armies openly intervened in Indochina, as they had in Korea, was being discussed then as either a bluff or the real thing and, to the credit of Mr. Eden, it must be said, he reflected accurately in private talks with the Red Chinese the American view and that was the main reason Chou En-lai was impressed and a truce in Indochina resulted.

Now it so happens that the United States didn't agree to the partition of Indochina itself and denounced the terms of the settlement; in fact, never has to this day subscribed to those terms. But the situation when Mr. Dulles interposed his plan in 1954 was not whether the terms of a truce would be acceptable or unacceptable in themselves but whether Red China would agree to any truce at all, and instead gobble up all of

Indochina because she thought the French were too weak to resist and neither Britain nor the United States would intervene. It would have been easy for the armies of Red China to capture all of Indochina—as they were about to do when the Dulles warning saved the day.

There is in the Life article one overcondensed quotation by Mr. Dulles, which was unfortunate. He is quoted as saying: "The ability to get to the verge without getting into the war is the necessary art. If you cannot master it, you inevitably get into war."

Now this is an ambiguous sentence and might well have been revised if there had been time. It could mean that there is artifice about diplomacy and that going up to the edge is really a matter of intentional bluff. But the Secretary did not mean this at all. What he had in mind was covered in the sentence: "You have to take chances for peace, just as you must take chances for war."

Mr. Dulles is eternally right—that miscalculation by the aggressor is what brings on war. This error by the Kaiser in 1914 and by Hitler in 1939 caused a World War in each case. The Dulles concept—shared by President Eisenhower—is that bluffing leads to war and you have to show clearly you will fight in order to prevent the enemy from attacking. Appeasement never pays.

Why did Mr. Dulles authorize the article at this time? For two reasons—one the recent article in Harpers magazine by former Secretary of State Dean Acheson, which in effect accused the administration of bluffing and the other was a desire to inform the world that the Democratic Pary spokesmen have not been speaking for America in hinting that this country has adopted a policy of bluff.

Mr. Dulles is entitled to the right to reply to Mr. Acheson's unfounded attacks. That's why Mr. Dulles was receptive to the idea and that's why the article in its introduction says, "Dulles' direction of United States foreign affairs is under attack these days as the presidential campaign gets under way," and that the "new information" made available to James Shepley, chief of the Washington bureau of Time-Life, who wrote it, "bulwarks the substantial case to be made for Mr. Dulles."

Christmas Cheer for Escapees From Communism

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. SADLAK. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert a letter which I received on December 15, 1955, from the Right Reverend Monsignor Felix F. Burant, president of the Polish Immigration Committee, with offices at 25 St. Marks Place, New York 3, N. Y. It brings a most impressive report of the wonderful humanitarian efforts to bring cheer for Christmas 1955 to escapees from communism, who are presently in free countries of Europe. The letter follows:

Hon. ANTONI N. SADLAK,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SADLAK: We think you will be interested to know that from our very limited funds we have managed to transfer to "hard core" cases in Europe for Christmas $1,750 and 2,250 food crusade packages through CARE, apportioned as follows:

Germany: $1,200 and 2,050 packages to be distributed by the Union of Polish Refugees in Germany (22a) Velbert (Rhld), Schliessfach 291. Out of the above 2,050 packages, 250 packages will be forwarded to Austria, which country is not serviced by CARE.

Austria: $200 and the above-mentioned 250 packages. The distribution there will be made by the Association of Poles in Austria, Salzburg, Postfach 23.

Italy: $100 and 200 packages which will be distributed by Reverend L. Rubin of Archbishop Joseph F. Gawlina Committee for Refugees—Comitato Polacco collegate alla Pontificia Opera di Assistenza, via Vecchiarelli 32, Roma.

Sweden: $200 sent to the Council of Polish Refugees in Sweden, 30 Jungfrugatan, Stockholm.

Denmark: $50 to two Polish refugees, recent escapees.

We are taking this opportunity to give you an account of our accomplishments up to December 1, 1955, as far as assurances are concerned:

Great Britain: 408 assurances for 840 former Polish soldiers.

Germany: 355 assurances for 702 Polish refugees.

France: 118 assurances for 229 Polish refugees.

Belgium: 54 assurances for 170 Polish refugees.

Sweden: 30 assurances for 43 Polish refugees.

Austria: 24 assurances for 46 Polish refugees.

A number of assurances were sent for refugees in Holland, Denmark, and Norway.

In the total of the aforementioned assurances there are 114 for 148 Polish escapees.

We are quite confident that 1956 will be even more productive in this respect.

I thank you, dear Congressman SADLAK, for all you have done for us in the past. Your friendship and sympathy is warmly felt and with best wishes to you for Merry Christmas and a Happy New Year, I am,

Sincerely yours,
FELIX F. BURANT,
President of the Polish Immigration Committee.

It Makes Sense

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. OSTERTAG. Mr. Speaker, the reaction to the President's farm program indicates that, at long last, we are on the right track. The program was a sober appraisal of a complex problem that requires complex remedies. It takes cognizance, however, of a fact as old as the free-enterprise system—namely, that overproduction destroys markets, whether in agriculture or commerce. And it lays down a blueprint for bringing supply and demand into balance, while conserving and enhancing our soil resources and sustaining farm income. The President's program contains no political razzle-dazzle, but, as the Buffalo Evening News commented in an editorial on January 10, it makes sense.

Mr. Speaker, under leave to extend my remarks, I include in the RECORD the News editorial, together with an editorial in a similar vein from the Democrat and Chronicle, of Rochester, N. Y., also of January 10:

[From the Buffalo Evening News of January 10, 1956]

IKE'S FARM PROGRAM

President Eisenhower's 8,000-word special message outlining a new farm program was longer—infinitely more detailed and complicated—than last week's state of the Union message. But its gist, it seems to us, can be boiled down to something like this:

1. While the rest of the economy has experienced unparalleled prosperity, the farmers have been left out in the cold. Thanks to the hangover of mountainous surpluses—due to wartime production incentives unwisely continued too long afterward—our American agriculture is the perfect paradox of poverty in the midst of plenty. Despite record production, farm incomes have been on the skids for 5 long years.

2. It is therefore an economic and political must of the highest urgency that the paradox be corrected, and that sound ways be found to let the farmers begin partaking of prosperity with the rest of us. The President admits that the 1954 flexible price-support law has been smothered under surpluses, and new action is imperative.

3. Whatever is done on a temporary basis, however, must be geared to the fundamental long-range aims of reducing surpluses and widening markets. No return to the discredited policy of high, rigid price supports—which merely encourage production, discourage consumption, and pile up bigger and bigger surpluses—can be countenanced.

4. To attack the twin bugaboos of an overexpanded farm plant and a depressing hangover of vast accumulated surpluses, a new billion-dollar soil-bank plan is offered. This will feature two kinds of incentive payments to get farmers to reduce acreage: (1) An acreage reserve for crops in greatest oversupply (wheat, cotton, corn, rice). Farmers who agree to put a percentage of land in this bank can either collect what it would have produced from the surplus stocks in Government warehouses, or they can be paid the cash equivalent. (2) A true conservation reserve. Vast acreage of marginal land that should never have been put to the plow was planted under the pressures of war; the President wants ultimately to get some 25 million acres out of cultivation and into a conservation reserve. He proposes that the Government pay a fair share—enough to encourage broad participation. He would put $350 million into this program the first year.

5. These soil-bank proposals are only part of a complex plan to deal fundamentally and urgently with the farm surplus and overproduction problem. Other basic features involve continuance of the flexible price-support program (with a limit suggested on the total aid that can go to a single farm), stepping up of the drive to broaden both foreign and domestic markets for accumulated stocks, special aids for low-income farmers, and more research to develop broader agricultural markets.

The President had declared in his state of the Union message that this vital area of farm policy must not become a political football field, since too much is at stake for all of us. The only thing political that we detect in his program is a recognition that immediate action to halt the downtrend in farm incomes is a political necessity, as well as an economic one. How well his program will work to achieve that aim, we can't say, and we doubt if he can until it has been tried. The gist of it, however, makes sense to us—and we suspect a big majority of the Nation's farmers would rather give it a try than revert to the tested and discredited

policy of high, rigid price supports which solved nothing and brought American agriculture to its present condition.

[From the Rochester (N. Y.) Democrat and Chronicle of January 10, 1956]

SOUND SOIL POLICY

Cornerstone of the amendments to the farm program which the President has sent to Congress is the "soil-fertility bank." Farmers would be encouraged on a voluntary basis to retire cropland from production temporarily and receive at least part of an incentive payment "in kind" from Government-owned surplus commodities.

All along, this newspaper has said that the No. 1 farm problem is the huge stock of price-depressing surpluses. We have looked with favor on the soil-bank plan if it would do these two things: Reduce production of surplus crops, and get rid of present surpluses. In other words, make use of the surpluses to solve the surplus problem.

The President rightly blames overproduction of some commodities on continuation of production incentive payments too far into the postwar period. The flexible price supports which became effective in the past year are designed to bring about some adjustment, but it is a slow process. Now a bold attack would be made to increase farmers' returns and at the same time alleviate the price-depressing influences.

As we have said, unmanageable surpluses are no good to anyone and there is danger of spoilage. Payment of incentives in the form of negotiable certificates for surplus stocks has the advantage of getting rid of stored crops and reducing cash payments to farmers for retiring cropland.

The President promises new steps to move surpluses in export and domestic markets. He would speed up plans to aid low-income farmers, refund Federal taxes to farmers on nonhighway gasoline, and increase by 25 percent research funds to find new uses for farm crops and new, useful crops to partly replace surplus crops.

What happens to the President's recommendations depends upon Congress. Last year Congress refused an appropriation to get the rural development program started. Petty politicians and representatives of special interests are yet to be heard from. But from where we sit it looks as if the administration has come through with proposals which should go a long way toward improving the economic outlook for farmers.

Veterans Regulations

SPEECH
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 16, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 1614) to amend the Veterans Regulations to provide an increased statutory rate of compensation for veterans suffering the loss or loss of use of an eye in combination with the loss or loss of use of a limb.

Mr. ADAIR. Mr. Chairman, I yield such time as he may require to the gentleman from California [Mr. TEAGUE].

Mr. TEAGUE of California. Mr. Chairman, I want to associate myself with the remarks of the members of the House Committee on Veterans' Affairs who have spoken in behalf of the bill, H. R. 1614. The bill is entirely meritorious and merely provides for a well deserved increase in compensation for those veterans who unquestionably are seriously disabled as a result of their efforts on our behalf in defending our country.

In the Nation—One More Very Curious Official Incident

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks, I should like to include a column written by Arthur Krock from the New York Times of Friday, January 13.

I trust that there is no necessary significance in the date of this article, for it appears that once again our Secretary of State has paused long enough in his travels to get his foot in his mouth.

Of course, it is I and not Mr. Krock who states the case so bluntly. Mr. Krock merely gives the story of Mr. Dulles his—Mr. Krock's—customary factual accounting. The conclusion is as clear, however, as any reading of the record can make it.

I am pleased that Secretary Dulles has received a big play in Life magazine. It helps us keep track of the actual spokesman of this Nation in foreign affairs because sometimes it appears that an eager administrative advocate by the name of Stassen fancies this position. Personally, I wish that Secretary Dulles would pause longer before he makes his great pronouncements. If he would follow this suggestion, it is my feeling that the Nation, and Mr. Dulles as well, would have less need of "agonizing reappraisals." Secretary Dulles could hardly have chilled our friends and partners more by taking them into one of his customary cold swims—and surely Pravda has not had such good copy since the "unleashing" days now—it is hoped—of distant memory.

The article follows:

IN THE NATION—ONE MORE VERY CURIOUS OFFICIAL INCIDENT

(By Arthur Krock)

WASHINGTON, January 12—The article in the current issue of Life magazine in which Secretary of State Dulles is directly quoted as asserting that bold and timely warnings by this administration that it would use atomic weapons in the Far East had thrice forestalled war in that area "at the brink" bears all the familiar marks of high official cooperation and approval before publication. The leading detectors of these marks are the Washington reporters.

Therefore they heard with what can politely be termed total incredulity the replies Secretary Dulles made yesterday to questions about the Life article. For these invited one of two extraordinary inferences. The first was that a reporter and the editors of a mass-circulation magazine were reckless enough to put out such an article without checking it for approval in an authoritative quarter (for instance, Dulles' assistant in charge of his press and public relations, Assistant Secretary McCardle). The alternative inference was that the functionary who did the checking, though the article quoted Dulles extensively and was replete with foreign policy revelations and claims certain to be politically provocative, made slight mention of it (if any) to the Secretary.

He said specifically, in answering questions about the article, that he had not "read" it, had not "seen" it, had no "precise recollection" of what he may have said to the author, and "would hardly say it was an exclusive interview" because he had talked to a great many reporters "in one way or another at one time or another."

If he had not seen the publication (which, presumably, means it had not come under his eye in the mimeograph copy that Life distributed widely in Washington Monday or in the current issue of the magazine), of course he had not read it either when he met with the newsmen yesterday. Accepting those words as statements of technical fact did not, however, induce his audience also to accept the inference that the article had been published without authorized official imprimatur.

POSSIBLE ASSUMPTIONS

But the Secretary indicated such total unfamiliarity with the contents of an interview in which he was freely quoted as to leave for evaluation the second inference, that, though his public-relations aides knew the matter would certainly arise at the press conference, they took no steps to acquaint him with it. That is possible if it can be assumed that the Secretary was too busy recently to find time to be briefed on this particular subject, or simply declined to allow his aides to bring it up. But, considering his lively interest in what appears about him in print, considering the reaction this article was sure to evoke, and further considering the risk that would be taken by an aide who passed such an article without advising Dulles of its contents, both situations are difficult to conceive.

So Dulles' responses to yesterday's questions, even before he dismissed the subject on learning that the article was not to be released until hours after the press conference was held, enter the category of official mysteries. It is known that the material was submitted to appointed checking authority in the State Department before it was circulated by mimeograph or published in the magazine. It is on the record that the Secretary had not seen, and hence not read, the interview before he was asked about it. But how and why are facts that remain in the realm of the curious and the unknown.

Dulles was virtually alone in unfamiliarity with the publication by the time his news conference assembled yesterday, so far as the political, press, and diplomatic communities in Washington are concerned. The Capitol buzzed with the public attribution to him that the President and he three times had averted war for the United States (a) by notice to the Communist powers that in certain aggressive circumstances we would attack Manchuria, and make aircraft carriers ready to bomb South China ports, and (b) through the Senate resolution drafted by Dulles that authorized the President to take any military course he thought necessary to defend Formosa. In two instances the use of nuclear weapons was specifically mentioned in the warnings; in the third it significantly was not excluded.

These revelations—or clarifications of what the executive department previously had but barely indicated—had atomic effects of their own. Diplomats of European nations were shocked and alarmed that the threat of nuclear war they dread had been revived, and in this casual way. Democrats in Congress, noting that Dulles was loaded with praise in an article (full of his quotes) as the boy on the burning deck whence all but he and the

President had fled, resented his hero portraiture and angrily classified it as a 1956 Republican campaign document. The shudders of the self-styled neutrals could be heard from New Delhi to Belgrade. And hard things were said about the timing, just before Eden's visit here, of an open complaint attributed to the Secretary that the British had reneged on the United States at a critical time.

Path to Chaos

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Path to Chaos," which appeared in the January 9, 1956, issue of the Park City Daily News of Bowling Green, Ky.

The editorial is as follows:

PATH TO CHAOS

Hard as it may be for the free world to believe, the French have managed to replace an unstable government with an even less stable one.

One might fairly say of the general elections that the political irresponsibility which more and more has become a hallmark of France is now enthroned.

The extremists of left and right have gained at the expense of the moderates, neither of whose two coalitions is strong enough alone to govern France.

The center-right group headed by outgoing Premier Edgar Faure, which led the polling, must find some means of joining with former Premier Mendes-France's center-left group if the French are to have a government at all.

Certainly these rival alinements are not going to get any help from the Communists or the newly formed rightist party of Pierre Poujade, fiery antitax crusader.

The Reds, who had 94 seats in the last assembly, gained more than 50 additional this time and are the strongest single party in France. Their gains should be treated with some caution, however.

Under a rigged election law, other parties put up many joint tickets in the 1951 election to pool their strength and beat Communist entries. So the Reds had proportionately fewer seats than their earlier vote normally would have given them. This time there was no ganging up, and Communists won seats they were squeezed out of before.

This is, of course, small consolation to those hoping for stability in France. What counts in the end is the Communists' power, especially in company with the surprising Poujadists, to hamstring effective government in a nation looked to as a key link in the chain of Western defenses.

Poujade, a small-town bookseller, exstevedore, and exsoccer player, has brought the rough and tumble of the waterfront and soccer field to a political movement that grew from a shopkeepers' war against the tax collector—traditional symbol of evil to the individualistic provincial Frenchman.

Using every demagogic device in the bag, and a few new ones he has raced about France converting tax rebels into political supporters. With violence as an avowed political tactic, he cut a big enough swath to capture some 50 seats—more than twice the wildest forecasts—in the new assembly.

That a 34-year-old political nobody could make such strides with no platform and no program except negative opposition to everything and everybody is perhaps perfectly symptomatic of what ails France politically.

France today seems not very far from the point where all the power groups in the country will checkmate each other, leaving none able to govern. Since this evidently is the goal of millions, possibly such a result is inevitable.

But if it is, so is the final decline of France as a world power. Tragic to tell, there is little enough left of that power now. With irresponsibility run rampant in the January 2 elections, the crucial blow may have been dealt.

Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. KIRWAN. Mr. Speaker, January 22 marks the 38th anniversary of the proclamation of Ukrainian independence. The centuries-old struggle for freedom and independence on the part of the Ukrainian nation constitutes an impressive chapter in the annals of human history. This indomitable will for national freedom clearly crystallized itself in the old Ukrainian Kievan state from the ninth to the fourteenth century; in the Ukrainian Kozak state from 1648 to 1783 and more recently in the Ukrainian national Republic from 1917 to 1920.

As one of the first victims of Soviet imperialism, Ukraine, since the very inception of alien Bolshevik tyranny, has proved to be the Achilles heel of the Soviet Union.

The destruction of its national churches, the horrible manmade famine of 1932–33, the mass murder at Vinnitsia in 1937–39, and the vast purges and deportations decreed by Moscow have failed to exterminate the spiritual and moral resources for national freedom in Ukraine. The historic capital of Kiev, with centuries of rich tradition and culture conserved in its vaults, still symbolizes today the indestructible hope and passion of a nation destined to be sovereign, free, and independent.

During the Second World War millions of Ukrainian patriots seized the short-lived opportunity of the German invasion to realize once again this hope, only to be frustrated in their valiant efforts by the scourge of another imperialism. But this unbending will continues to be strong and powerful in the epic struggle of the Ukrainian insurgent army (UPA) against the evil forces of Soviet imperialism, and in the resistance of the Ukrainian people.

As a nation of over 40 million people—the largest non-Russian nation behind the European Iron Curtain—Ukraine stands as one of our most important and natural allies in the eventual defeat of Soviet imperialism. Its historic claim to national freedom and independence cannot be ignored. Its place as a sovereign and equal partner in the mutual construction of the free Europe of tomorrow must be assured, if the foundation of permanent peace among freedom-loving nations is to be impregnable.

Dean Sayre Is Critical of UNESCO

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the Appendix of the RECORD a news item from the January 16, 1956, Washington Post, headlined, "Dean Sayre Is Critical of UNESCO: Churchman Sees Missionaries Doing More Effective Job Winning Friends."

The article does not go into much detail of the dean's speech. I am anxious to read all that he said because it is about time that the church leaders of this country brought their lights out from under the bushels which have been hiding them. For 6 years I have been saying in one public speech after another that UNESCO and point 4, desirable and helpful as they were, were nothing new to Americans and other enlightened societies of the world. They were merely Government programs attempting to do what our great missions had been doing for many decades, indeed for over centuries. Indeed, I resented the propagandizing that went along with these programs which overshadowed the great missionary work in the very same fields, medical missions, educational missions, sanitary missions, missions to teach economic skills, and so forth.

I pointed out that here, as in the field of economic endeavor, political government was moving in to take over private enterprise—for, indeed, in this regard our missions are private enterprise, just as our community chests are private enterprise as contrasted to Government endeavor.

I pointed out that just as in the fields of economic endeavor political government did not lend itself well by its very structure to performing these functions, so in the field of missionary work, political government was not well suited to perform these functions.

The reasons were quite clear to me. If political governments tried to do the job they perforce had to deal with and through the political government which existed in the society they were trying to help. In all too many instances the political government was on the backs of the peoples in the society and many of their basic troubles lay with that government. Yet by channeling economic, educational, medical, or any of these aids through the political government, to a large extent this assisted in keeping that particular political government on the backs of the people. Indeed, the Comintern made much of this argument. It pointed out to the peoples we were trying to assist through these programs that we were keeping a particular political government on their backs and maintaining the status quo. The missionary programs on the other hand were essentially person to person rather than government to person or government to government relationships.

Second, the missionary programs which were most effective were those

where the persons engaged in the work were living with the people they were trying to help. To subject oneself to the living conditions of a backward people requires an attitude of humility and dedication to service which is most often found in our great religious institutions. The persons employed by political government, on the other hand, are motivated more by the wages they will receive and the conditions under which they will live, the promotions they may expect, and so forth. And this is not meant to be critical of them, because government service in relation to employment in private enterprise requires a certain amount of dedication. However, security plays a great role in choosing government service as a career. The result has been, as might be expected, those who have been administering the UNESCO and point 4 programs do not usually live with the people whom they are trying to help. I want to point out there are many splendid exceptions to this generality, but these exceptions would work well under a missionary program—missionary programs are not all attached to churches, some educational missions have been set up by educational institutions, many health missions by private individuals. Furthermore, the Government programs conducted by these people are almost without exception the least costly and the most effective programs toward gaining real friends abroad.

I will never forget the time I inadvertently came across an item in the foreign-aid budget for 100 air conditioning units to be sent to a spot in India. Certainly it was hot in that section of India but I wondered just how these point 4 persons were going to work with the people of India in air-conditioned offices. No; they were not for hospitals.

In 1954 I successfully sponsored an amendment to our tax code which gave an additional 10 percent deduction for donations to medical, educational, and religious institutions. I did not have in mind our domestic institutions, although I was happy to know they would benefit also. I had in mind a little discussion I had with a Congregational minister after I had spoken before a symposium held at his church along the lines of this present talk. He said to me: "This is all well, but the problem is so vast that some source like the Federal Treasury is necessary in order to meet the need." Well, it is true that the problem is great but I do not think money will solve it. Money will help if channeled into the proper places. This tax credit, as far as I am concerned, was to help a little in getting money channeled into our private missions so we could get friends abroad.

Essentially the problems of our would-be friends abroad will never be solved until they take from the limited success experienced in our society the things that have produced this success, and eschew the things that in our society still block our advancement to greater success. These things can neither be sold nor given away. They can be taken freely, however. It is merely a philosophy of life * * * the golden rule applied to modern economics with proper attention paid to the parable of the three servants. If only our missionaries and Government servants engaged in work abroad knew just a little more about the economics of the American society they would be less intent on selling socialism abroad in the belief that because of its professed love of the people it did love them. Which son did the will of his father—the one who said: "I go, sir," and went not—or the one who said: "I will not" but went? Do men gather grapes of thorns, or figs of thistles?

The article follows:

DEAN SAYRE IS CRITICAL OF UNESCO—CHURCHMAN SEES MISSIONARIES DOING MORE EFFECTIVE JOB WINNING FRIENDS

(By Kenneth Dole)

The Very Reverend Francis B. Sayre, Jr., dean of the Washington Cathedral, declared yesterday that UNESCO was inferior to church missionary work in promoting world friendship.

Relating how he once attended a conference of the United Nations organization, he said he came away with a "poignant" sense of futility.

"All those ambassadors of culture, those emissaries of art and learning and national handicraft * * * were ablaze for the cause of mutual understanding and peace," he said, " * * * yet the drawstring that could draw all together was lacking, and all I heard at the last was aimless talk."

A generation ago many of those at the conference would have been missionaries, he said, "but now religion is a word that is strictly taboo at their meetings."

In the second of 2 sermons on church missions, Dean Sayre told how Episcopalians could, through the Overseas Mission Society, promote the spread of the Christian religion, which, he said, "has done a far more effective job of winning the friendship of others in the world than any secular institution."

The dean used his text, "I Will Go," to point up the sacrifice of the 5 missionaries who were killed in Ecuador last week by Indians . One of them, the Reverend Nathaniel Saint, was the son, he said, of Lawrence Saint, the stained-glass artist who made the Cathedral's rose window.

"All honor," said the dean, "to those 5 young men, on whose lips the Word was strangled; for in their deaths they bore a nobler witness, not so much to God's last judgment, as to His forgiving love."

Outlook Brighter for King Coal

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Outlook Brighter for King Coal," which appeared in the January 9, 1956, issue of the Owensboro Messenger, of Owensboro, Ky.

OUTLOOK BRIGHTER FOR KING COAL

Senator HARLEY KILGORE'S plea for Government aid to economically distressed countries of West Virginia is the story of depression in the coalfields. It is a story that Kentucky saw repeated in the coal-producing areas of this State. Both in the far-eastern part of the State and in the western coalfields conditions existed in startling contrast to the general prosperity.

Company houses often substandard originally went unrepaired; company stores forced to close; children skimpily dressed and undernourished looked to the free-lunch program at school to help hold body and soul together. Altogether the outlook in those counties whose sole source of livelihood had been the mines looked dark. The expanding use of gas in heating and in industry seemed to spell the doom of these communities whose soil, generally, was so poor as to offer no hope of surcease there.

But within the last year a brighter outlook for the miner and his family has opened up. Production of coal made a strong recovery in 1955, with production figures about 500 million tons as compared with 392 million in 1954. One of the reasons for this steady and increasing market is the growth and expansion in the steel market with its demand for more high-grade coal.

With the use of coal at home becoming greater, there has also been a growth in the export of coal. Exports tell us that the consumption of coal in Europe is steadily growing. All of this has stimulated the coal industry. With the research in synthetics, with coal as a base for all types of products from medicine to perfume, from jewelry to fabrics, the future of coal should brighten considerably from here on out.

Needless to say, along with experimenting with products from coal there has also been an improvement in the methods of mining, with resulting greater safety, less waste both of coal and of manpower.

In discussing the rosy future ahead for the coal industry, S. M. Cassidy, vice president of Pittsburgh Consolidation Coal Co. also called attention to the improved labor relations that has taken place in recent years.

Problems of the Midwest Farmer

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks, I ask unanimous consent to include in the CONGRESSIONAL RECORD a letter I received from Quincy I. Rice, vice chairman of the Keokuk County (Iowa) Chapter of the National Farmers Organization. Mr. Rice has given considerable thought to the problems of the Midwest farmer and has arrived at some sound conclusions. He analyzes the various phases of the situation and presents suggestions worthy of our consideration. The problem of the small farmer is acute and we are not going to solve it by avoiding it. The farmer deserves a fair share in the Nation's economy, and I feel sure you will agree with Mr. Rice that, under existing circumstances, he is not getting it. I hope all Members will take the time to carefully examine Mr. Rice's letter.

The letter follows:

DELTA, IOWA, *January 10, 1956.*

Mr. KARL M. LECOMPTE,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I have seen and read a draft of the bill you are presenting to

Congress in behalf of the hog producer. I appreciate your effort but I feel that you do not have the whole picture of the situation in mind.

Meat production in the United States has increased in 1955, 14.4 percent over the average of the preceding 5 years. At the same time per capita consumption has increased 10.6 percent, which makes a net increase of 3.8 percent. However at the same time our population has increased at least 8 percent during the same 6 years, 1950 through 1955. These facts together with the fact that we have 14 percent less meat in storage than 1 year ago prove that all this talk of surplus meat is pure bunk.

Your plan to reduce hog production by 20 percent would reduce our total meat supply by about 8 percent as hogs make up about 40 percent of our meat supply. Furthermore a flat 20 percent cut to all farmers would be definitely unjust because the increases in pork production we have had in the past few years have been caused by less than 5 percent of the farmers. Some of this same 5 percent have tripled their hog production.

The problem of grain surpluses is a little different in the fact that a surplus does exist, but the present surplus of grain is only enough to insure the Nation a stable grain supply in event of a drought such as we had in 1934. I feel that the maintenance of such a supply of food is as vital to our national defense as arms or any other phase of the defense program and at a lesser cost than other phases of this same defense program. I do feel that some production controls should be put in effect to see that this supply of grains remains at about the present level and does not get larger. The soil bank plan has some merit, however, I feel that our old soil conservation plan could be practiced more vigorously and with strong penalties put on the man who abused his land. Furthermore land taken out of cotton, wheat, and tobacco should not be put in corn or other feed grains and vice versa.

The farm-parity problem of today is not being caused by overproduction nearly as much as it is by the greed of industry and by that I mean the owners of industry. Certainly labor costs have risen, mostly because with the high profits in industry, labor feels that part of that same profit belongs to them, and justly so. If I were making a 20- to 25-percent profit on my investment over and above my own wages and all expenses I surely would feel that any employee of mine would be entitled to a raise in salary. In a great many cases these same wage increases have not increased labor costs because of speedup changes in processing.

The present flexible price-support program is a joke as far as the livestock producer is concerned, like a rubber crutch for a man who is crippled, it just won't hold him up when he needs it. Lower farm prices do not tend to lower production, they do just the opposite. The farmer has fixed expenses the same as any other segment of our industry and he must meet those expenses or he must go out of business. These expenses are paid with the money he receives for his products. If 50 hogs won't pay the bill he must raise more and the same applies to cattle. It is a vicious cycle and if it isn't stopped it's going to be worse and even fatal for our whole economy.

The pork-buying program of Mr. Benson is not helping the farmer or the consumer, only the packer. As you know if you have examined the facts as I have, we have no surplus of meat, so meat taken out of the consumer market will tend to raise the market to consumers and reduce consumption.

As you know, hog and cattle prices have dropped in the last few months, hogs about 35 percent under the average of the last 5 preceding years and cattle almost as much. At the same time meat to the consumer has not come down very much if any, and in some cases is higher. Again industry is being a "hog," it's not the farmer.

Some people say: "Anyone can be a farmer, he doesn't have to know anything." I resent that statement. A farmer, in order to succeed, must have at least a working knowledge of more skills and be able to use them, than any other worker in the world. He must be a pretty fair mechanic and understand the working principles of many machines, he must be a pretty fair carpenter, he must be able to understand the simple properties and elements of electricity, he must have a good knowledge of livestock diets, care, and diseases, he must be enough of a soil chemist and agronomist to know what crops to plant and what fertilizers to use, he must be able to keep a set of books, he must have overall good judgment in regard to weather, harvest time, practicability of farming methods, and others. And last but not least he must be physically able to work 16 hours per day if necessary in all kinds of weather.

Some people resent the fact that the farmer has an automobile. Do you know of any class of people other than perhaps a traveling salesman, doctor, or veterinarian, who has more need of an automobile? Within the last few months Wallaces Farmer made a survey of farmers' automobiles in Iowa with this result: 72 percent drive Fords, Chevrolets, or Plymouths, the lowest priced cars, and the average age of all farmer-owned cars was 5½ years.

To give you an idea who the next segment of our economy to hit the skids will be—take a look at the farm-machinery industry. Laborers are being laid off now in large numbers and more of them will be. Farmers can't buy machinery if they can't even pay their operating and living expenses.

I do not resent the fact that many people are wealthier than I. What I do resent is the fact that through the power given them by this wealth, so to speak, that they try to take away what little I have, when they already have more than they need. Domination by economic power is just as wrong as domination by physical power. Yes; we have laws to protect us from physical power or greed but hardly any to protect us from economic power or greed. Overindulgence in economic power breeds communism, and we certainly don't want that. Economic power of the few must be curbed if we are to succeed and survive as a nation subscribing to the principles of justice and equality for all, as put forth in the creed of our forefathers who founded this great country.

The farmers do not expect to be held as wards of the Government; we only want what is rightfully ours, 100 percent of parity.

Farmers could do well on 10-cent hogs if the consumer goods we buy were priced accordingly but when it takes 120 head of hogs to buy the cheapest 2-bottom tractor, things are definitely out of balance. As long as industry is allowed to take all the cream of our economy, the farmer is going to suffer. The average farmer must sell $3,000 to $5,000 of produce or crops before he can even take his own living out. This same $3,000 to $5,000 is made up of motor fuel, oil, seed, taxes, interest, repairs, rent, depreciation on buildings and machinery, labor, feed, and others.

Industry takes a chance in producing their goods, to be sure, but no more than the farmer does, for he has to combat the weather as well as insects. In the last 10 years, I have had just 3 good crops.

I am 44 years old, married, and the father of 5 children, 1 recently married. I fought with the Ninth Division in Europe during World War II and spent nearly 7 months in a German prison camp so I really know what it is to be hungry. I started farming in 1946 after getting out of the service. I own 120 acres, with a mortgage on it, and rent 160 acres more. I drive a 1948 car and I do not have a television set. I work hard and employ very little hired labor and still I find it really rough going.

It is true the farm population is only about one-eighth of our total population, but farm prosperity is the most vital part of our economy. It is like the ignition system on a car or tractor, which too is quite small but things will not go without it. The rest of the economy must be geared or timed to that ignition, properly, or the machine does not give service and could collapse as far as durability and service are concerned. There isn't too much wrong with the ignition, the trouble is with the rest of the machine.

Yours very truly,

QUINCY I. RICE,
Vice Chairman, Keokuk County Chapter, National Farmers Organization.

Small Publishers Can Hardly Make Newsprint

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Small Publishers Can Hardly Make Newsprint" which appeared in the January 10, 1956, issue of the Gleaner and Journal of Henderson, Ky.

The editorial is as follows:

SMALL PUBLISHERS CAN HARDLY MAKE NEWSPRINT

A report issued from Washington that the Small Business Administration has announced it will provide small publishers with pool loans to set up their own production plants is interesting, but as a publisher we are not particularly impressed with the prospects it presents for alleviating the newsprint shortage.

To begin with, it takes more than 2 years to get a newsprint mill into production after a place is located for the mill to be built. It takes about $36 million to build a plant which would produce 300 tons per day. Further, it would take trees to provide the pulp, which means that it would be necessary to locate forests with suitable wood for pulp, and after locating them, there would be the necessity of being able to purchase them at a price which would enable the plant to manufacture newsprint at a price no higher than current levels.

This is assuming that the small publishers who joined in with the project would (1) be able to hire competent men to install the machinery and run the factory; and (2) be able to raise enough capital, individually, to float the necessary loans. It has been suggested that publishers might raise about $250,000 apiece to put into the plant though a smaller sum might be borrowed by small operators in proportion to the size of the shop.

We look upon this announcement of the Federal Government bureau as a sort of "gobblydygook" statement designed to catch the fancy of the public which has just begun to realize that a newsprint shortage exists. Certainly it can't be taken seriously by publishers who know that the shortage exists now, and that the hardest year is just ahead of us. The stringency of 1956 is due to the fact that storage pools of newsprint were

drawn upon during 1955, and that newsprint usage is increasing out of proportion to production.

We have suggested before, we suggest it again, that newsprint producers now in the game might get together (possibly with encouragement from the United States and Canadian Governments) to arrive at a quota system for newsprint users which would be fair to small papers as well as to large. A large newspaper will waste enough newsprint in 1 day to keep a small paper in business for a year. It is unthinkable that in a country where freedom of the press is a basic tenet of government, a technicality would be allowed to cancel out this freedom. In other words—a failure to do the wise thing at the propitious moment may result in small newspapers closing doors because they have no paper on which to print their papers.

The attempt of the small-business bureau to alleviate the situation is a step in the right direction, but we do not believe that small papers have the possibility of paying back loans to the amount of $250,000 these days, for costs have mounted to the extent that profits are cut to the bone. We do not believe that any such plant could get into operation quickly enough to save the papers which may have to go out of business this year because of the lack of newsprint. We do not believe that such an investment would be safe enough for the small publisher to take the risk.

Some large newspapers have their own forests, their own pulp mills. The United States has suffered during the past year in part because the Canadian mills have shipped much tonage abroad, especially to England. No United States law can forbid Canadian mills from shipping their own products to Britain instead of the United States. We can, however, encourage with Federal loans, and so forth, the expansion of already existing mills, a half dozen of which have been located in the south during the past several years. These mills, with adequate encouragement, and with a voluntary control on quotas which give all publishers an equal shake at a percentage of their requirements, might do more than loans to help small publishers.

We appreciate the fact that the Federal Government has finally taken cognizance of the critical situation in newsprint—but we fear that it has begun in the wrong department, and at the wrong end of the planning.

The Brink of Diplomacy

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. McDOWELL. Mr. Speaker, under unanimous consent, I include an editorial from the Wilmington Morning News, Wilmington, Del., of January 16, 1956:

John Foster Dulles is one of the best prepared men ever to serve as American Secretary of State, and in many respects one of the ablest. He might also be one of the greatest—if he only had a little humility, and a gift for knowing when to keep his mouth shut. His worst fault is the lack of that "address or tact in conduct of affairs" mentioned in Webster's Dictionary as an attribute of diplomacy.

We have deferred comment till now on the Life magazine article purporting to reveal Mr. Dulles' philosophy and techniques, hoping that when the Secretary saw how it disturbed our friends without harming our enemies he would be awakened to the need for explaining that he hadn't meant it the way it sounded. But he stood pat last week on what the Washington Post calls massive hindsight in incredibly bad taste, and the New York Times refers to as "to say the least, an extreme example of how not to conduct diplomacy."

The article offers an unproved and unprovable version of three diplomatic victories it attributes to Mr. Dulles. First of these was the armistice in Korea. The Communists would not have agreed to it, the article says, if the United States hadn't threatened to enlarge the war, bomb China, and perhaps use atomic weapons. Second was the armistice in Indochina, made possible only by the same deterrent threat—implied rather than stated in this case. The third was the Communists' decision not to attack Quemoy and Matsu, allegedly because they knew that if they did the United States would fight them with all weapons.

Actually no one knows why the Communists made the decisions they did, but their diplomacy in Asia has been so successful ever since that it might well be argued that they planned it that way. The second and third examples, moreover, distort the historical record as previously given to the American people. Mr. Dulles liked his victory in Indochina so little that the walked out on the armistice conference in Geneva, and left it to Anthony Eden's skilled mediation—ignored in these boastful claims—to retrieve the situation. The record also shows that President Eisenhower refused to commit the United States to defend Quemoy and Matsu.

Even worse was the article's quotation attributed to Dulles: "The ability to get to the verge of war without getting into war is the essential art." How could Dulles fail to see how this sounds in this nuclear age? America's Secretary of State is represented as an omniscient artist who has three times brought the world to the brink of war, who enjoys the game and will play it again, and who has supreme faith that he will never miscalculate.

This is the interpretation bound to be put on his alleged remarks. It is not true. But since Dulles has passed up an opportunity to clarify the record, it may be necessary for President Eisenhower personally to repudiate the brink of war doctrine.

The Good Name of the State of Mississippi

SPEECH
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. RIVERS. Mr. Speaker, I am placing in the Appendix of the RECORD an article by Davis Lee, a Negro who publishes a newspaper called the Telegram, in Newark, N. J. That is in answer, Mr. Speaker, to an article appearing in Look magazine written by William Bradford Huie, who tried to libel and slander the admirals of the United States Navy because he could not get certain consideration, et cetera, in his book, The Case Against the Admirals, during the time he was a naval officer. The article in question appears in Look magazine of this month in which this man vilified, slandered, libeled, with unmitigated vituperation the good name of the State of Mississippi, the people of Mississippi, the courts of Mississippi, and held out to the Nation that the State of Mississippi is one of the worst places on earth.

Mr. Speaker, I want you to read what a colored man had to say, who went down to Mississippi and spent 7 weeks there; what he found, and what he published in his newspaper north of the Mason and Dixon line.

Mr. Speaker, it is a tragedy when the good name of a State is held up for dramatic purposes, to ridicule, and to scorn at the hands of these headline seekers, such as the one that appears in Look magazine. I want you to read this article written by this man who had nothing to gain in writing the article.

The article follows:

[From the Newark (N. J.) Telegram of January 15, 1956]

MISSISSIPPI SURVEY—STATE NO WORSE THAN ANY OTHER; WHITE'S PATERNALISM KEY TO NEGRO UNDERSTANDING

(By Davis Lee, publisher)

In recent weeks the entire world has been led to believe that the 1 million Negro citizens of Mississippi are in constant fear for their lives; that they are ruthlessly exploited, deprived of every right as American citizens.

The murder of the Reverend George Lee of Belzoni, the Emmett Till kidnap murder, and other similar tragedies have given numerous distorted reports the appearance of being true. And those who have never been to Mississippi, from what they read, naturally conclude that it is the worst place on earth.

After spending 7 weeks in the State, touring its 82 counties, meeting and talking with Negro and white citizens of every walk of life, I am convinced that Mississippi is no worse than any other State in the Union, and what has happened there could happen in any of the 48 States with sufficient provocative agitation, and that the decent citizens deplore violence.

My trip to Mississippi was not in search of propaganda material designed to stimulate interest in any alleged righteous cause, nor was I sent by any publication with instructions to dramatize the slightest incident. I went in search of the truth. I didn't go in search of the worst that I could find in the State; I endeavored to find the good.

Naturally my findings will be criticized, but I don't care. Most people would rather believe a false report than a true one.

When I arrived in Mississippi, I began my tour at Biloxi and the first man I met was the able head of the chamber of commerce. He extended a cordial welcome and offered to give me any assistance I wanted. I have never met a man more gracious and considerate.

My next stop was Gulf Port and Bay St. Louis resort towns, with large Negro populations. There are many prosperous Negro businesses in these cities, and some of the finest homes are owned by Negroes.

I visited all of the coastal towns and cities and found no racial tensions. In every community an honest effort is afoot to give the Negroes equal schools.

When I arrived in Jackson, I went by to see Gov. Hugh White, who was glad to see me and talked at some length about the State's efforts toward improving the economic and educational stature of the Negro citizens.

Before leaving Jackson, I conferred with officials of the State department of education,

and learned that the State is spending considerably more money for Negro education than it is spending for white. At Leland, I was told, the State had spent $1 million for a Negro elementary and high school.

Because of the wide publicity given the citizens' council I decided to meet with the heads and find out first hand the purpose for the organization, its objectives, and the type of people who head it.

I drove to Winona where I met Mr. Robert B. Patterson, the secretary. I spent some 3 hours with him. He is a native of Mississippi, young, energetic, and believes that our Creator intended that there should be a separation of races.

Mr. Patterson is an intelligent, fairminded southerner who doesn't believe that integration offers a solution to our racial problem. And his opinion and convictions are based on a lifetime with Negroes.

He operates a plantation at Indianola where he has some 80 Negro families. He travels extensively and leaves his wife and daughters in the care of his Negro help.

In one sentence, Mr. Patterson, in referring to the fact that his Negroes cared for his family, gave me the southern view, the South's feeling, in a nutshell.

"When I am away," he said, "I know that my Negroes will not let anything happen to my wife and children. In fact, they are my children, too."

It is this feeling of parenthood, of paternalism that people outside the South don't understand. Southern white people do regard their Negro employees as their children, their responsibility.

This fact was evident everywhere that I went. White people in Mississippi love and respect their Negro employees and they resent outsiders who interfere with local custom.

To further illustrate the workings of paternalism, I visited Drews, a small town not far from Money. I met a plantation owner who had 150 Negro families on his spread.

Some of these Negroes had been on that plantation all of their lives. The owner is a Mr. Smith, an educated, cultured man. He loves his Negroes as if they were his children.

Recently he missed 35 tons of fertilizer. A private detective was called in. In short order the fertilizer was located in Mound Bayou, the all Negro town. The fence who bought the stuff agreed to pay for it and no charges were made.

Shortly thereafter Mr. Smith missed several bales of cotton. The detective was called in again and given a retainer of $100 to locate the cotton. The next day the detective called and informed Mr. Smith that the bales of cotton had been found in Mound Bayou. The detective informed the plantation owner that one of his Negro employees had sold the cotton.

Mr. Smith sent for the alleged thief, a young man in his twenties who had been born and reared on the place. He readily admitted taking the cotton. The sheriff was summoned and the young man arrested and jailed.

A few days later, at the trial, the young man was fined $200, with the alternative of a jail sentence if he could not raise the money. Mr. Smith walked forward, paid the fine, and took the young man back to the plantation.

Since the Emmett Till tragedy I have read exaggerated reports by Negro reporters that they had to disguise themselves in dilapidated cars in Mississippi. I traveled the entire State, was well dressed, and rode in a late model convertible.

I was not even stopped and asked to show my driver's license during the entire trip. I went on dozens of plantations and talked with hundreds of Negroes, and not one planter questioned me about my being there.

The Federal Forest: How the Hoover Commission Proposal Would Prune It

EXTENSION OF REMARKS

OF

HON. J. ARTHUR YOUNGER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial taken from a recent issue—January 6, 1956, page 8—of the Wall Street Journal:

THE FEDERAL FOREST: HOW THE HOOVER COMMISSION PROPOSALS WOULD PRUNE IT

(By John Chamberlain)

When the task force charged with investigating military-supply problems for the second Hoover Commission on Government Reorganization discovered that the Navy had on hand enough canned hamburger (keeping life: 2 years) to last for 60 years, it set a Nation to chuckling. The laughter became more boisterous when a supplementary announcement disclosed that there were 812,000 gallons of catsup to go with the hamburger, which figures out to about 1 gallon per can.

Titillating details of this sort have done much to dramatize the 19 reports submitted by the Hoover Commission to Congress prior to the completion of its mission last July. But the dramatization has had the defect of its quality: It has shown so many misshapen and grotesque trees that the outline of the forest has tended to get lost.

What is the scope and shape of the forest? One way to view it is in terms of the Hoover Commission's recommendations—362 of them, which, if all of them were accepted, might result in saving the taxpayer $6 billion to $8 billion a year.

This figure, especially if added to the $7 billion (total figure, not annual) already cut from the cost of Government over a 5-year period as a result of the work of the first Hoover Commission, is a prodigious sum even in a day of $60 billion budgets. Six billion in savings a year should make it relatively easy to balance the budget and save something on taxes or provide for debt reduction. Of the 362 recommendations, 145 could be adopted by departments and agencies without act of Congress. Fifty more could be turned into reality by White House order. The remaining 167 are up to Congress itself.

Another way to look at the forest is to study the way the Commission went about its work. It decided from the outset to investigate the Government by function, not by agency (the Defense Department excepted), and it followed the functions straight across the board, which enabled it to spot all sorts of duplication, backtracking and cross-purposes. It dealt with the Government as employer, as consumer, and as a many-faceted business enterprise.

CALLING ON EXPERTS

The Commission itself—a bipartisan group (7 Republican, 5 Democratic) of Congressman, administrators and public figures such as Chairman Herbert Hoover, James A. Farley, Joseph P. Kennedy, and Dean Solomon C. Hollister of the Cornell College of Engineering—drew upon a vast body of experts to constitute its task forces.

What the task forces did was to pursue 16 functions of Government into every nook and cranny. Here's what they found:

In investigating paperwork, a task force discovered that the administrative arm of the Government wrote a billion letters annually at a cost of $1 per letter. When the carbons were filed along with other Government documents, it meant crowding 9 billion items per year into bulging Federal filing cabinets and storage warehouses. (Mr. Clifton Fadiman's fear that we are destined to drown in paper is apparently coming true.) The task force found that 4,700 different forms sent out to private citizens could be greatly simplified. Estimated annual savings on paperwork: $288 million.

The Government employs 2.3 million civilian (annual pay: $9 billion). The Civil Service system which covers most of them was found to be deficient in its ability to identify men of great capacity. The Hoover Commission recommended the establishment of a senior civil service to handle top jobs under the policymaking appointees. Turnover in Government personnel now runs at 25 percent a year. If this could be cut to 20 percent, it would mean $48.5 million saved on training costs.

The task force on medical services found 26 Federal departments and agencies mixing in health activities. The Government is responsible for at least some part of the care of 30 million people. Estimated savings to be achieved by proper coordination and restrictionof Federal medical services: $293 million a year.

The investigators who combed over the Federal lending agencies uncovered vast areas in which the Government duplicates the work of privately owned banks and insurance companies. Estimated savings if the Government were to cease unjustified competition with private finance: $200 million a year, plus a return of $5 billion in capital to the Federal Treasury.

Task force investigators discovered much Defense Department transport competition with privately owned carriers, most of which are subsidized by the Government in the first place. By better traffic management, the Commission says $151 million could be saved each year.

A task force found the administrative agencies of Government to be deficient in observing proper legal safeguards for the individual. It suggested the establishment of an administrative court with tax, trade, and labor relations sections designed to effect a separation of the powers in regulatory agencies which now function as judge, jury, defense, and prosecution. No savings were estimated! as the Commission puts it, "justice is not cheap."

The Government disposes of vast amounts of surplus property each year. Says the Commission: "Each 1-percent improvement in return for selling a piece of so-called junk or scrap means a saving of $20 million a year." Total estimated savings in surplus disposal: $2 billion a year for the next 4 years, $1 billion thereafter.

In buying, storing, and distributing food and clothing for the Department of Defense, a coordinated civilian management might save $340 million a year, or 10 percent out of a total outlay of $3.4 billion.

PENTAGON EMPIRE

The Department of Defense conducts some 2,500 business enterprises which compete with private business. The capital tied up in these enterprises exceeds $15 billion. The Commission says a thousand enterprises could be eliminated without injury to national defense. Five hundred competitive enterprises run by other departments of the Government could be eliminated or reduced in scope.

In depot utilization, a planned cross-servicing of storage space among the military departments and greater use of commercial warehouses might save $253 million a year.

Twenty-nine Government agencies conduct research and development programs,

spending on them $2.4 billion annually. Basic research, however, is skimped. The Commission recommended more money for basic research.

To quote from the Commission report on overseas economic operations: "Since the end of World War II, the United States has spent more than $50 billion in foreign aid * * * the time has come to apply some brakes to this program." Estimated savings: $360 million a year on nonmilitary foreign aid.

The Federal Government owns $40 billion in real estate, and pays an annual rent bill of $107 million. By selling surplus real estate and improving its management of retained property, the Government might save $100 million a year and return $1 billion to the Treasury.

Government budget and accounting practices, if improved and modernized, might well be made to yield a whopping economy of $4 billion a year (a figure which includes considerable duplication of estimates made by the Hoover task force investigating other lines of Government activity).

The Commission looked into intelligence activities; but since the work of the Central Intelligence Agency is secret and classified, it could make only one public recommendation. This called for Presidential and congressional watchdog committees to review the work of the CIA, the National Security Council, and so on.

SOURCES OF OVERLAPS

In water resources and power the Commission found scores of overlaps. I urged a national water policy to eliminate confusion and to clarify the role of private power distribution.

Finally, the Commission, abandoning its investigation by function, made a blanket survey of the business organization of the Department of Defense. It advocated a tremendous shakeup here which might considerably reduce the Department's annual need for two-thirds of the United States citizens' tax dollar.

In running its survey lines through the forest of big government, the Commission turned up vast areas where dead wood abounds and saplings are starved for sunlight. But sensible conservation practices have cleaned up many a forest, and could be applied to this one.

Flag-Raising Ceremony—Curtiss-Wright Research and Development Center, Quehanna, Pa., November 19, 1955

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. VAN ZANDT. Mr. Speaker, on Saturday, November 19, 1955, the Curtiss-Wright Corp. officially opened with a flag raising ceremony its new $27 million research and development center at Quehanna, Clearfield County, Pa.

This new installation is located in the heart of Pennsylvania's virgin forest comprising the counties of Clearfield, Cameron, and Elk and is an expression of the confidence that President Roy T. Hurley and other officials of the Curtiss-Wright Corp. have in the future of Pennsylvania and in the free enterprise system.

The principal address for the occasion was delivered by Admiral Lewis L. Strauss, Chairman, United States Atomic Energy Commission.

Admiral Strauss' address follows:

REMARKS PREPARED BY LEWIS L. STRAUSS, CHAIRMAN, UNITED STATES ATOMIC ENERGY COMMISSION, FOR DELIVERY AT FLAG-RAISING CEREMONIES CURTISS-WRIGHT RESEARCH AND DEVELOPMENT CENTER, QUEHANNA, PA., NOVEMBER 19, 1955

It is a pleasure to be here today and to participate in this flag-raising ceremony on the site where another great center of scientific research and invention soon will be contributing to the technological progress so vital to our national well-being and the preservation of our freedom.

I salute the Curtiss-Wright Corp. and its officials for their vision and enterprise.

We live in an age of science and technology. Our standard of living, our wealth and productive capacity, our ability to defend all these blessings and, in fact, to defend our liberty if need be—all these depend in ever-increasing measure upon the vitality of our scientific skill and imagination.

Our position of eminence in the world could not have been achieved, nor will it be possible to maintain it, without the free enterprise incentives that are responsible for the plants, laboratories and other facilities soon to take form on this 55,000-acre tract, at an initial cost of some $20 million in private funds.

The skills and imaginations which will be assembled here—seeking constantly to expand our store of knowledge of aeronautical and nuclear science—are a symbol of our Nation's greatness and a repository of our strength and hopes for the future.

For me, the pleasure of this occasion is made greater by reason of the fact that it affords me the opportunity to visit the home district of my good friend of many years, JIM VAN ZANDT.

If he should find my references to him slightly embarrassing, then I can only say that this imposition upon his modesty is the penalty to which he unwittingly exposed himself when he took the risk of asking me to come here today and take part in this ceremony.

The people of the 20th Pennsylvania district are fortunate to be represented in Congress by a man whose life, for nearly 40 years, has been marked by high devotion to public service—as a Navy hero of two wars, civil leader, and Member of Congress.

It has been my good fortune to work in close and—for me—rewarding association with JIM VAN ZANDT, because of the important place he holds on the Joint Congressional Committee on Atomic Energy. I have come to know him as a man of outstanding ability and integrity. I feel that my life has been made richer by his friendship and I know that the Nation's atomic energy program has benefited from his understanding, his diligence, and his wise counsel.

Mr. Van Zandt and his colleagues on the Joint Committee have never denied to the Atomic Energy Commission their wholehearted cooperation, nor have they ever stinted us in the matter of support for the proper functioning of the atomic-energy program, either in regard to the weapons we must have to maintain and secure our freedom, or for the development of the peaceful uses of nuclear energy.

I should like to speak briefly this afternoon about that program, and particularly the partnership which has been created between the Government and American industry in exploiting the energy of the invisible atom.

Private industry—as it is exemplified here today by the Curtiss-Wright Corp. and its plans for this great Quehanna Research and Development Center—can be justly proud of its contributions to the nuclear art. Its accomplishments are not confined to industry's expanded role under the Atomic Energy Act of 1954, but extend back to those days of war and peril when Government and industry joined hands in the greatest—although in those days secret—scientific-industrial project ever undertaken.

When we look back on those early days and compare them with our atomic-energy program as it exists today, it seems a very tiny beginning indeed.

It began officially in February of 1940 with $6,000 of Government funds for the purchase of materials needed for laboratory studies of nuclear fission. For 5 years thereafter, it remained a secret project, cloaked by the purposely vague name of the Manhattan Engineer District.

But even in those early days the program came to rely heavily upon industry. As a nation we could not have succeeded in the grim wartime race and beaten our enemies to the building of the bomb without the vitality and ingenuity of American industry. No more can we succeed now in our determination to exploit atomic energy for peaceful purposes unless we have the same competitive resourcefulness which only free enterprise can provide.

From that meager beginning of 15 years ago our activities have grown until they presently comprise a vast scientific and industrial complex representing a total Government outlay for operations and facilities of somewhere in the neighborhood of $15 billion—or about 2½ million times the original investment in 1940.

Private industry has participated in this growth every step of the way.

Together, we have built and operate a network of plants, laboratories, and other installations located in 22 States, housing some of the costliest machines ever built, great discoveries, and vital stockpiles of weapons and fissionable materials. The reservations on which these installations are situated cover about 3,200 square miles, or an area roughly equal to the States of Delaware and Rhode Island.

The Government spends about $2 billion a year on this enterprise—of your money and mine. That comes out, I believe, to something like $4,000 a minute, night and day.

These AEC installations give work to about 101,000 people and it is interesting to note that only about 6,000 of them are employees of the Atomic Energy Commission—only a little more than 6 percent of the total. The great majority of the men and women who keep our facilities functioning are the employees of private industry—that is to say, they work for the Commission's contractors and subcontractors. There is no phase of the program—even the most sensitive and secret work on weapons—in which private industry does not have a substantial role. The list of the Commission's contractors and subcontractors reads like a directory of American corporations.

All of our major production facilities, including plants that range in cost up to as much as a billion dollars each, have been designed, built and are operated by industrial concerns. Furthermore, a substantial portion of our research and development program is carried out by industrial research organizations.

The Commission—or, more properly, the Government and the people—have at present around $6½ billion of invested capital in atomic energy plants, laboratories, and other facilities.

In the fiscal year 1955, about $840 million was spent on new AEC plants and equipment—through contracts with private industry. This figure, I am told, accounts for about 2 percent of the Nation's total annual construction costs.

The comparative figure for the previous year—fiscal 1954—was somewhat higher, around $1.2 billion. From this you will see that our construction costs are tapering off, as the expansion of our production facilities nears completion.

It is my belief that American industry plays a far more comprehensive role, throughout the length and breadth of our Government-supported atomic-energy program, than does private industry in any other country. I refer to both our weapons program, and to the development of the peaceful uses of atomic energy.

The Government's partnership with industry constitutes a vast enterprise, but the fact that it is of such proportions does not mean that only the big corporations are represented in that partnership.

It is the Commission's policy to assure, to the fullest extent possible, that a fair proportion of its total supplies and services comes from the smaller business concerns.

For example: Between July 1, 1951, and March 31 of this year, the total of all contracts awarded by the Commission was $5.6 billion, or at the rate of nearly $1.5 billion a year.

During that same 45-month period, cost-type contractors doing business with the Commission let out contracts to other firms in the amount of nearly $2.5 billion, and small firms got nearly 40 percent of that amount. This was in addition to direct Commission contract awards to small concerns totaling nearly $173 million.

To illustrate the wide spectrum of the Commission's dealings with private industry, I might cite a survey made by the Council for Technological Advancement which is associated with the Machinery and Allied Products Institute. This survey covered only the capital goods industry, where it was found that approximately 10 percent of the responding firms hold prime contracts with the Atomic Energy Commission, and another 22 percent hold AEC subcontracts. Bear in mind that those figures represent only one segment of American industry.

Of course, as we have ample opportunity to witness here today, private industry, in addition to its important role in the Government-financed atomic-energy program, is devoting large amounts of its own capital to the development of the many peaceful uses of nuclear energy.

One recent survey by industry produced the estimate that, during the 4-year period between 1955 and 1958, industry and other non-Government groups will spend about $300 million on nuclear research and development, including capital facilities, new equipment, wages, and salaries, and other operating expenses.

About half of this private investment in the future—or some $150 million—is expected to go toward research and development work in the effort to provide nuclear powerplants which will be competitive with plants using conventional fuels. This is in addition to the more than $200 million of Government funds allocated for that purpose under the Commission's 5-year power-reactor program.

Pennsylvania is a cradle of American industrial achievement and technological progress, as well as a storehouse of great mineral wealth. Therefore it is in no sense surprising that this State should be found in the front ranks of atomic research and development.

In fact, Pennsylvania already has achieved an historic place in the annals of nuclear progress, particularly in the development of nuclear power for propulsion and commercial distribution. Important pioneering has long been a characteristic of your State.

I am sure that most of you must know that the nuclear powerplant of the *Nautilus*—the world's first atomic submarine—was developed in the Commission's Bettis facility at Pittsburgh, under contract with Westinghouse Electric Corp. It may be of interest to you to know that no less than 3,500 industrial firms contributed to the nuclear plant of the *Nautilus* as subcontractors and suppliers.

The Nation's first central station atomic powerplant for peaceful uses is being built at Shippingport by the Duquesne Light Co. and Westinghouse, and in 1957 will be furnishing electrical power to industries and thousands of homes of the Pittsburgh area. These companies deserve great credit for their vision and their confidence in the promises of atomic power, and for their readiness to back up that vision and confidence with large sums of capital. Such bold steps are necessary to properly exploit the possibilities of the beneficent atom. The Shippingport plant like the prototype *Nautilus* reactor are Pennsylvania products.

As a sidelight, I can report to you that Pennsylvania's fame in the field of atomic development became a matter of international interest this past summer—at the Geneva Conference on the Peaceful Uses of Atomic Energy. We had a large and comprehensive United States technical exhibit there and one of its star attractions was a beautiful scale model of the Shippingport plant.

The nuclear powerplant of the *Nautilus* and the first full-scale atomic station for generating electricity at Shippingport are perhaps the most widely known of Pennsylvania's contributions to the atomic-energy program, but they are by no means to be regarded as the extent of those contributions.

The Bettis plant at Pittsburgh is working on the design and development of a nuclear powerplant for a large surface ship, and will build an experimental prototype for this naval reactor at the AEC National Reactor Testing Station in Idaho.

Several Pennsylvania firms have contracts with the Commission for work on small or "package" power reactors, intended primarily for military use.

At the present time, industries in Pennsylvania, large concerns and small ones, have done and are doing business with the Atomic Energy Commission in a sum in excess of a quarter of a billion dollars—$267,247,144.

More than 80 private firms of Pennsylvania are involved in current contracts, ranging from large engineering and development firms, down to manufacturers of pumps and valves, small dye works and watch manufacturers. These 80 firms hold 38 prime contracts with the Commission, totaling about $235 million, and 105 subcontracts aggregating nearly $33 million.

In its atomic power development program, the Commission currently is spending about $24 million a year in Pennsylvania, the largest items in this category, of course, being the two plants I have previously mentioned. It is estimated that the expenditures in Pennsylvania in the coming year—under the power development program—may be increased by as much as 60 percent or to a total of nearly $39 million.

The atomic energy program, in a more indirect way, also is a good customer for Pennsylvania's coal, since the AEC is the Nation's largest single consumer of electrical power. Our sites, at present, use about 4½ percent of all the electrical kilowatts generated in the United States, and this figure is steadily increasing.

I have spoken of Pennsylvania's stake in the atomic energy program, from the standpoint of the Commission's contracts with industry. But our contracts are not exclusively with private industry. They include many important research contracts with colleges and universities, and in this category, too, Pennsylvania is well up in the list.

Your neighbor of 40 miles to the south, Pennsylvania State University, is the proud possessor of the second research reactor to be built by an American university. This reactor is very similar to the so-called "swimming pool" research reactor which we transported by air from Oak Ridge, across the Atlantic to Geneva, and installed on the grounds of the Conference on the Peaceful Uses of Atomic Energy.

Pennsylvania State University holds six chemistry research contracts with the Commission, ranging from analyses of minerals and ores to studies of Beta radiation. The University of Pennsylvania and the University of Pittsburgh have similar research contracts with the Commission, as do the Carnegie Institute of Technology and Franklin Institute.

The Commonwealth of Pennsylvania is rich in the traditions of freedom, learning and progress, handed down from William Penn and his Quaker followers who pushed into the wilderness, fortified by their faith in God, their vision, and a bold confidence in the future.

Here, in this virgin setting of streams, forests and hills, those traditions are about to find new and vital expression.

New frontiers will be blazed, by men of scientific skill and vision, toward our goal of greater abundance and defense of our freedom.

Guide to 73 Improvements Made To Simplify and Improve Mailing Procedures, Services, and Privileges for Mail Users

---

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 17, 1956

Mr. REES of Kansas. Mr. Speaker, under permission approved by the House, I am including a report from Postmaster General Arthur Summerfield entitled "Guide to 73 Improvements Made To Simplify and Improve Mailing Procedures, Services, and Privileges for Mail Users." I am sure the Members of the House will be impressed with the improvements that have been made in the Post Office Department designed to bring about better and more efficient mail service for the public:

GUIDE TO 73 IMPROVEMENTS MADE TO SIMPLIFY AND IMPROVE MAILING PROCEDURES, SERVICES AND PRIVILEGES FOR MAIL USERS

CERTIFIED MAIL

1. The Post Office Department has established a new, low-cost domestic mail service, known as the certified mail service, by which postal patrons may obtain evidence of mailing and delivery for documents, receipts, notices, replaceable papers of importance, and so forth. Since certified mail service costs are lower than those for registered mail, mail users, who formerly sent such materials by registered mail, are now enabled to make savings in their mail costs.

2. Certified mail service was extended to and from the Canal Zone in 1955.

C. O. D. MAIL

3. A new easily understood card form has been provided to notify patrons of the arrival of c. o. d. mail. This notice for the first time makes provision for showing the exact date on which the mail, if not accepted, will be returned to the sender.

4. In addition to the notice customarily left with or for the addressee after an unsuccessful attempt to deliver collect-on-delivery mail, a second notice now is sent to the addressee on the new form after 5 days so that he may have every reasonable opportunity to accept delivery if he wishes to do so.

5. Also, addressees are now permitted to use the new notice-of-arrival card to mail instructions to their postmaster, without any postage charge, telling him that they wish the c. o. d. parcel delivered to their home at a certain time when they will be in.

6. Mailers of shipments of baby chicks sent c. o. d. no longer lose a standard 5 percent of the total value of the chicks if the entire shipment is lost, when claiming insurance indemnity for the shipment. Formerly, where the entire mail shipment of chicks was lost and where it was covered by insurance, the Post Office Department deducted 5 percent of the value, on the theory that 5 percent represented the normal death rate in such shipments.

7. The period during which c. o. d. parcels may be held at offices awaiting delivery to the addressee has been increased from 15 days to 30 days.

CERTIFICATES OF MAILING

8. Certificate of mailing, (p. o. d. form 3817), a form prepared by the sender and authenticated by the postal clerk for a small fee, and which shows evidence of mailing for ordinary mail, has been improved. The amount of postage paid, a record-keeping item of importance in many cases for larger mailers, may now be entered upon the certificate. Also, a facsimile of this form may be reproduced directly on copies of documents and authenticated in the same manner as the individual certificates on form 3817.

REGISTERED MAIL

9. New surcharge rates, which are more equitable for registered mail of higher value, have been set up. Surcharge rates formerly were based on an inflexible rate per $1,000 of value for the zone of destination. After the first million dollars of value, progressively lower rates are now prescribed, and authority exists for quotation of surcharge rates for shipments valued over $15 million, based on considerations of weight, space, and value. At the same time, the nuisance surcharge rates from 2 to 10 cents, covering values up to $1,000 formerly subject to surcharge, have been discontinued entirely. Surcharges on registered mail do not provide additional insurance coverage by the Government, but are intended to cover the additional costs incident to the extra care used in handling these valuable shipments.

10. Senders, who are required by law to declare the actual value of the mail they present for registration, are no longer required to declare as the value of nonnegotiable securities the estimated cost of their duplication if lost or destroyed. Such securities may now be declared as having no intrinsic value, thus permitting payment of lower registration costs than formerly on this matter. However, the mailer may optionally insure nonnegotiable securities with the Post Office Department against possible costs of duplication by payment of one of the higher registration fees.

11. The form used to notify the sender of a registered article that it is undeliverable because the addressee is not known at the place addressed, or because the address borne by the article is not good, has been revised so that it may also be used to notify the sender when the post office of address is unable to deliver a registered letter because the sender has restricted delivery to the addressee only and the addressee declines personally to receipt for it. This new notice permits the sender to lift the restriction if he wishes to do so, thus enabling the post office to deliver the mail to the agent of the addressee.

12. Safer internal procedures have been put into effect in the handling of registered mail. Formerly, a shipment of numerous items of registered mail of limited value were "bulk billed;" that is, described only by the total number of items on the bill enclosed with the articles in registered pouches and jackets. Under this arrangement it could not be determined whether a particular registered article had been dispatched or received, and the dispatching employee was responsible only for seeing that the total number of articles he enclosed in the pouch or jacket was shown on the bill. The receiving employee was responsible for checking the number of articles received against the number shown on the bill. In case of a shortage, it was not possible to determine the particulars of the missing article. With the inauguration of the new certified mail service, to which millions of articles formerly registered are being diverted, bulk billing was discontinued. Now, employees handling registered mail must list the particulars of all registered mail dispatched and check the particulars of all articles received against their description on the dispatch bill.

13. Mail that is intended by the sender to go by registered mail, and which contains adequate postage to go registered, but which is inadvertently deposited with a regular mail shipment, now is promptly dispatched as registered mail by postal employees, and a receipt is mailed to the shipper. Formerly, such items intended for registry were delayed until further checks were made with the sender.

14. The value of registered mail that can be transported over star routes (routes over which mail is carried by certain contractors who are not employees of the Post Office Department) has been increased consistent with safety.

CLAIMS FOR MAIL LOST OR DAMAGED

15. The form provided for use by mailers in making application for payment of indemnity on domestic insured and c. o. d. mail has been greatly simplified.

16. The function of adjusting and paying claims for indemnity on domestic insured and c. o. d. mail has been centralized in 15 offices within the postal service, rather than in 57 offices as before, providing speedups in adjustments of claims, and considerable savings to the Post Office Department.

17. Senders of insured and c. o. d. mail that is damaged in transit can now recover damages more easily. Usually, a simple statement of value from them is adequate.

18. The 15 claims-paying post offices also have been authorized to pay many types of claims which formerly had to come to Washington for settlement. This has greatly speeded adjustments.

19. In a good many instances involving claims for damaged mail items started by the sender it is no longer necessary for the addressee to file a declaration about the damages. This applies in instances where the addressee has received a damaged article in the mail and has sent it back to the mailer, or where the article was returned to the sender as undeliverable mail. In these instances, only the mailer needs to file—not both the mailer and the sender, as was the case formerly.

20. Payment of damage claims on parcels that have been accepted by the Post Office Department for insurance is no longer denied because of inadequate packing.

21. If a mailer pays an inadequate fee to cover the requested insurance on a mailed article, because of an error by the postal employee who accepted the item for mailing, the mailer will nevertheless be reimbursed in full if the item is damaged or lost. The Post Office Department made this full reimbursement policy available by seeking on its own initiative a reconsideration of former adverse rulings by the Comptroller General.

22. Mailers who have legitimate claims on insured mail articles can now mail the completed claims forms to the post office. Formerly they had to go in personally to do this. This saves a great deal of time and trouble for many mailers.

METERED MAIL

23. A bothersome requirement imposed on meter users, that they had to furnish a statement of their postage meter readings every day to post offices has been abolished.

24. The Post Office Department has provided a convenient record book for use by meter users in keeping records of meter operations.

25. The requirement that the day date of mailing be shown in meter stamps on fourth class (parcel post) mail has been eliminated. This formerly caused much trouble for large fourth-class mailers where, for instance, parcels intended for mailing on a certain day were delayed. In such cases, the post office frequently would not accept parcels with outdated meter stamps, involving red tape and delay in getting new meter stamps placed on the packages.

26. The requirement for labeling of metered mail with special identification labels from the mailer has been eliminated.

27. Mailers were authorized to deposit metered letter mail in any street or office building mail receptacle within postal district where their meter is registered, thus eliminating trips to the post office for many mailers.

28. The 10-percent penalty that used to apply for those presenting certain metered mail that contained an incorrect date (for example, a piece of mail showing a meter date on the first of the month, but presented for mailing on the 5th) has been eliminated.

REFUNDS OF POSTAGE

29. The processing of claims for refunds of postage was decentralized from Washington to local post offices to speed up payment and eliminate red tape.

30. The minimum amount for which postage refund would be paid was eliminated; now any claim of any amount may be considered.

NOTICES TO SENDERS OF UNDELIVERABLE THIRD- AND FOURTH-CLASS MAIL

31. Where a sender of third- or fourth-class mail requests that he be notified if the piece is not deliverable as addressed the post office marks on such mail, which is not deliverable locally or forwardable, the reason for nondelivery, or a new address if it has one, and sends the piece of mail back to the sender. This enables him to correct his mailing list without delay. Formerly, in such cases, the Post Office Department held the mail and engaged in correspondence, on card forms, with the senders, regarding the mail that was held, why it was not delivered, and so forth. The new procedure is much faster and more direct.

ISSUANCE OF MAILING PERMITS

32 Authority was extended to postmasters to issue meter, imprint, precancel and business reply permits, without obtaining prior approval of the Department from Washington, resulting in much faster action on such applications.

33. The application and authorization forms for these permits have been simplified and combined, to make it easier for mail patrons to obtain and use these permits when needed.

ENDORSEMENT OF MAILER ON SEALED PARCELS

34. The regulations have been changed to remove the requirement that the sender's authorization that parcel-post parcels may be opened for inspection be printed. Such endorsements may now be placed on wrappers or labels in handwriting, or by handstamp or other means.

PREPAID AIR PARCEL POST

35. The regulations have been changed to authorize onward dispatch and collection of postage due upon delivery of air parcel post which does not bear enough postage, provided it bears at least 50 percent of the postage chargeable. This has eliminated requirement for holding such mail and speeded delivery in many cases where mailers have inadvertently neglected to affix adequate postage.

RELAXATION OF MAILABILITY RESTRICTIONS ON PARCEL POST

36. Many complex restrictions on mailing various types of items and their containers have been simplified to give mailers, particularly those sending merchandise through the mails, access to the mails for their products. For example, standard types of aerosol containers are now accepted in the mails where restrictions once barred them.

REVISION OF PACKAGING SPECIFICATIONS

37. Regulations to authorize use of wrapping and cushioning materials recently developed for preparation of products for mailing have been put into effect; formerly, technical requirements banned use of such materials in the mails.

WINDOW ENVELOPES

38. Formerly only a single address window was permitted in envelopes. Now regulations have been relaxed to permit use of other windows—for advertising or display purposes for example, or for return address. Also, more latitude is permitted on where the windows may be located in the envelopes and printing may now be placed closer to the windows than formerly.

MAIL OF NONPROFIT ORGANIZATIONS AT SPECIAL THIRD-CLASS RATES

39. Application and authorization forms for nonprofit organizations to qualify for mailing at special third-class rates have been simplified and combined. Procedures for handling have been revised to speed issuance of authorizations to applicants.

INFORMATION PAMPHLETS

40. Two new publications have been issued for free distribution to the public, to assist in their mailing: 1. POD publication No. 2, containing instructions and illustrations on packaging and wrapping parcels for mailing, and 2. POD publication No. 3, containing all domestic postage rates and fees.

KEYS AND IDENTIFICATION DEVICES

41. Supported bill which became law extending the special postage rate for hotel and steamship keys to all keys and identification devices which have attached, or which bear, a name and address and guarantee to pay postage on delivery.

SECOND CLASS MAIL (NEWSPAPERS AND PERIODICALS)

42. Eliminated from regulations definition of "sample copies" which was impracticable to administer and unnecessarily restrictive.

43. Eliminated the regulation which arbitrarily limited the mailings of sample copies to three a year to the same individual.

44. A regulation was adopted making it easier for publishers to mail separate editions of their publication. This eliminated a mass of involved regulations, fee charges and so forth which formerly prevailed on mailings of such editions.

45. A regulation was adopted permitting "split run" advertising in publications mailed by second-class mail. For example, a publication mailed to one section of the country may contain a certain ad on a certain page slanted especially to that section, while the same edition of the same publication that is sent to a different section may contain on that same page a different ad, especially slanted to the other section.

46. A regulation was adopted permitting advertising pages to be die cut, deckle-edged, or prepared for folding out horizontally, vertically, or both. These technical changes provide important liberations for mailers or second-class mail, giving them more leeway in what types of advertising they may accept.

47. As another major improvement, the Post Office Department adopted regulations which permit use of all kinds of modern papers for pages of magazines. This removed former strict and outdated requirements regulating use of papers used in magazine publication.

48. Regulations were adopted which define and permit the reasonable use of novely pages, for publishers, including such pages as those containing paper doll cut-outs, coupons, and so forth.

49. New commonsense policies for determining distinctions between advertising and non-advertising content of publications were adopted.

50. The Department simplified the manner in which publishers mark their copies that are filed with postmasters to show the difference in content between reading and advertising content.

51. Regulations were put into effect to change and simplify the manner of handling copies of second-class publications that are undeliverable as addressed. To illustrate: Mrs. Smith in Anytown moves from First Street to Third Street and gives her new address to the post office. Her new copy of her favorite magazine comes by mail, and is sent to Third Street. It will contain a new simple form, on which she may notify her publisher of her change of address. She has 3 months to do this, and, if it is not done by then, the post office will tear off of the copy of her magazine the name and address label and itself send it back to the publisher with the change of address indicated. Formerly, the post office engaged in a complicated correspondence back and forth between publishers to get the change of address made, and often copies of the publication were returned to senders.

52. The handling of publishers mail was speeded by discontinuing bulk weighing of each and every mailing. Now, the total weight of the overall mail shipment is computed from statements of the copies involved and verified by taking sample weighings of mail loads selected at random.

53. A regulation was adopted which permits publishers to deliver copies directly from their plants to railway stations, neighboring towns, or elsewhere, for acceptance and dispatch from those points in the mails. Formerly, publishers were limited to one, or a few, points from which they could mail.

54. Publishers were given authority to deposit Sunday and holiday isues in rural mail boxes on Sundays and holidays without paying postage. This is a particular benefit for smaller papers in largely rural areas. (This is an exception from the rule that mailable matter that is deposited in mail boxes is subject to postage, even though it is carried personally by an individual and does not move through the postal system.)

55. The Department placed in operation, first by regulation and later by authority of new law, a method of paying postage in cash on copies of magazines and newspapers, subject to local per copy postage rates—a convenience and record-saving step in many instances for publishers.

56. A regulation was adopted which permits printed illustrations to be pasted to advertising pages in publications.

57. A regulation was discontinued which required publishers to receive at least 30 percent of the amount of the regular advertised annual subscription price on subscriptions that are obtained through agents or agencies that work on commission.

58. Revised special form that is used by subscribers to inform publishers of changed address, and obtained publishers' cooperation in carrying advertisement asking subscribers to use the form.

59. Greatly simplified the regulations prescribing display of title and name of office of publication in copies of publications.

60. Adopted regulation providing for issuance of special issues.

61. The Post Office Department supported a bill, which became law, and which has greatly simplified the obtaining of second-class mailing privileges for publications of churches and religious organizations.

62. Changed regulation to permit publishers to use white or any other light colored paper for wrapping, instead of being restricted to white or manila paper.

63. Changed regulation to permit use of light colored paper by publishers for address strips, instead of mandatory white or yellow.

64. Discarded requirement that black ink only could be used on address slips by publishers.

CONTROLLED CIRCULATION PUBLICATIONS

65. For controlled circulation publications (certain publications sent free by their publishers; usually publications containing highly specialized content and sent, for example, only to persons engaged in a special kind of work) the Post Office Department adopted procedures for weighing and computing of postage which are uniform with those used for second-class publications.

66. For controlled circulation publications, the Post Office Department adopted procedures that are uniform with those used for second-class publications, for handling copies that are undeliverable as addressed.

PARCEL POST SIZE AND WEIGHT LIMITS

67. The Department authorized mailers located on rural routes serviced from first-class larger post offices to mail their larger and heavier parcels at the post office.

PUBLIC INFORMATION

68. Policies of lending technical assistance to press, particularly trade press in preparation of technical articles on mailing were put into effect in Department. Department technical personnel assisted in writing and preparation of articles upon such subjects as mailing of aerosol insecticides and compressed gases, encyclopedia material, postage rate and mailing information materials.

COMBINATION MAIL

69. The Post Office Department put into effect its new combination mail service, permitting for the first time in history the mailing of a letter or message inside a package or publication, provided the sender pays appropriate postage to cover both items.

FORWARDING MAIL

70. Adopted relation authorizing the free forwarding of mail, formerly chargeable with forwarding postage, for dependents of military and civilian persons whose addresses are changed by official governmental orders.

POSTAL CARDS

71. Regulations governing use of postal cards issued for sale to the public by the Post Office Department (and usually distinguished from "post cards" offered for sale through private newsstands, tourist shops, and not containing the printed stamp) have been revised to authorize use of 50 percent of the space on the address side for writing or message purposes. Formerly only a third of the space could be used for this purpose.

POST CARDS

72. Use of post cards with round corners was authorized. Manufacturers formerly could not sell this type of card because use in mails was not permitted.

REGULATION REFERENCES ON MAIL

73. Requirement that regulation numbers, which change frequently, be shown on certain types of mail was eliminated. Mailers now use descriptive terms such as "Bulk Rate," "Library Book," etc. With each change in regulation numbers, it is no longer necessary for mailers to obtain new printing dies.

Ten Centuries of Christianity Mean Nothing to the Reds

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 17, 1956

Mr. KRUEGER. Mr. Speaker, under leave to extend my remarks, I would like to insert in the CONGRESSIONAL RECORD the following letter and memorandum from Dr. Anthony Zukowsky, of Steele, N. Dak. Dr. Zukowsky is president of the State branch of North Dakota of the Ukrainian Congress Committee of America, Inc. Dr. Zukowsky's letter and memorandum carry the stories of the destruction not only of the people, but of the faith.

Recently, the 1000th anniversary of Christianity in the Ukraine was observed throughout the world. Special services were held in many parts of the world, but not in the Ukraine, where religion has been driven underground by the Red masters.

The above-mentioned follows:

UKRAINIAN CONGRESS COMMITTEE OF AMERICA, INC.,
Bismarck, N. Dak., December 30, 1955.

The Honorable OTTO KRUEGER,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE KRUEGER: In behalf of all the members of our committee and all Americans of Ukrainian descent in North Dakota, it gives me pleasure to extend to you, hearty and sincere greetings for the coming New Year, and wish you great success in your important work for this country of ours.

At the same time it gives me an opportunity to write you regarding our recent celebration of the 1000th anniversary of Christianity in Ukraine, brought about by the baptism of the Ukrainian Queen, St. Olga, in 955. Special church services, programs, and other celebrations were held not only in North Dakota, but all over the United States, and also in Italy, Great Britain, France, Belgium, Germany, and all over the world, except behind the Iron Curtain; with newspapers carrying publicity on these events.

One thousand years ago, St. Olga, Queen of Kiev and Ukraine, was baptized and became a member of the Christian church, and a few years later all the people of Kiev, capitol of Ukraine, were baptized and St. Vladimir, King of Ukraine, officially introduced Christianity in his state. Christianity has been existing in Ukraine for more than 1,000 years. It has fostered a profound faith in God among the people and has begotten abiding moral principles, and nourished a new culture and erudition.

Since that time Christianity in Ukraine has flourished and also suffered persecution. Today the church in Ukraine is suffering one of the greatest persecutions in its history. It is significant to note that many members of the Catholic hierarchy—cardinals, archbishops, and bishops—have sent congratulatory and inspiring message to our exarchate to commemorate this anniversary. They have joined in our prayers and they express sympathy for our brethren behind the Iron Curtain, who, under the rule of hammer and sickle are unable to celebrate this event. They desire that the light of the true Christian faith shine again upon Ukrainian lands.

In December 1955, Ukrainians all over the world marked two other anniversaries—25 years ago when Ukrainian Autocephalous Orthodox Church and 10 years ago, when the Ukrainian Greek Catholic Church was totally annihilated by Russian Communist Government.

During the 34 years of Red rule over Ukraine, the Russian Communist Government has not only liquidated the liberties of Ukrainian Republic, not only destroyed physically about 10 million Ukrainians, but it has also completely liquidated the independent church life of the Ukrainian people and has ruined its two main churches—the Ukrainian Autocephalous Orthodox Church and Ukrainian Greek Catholic Church.

At present, official these two chief churches of the Ukrainian people do not exist, they exist unofficially in the underground.

During 1930–31, the Ukrainian Autocephalous Orthodox Church was desecrated and ruined in a most barbarous manner. Thirty-four archbishops and bishops, and more than 3,000 priests along with 75-year-old Metropolitan Lepkivsky at their head, were unjustly arrested, sentenced, without public hearing or trial, to slave-labor camps, where they later died. Hundreds of thousands of faithful, priests were inhumanly tortured in prisons or deported to camps in Siberia; a greater part of these innocent people died martyrs to their faith; the remainder still endures the appalling trials and hardships of imprisonment.

The archibishops and bishops who died as martyrs are as follows:

Metropolitans: Wasil Lepkivsky, Mykola Boresky, Ivan Pawlowsky, O. Vzovensesky.

Archbishops: George Savchenko, George Mychnovsky, Stephen Orlyk, Joachim Kalnyshevsky, Peter Tarnavsky, Alexander Cherniswsky, Constantine Krotevich, Theodosy Ariyiv, Constantine Malunkevich, Ossyp Oksiuk, W. Dachivnyk-Dashivsky, Peter Romentaniv.

Bishops: Gregory Storonenko, Jacob Shulayevsky, Valdimir Michnovsky, Mark Hrushevsky, Kanon Bey, Basil Pshenechney, Anton Bronovsky, Maxym Zadvirniak, Mykola Karabinevich, Vladimir Samborsky.

After liquidation of the episcopate of the Ukrainian Orthodox Church, thousands of her clergy were shot, tortured, or sent to concentration camps in Siberia. All church properties were confiscated by the State.

In the country the churches were turned into granaries, theaters, clubs, or simply destroyed. The Reds destroyed 80 percent of the churches, many containing precious historical relics, as for example the golden-domed Michalivsky Monastery in Kiev from the 12th century.

Extirpation of church leaders and religious teachings is an integral principle of Russian policy. The recent arrest and trial of Cardinal Mindszenty and the suppression of the Protestant church in Bulgaria, are vivid examples of Moscow's methods aimed at total destruction of all religion, except the religion of Marx-Lenin-Stalin-Krushchev. Nevertheless the government of Moscow has definitely assumed the protection of the Russian Orthodox church, under the leadership of the Moscow Patriarch Alexsey, and has helped to liquidate both Ukrainian churches.

Later, in 1945 and 1946, the Ukrainian Greek Catholic Church was almost totally annihilated in the whole of western Ukraine. Upon occupying the western Ukraine after World War II, Moscow immediately began her wantonly cruel liquidation of the Ukrainian Greek Catholic church, which numbered in the millions of faithful followers, and was decidedly opposed to Moscow's irreligious policy, as well as national and social tyranny. Soon Metropolitan Andrei Sheptysky, head of the Ukrainian Greek Catholic church and a man with a patrician spirit, died mysteriously. Somewhat later it had been disclosed that he died from poisoning. Following his death the Communists published a booklet in which they tried desperately to dishonor that great man and his religious work. Then followed arrests and deportations of the whole exarchate because it had refused to serve the false patriarch of Moscow, who was instituted to, first and foremost, spread Communist propaganda and spy abroad.

Here are the names of those martyrs for the Christian truth and defenders of the people:

Metropolitan of Halych and Archbishop of Lviv, Joseph Slipyj, 80-year-old Bishop Gregory Khomyshyn, Bishop John Latyshevskyj, Bishop Nicholas Charnetskyj, C. SS. R., and Bishop Nykyta Budka. On June 25, 1946, Bishop Josaphat Kotsylovskyj, OSBM, and Bishop Gregory Lakota, were imprisoned. All these bishops were condemned to forced labor for 8 to 10 years, and even life; the imputation was lawfully unjust. Some of these bishops (for instance Bishop Gregory Khomyshyn and Bishop Josaphat Kotyslovskyj) later died from maltreatment in prison. Still more, when Archbishop Joseph Slipyj's or other bishops' terms expired, the Reds would not release them from prison.

In the autumn of 1947, the Communists murdered Bishop Theodore Romza, Ushorod, Carpathian Ukraine, and in 1950, the Bishops Paul Gojdich, OSBM, and Basil Hopko, Pryasiv, Czechoslovakia, were imprisoned. On January 15, 1951, Bishop Paul Gojdich was tried and unjustly condemned to forced labor for life. Bishop Basil Hopko is now in a concentration camp.

Altogether, 10 Ukrainian Catholic bishops have been liquidated by the Reds.

In 1946, the Soviets enjoined the legal continuance of the Ukrainian Catholic Church in Ukraine. Thus, in our own 20th century, it has been reduced to the sorrowful plight of the "church of the catacombs" as was the primitive church during the Neronian persecution. The Reds exterminated all 5 dioceses of the Ukrainian Catholic Church, desecrated 4,400 of its churches and chapels together with 195 religious houses. Two thousand secular priests and monks were arrested. The Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church and faith.

Therefore, I respectfully request on behalf of our Ukrainian Congress Committee of America, Inc., State branch of North Dakota, and 20,000 Americans of Ukrainian descent living in North Dakota, that you present to Congress the dreadful situation of the religious persecution in Ukraine and ask to propose that Congress inquire into this anti-Christian terror, and that a special designated congressional committee hold hearings of witnesses of the aforesaid situation.

I also request that the Secretary of State propose to the American delegation in the United Nations that the conditions of the persecuted church in Ukraine be placed on the agenda of the United Nations Assembly.

Enclosed please find a memorandum and an article written by Prof. Nicholas Chubaty contained in Ukrainian Quarterly, volume XI–I, winter 1955, about "Political background of the religious persecution in Ukraine by Moscow." Our committee would appreciate inserting a memorandum in the CONGRESSIONAL RECORD, as a matter of public record.

Thank you.

Very sincerely yours,
Dr. ANTHONY ZUKOWSKY,
President, UCCA State Branch of North Dakota.

MEMORANDUM

Christianity has been existing in Ukraine for more than 1,000 years. It has fostered a profound faith in God among the people, and has begotten abiding moral principles, and nourished a new culture and erudition.

In December, 1917, Communist Russia invaded Ukraine and in 1919–20 occupied the

eastern provinces of this country. The Soviet were bent on extirpating Christianity from these regions. In their coup d'etat they published aggressive antireligious propaganda and terrorized the people with threats of exile, torture and death.

First, the Communists attacked the Church in Eastern Ukraine. Within 10 years, from 1921 to 1931, they unjustly arrested and ruthlessly murdered 34 Ukrainian Orthodox bishops and more than 3,000 priests. Hundreds of thousands of the faithful were inhumanly tortured in prisons or deported to concentration camps in Siberia; a greater part of these innocent people died martyrs to their faith; the remainder still endures the appalling trials and hardships of imprisonment.

The Reds destroyed 80 percent of the churches (many of these churches contained precious historical relics, as for example the Golden Domed Michalivsky Monastery in Kiev from the 12th century); other churches were despicably converted into warehouses, theaters and convention halls; monasteries were outraged and cemeteries profaned.

By 1930 the Communists had completely liquidated the entire Ukrainian Orthodox Church, barring it from all public activity.

Though article 123 of the Soviet constitution, which is binding in Ukraine as well as the U. S. S. R., explicitly recognizes freedom of religion, yet, during the first Red occupation of Western Ukraine (1939–41), the Communist regime overtly persecuted the church, arresting many Ukrainian priests and ruthlessly murdering 27 of them.

This anti-Ghristian terror adopted more hideous means of exterminating Christianity in Ukraine during the second occupation of this country beginning in 1945. On April 11, 1946, the Soviets arrested the metropolitan of Halych and archbishop of Lviv, Joseph Slipyj, 80-year-old Bishop Gregory Khomyshyn, Bishop John Latyshevskyj, Bishop Nicholas Charnetskyj, C. S. S. R., and Bishop Nykyta Budka. On June 25, 1946, Bishop Josaphat Kotsylovskyj, OSBM, and Bishop Gregory Lakota were imprisoned. All these bishops were condemned to forced labor for 8 to 10 years and even life; the imputation was lawfully unjust. Some of these bishops (for instance Bishop Gregory Khomyshyn and Bishop Josaphat Kotsylovskyj) later died from maltreatment in prison. Still more, when Archbishop Joseph Slipyj's or other bishops' term expired, the Reds would not release them from prison.

In the autumn of 1947, the Communists murdered Bishop Theodore Romza, Uzhorod, Carpathian Ukraine, and in 1950, the Bishops Paul Gojdich, OSBM, and Basil Hopko, Pryashiv, Czechoslovakia, were imprisoned. On January 15, 1951, Bishop Paul Gojdich was tried and unjustly condemned to forced labor for life. Bishop Basil Hopko is now in a concentration camp.

Altogether, 10 Ukrainian Catholic bishops have been liquidated by the Reds.

In 1946, the Soviets enjoined the legal continuance of the Ukrainian Catholic Church in Ukraine. Thus, in our own 20th century, it has been reduced to the sorrowful plight of the Church of the Catacombs, as was the primitive church during the Neronian persecution.

Two thousand secular priests and monks, for rightfully refusing to acknowledge the patriarch of the Russian Orthodox Church as their head—this church is now subservient to the Communists—were arrested and deported to slave labor camps. The Reds exterminated all 5 dioceses of the Ukrainian Catholic Church, desecrated 4,400 of its churches and chapels together with 195 religious houses. The Communists continue to oppress mercilessly the Ukrainian laity for remaining steadfast to its Christian heritage, church and faith.

Therefore, I respectfully request to present to Congress the dreadful situation of the religious persecution in Ukraine and ask to propose that Congress inquire into this anti-Christian terror, and that a special designated congressional committee hold hearings of witnesses of the aforesaid situation.

I, also, request that the Secretary of State propose to the American delegation in the United Nations that the condition of the persecuted church in Ukraine be placed on the agenda of the United Nations Assembly.

DR. ANTHONY ZUKOWSKY,
President, Ukrainian Congress Committee of America, Inc., State Branch of North Dakota.

The Overseas Role of Private Investment

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17, 1956

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have excerpts from the testimony presented to the Joint Committee on the Economic Report by Mr. Robert R. Nathan printed in the Appendix of the RECORD.

Mr. Nathan is an eminent economist. He gave outstanding service to his Government in World War II, and in recent years has been serving as an economic consultant for private industry, and one of his most important assignments has been as the economic consultant to the Government of Burma. Few men are better qualified to give sound and constructive advice and counsel in the field of industrial planning and economic developments.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

THE OVERSEAS ROLE OF PRIVATE INVESTMENT

(By Robert R. Nathan)

Every effort needs to be made to expand the flow of investment funds from the United States to countries abroad. This is a principle on which there can and should be no fundamental disagreement. Yet there are many problems involved in private foreign investment which must be taken into serious account in developing programs for this expansion.

First, let me risk the criticism of the American business community by saying that in general it is my impression that the daring and imagination and risk assumption which are associated with the American businessman in his operations within the United States are hardly characteristic of his role as a foreign investor. For a variety of reasons the American investor is not generally a foreign investor. If we look at the figures on private foreign investment published by the Government, and if we deduct from the totals the investments made in oil and mineral exploration and the amounts invested in Canada, the residual foreign investment is distressingly small.

INCENTIVES FOR INVESTORS

Our Government has taken steps to provide incentives for American investors to employ their resources abroad. The guarantee provisions with respect to convertibility and expropriation are certainly steps in the right direction. Taxation inducements have not been without merit. Whether we have exhausted all reasonable possibilities for private incentives is doubtful. Therefore, continued study of the experience of existing American investors abroad and of prospective investors is worth undertaking because it might well point the direction for providing advantages to such investors.

We sometimes fail to recognize that foreign governments face difficult problems if they undertake to provide greater incentives to foreign investors than to their own investors. Huge profits are not always politically defensible in recently liberated countries, where generations of colonialism have created a state of mind that does not distinguish clearly between capitalism and colonialism, judging both to be exploitative. Many underdeveloped countries believe in nationalization of basic industries and are hesitant to allow private capital to control such basic industries, least of all foreign private capital. We in America do not share such ideological tendencies, but we cannot ignore them or quickly change them. Presumbly we believe that other countries are free to make their decisions democratically for themselves without interference or pressure from us. One might say that if a nation believes in nationalization of its basic industries it should not expect private investment. There is logic in such a position, but if such countries need foreign capital and if Communist nations are willing to participate in fulfilling such needs, we are hurting our best interests by failing or refusing to be helpful.

Difficulties more often stem from the fact that private investors shy away from any investment in a country which has nationalized some of its industries. This problem poses a serious challenge to our Government as well as to our industrial and financial leaders. We just cannot expect free countries whose economic ideologies vary from ours to change their basic concepts and conform to the United States pattern in the hope that private investment will be forthcoming. In a way, there is a vicious circle involved. The less foreign investment, the more tendency toward nationalization, and this in turn precludes or narrows opportunities for private investment. I emphasize the fact that this is not a simple problem, because too often in the past some of our Government and business leaders have stated irresponsibly and without adequate thought that the problem of providing capital abroad is one exclusively for private solution.

All these problems are not posed for the purpose of concluding that private foreign investment is hopeless as a means of accelerating the development of the less advanced countries. Quite the contrary—they are presented with the thought that their recognition is a prerequisite to solution. In other words, we must understand that private investment has not played a sufficiently large role, and that there are serious impediments which we must try to overcome.

Private investment is important not only because it brings private capital; it also normally brings knowledge and responsibility for management and training. It is very important to provide the undeveloped countries with both know-how and capital. A combination of public capital plus management contracts would perhaps be the next most desirable substitute for a combination of private capital and private management. If American industry cannot be induced to undertake more foreign investment, then operating companies should be more willing to undertake management contracts, particularly where they do not pro-

vide capital but receive adequate compensation, including perhaps profit participation.

PUBLIC INVESTMENT BASIC

There is a very basic relationship between public and private investment. Just as those who are inclined to ignore completely the role of private investment are in error, so I believe that those who seem to think that the entire solution lies in private investment are unrealistic. Recognizing its desirability and importance, it is my conviction that public investment at this stage must play a more important role and must, in a sense, lay the groundwork for private investment.

We are inclined to take for granted—because they are so deeply imbedded in our society—the prerequisites on which the productivity of a society rests, such as a healthy, literate population and working force; a network of transport and communications; land reclamation and irrigation; basic power sources; distribution facilities to active and accessible markets. We are inclined to forget that these have been built up in our own country over many decades and at enormous cost, often directly by public capital or through generous incentives to private capital. Often these forms of investment do not yield an immediate and direct form of return. For this reason, among others, they may not be suitable investments for private capital, but they are necessary before there can be private investment on a large scale. This is the necessary role of foreign public capital, on a government-to-government basis or through international organizations.

In other words, the more intelligent and more constructive the job of increasing the flow of public capital, the more likely an increased flow of private capital in the years to come. Not only does this seem logical in time sequence, but (equally important) government can do much more to step up the flow of capital abroad by direct action than it can through assisting private investors. Therefore, without neglecting private investment and indeed striving to simulate it, our Government should now reappraise our whole foreign economic policy with respect to the foreign flow of public capital and give it the emphasis and support which it needs.

A CHALLENGE TO AMERICAN BUSINESS

Before closing, may I make one final point. I should like to offer a challenge to the leaders of American industry, particularly to the larger companies which have the resources and the know-how to help spread the prosperity of America to countries which are still free and which want to remain free. We are all against communism, but it isn't enough to be merely vocal in this opposition. Those who have the technical ability and the financial capacity to carry on the fight for freedom under conditions of competitive coexistence ought to see clearly the need to use these resources to demonstrate that a free economy can help the underdeveloped countries far more than the Communist powers can.

American industry has not done enough in this economic fight against communism; it has not used any significant portion of its resources for this great purpose. If only a little of the time and talent and money spent for nonessential purposes by big business were devoted to sending more of its technicians abroad, to helping foreign enterprises increase their productivity, to providing equipment for some industries in underdeveloped countries, the prospects for winning the fight against communism would be much brighter. The money and the talent needed is insignificant compared with that which our industrial leaders have at their disposal. I hope that the great ingenuity and ability of American business leadership, as demonstrated by the growth of business in the United States, will somehow be directed toward this most serious problem of the middle of the 20th century.

Too Poor For Defense?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1956

Mr. PRICE. Mr. Speaker, we have been warned by the President of the United States that Soviet Russia and Red China continue to pose a serious threat to the free world. The threat is heightened by Soviet achievements in nuclear research, in technology, and in aircraft production. The air-atomic balance between the United States and the Soviet Union is stilting precariously, for us, in the direction of the Communist bloc in Europe and Asia. Marshal Bulganin has himself boasted that the Soviet armed forces would soon have an intercontinental ballistic missile. By now we should have learned that Soviet boasts usually precede by a narrow margin our own discovery, through intelligence channels, of Soviet accomplishments.

It was only a few years ago that Secretary of Defense Wilson pooh-poohed research as something that discovered why potatoes turn brown when they are cooked. Fortunately, Mr. Wilson was persuaded not to cancel all research being conducted by our armed forces, and after considerable unnecessary delay, we are now really getting somewhere in guided missile research and development.

Whether we are keeping up the production of manned aircraft and conventional weapons at a rate sufficient to insure our defense until we have better guided missiles, is another question. The answer is not reassuring. Soviet output is now far ahead of American output in 3 of the 4 major categories of combat aircraft, day fighters, night fighters, and long-range jet bombers. In fact, the only category in which they are not ahead of us is medium range jet bombers. We got a head start with our B–47, and still maintain a lead in the production of this type of plane, which is the backbone of our Strategic Air Command's striking force.

These facts have caused hardly a ripple in the American attitude toward defense, because of public ignorance and the failure of responsible officials to correct it. Fortunately, if no truthful announcements come from the Pentagon, they still leak to Congress and the public. The periodic reporting of Mr. Joseph Alsop and his brother, Mr. Stewart Alsop, help to correct the situation in respect to vital information, though admittedly no individual outside the Government can command the attention—with the authority—of an administration spokesman.

We have now had a report on the state of the Union. We await with eagerness the President's budget message. But we wait with foreboding. The Alsops tell us that "one of the great secret dramas of the struggle over this year's budget was caused by General LeMay's bold demand for an urgent program to produce no less than 1,900 B–52's" to replace the B–47 and to bring us up to Soviet production of their comparable Bison, which they are producing at the rate of 13 per month.

If the commanding general of the Strategic Air Command lost out in geting this recommendation into the budget, it need not follow that his recommendation be ignored in the appropriations bill for 1957 which it is the responsibility of this Congress to prepare. And an appropriation for these heavy bombers of true intercontinental range need not be omitted—unless the richest country in the world is still too poor to pay for its own defense.

Mr. Speaker, I call my colleagues attention to two articles—the first of a series—by Joseph and Stewart Alsop, reporting current changes in the balance of strength between the U. S. S. R. and the United States of America. These articles appeared in the New York Herald Tribune of January 2 and 4, 1956, and have been inserted in the CONGRESSIONAL RECORD by the distinguished Senator from Missouri, the Honorable STUART SYMINGTON. They appear in the RECORD of January 9 on page 196. Every Member of Congress should read these articles.

Address Delivered by Senator Martin of Iowa Before the American Mining Congress

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 17, 1956

Mr. MARTIN of Iowa. Mr. President, on the 12th day of October last year I had the honor of addressing the American Mining Congress. I ask unanimous consent that the text of my remarks be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE ADMINISTRATION REJECTS EFFORTS TO IMPLEMENT THE HABANA CHARTER WITHIN THE UNITED NATIONS

Mr. Chairman, distinguished guests, ladies, and gentlemen, it is again a great pleasuse for me to participate in this important panel discussion of the American Mining Congress on our strategic material and stockpile policies. As I have told you before, Iowa is not a mineral producing area and my concern with the production of minerals arises solely from my interest in our national defense.

Before entering the United States Senate, for 16 years I was a Member of the House of Representatives and my committee assignments in the House were the Armed Services Committee responsible for legislation concerning the strategic stockpile, and the Ways and Means Committee which writes our tariff laws. This experience has given me certain very definite views regarding those policies which will promote our security, and conversely, the basis for opposing schemes which have been promoted over a period of many years which can seriously weaken our economy and our position of world leadership.

Last year when I appeared before you I discussed proposals then pending in the

United Nations to implement parts of the rejected Habana Charter for an international trade organization. Let me briefly review this rejected Habana Charter.

The original proposals which led to this draft charter were developed within our own State Department. They included provisions for establishing what in effect were world antitrust laws to deal with so-called restrictive business practices and for the establishment of intergovernmental commodity agreements. Commodity agreements by their very nature impose restrictions on both producers and consumers. Many different kinds of agreements have been proposed, some of which involve buffer stocks. Agreements have also been suggested to establish a just and equitable relationship between the prices of raw materials and manufactured goods. The difficulty immediately arises as to how one shall define the words "just and equitable" in an international agreement. The long term effect of all of these proposals is to allocate materials and fix their prices through an elaborate system of Government controls.

The Habana Charter was submitted to the Congress by President Truman. It was never approved. Late in 1950 President Truman assured us that he would not ask the Congress to again consider this document. But let us see what happened.

The United Nations Economic and Social Council proceeded to consider the charter chapter by chapter. Chapter VI of the Habana Charter, which dealt with international commodity agreements, was the basis for the establishment of the Interim Coordinating Committee for Intergovernmental Commodity Arrangements within the United Nations in 1947 and, more recently, the Commission on International Commodity Trade. Chapter V, which provided for an international agreement to deal with restrictive business practices, in other words, world antitrust laws administered by the United Nations, was turned over to an ad hoc committee of the United Nations Economic and Social Council for study. The resolution establishing the ad hoc committee was sponsored by the United States Government under the Truman administration. Both of these proposals were under active consideration when I appeared before you a year ago.

A great deal has taken place in the intervening 12 months, and I am very proud of the manner in which the administration has extricated itself from the problems which it inherited from the Truman-Acheson regime. While the United Nations Commission on International Commodity Trade, the group concerned with commodity agreements, was established in spite of United States opposition, our Government has refused to participate in the work of this Commission. The United States representative at the meeting of the Economic and Social Council at Geneva this summer requested the Council to elect another government to our place on the Commission as we had definitely made up our minds not to participate in its work. Let me read from the statement of the alternate United States representative to the Council, Nat King:

"Our views with respect to the Commission on International Commodity Trade are well known and were expressed at the 18th session of the Council and also in comment submitted to the Secretary-General. Nothing has occurred since then to cause us to change our point of view.

"As the committee is aware, my Government has not occupied the seat on the Commission to which it was elected. We continue to question seriously whether the Commission can contribute significantly to the solution of international commodity problems. After most careful consideration, we have regretfully reached the conclusion that we will not find it possible to participate in the work of the Commission. Accordingly, my Government would welcome the election of some other government on the Commission in its place."

This disposes of the commodity agreement problem and chapter VI of the charter for the present.

The agenda of the United Nations Economic and Social Council this year also included the question of approving a proposed agreement to implement chapter V of the charter dealing with so-called restrictive business practices. This agreement had been drafted by the so-called ad hoc committee established in accordance with a United States sponsored resolution by the United Nations Economic and Social Council in 1951.

The statement of the United States in rejecting this agreement was forthright. I shall read two paragraphs which completely express the philosophy of this administration.

"The elimination of harmful restraints on international trade and the furthering of the development of free competitive enterprise continue to be basic objectives of this country's economic policy. In the present circumstances, however, the endeavor to effectuate a plan of international cooperation along the lines envisaged by the current proposals might well prejudice rather than promote the attainment of these objectives.

"It is, therefore, the opinion of the United States Government that present emphasis should be given not to international organizational machinery but rather to the more fundamental need of further developing effective national programs to deal with restrictive business practices, and of achieving a greater degree of comparability in the policies and practices of all nations in their approach to the subject."

Let me congratulate the mining industry on your good fortune that Herbert Hoover, Jr., a mining engineer, the son of one of our most distinguished mining engineers, is the Under Secretary of State and has helped to develop these policies in the Department. You are also fortunate in having the real problems of the industry constantly brought before the Cabinet by Secretary Wormser who has also spent his entire life in your industry.

Within the past month the Subcommittee on Antitrust and Monopoly of the Senate Committee on the Judiciary conducted hearings to determine why this administration rejected the proposed agreement on restrictive business practices. The only witness who appeared in favor of the United States adherence to this proposed agreement was Sigmund Timberg, who had served as Secretary of the United Nations Ad Hoc Committee. He expressed his deep concern at the rejection of his handiwork by President Eisenhower and Secretary Dulles. For many years prior to 1951 he was an official of the Antitrust Division of the Department of Justice in the Truman administration. A review of the history of the antitrust cases brought by the Truman administration in the middle 1940's shows that the Department of Justice was trying to secure jurisdiction over enterprises operating in foreign countries and this jurisdiction had been repudiated by courts in Canada and in the United Kingdom. These circumstances account for Mr. Timberg's desire to remake the world so that he could carry out his pet theories of antitrust enforcement.

A distinguished lawyer specializing in antitrust and international law, Mr. William Dwight Whitney of New York, formerly a Special Assistant to the Attorney General in the Antitrust Division, in his appearance before the subcommittee, made the following comment with respect to the philosophy of Mr. Timberg which I regard as most illuminating. He said:

"The point I think is being lost sight of is that you must have in a nation, and we must have in our Nation, two types of jurisdiction: jurisdiction over the person of the defendant, and jurisdiction over the subject matter of the action, over what happened.

"Now, all our recent cases that I am criticizing talk only about jurisdiction over the person, whether you can catch the person or, as one of the judges said, whether you can lay hold of him. The word 'catch' is in one of the opinions, too.

"I noticed yesterday in a very learned and brilliant presentation by Mr. Timberg, who ought to know something about this because he was in the Department of Justice all during the period when, I think, our law went wrong, talked about jurisdiction over the person, and his report discusses it, under the general title of 'jurisdiction,' but he never makes any reference at all to the jurisdiction over the subject matter of the action.

"Now, it is there that we intrude into the territorial sovereignty of foreign nations."

An analysis of the testimony before the subcommittee confirms all of the fears which I have expressed on numerous occasions during the past year regarding this proposed agreement.

The position of the administration in rejecting the proposed agreement was explained at these hearings by Mr. David C. Murchison, who for the past 2½ years served as legal adviser and assistant to the Chairman of the Federal Trade Commission. In addition, he served as an adviser to the United States delegation to the United Nations Economic and Social Council at those sessions devoted to considering the report of this Ad Hoc Committee.

The proposed agreement would have established a tribunal to determine what practices were restrictive and had harmful effects on the expansion of production or trade. Mr. Murchison pointed out that member nations will implement the tribunal's decisions under this proposed agreement "in accordance with their respective laws and procedures." He thus showed that:

"The agreement would therefore apply only to countries having antitrust laws and enforcement programs, principally to enterprises located in the United States, Canada, and possibly, to a lesser degree, in the United Kingdom."

This agreement by its very nature is discriminatory and favors enterprises in countries without antitrust laws as against American enterprises.

The agreement also discriminates in favor of public enterprises as compared with private enterprises. Mr. Murchison said:

"For example, dual standards for investigative activity are proposed. Public enterprises are at the outset given recourse to a 'consultation procedure' in the event complaints are lodged against them. Private concerns, on the other hand, are immediately made subject to the tribunal's investigative procedures and the provisions relating to publicity.

"Furthermore, under the terms of the proposed agreement, complaints against a State-owned or controlled enterprise cannot be filed except by governments. Complaints against private concerns, however, can be filed by individuals or private groups."

I cite these remarks of Mr. Murchison because they summarize so many of the points which I have discussed on other occasions, and which have been the subject of addresses and papers by distinguished lawyers who are experts in this field.

Now let me review Mr. Timberg's statement before the subcommittee and rebut some of the points which he made. Mr. Timberg said:

"The difficulty of establishing personal service explains why so many international cartel cases involve foreign coconspirators who are not joined as defendants. For example, in the General Electric case, all of General Electric's German, English, and other foreign cartel associates, with the exception of a Dutch firm that had established a fac-

tory in the United States during World War II, were immune from suit. The selective enforcement of the Sherman Act against foreign businesses that happen to get 'caught within the jurisdiction' pleases neither the United States defendants, nor the hapless foreign defendant, nor the antitrust enforcement authorities.

"* * * Difficulties in obtaining evidence: The second main obstacle is that of getting the evidence which will establish the antitrust violation. It is difficult and often impossible to obtain, by the use of American judicial process, business records located in a foreign country. The location of such records at a distance from the United States increases their unavailability, and facilitates their concealment.

"Moreover, national feelings are aroused in the process. When the Department of Justice some years ago tried to subpena Canadian records in connection with a newsprint investigation, the Province of Ontario enacted a statute making it a criminal offense to send any corporate records out of the jurisdiction in response to the request of any judicial, legislative, or administrative body of another country. This, of course, is an extreme example of the kind of resistance which one might expect abroad to an American court subpena. The more usual type of governmental protest is that which was registered in the Oil Cartel case."

Mr. Timberg has become so obsessed with the problems of establishing personal service and in obtaining evidence in foreign countries that he is quite willing to compromise our own sovereignty and permit an international agency to effectively exercise jurisdiction over United States nationals if such a device would permit him to secure remedies which he thinks justified in specific cases.

I was amazed at the following statement by Mr. Timberg:

"Also, business records and statistics in foreign countries are generally not as comprehensive as in the United States, and may be so different in nature from those in this country as to be unreliable indicators of the business and economic facts relevant to antitrust violation.

"Last, the mere factor of geographic distance and transportation expense impedes the securing of relevant information, which frequently depends on the testimony of witnesses as well as on the existence of business records."

I do not quite see how a United Nations organization could assist in improving business records and statistics in foreign countries unless all semblance of national sovereignty is to be done away with.

Let me emphatically state that I believe in our antitrust laws and support them wholeheartedly. I do so as I am convinced that competition under our American free-enterprise system has provided us with our standard of living and our position of world leadership.

Our Government's statement to the United Nations on the proposed agreement clearly shows the real difficulty in establishing an agreement on this subject. We can agree on a mechanism to grant jurisdiction, but no mechanism can establish substantive agreements on the contents of world antitrust laws. Our conception of the purpose of antitrust laws is completely different from that of the other countries who would presumably participate under the draft agreement. Therefore, an international agreement could not possibly be operative in a constructive manner but could only lead to confusion until comparability in our legal concepts was achieved.

Mr. Timberg not only is obsessed by the problem of obtaining jurisdiction in antitrust cases but he is also disturbed at the "unavailability of extraterritorial remedies." He said:

"Unavailability of extraterritorial remedies: Finally, assuming an airtight antitrust case, in which all the parties involved are properly served as defendants, there would still remain a final obstacle to success in antitrust enforcement—the securing of satisfactory relief. This is the most important of the points I have mentioned, since failure to achieve adequate relief makes any antitrust equity proceeding, however conclusively it establishes guilt, a waste of the Government's time and money.

"In international cartel cases effective relief may require that the court issue injunctions changing the foreign operations affecting the foreign businesses, or disposing of the foreign properties of the defendants. American judges are reluctant, however, to go as far as they would in domestic cases, because of doubts they have as to the extraterritorial scope of their own jurisdiction and because of legal and practical difficulties that they think the defendants will encounter abroad."

The paragraphs I have quoted clearly show Mr. Timberg believes that the findings of the United Nations body would have great weight and would be enforced, yet he testified to the subcommittee that:

"The U. N. draft agreement is an instrument of international cooperation, not a grant of international sovereignty. The agency which is to administer the agreement is not given any judicial, legislative, or other sovereign powers."

These two statements by Mr. Timberg are in direct conflict.

Mr. Timberg also said:

"The end result of the investigtaion of a particular complaint is the issuance, by the international investigating agency, of a report. This report examines, analyzes, and sets out the information received; determines whether the complained-of practice has had, has, or is about to have harmful effects within the meaning of the draft agreemnet; and makes recommendations in appropriate cases to the governments involved as to remedial measures (art. 3, pars. 6, 7, and 8; art. 15, pars. 4, 5, and 6; art. 16; art. 17; par. 52 of the ad hoc committee's report). The report by itself has no sanction except the informal one of publicity."

Adverse publicity for an American enterprise through the course of an investigation brought by this United Nations body could have damaging effects not only on the enterprise concerned but also on the international position of our Government. Let us not forget that it would be expecting too much of human nature for such an agency not to be used as a political instrument by many nations.

Mr. Timberg testified further that:

"However, governments adhering to the draft agreement are obligated to supply the information needed by the agency; to take appropriate action to implement the remedial measures recommended to them by the agency; and to keep the agency posted on their compliance.

"As stated earlier, governments adhering to the draft agreement are obligated to adopt investigative measures that will enable them to supply the international agency with the information needed to analyze complaints of restrictive business practices and to make intelligent recommendations. They also bind themselves to make adequate provision in their legal system for putting the agency's remedial recommendations into operation. They undertake to keep the international agency posted on their compliance with the agency's recommendations. Moreover, under the agreement, diverse national conceptions of 'harmful effect' are harmonized in a uniform standard."

Mr. Timberg is, in effect, proposing that this Government bind itself by a treaty to adopt whatever legal provisions are necessary to put the United Nations proposed agency's recommendations into operation.

Mr. Timberg states "* * * diverse national conceptions of 'harmful effect' are harmonized in a uniform standard." My examination of the draft agreement fails to disclose any standards whatsoever. The pargraphs I have quoted from Mr. Timberg's testimony clearly indicate that countries adhering to this agreement would delegate judicial and executive powers to this new international agency. Yet, Mr. Timberg again said:

"The international agency which would administer the draft agreement is an instrumantality of international cooperation, not an organ with sovereign judicial, legislative, or executive powers. This is a necessary concession to national sovereignty."

I am glad he still feels it necessary to make concessions to national sovereignty. This statement is, however, followed with another indication that the recommendations of the United Nations body would be enforced. He said:

"The tangible outcome of the agency's activity is an advisory report (like a Federal Trade Commission report) analyzing the facts and recommending remedial measures. However, there are assurances in the draft agreement that the analysis will be heeded and the recommendations complied with. Those assurances are to be found, first, in the specific obligations of governments to cooperate in the work of the agency, which have just been set forth, and second, in the publicity that the agency's reports will receive."

Let us go back and review the mechanics of how these recommendations to which Mr. Timberg refers would be made. The proposed agreement would establish a United Nations agency to administer the agreement. Its powers would be exercised by a representative body. Article 10 of the draft agreement provides as follows:

"The representative body shall consist of all members of the agency. Each member shall have one representative in the representative body. * * *

"Each member shall have one vote in the representative body."

In other words, if all the countries in the United Nations adhered to this proposed agreement there would be more than 60 members of the representative body embracing every form of economics from Russian communism to American free enterprise.

Article 10 also provides that:

"The representative body shall establish its rules of procedure. * * *

"The powers and duties attributed to the agency by this agreement and the final authority to determine the policies of the agency shall be vested in the representative body."

The authors of the agreement realized that such a group would be too unwieldly, so they provide in article 13 of the agreement for an advisory staff. Now let me quote from article 13:

"The chief advisory officer of the agency shall be the director of the advisory staff. He shall be appointed by the representative body and be subject to its general supervision.

"In accordance with any rules laid down by the representative body, the director shall select the advisory staff and any necessary consultants to it."

In other words, this one individual, the director of the advisory staff, for all intents and purposes, is the agency. This is clearly shown in articles 15 and 16 of the agreement which deal with the functions of the advisory staff.

"Pursuant to policies and rules prescribed by the representative body, the advisory staff shall (a) perform the functions set out in the following paragraphs of this article and (b) advise the representative body, subject to any limitations established by that body.

"After the executive secretary has collected information relating to a complaint in pursuance of the relevant provisions of article 3, and has transmitted it to the director of the advisory staff, the director shall arrange for the analysis of the information and for the preparation of a report by the advisory staff.

"The report of the advisory staff shall set out the facts established by the information aforesaid, together with such analysis of their effects and significance in relations to the objectives of the agreement as may assist the representative body in carrying out the duties laid on it by the agreement.

"When, in accordance with paragraph 3 of article 8, the representative body shall have arranged for the collection of information from members, all such information collected by the executive secretary shall be transmitted to the directory of the advisory staff who shall arrange for its analysis and for the preparation of a report in accordance with paragraph 4 of this article.

"Reports by the advisory staff shall be submitted to the representative body."

Paragraph 1 of article 16 provides that:

"The representative body, in carrying out the duties laid on it by this agreement, shall take full account of reports of the advisory staff."

Actually this agreement would entrust one individual, the director of the advisory staff, who might be a Russian Communist, a European Socialist, or an American capitalist with fantastic powers over the entire economy of the world.

It is quite obvious that Mr. Timberg feels that he is qualified for this assignment and he undoubtedly believes that the members of the Ad Hoc Committee who served with him are similarly qualified. In his testimony before the subcommittee he discussed the membership of the Ad Hoc Committee as follows:

"The chairman of the committee was a leading name Swedish economist and industry advisor and author of an outstanding study on 'Growth and Stagnation in the European Economy,' and is now a member of the Freedom of Commerce Board, an official Swedish antitrust agency established in 1953. The vice-chairman of the committee was Chairman of the Inter-American Economic and Social Council, and is now Uruguay's Minister to Sweden. The acting chairman, who presided over 2 of its 4 long sessions, was in the highest level of the Belgian Government and administered some of Belgium's most important economic policies. Canada was represented by the head of its antitrust department, and this country by the Chief Economist of the Federal Trade Commission (Corwin Edwards). France's representative is now the United Nations Under-Secretary for Economic and Social Affairs. The other countries were represented by officials who had important responsibilities in connection with foreign trade, such as Commercial Counselor, Consul General or within the Board of Trade or Foreign Offices of their respective countries. All personal representatives operated under specific instructions from their national governments.

"I have gone into the composition of the United Nations Committee in some detail, because the draft articles of agreement relating to the administration of the United Nations proposals was the work of this talented group."

It is significant that none of these people would be the type of individual selected for apointment to high judicial office in the United States or qualified for an appointment to the International Court of Justice. They are political economists—not judges.

Mr. Timberg recognized that the reputation of individual firms and "national prestige" might be hurt by the investigative procedure even though the investigation later proved them blameless. In discussing the membership of the Ad Hoc Committee he said:

"Such a committee, composed preponderantly of representatives from industrial countries, could hardly fail to be aware of the fact that vital trading and economic interests were involved; that commercial interests and national prestige could be needlessly damaged by irresponsible or politically motivated complaints or publicity; and that there were risks in allowing countries with a small share in world trade to control international policies in this delicate area."

Mr. Timberg's only protection against these admitted problems is the integrity of his advisory staff. He said:

"It (the Ad Hoc Committee) therefore sought to safeguard against these contingencies by making various organizational and procedural recommendations, concerning such matters as independence, impartiality and competence on the part of the personnel that would administer the proposed program of international cooperation, the role to be played by countries of chief economic importance in international trade, and fair procedures for investigating the facts and reviewing and publicizing reports."

"The situation under the draft agreement seems to me analogous to that whereby the report of an administrative commission is prepared in this country; a qualified and nonpartisan staff prepares the original draft of the report, which is then reviewed by a politically responsible and responsive commission."

Let us remember that the advisory staff is a creature of the representative body. It is difficult for me to conceive of the so-called representative body, consisting of some 60 nations, as a "politically responsible and responsive commission" to deal fairly with the problems of an American enterprise submitted to its jurisdiction.

The representative body by its very nature is a political organization. Mr. Timberg in discussing the role of the representative body said:

"It is my observation that, on the international as well as national scene, there is a cooperative interaction between the policy makers and the research staff. National representatives as well as politically appointed commissioners, are concerned with major policy matters and accept to a surprising extent the work of their staff. Perceptive staff work helps smooth out the difficulties, and reconcile the differences, of the more politically oriented international representative body or national commission."

A "politically oriented international representative body, or a national commission" should not be entrusted to make decisions affecting the well-being of our entire economy.
